A see-saw action is produced by a body that is pivotally mounted in the liquid with its pivot located intermediate of its ends. Air is fed to the lower side of the body. The body is adapted to trap alternately at each end enough air to cause that end to rise in the liquid. Trapped air is released when the end has risen a predetermined amount with the result that the body oscillates and agitates as it aerates the surrounding liquid. (Sinha-OEIS)

HYDROGEN PEROXIDE CURES FILAMENTOUS GROWTH IN ACTIVATED SLUDGE,
District of Columbia Dept. of Environmental Services, Washington.
C. A. Cole, J. B. Stamberg, and D. F. Bishop.
Copy Available from GPO Sup Doc as EP1.23:670/2-73-033, $0.65; microfiche from NTIS as PB-231 848, $1.45. Environmental Protection Agency, Technology Series Report EPA-670/2-73-033, October 1973. 20 p, 8 fig, 13 ref. EPA Project 11010 FYM. 14-12-818.

Descriptors: *Activated sludge, *Waste water treatment, *District of Columbia, *Sphaerotilus, Biological treatment, Aerobic bacteria, Sedimentation, Sewage bacteria, Sludge treatment.
Identifiers: *Hydrogen peroxide, *Biochemical treatment, Bulking, Washington(D.C.).

Laboratory tests at the Dupont Experimental Station substantiated by tests at the EPA-DC Pilot Plant in Washington, D.C. revealed that H2O2 offered a solution to filamentous bulking caused by Sphaerotilus growth. The addition of H2O2 eliminated the free-growing filaments while not deteriorating the spherical aerboic floc. The H2O2 also released oxygen which was beneficial in maintaining a purely aerobic environment. Bulking activated sludge units could be brought under control by doses of H2O2 from 20-200 mg/l for less than one to several days. The sludge volume index of the systems was reduced substantially. The H2O2 treated aeration process could then be brought under control by maintaining proper plant operation. (EPA)

REGENERATION OF CHROMATED ALUMINUM DEOXIDIZERS, PHASE I REPORT,
Boeing Commercial Airplane Co., Seattle, Wash.
H. C. Hicks, and R. A. Jarmuth.
Copy Available from GPO Sup Doc as EP1.23:660/2-73-023, $1.95; microfiche from NTIS as PB-231 835, $1.45. Also available from NTIS as PC$5.00. Environmental Protection Agency, Technology Series Report, EPA-660/2-73-023, December 1973. 160 p, 45 fig, 15 tab, 20 ref. EPA Project 12070 HEK.

Descriptors: Chromium, *Electrolysis, Toxicity, Metals, *Water reuse, Filtration, Centrifugation, Volumetric analysis, Recycling, *Waste treatment, *Oxidation, Reclamation, Industrial wastes.
Identifiers: Aluminum deoxidizer reuse, Chromated deoxidizers, *Chromium reoxidation, *Regeneration, Hexavalent chromium, Trivalent chromium, Dissolved metals removal, Diffusion diaphragm, *Metal finishing waste treatment, Electrolytic reoxidation.

In the metal finishing industry highly concentrated hexavalent chromium solutions are used extensively to deoxidize aluminum surfaces prior to anodizing, conversion coatings, prepaint preparation, welding and adhesive bonding. A regeneration process was conceived and tested to reduce the frequency of discarding the spent chromated deoxidizers. The engineering techniques developed in this project involve reoxidation of trivalent chromium to the hexavalent state by electrolysis thru a diaphragm plus removal of undesirable dissolved metals by crystallization and separation. Results of the accomplished work establish that regeneration of chromated aluminum deoxidizers is feasible, practical and economical. (EPA)

COMBINED SEWER OVERFLOW SEMINAR PAPERS.
Edison Water Quality Research Lab., N.J.
Copy Available from GPO Sup Doc as EP1.23:670/2-73-077, $2.20; microfiche from NTIS as PB-231 836, $1.45. Also available from NTIS as PC$5.75. Environmental Protection Agency Report No. EPA-670/2-73-077, November 1973. 216 p.

Descriptors: *Combined sewers, *Overflow, Management, Control systems, *New York, *Pollution abatement, Storm water, Design, Economics, Costs, *Storm runoff, Sewers, *Waste water treatment, Regulation.
Identifiers: Wet-weather flow.

The Environmental Protection Agency in conjunction with the New York State Department of Environmental Conservation conducted three one-day seminars on the problem of wet-weather flow pollution abatement. Many facets of the problem were considered including a brief overview of its magnitude and what the federal government is doing to manage and control this source of pollution. Various management, control, and treatment techniques were described and the most up-to-date information on design and economics was presented. The audience consisted of consulting and municipal engineers from all areas of New York State. This publication is a compilation of the papers presented at the seminar. W74-07255

STORMFLOW POLLUTION CONTROL IN THE U.S.,
Edison Water Quality Research Lab., N.J.
R. Field, and A. Tafuri.
In: Combined Sewer Overflow Seminar Papers, Environmental Protection Agency Report No. EPA-670/2-73-077, November, 1973. p 1-47, 22 fig.

Descriptors: *Storm water, *Storm runoff, Combined sewers, *Overflow, *Pollution abatement, Water pollution sources, Water quality control, Standards, Discharge(Water), *Waste water treatment, Treatment facilities, Equipment, Methodology, *Federal government.

The problem of storm water discharges and combined sewer overflows is discussed in relation to the Federal Government's involvement. This overview details wet-weather flow pollution as classified in the categories of combined sewer overflows, storm water discharges, and non-sewered runoff. As a result of program research, development, and demonstration projects, it is maintained that sewer separation in most cases is not the logical course of action for pollution abatement. Therefore the following approaches are being ex-

plored: control, treatment, and combinations of the two. These approaches are discussed under the topics of flow regulation, storage, porous pavement, new sewer systems, auxiliary biological treatment, microscreening, flotation, filtration separation, flow measurement, and management models, as well as the necessary equipment and instrumentation involved. In view of the tremendous quantities of pollutants bypassed during rainfall from the combined sewer system, it is not reasonable to debate whether secondary treatment plants should be designed for high BOD or suspended solids removal, since bypassing at regulators during wet-weather flow occurs. Rather, wet-weather standards must be instituted at various regulatory levels. (See also W74-07255) (Sandoski-Franklin)
W74-07256

PREVENTION AND CONTROL OF INFILTRATION AND INFLOW,
American Public Works Association, Chicago, Ill.
R. H. Sullivan.
In: Combined Sewer Overflow Seminar Papers, Environmental Protection Agency Report No. EPA-670/2-73-077, November, 1973. p 49-56.

Descriptors: *Infiltration, Documentation, *Reviews, Surveys, Economic justification, *Water pollution control, *Inflow, Methodology, Instrumentation, Pollution abatement, Combined sewers.

Some of the major findings of an APWA Foundation report bearing the same title are reviewed together with guidelines for the establishment of a survey to determine the nature and extent of infiltration and some of the factors to be used in making an economic analysis of desirable corrective actions. Steps involved in the complete infiltration-inflow analysis are outlined. Detection methods, equipment, and economic justification with respect to controlling pollution are disclosed. W74-07257

COMBINED SEWER OVERFLOW REGULATOR FACILITIES,
American Public Works Association, Chicago, Ill.
R. H. Sullivan.
In: Combined Sewer Overflow Seminar Papers, Environmental Protection Agency Report No. EPA-670/2-73-077, November, 1973. p 57-63.

Descriptors: *Storm water, Water pollution sources, Sewers, Water quality control, *Waste water treatment, Equipment, *Combined sewers, *Overflow, *Treatment facilities, *Regulation.

Results of investigative programs in such fields as the pollution of stormwater, the extent of combined sewer facilities, the design, operation, and maintenance of combined sewer overflow regulators, and the prevention and correction of excessive infiltration and inflow to sewers show that storm water is polluted whether or not it is carried in separate or combined sewers. Thus, to meet receiving water quality standards, treatment or control facilities may be necessary and therefore such equipment must be examined. Decision guidelines are presented for the consideration of the combined sewer overflow regulator facility as a possible means for pollution abatement. (See also W74-07255) (Sandoski-Franklin)

PRESSURE SEWERS,
New York State Dept. of Environmental Conservation, Alabany. Environmental Quality Research and Development Unit.
I. G. Carcich.
In: Combined Sewer Overflow Seminar Papers, Environmental Protection Agency Report No. EPA-670/2-73-077, November, 1973. p 65-87, 9 fig, 4 tab, 6 ref.

Descriptors: *Plastic pipes, Investigations, *Waste water treatment, *Combined sewers, Treatment facilities, Evaluation, Pumping, Performance, Operation and maintenance, *Sewers.
Identifiers: *Pressure sewers, Grinder pumps.

The pressure sewer concept deals with a wastewater collection system that utilizes a newly developed grinder pump unit and small diameter plastic or metallic piping systems. Results of a 13-month study undertaken to evaluate the functional specifications of the pumping units and to gain operating experience on the mechanical performance, use pattern, operating cost, and maintenance requirements for said units, are reported. A description of the grinder pump unit and the test results are given. Results indicate used plastic pipes and fittings functioned well for the duration of the demonstration project. It is recommended that pressure sewer systems be considered as available engineering technology for use where applicable. (See also W74-07255) (Sandoski-Franklin)
W74-07259

APPLICATION OF MICROSTRAINING TO COMBINED SEWER OVERFLOW,
Crane Co., King of Prussia, Pa. Cochrane Div.
G. E. Glover.
In: Combined Sewer Overflow Seminar Papers, Environmental Protection Agency Report No. EPA-670/2-73-077, November, 1973. p 89-113, 7 fig, 2 tab.

Descriptors: *Combined sewers, *Overflow, Performance, Investigations, Suspended solids, Flow rates, Treatment facilities, Organic matter, Coliforms, *Storm water, *Waste water treatment.
Identifiers: *Microstrainers.

Studies initiated to determine the performance of microstrainers in removing suspended solids are reported. A flow rate of 2.0 cfs/acre was used as the required instantaneous capacity of the treatment facility. A drawing of the microstrainer tested as well as a description of the operational procedure are given. Test results indicate that the microstrainer will reduce suspended solids from 50-700 mg/liter to 40-50 mg/liter at flow rates of 35 to 45 gpm/sq ft of gross submerged screen area (42-54 gpm of unimpeded submerged area). These flow rates have been routinely achieved within an arbitrary limitation of 24 inches of water differential between inlet and outlet liquid levels. The removal of organic and other oxygen demanding material is 25-40 percent confirmed by BOD, COD, and TOC measurements. Microstraining had negligible effect on the coliform content of the storm water. (See also W74-07255) (Sandoski-Franklin)
W74-07260

HIGH-RATE MULTI-MEDIA FILTRATION,
Environmental Protection Agency, New York. Region II.
P. Harvey.
In: Combined Sewer Overflow Seminar Papers, Environmental Protection Agency Report No. EPA-670/2-73-077, November, 1973. p 115-128, 10 fig.

Descriptors: Evaluation, Performance, Application methods, *Filtration, *Combined sewers, *Overflow, Treatment facilities, Screens, Filters, Optimization, *Construction costs, *Operating costs, Tertiary treatment, Automation, Operation and maintenance, Efficiencies, *Ohio, *Waste water treatment.
Identifiers: *Cleveland(Ohio).

To evaluate the applicability and effectiveness of the high rate filtration process in removing contaminants from combined sewer overflows, a testing program was undertaken at Cleveland, Ohio's Southerly Wastewater Treatment Plant, beginning in 1970. The two major process units used in the proposed treatment system were the drum screen followed by the deep bed, dual media filter. The testing program was conducted in two phases: (1) evaluation and selection of system media and filtration rates; and, (2) optimization of the filtration process via coagulants and polyelectrolyte addition prior filtration. Estimated total construction costs of a filtration plant which discharged waste screenings and filter backwash to the municipal treatment system ranged from $830,000 for the 35 mgd capacity to $3.754 million for 200 mgd capacity at a design rate of 24 gpm/sq ft. Annual cost estimates ranged from $97,270 to $388,210. High treatment efficiencies, automated operation, and limited space requirements are the principal advantages of the proposed system. The high rate filtration process was also evaluated elsewhere, in terms of its capacity for polishing secondary effluent. Test data confirmed the applicability of this media to reducing suspended solids, BOD, and phosphate to low residuals. (See also W74-07255) (Sandoski-Franklin)
W74-07261

SCREENING/DISSOLVED-AIR FLOTATION TREATMENT OF COMBINED SEWER OVERFLOWS,
Envirex, Inc., Milwaukee, Wis. Environmental Sciences Div.
M. K. Gupta, and R. W. Agnew.
In: Combined Sewer Overflow Seminar Papers, Environmental Protection Agency Report No. EPA-670/2-73-077, November, 1973. p 129-151, 3 fig, 7 tab, 4 ref.

Descriptors: *Combined sewers, *Overflow, Treatment facilities, *Waste water treatment, *Flotation, Design criteria, Automation, Operation and maintenance, Equipment, Capital costs, Operating costs, Laboratory tests, Pilot plants, Evaluation, Performance, Suspended solids, *Separation techniques, *Wisconsin.
Identifiers: Screening/dissolved-air flotation, *Racine(Wis).

A major portion of the pollutional substances in combined sewer overflows is particulate in nature indicating that an efficient solid/liquid separation process can be expected to provide an effective treatment. Thus an effective and economical separation process was designed, tested, and developed on a full-scale basis. Two full-scale screening/dissolved-air flotation systems have been installed in Racine, Wisconsin for treatment of combined sewer overflows. Design criteria for each of the various elements is tabulated; systems were designed for completely automatic startup, operation, and shutdown. To insure optimum use of the system, a floodgate was installed in one of the overflow sewers to provide approximately 600,000 gallons of in-system storage. In addition, the system has been equipped to be completely self-draining thus enabling use of the system during periods of snowmelt and cold weather. The cost of the Racine system is $30,000 per mgd installed capacity. (See also W74-07255) (Sandoski-Franklin)
W74-07262

HIGH-RATE DISINFECTION OF COMBINED SEWER OVERFLOW,
Crane Co., King of Prussia, Pa. Cochrane Div.
G. E. Glover.
In: Combined Sewer Overflow Seminar Papers, Environmental Protection Agency Report No. EPA-670/2-73-077, November, 1973. p 153-170, 3 fig, 15 ref.

Descriptors: *Disinfection, *Combined sewers, *Overflow, *Waste water treatment, Water pollution control, Flow rates, *Pilot plants, Chlorine, Turbulence, Design criteria, Treatment facilities, Bacteria.
Identifiers: Bacteria kill.

Work on disinfection of combined sewer overflows has been performed in pilot size contact chambers at a constant flow rate. A bacteria kill of 99.99 percent was achieved with chlorine dosages of 10 ppm in 120 seconds under a flow rate of 20 gpm. The chambers were designed to ensure that the hypochlorite was promptly and well mixed with stormwater as well as to ensure a high degree of small eddy turbulence in the passages of the contact chamber. The extraordinarily high kill rate of these chambers is attributed to the turbulence during contact time. The performance of the pilot units, the preliminary design scheme, and the plans of a 92 cfs chamber designed according to this scheme are detailed. The installed cost of such a chamber has been calculated at about $53,000 (in 1969 dollars). The inherent advantage of increased turbulence economically induced in this type of installation of enhance reaction rates makes the system applicable to many situations. W74-07263

THE SWIRL CONCENTRATOR AS A COMBINED SEWER OVERFLOW REGULATOR,
American Public Works Association, Chicago, Ill.
R. H. Sullivan.
In: Combined Sewer Overflow Seminar Papers, Environmental Protection Agency Report No. EPA-670/2-73-077, November, 1973. p 171-179, 2 fig.

Descriptors: *Combined sewers, *Overflow, *Waste water treatment, Capital costs, Construction materials, Operation and maintenance, Treatment facilities, Automation, Design criteria, Model studies, *Regulation.
Identifiers: *Swirl concentrator.

As a result of laboratory tests and mathematical modeling, significant portions of settleable and floatable solids can be removed from combined sewer overflows using a swirl concentrator. Advantages of this system include low capital cost, absence of primary mechanical parts, and construction with inert material; operation of the facility is automatically induced by the inflowing combined sewage so that operating problems will be infrequent. Consideration of the use of a swirl concentrator as a combined sewer overflow regulator facility requires evaluation of many factors. The following factors are discussed: hydraulic head differential, hydraulic capacity of collector sewer, design flow, dry-weather flow and interceptor sewer capacity, and amount and character of settleable solids. (See also W74-07255) (Sandoski-Franklin)

THE EPA STORMWATER MANAGEMENT MODEL: A CURRENT OVERVIEW,
Florida Univ., Gainesville. Dept. of Environmental Engineering Sciences.
W. C. Huber, J. P. Heaney, and H. Sheikh.
In: Combined Sewer Overflow Seminar Papers, Environmental Protection Agency Report No. EPA-670/2-73-077, November, 1973. p 181-216, 21 fig, 6 ref.

Descriptors: Loads(Forces), *Combined sewers, *Storm water, Overflows, *Storm runoff, Urban runoff, *Mathematical models, Computers, *Simulation analysis, *Rainfall-runoff relationships, Drainage, Storage requirements, Model studies, *Pennsylvania.
Identifiers: *Lancaster(Penn).

The problem of loading by combined and separate storm sewer overflows on streams and other receiving waters has led to the development of a comprehensive mathematical computer simulation program that models quantity (flow) and quality (concentrations) during the total urban rainfall-runoff process. The present Storm Water Management Model (SWMM) is descriptive in nature and will model most urban configurations encompassing rainfall, runoff, drainage, storage-treatment, and receiving waters. It does not define nor determine any decisions for the system or consider alternative methods for efficient economic comparisons. An overview of the SWMM is presented by illustrating its use in Lancaster, Pennsylvania. Major revisions to the Model have been made to include urban erosion prediction, modeling of new treatment devices and biological treatment facilities, monitoring of significant pollution sources, flexibility in modeling new areas, new and improved cost functions for treatment and storage options, and a modest hydraulic design capability as well as minor programming changes and slight format revisions. W74-07265

LAND APPLICATION OF SEWAGE SLUDGE,
Guelph Univ. (Ontario). Dept. of Land Resource Science.
T. E. Bates.
Environment Canada Research Report No. 1, September, 1972. 212 p, 1 tab, 566 ref. 71-4-1.

Descriptors: *Water reuse, *Bibliographies, *Land management, *Reviews, *Sewage sludge, *Farm management, Nitrogen, Nutrients, Application methods, Copper, Zinc, Cadmium, Nickel, Chromium, Lead, Viruses, *Sewage treatment, Sludge disposal, Pathogenic bacteria.

A literature review was undertaken to determine the extent of present knowledge for ecologically safe and agriculturally productive application of sewage sludges to farm lands. It was concluded that sludge is quite variable in solids and nutrient content from one sewage plant to another and also on a daily basis. Nitrogen is likely to control rates of sludge application which should be restricted to those needed for crop production, yet leaching of phosphorus into the groundwater is not expected to be a major problem controlling application rates. Reports indicate that the metals copper, zinc, cadmium, nickel, chromium, and lead are high in some sludges and may be cause for concern. Studies are reported on the survival of human and animal pathogens and viruses whose populations are reduced by anaerobic digestion and eliminated by heat drying. No information was found concerning the land application of sludges resulting from treating sewage with chemicals for the removal of nutrients. Little information is available on times and methods of sludge applications which will prevent or eliminate water contamination by erosion and runoff. (Sandoski-Franklin)

THE EFFECTS OF HOUSEHOLD SANITARY SYSTEMS ON EFFLUENT PHOSPHATE LEVELS,
Windsor Univ. (Ontario). Industrial Research Inst.
P. D. La Valle.
Environment Canada Research Report No. 2, March, 1973. 67 p, 15 fig, 8 tab, 18 ref. 72-5-14.

Descriptors: *Waste water treatment, *Phosphates, Sanitary engineering, *Septic tanks, *Sewers, Urban drainage, Urbanization, *Pollution abatement, Effluents, Canada, Data collections.

An outline is presented of work conducted to assess the variation of phosphate input to urban waterways from residential areas serviced by septic tanks and sanitary systems. Data were collected on the population density of each sample area and the amount of phosphorus in household detergents, as well as lawn and garden fertilizers. For a number of urban watersheds, the presence of household septic tank systems played a major role in determining stream phosphate concentrations accounting for 56-76 percent of the spatial variation in stream total phosphate levels and 61-77 percent of the spatial variation in orthophosphate levels. Rainfall and fertilizer usage inputs were also statistically significant but secondary to septic tank systems. Results suggest that if phosphate pollution abatement is to be practiced, a concerted effort should be made to serve all urban residential units by an integrated sewer system with subsequent phosphate removal at the wastewater treatment plant. Also septic tanks are not an efficient means of keeping excessive quantities of phosphates from local stream systems. (Sandoski-Franklin)
W74-07267

AEROBIC DIGESTION OF ORGANIC SLUDGES CONTAINING INORGANIC PHOSPHORUS PRECIPITATES: PHASE I,
Toronto Univ. (Ontario). Dept. of Civil Engineering.
J. Ganczarczyk, and M. F. D. Hamoda.
Environment Canada, Research Report No. 3, June 1973. 71 p, 7 fig, 22 tab, 65 ref. 72-5-4.

Descriptors: *Waste water treatment, *Sludge digestion, Laboratory tests, *Aerobic treatment, *Activated sludge, Salts, *Phosphorus, Chemical precipitation, Aeration, Nutrients, Organic compounds, Carbons, Suspended solids.
Identifiers: *Aerobic digestion, Total organic carbon, Soluble nutrients, Dewaterability, Settleability, Oxygen uptake, Volatile solids destruction, Ferric salts, Aluminum salts.

Three series of laboratory batch and semi-continuous experiments were carried out at 20C on the aerobic digestion of activated sludges containing aluminum salts or ferric salts used for phosphorus precipitation. Treatment responses measured were digested sludge characteristics, such as volatile solids destruction, oxygen uptake, settleability, and dewaterability, and supernatant characteristics, including total organic carbon, soluble nutrients, and suspended solids. The only variable that was controlled for all experiments was the sludge hydraulic detention time. The aerobic digestion of conventional activated sludge was not affected to any significant degree by the presence of ferric of aluminum precipitates. For both the control and chemically precipitated sludges an aeration period of 10 to 15 days was required for stabilization. Release of soluble organic carbon and nutrients during the aerobic digestion of activated sludges was not altered appreciably in the presence of the chemical precipitates. At the higher chemical dosages there was a reduction in nutrient release in the supernatant. Dewaterability and settling characteristics of control and chemically precipitated digested sludges did not differe significantly. (Sandoski-Franklin)
W74-07268

USE AND PRODUCTION OF IRON SALTS FOR PHOSPHORUS REMOVAL,
Waterloo Univ. (Ontario). Dept. of Chemical Engineering.
D. S. Scott.
Environment Canada Research Report No. 5, June, 1973. 62 p, 12 fig, 10 tab, 9 ref. 72-3-5.

Descriptors: *Salts, *Waste water treatment, *Phosphates, Chemical precipitation, Canada, Sulfates, Estimated costs, Iron compounds.
Identifiers: *Phosphate removal, *Iron sulfate, Sulfuric acid.

The principal objective was an assessment of the supply and probable cost of iron salts for use as phosphate removal chemicals in wastewater treatment. The use of iron salts for the precipitation of phosphate from wastewaters is discussed. Evidence is reviewed which suggests that ferrous and ferric salts behave in an equivalent manner due to rapid oxidation of the former in neutral solutions. A summary is given of the nature, source, composition, and reactivity with dilute sulfuric acid of major iron containing waste materials available in Ontario Canada. The costs of manu-

facture of ferrous and ferric sulfate at different production capacities from a number of these materials has been estimated. Treating costs for phosphate removal using iron sulfate could be as low as 10-20 dollars per million gallons. For almost all circumstances, the use of locally manufactured iron sulfates should be competitive with or cheaper than either alum of imported salts. (Sandoski-Franklin)
W74-07269

WASTE WATER TREATMENT IN COMMERCIAL FISH PROCESSING: REDUCING STICK WATER LOADINGS,
Wisconsin Univ., Madison.
D. A. Stuiber, and J. J. Quigley.
Available from the National Technical Information Service as COM-73-10/58, $3.00 in paper copy, $1.45 in microfiche. University of Wisconsin Sea Grant Advisory Report No. 1, WIS-SG-72-401, November, 1972. 17 p, 5 fig, 4 tab, 4 ref.

Descriptors: *Lake Michigan, *Waste water disposal, Liquid wastes, *Waste water treatment, *Commercial fish, Treatment facilities, Industrial plants, Suspended solids, Laboratory tests, Cost analysis, Coagulation, Design criteria.
Identifiers: Lime coagulation, *Glutaraldehyde coagulation, *Anaerobic-aerobic systems, Fish processing.

A wastewater disposal problem involving the inadequate treatment of wastewater resulting from the processing of alewives for fish meal was investigated. Inplant practice was examined to determine whether process revisions could be made to reduce the amount of lipids, protein, and other suspended solids in the discharge. A further processing step was developed to remove more solids and to increase product recovery. The resulting wastewater discharge was studied for purposes of improving treatment practice. Owing to the complexity of the material in the discharge, an anaerobic treatment stage was required with subsequent design focusing on combination anaerobic-aerobic systems. Laboratory scale studies on both glutaraldehyde and lime coagulation methods were made. Both processes were subjected to cost analysis with generally comparable results. Preliminary analysis conducted on waste water effluent indicated that resulting effluents had comparable chemical oxygen demand and biochemical oxygen demand values. (Sandoski-Franklin)
W74-07270

REMOVAL OF PHOSPHATES FROM WASTEWATERS WITH ELECTRO-CHEMICALLY GENERATED GADOLINIUM IONS,
Los Alamos Scientific Lab., N. Mex.
E. I. Onstott.
Available from the National Technical Information Service as LA UR 73-72 $3.00 in paper copy, $1.45 in microfiche. (1971) 10p, 3 fig, 3 tab, 6 ref (CONF-73 0402).

Descriptors: *Electrochemistry, Chemical precipitation, *Phosphates, Sewage effluents, Anodes, Cathodes, *Waste water treatment, Hydrogen ion concentration, Electrolysis, Zinc, Bicarbonates, *Ion transport.
Identifiers: *Phosphate removal, *Gadolinium.

A method of electroprecipitation of phosphates from secondary sewage effluents with anodically generated GD 3+ was investigated using a gadolinium metal anode and stainless steel cathode. At the anode Gd was oxidized to Gd3+, WHICH PRECIPITATED PHOSPHATES, AND AT THE CATHODE H2 gas was evolved. For electrolysis times in excess of theoretical, removal of soluble orthophosphate was greater than 99 percent to concentrations of about 0.02 mg/liter P; soluble condensed phosphate removal was more than 90 percent to about 0.04 mg/liter P; and removal of soluble organic phosphate was greater than 80 percent to about 0.07 mg/liter P. The electrolytic treatment increased the pH OF PRODUCT FILTRATES AND A FRACTION OF THE BICARBONATE WAS CONVERTED TO CARBONATE DEPENDING ON ELECTROLYSIS TIMES. Some Zn2+ and carbonate, if the concentration of carbonate exceeded 30 mg/liter, were precipitated by this electrolytic treatment. (Sandoski-Franklin)

CYANIDE WASTE TREATMENT UTILIZING CATALYTIC OXIDATION,
Thiokol Chemical Corp., Brigham City, Utah.
P. H. Woolhiser, and D. P. Clark.
Available from the National Technical Information Service as AD-769 293 $3.75 in paper copy, $1.45 in microfiche. Air Force Weapons Laboratory Report No. AFWL-TR-73-37, October, 1933. 82 p, 13 fig, 27 tab, 33 ref. 683M3W10 F29601-72-C-0135.

Descriptors: *Waste water treatment, *Oxidation, Liquid wastes, Effluents, Evaluation, Standards, Effluent streams, Design criteria, Operating costs, Industrial wastes, Treatment facilities.
Identifiers: *Electroplating, Photographic processing, *Catalytic oxidation, *Cyanides.

Two major sources of liquid cyanide wastes are electroplating operations and color photograph processing. Waste streams vary in concentration from under one mg/liter to over 100,000 mg/liter. To meet state effluent standards which range from 0.25 mg/liter to undetectable levels, a system utilizing a proprietary cobalt-based catalyst and chlorine-producing electrolytic cells was evaluated with actual photographic and electroplating wastes. A prototype catalytic oxidation system capable of treating 0.25 gpm of 2000 mg/liter total cyanide waste produced effluent streams containing undetectable amounts of cyanide with copper plating and nickel strip feeds. Treatment of photographic wastes produced an 87 to 94 percent reduction of total cyanide. Effluent cyanate levels were generally under 10 mg/liter for copper solutions and ranged from 4 to 42 mg/liter for nickel strip solutions. The catalytic oxidation system has a strong potential for decreasing the operation costs of cyanide destruction system. System designs are given for two full-scale cyanide waste treatment systems. PHOSPHORUS REMOVAL TREATABILITY STUDIES AT C.F.B. BORDON, PETAWAWA, TRENTON AND UPLANDS,
Environmental Protection Service, Burlington (Ontario). Wastewater Technology Center.
E. E. Shannon, and R. J. Rush.
Environment Canada Technology Development Report EPS 4-WP-73-5, December, 1973. 34 p, 11 fig, 7 tab, 3 ref.

Descriptors: *Canada, Phosphorus, On-site tests, Efficiencies, Evaluation, *Waste water treatment, *Estimated costs, Environmental effects, *Treatment facilities, Lime.
Identifiers: *Phosphorus removal, Waste water characteristics, Diurnal variations, Treatment methods, Alum, Ferric chloride.

Results of phosphorus removal treatability studies carried out at Canadian Forces Bases Borden, Petawawa, Trenton, and Uplands during 1971 and 1972 are reported. Traditional phosphorus precipitants such as ferric chloride, alum, and lime, were evaluated with respect to phosphorus removal efficiency via standard jar testing procedures. Also the wastewater characteristics and diurnal variations at each Base were determined and discussed. Costs for phosphorus removal at each Base were estimated and recommendations made regarding the type of full-scale system that should be installed. The impact of the phosphorus removal system on the receiving waters was evaluated. (Sandoski-Franklin)

PURIFICATION OF EFFLUENTS AND IMPROVEMENT OF THE TECHNOLOGY IN THE PRODUCTION OF CHLORETONE, (IN RUSSIAN),
Vsesoyuznyi Nauchno-Issledovatelskii Khimiko-Farmatsevticheskii Institut, Moscow (USSR).
G. A. Frangulyan, I. E. Sokolova, A. A. Lavrukhina, and E. V. Zyuzenko
Khim Farm Zh. Vol 6, No 11, p 51-52. 1972.
Identifiers: *Chloretone, Effluents, Chemical analysis, *Waste water treatment, Water purification, Pollutant identification.

A method for purifying effluents from the production of 1,1,1, trichloro-2-methylpropanol-2 (chloretone) is described. An improvement in chloretone production is discussed. The purification is based on heating effluents with Ca soda to 95-100C. The data from chemical analyses of effluents prior to and after purification are included.—Copyright 1973, Biological Abstracts, Inc.

WATER AND EFFLUENT TREATMENT PLANTS - COST CONSIDERATIONS AND CLIENT, CONTRACTOR, CONSULTANT RELATIONSHIPS, THE CONSULTANT'S VIEW,
J. R. Joslin.
Process Biochemistry, Vol 9, No 1, p 10-11, January 1974. 3 fig, 3 ref.

Descriptors: Water resources development, *Waste water treatment, *Treatment facilities, *Costs, *Projects, *Design, *Optimization, Planning, Water quality, Civil engineering, Mathematical models, Systems analysis.
Identifiers: Great Britain.

With the reorganization of local government and the capital intensive water services industry at an advanced stage in England, it is desirable to examine the client-contractor-consultant relationship; the views of each are separately put in this series. This second article deals with the consultant's view. The effect of costs on projects carried out by consulting engineers from the feasibility study to the control of actual expenditure on the contract works is discussed in terms of achieving the economically optimal design consistent with sound engineering practice. As a plan is carried out, the main overall cost factors, i.e., repayment periods, running costs, choice and use of processes, must be assessed in greater detail. An optimization model can be used advantageously to obtain the most cost-effective treatment methods for meeting the desired standards. The control and certifying of actual expenditure is most important. (Bell-Cornell)

LAND DISPOSAL OF WASTEWATER--LITERATURE REVIEW FOR 1973,
New York State Dept. of Environmental Conservation, Albany.
T. J. Tofflemire, and F. E. Van Alstyne.
Technical Paper No 33, February 1974. 10 p, 129 ref.

Descriptors: *Waste water disposal, *Water spreading, *Irrigation, *Waste disposal wells, *Reviews, Bibliographies, Sprinkler irrigation, Sewage disposal, Waste water treatment, Septic tanks, Soil disposal fields.
Identifiers: *Land disposal(Wastes).

cent literature in land disposal or treatment of ste water is reviewed. The most used waste- ter application method was spraying, followed flooding and ridge and furrow. Many municipal stems provide some form of secondary treat- nt before land application. In the United States 1972, land disposal was used by 571 municipali- s and 1300 industries. In addition, there were er 50 million people using septic tanks. The sults of irrigating several crops with sewage ef- ent or with regulating irrigation water were mpared. Significant increases in soil phosphate, dium, soluble salts and pH were found in the wage plots. Possible harmful plant responses th sewage irrigation include nitrogen overload- g, heavy metal accumulation, boron toxicity, d salt accumulation in the soil. (Knapp-USGS)

escriptors: *Waste water treatment, *Oxidation, mmonia, Nitrogen, Chemical reactions, Sewage eatment.
entifiers: Potassium ferrate.

n exploratory study was undertaken to deter- ine the feasibility of using potassium ferrate VI oxidize ammonia in the secondary effluent from ter treatment plants. The method shows good otential in that the major oxidation product, ele- ental nitrogen, is also the most desired product nsidering pollution abatement. In the range 001 to 0.01 N NH3, an increase in concentration ferrate increases the percent ammonia moved. Increases in the mole ratio of ferrate to mmonia above 1:1 decrease ammonia removal. In e pH range 8-9, an increase in pH increases am- onia removal. The addition of chloride ion up to 0 ppm has little effect on ammonia removal. Of e ammonia nitrogen oxidized, more than 50% is idized to elemental nitrogen and less than 10% is idized to nitrites. (Knapp-USGS)

systems methodology for defining and evaluat- g alternatives for managing urban water quality proposed. This study focuses on the planning nd operation of urban wastewater control ystems. The metropolitan economic-engineering rban water quality system is defined and an ap- roach is adopted for analyzing the complex in- eractions among the physical, technological, so- ial and economic aspects of the urban water anagement problem. Linear programming is util- ized to define the minimum required investment in the wastewater control system. To account for risk, a chance constrained formulation is provided. Dynamic programming is used to obtain the optimal operating policy under deterministic and stochastic conditions. A water quality index was used to obtain this policy. The model relies on data collection systems that provide continuous information on the quality and quantity of both the receiving water and the wastes to be discharged. Digital computer simulation is utilized to predict the values of various measures of effectiveness of the water pollution control system and to check the validity of the mathematical programming solutions. The methodology is applied to a specific urban area. The data needs and computational effort are illustrated, and the possibility of improving the current planning and management procedures is discussed. The study illustrates how the system analysis framework is suitable for planning effective and economically efficient water pollution control programs and for the operation of wastewater control systems. MODULAR WASTEWATER TREATMENT SYSTEM DEMONSTRATION FOR THE TEXTILE MAINTENANCE INDUSTRY,
Linen Supply Association of America. Miami Beach, Fl. and Institute of Industrial Launderers Washington, D.C.
G. Douglas.
Copy Available from GPO Sup Doc as EP1.23:660/2-73-037, $3.45; microfiche from NTIS as PB-231 837 $1.45. Environmental Protection Agency, Technology Series EPA-660/2-73-037, January 1974. 342 p, 32 fig, 109 tab, 20 ref. EPA Project 12120 FYV.

Descriptors: *Waste water treatment, Coagulation, Diatomaceous earth, *Filtration, *Flotation, Industrial wastes, Water costs, Biochemical oxygen demand, Suspended solids, Laundering, Pollution taxes(Charges), Separation techniques, Operating costs, Textiles, *Flocculation.
Identifiers: *Chemical treatment; *Laundry effluent, Municipal sewer ordinances.

An industrial waste survey of the textile maintenance industry was performed to characterize and quantify the pollutants emanating from various types of plants. Bench scale waste treatment tests were performed to design a system for the textile maintenance industry. A wastewater treatment system consisting of chemical treatment and flocculation facilities, dissolved-air flotation for solids-liquid separation, diatomaceous earth filtration for polishing the flotation effluent, and vacuum filtration dewatering of flotation scum was installed at a commercial laundry. Data were obtained on effluent quality, sludge volume, chemical costs and other operating costs for industrial laundry wastewater, linen laundry wastewater, and uniform laundry wastewater. The final effluent of the linen and uniform laundry wastewater treatment met municipal sewer ordinance requirements for grease and heavy metals. Wastewater suspended solids and BOD were also significantly reduced, so that high municipal sewer surcharges would not be imposed. The effluent from the industrial laundry wastewater treatment did not consistently meet municipal sewer ordinance standards. Complete wastewater treatment operating costs were on the order of $0.80/cu m for industrial laundry wastewater, $0.66/cu m for uniform laundry wastewater and $0.40/cu m for linen laundry wastewater. It was concluded that the treatment system had applicability in treating laundry wastewater. (EPA)

ORGANIZATION OF THE COLLECTION AND DECONTAMINATION OF INDUSTRIAL AND DOMESTIC RADIOACTIVE SEWAGE, (IN RUSSIAN),
V. F. Bagretsov, S. I. Zakharov, and S. V. Metal'nikov.
Gig Sanit. Vol 37, No 12, p 91-93. 1972.
Identifiers: Collection, *Industrial wastes, Organization, *Radioactive sewage, Salts, *Sewage, Decontamination, *Waste water treatment, Waste disposal.

The 10-yr experience of the V. I. Lenin Research Institute of Atomic Reactors confirmed the possibility of complete protection of the environment against radioactive pollution by industrial wastes. This is promoted by centralization of the collection, treatment and monitoring of radioactive wastes at the Institute. The radioactive solutions at the Institute are divided into 3 groups according to specific activity and salt content. The first group consists of the saltfree waters of the first circuits of the reactors and holding basins; the second solutions obtained on deactivating the equipment, rooms, floors and waste products of chemical laboratories; the third, sanitary plumbing wastes.--Copyright 1973, Biological Abstracts, Inc.

USER CHARGES AND INDUSTRIAL COST RECOVERY, DENVER SMSA,
Wilbur Smith and Associates, Denver, Colo.
G. H. Aull, Jr., T. F. Jones, and W. G. Stringfellow.
Available from the National Technical Information Service as PB-231 866, $9.00 in paper copy, $1.45 in microfiche. Environmental Protection Agency, Region VIII, Denver, Colorado, January 1974. 120 p, 2 fig, 52 tab, 42 ref. EPA Contract 68-01-1864.

Descriptors: *Pollution taxes(Charges), *Cost allocation, Use rates, Treatment facilities, Water rates, *Colorado, *Industrial water, *Regulation, Grants, Cost sharing, Cost repayment, Administrative agencies, Water pollution control, *Construction costs.
Identifiers: Waste water user charges, Industrial cost recovery, *Denver SMSA.

An investigation was made of the extent to which wastewater user charges, consistent with current federal regulations and guidelines, have been adopted by municipal and special district wastewater agencies within the Denver Standard Metropolitan Statistical Area. Compliance with these guidelines has been established as a prerequisite for award of federal construction grants for wastewater treatment facilities. Three wastewater agencies within the Denver SMSA were selected for more detailed analyses of current user charge schedules. The existing schedules of rates and charges were compared to schedules derived in the study through rational cost allocation and application of model user charge systems developed by Environmental Protection Agency. Volume, strength and flow rates are among the waste characteristics considered in developing cost allocations and revenue structure. Hypothetical examples were also developed to illustrate the possible impact of the industrial cost recovery features of federal regulations and guidelines upon local user charge schedules. A special inquiry was made into the state of eligibility for construction grants of regional wastewater treatment and disposal agencies in the light of revenue methods employed by their direct and indirect subscribers. Possible corrective actions were outlined. Previ-

ous study findings were reaffirmed that a number of wastewater agencies within the Denver SMSA have not established or maintained user characteristic and treatment cost data in a form or to the extent necessary to design equitable user charges, and thus fail to comply with current federal guidelines for eligibility for construction grants. MICROBIAL INDICATORS FOR THE BIOLOGICAL QUALITY OF TREATED WASTEWATER EFFLUENTS,
Dept. of Civil Engineering. Illinois Univ., Urbana.
E. O. Greening.
Available from the National Technical Information Service as PB-231 874, $9.50 in paper copy, $1.45 in microfiche. Environmental Protection Agency Report. EPA 670/2-73-082, May 1974. 118 p, 7 fig, 9 tab, 127 ref. M.S. Thesis, 1971. EPA Project 17060 EYZ. Program Element 1BB043.

Descriptors: *Bioindicators, *Bacteria, Coliforms, *Yeasts, *Chlorination, *Waste water treatment, Viruses, Public health, Water reuse, Activated sludge, Trickling filters, Resistance, Sewage bacteria, E. coli.
Identifiers: Enteric viruses, Chlorine resistance, Pour plates, Acid-fast bacilli.

Due to the relatively low resistance of coliforms to chlorination when compared to resistant enteric pathogens such as viruses and protozoal cysts, a search was initiated for a new chlorine resistant bioindicator. The presently used indicator organisms and the reported chlorine resistance of wastewater organisms are reviewed. Wastewater effluents were chlorinated to a free chlorine residual and plated on various media at different temperatures. Surviving organisms were collected for further study. With this procedure the most chlorine sensitive organisms were eliminated from consideration. Pure cultures of 135 isolates were collected in this manner. A yeast and two different acid-fast bacteria were shown to be resistant to chlorination at levels considered necessary for the inactivation of pathogens, including viruses. One acid-fast bacteria was able to survive 2.0 mg/l free chlorine residual for 67 minutes while the other survived 1.0 mg/l free chlorine for 15 minutes. The yeast showed resistance to 1.0 mg/l free chlorine for 20 minutes. In comparison, a pure culture of Escherichia coli failed to survive following 5 minutes contact with 0.03 mg/l free chlorine. Techniques were investigated for the routine isolation of these organisms. Use of yeast extract-malt extract agar at pH 3.5 was employed for the yeast while acid-fast staining of colonies grown on membrane filters on Middlebrook and Cohn 7H10 agar was found to be useful for the acid-fast bacteria. ROTATING BIOLOGICAL DISK WASTEWATER TREATMENT PROCESS - PILOT PLANT EVALUATION,
Rutgers - The State Univ., New Brunswick, N.J. Dept. of Environmental Science.
W. N. Torpey, H. Heukelekian, and A. J. Kaplovsky.
Available from the National Technical Information Service as PB-232 133, $6.00 in paper copy, $1.45 in microfiche. Environmental Protection Agency, Report EPA-670/2-73-027, May 1974. 250 p, 22 fig, 41 tab, 5 ref. EPA Project 17010 EBM. Grant No. WP-01322-02.

Descriptors: *Waste water treatment, *Activated carbon, Absorption, *Nitrification, Pilot plants, *Biochemical oxygen demand, *Oxygenation, Slime, Nutrient removal, *Treatment facilities.
Identifiers: Oxygen enriched atmospheres, *Rotating disks, Surface loading, Illumination, Stage treatment, Nutrient extraction.

The results of operating a 10,000 to 20,000 gal per day staged rotating disk pilot plant have been presented for three modes of operation, namely, (1) the slimes in all stages exposed to ambient atmospheres, (2) the slimes in stage 1 exposed to an atmosphere enriched with oxygen, and (3) the slimes in stages 1 and 3 of a 3-stage operation exposed to atmospheres enriched with oxygen. In the first mode of operation about 30 minutes of contact with the slimes was sufficient to remove 90% of the B.O.D.5 while during the second mode of operation, 18 minutes accomplished the same rate of removal of B.O.D.5. In the third mode of operation, not only was 90% of the B.O.D.5 removed during 18 minutes of contact with the slimes but a substantial portion of the nitrogenous oxygen demand was satisfied. (EPA)
W74-07373

COMBINED SEWER OVERFLOW TREATMENT BY THE ROTATING BIOLOGICAL CONTACTOR PROCESS.
Autotrol Corp., Milwaukee, Wis. Bio-Systems Div.
Available from the National Technical Information Service as PB-231 892, $11.00 in paper copy, $1.45 in microfiche. Environmental Protection Agency, Report EPA-670/2-74-050, June 1974. 136 p, 69 fig, 8 tab, 9 ref. EPA program Element 1BB034. Contract 14-12-24.

Descriptors: *Waste water treatment, Treatment facilities, *Combined sewers, *Overflow, *Biological treatment, Water pollution treatment, Biochemical oxygen demands, Chemical oxygen demand, Solid wastes, *Wisconsin, Pilot plants.
Identifiers: *Biological contactor(Rotating), *Milwaukee(Wisc).

A Rotating Biological Contactor (RBC) was constructed on a bypass of a portion of the combined sewerage in Milwaukee, Wisconsin, to demonstrate the feasibility of treating combined sewer overflows. Prior to actual field testing of this full scale RBC unit, simulated overflow tests were conducted with a bench scale RBC system to establish scale-up criteria for costing out the full scale plant, operating parameters and test conditions for the demonstration facility. Construction of the demonstration plant was completed early in 1969, and a full year of testing was completed in March of 1970. Average dry weather flow through the plant was 35 gallons per minute (gpm). Under actual storm flow conditions, the demonstration plant exhibited system stability up to 14 times dry weather flow conditions. Beyond these conditions, COD treatment effectiveness sharply decreased ranging from no reduction at high flows to 79% reduction at normal dry weather flow. With lessening of these flows, biological treatment recovery was obtainable in 24 to 30 hours. To effectively treat these high overflow loads, sufficient volumetric storage and a solid separation operation should be provided to limit flow rates to controllable RBC treatment levels. (Tobin-EPA)

A COMPARISON OF EFFLUENT CHARACTERISTICS FROM CONVENTIONAL AND OXYGEN BLEACHING SEQUENCES: RESULTS OF A LABORATORY STUDY,
National Council of the Paper Industry for Air and Stream Improvement, Inc., New York.
W. L. Carpenter, W. T. McKean, H. F. Berger, and I. Gellman.
Preprints, 1973 International Pulp Bleaching Conference, June 3-7, 1973, Vancouver, B.C., p 13-19. 10 tab, 3 ref. (Jointly sponsored by TAPPI and CPPA).

Descriptors: *Bleaching wastes, *Waste water treatment, Waste treatment, *Pulp wastes, *Oxygen, *Biodegradation, *Effluents, Water pollution sources, Color, Biochemical oxygen demand, Chemical oxygen demand, Suspended solids, Chlorides, Aerated lagoons, Hardwood, Softwood, Pollution abatement, Pulp and paper industry
Identifiers: *Oxygen bleaching, Bleach plants

Southern kraft softwood and hardwood pulps were bleached by conventional CEHDED and CEDED sequences in comparison with modern OCEDED and OCED sequences (C = chlorine, E = alkaline extraction, D = chlorine dioxide, H = hypochlorite, O = oxygen). The respective bleach effluents were compared with regard to color, chloride and total solids contents, volatile vs fixed solids, BOD, COD, alkalinity, and other characteristics. Allowing for 100% recycle of the oxygen stage, softwood-derived effluents contained 81% less BOD, 67% less COD, 73% less chloride, and 89% less color than those from conventional bleach sequences. For hardwood-derived effluents, the respective decreases were 81% in BOD, 80% in COD, 44% in chlorides, and 92% in color. Reductions in total, volatile, and fixed solids ranged from 40 to 50% for both hard- and softwood pulp effluents. When simulated effluents from each bleaching stage were subjected to biodegradation in aerated stabilization basins, all underwent rapid BOD reductions, viz., 75-97%, during detention times of 1 to 10 days. (Brown-IPC)
W74-07375

OXYGEN BLEACHING -- A FLEXIBLE PROCESS FOR POLLUTION ABATEMENT,
Groupement de la Cellulose, Saint-Gaudens (France). Research Lab.
J. C. Lescot.
Preprints, 1973 International Pulp Bleaching Conference, June 3-7, 1973, Vancouver, B.C., p 61-70. 12 fig, 7 tab, 4 ref. (Jointly sponsored by TAPPI and CPPA).

Descriptors: *Waste water treatment, Pollution abatement, Water pollution control, *Bleaching wastes, *Pulp wastes, *Oxygen, *Effluents, Waste water pollution, *Color, Biochemical oxygen demand, Chemical oxygen demand, Water pollution sources, Pulp and paper industry, Europe, Hardwood, Industrial wastes.
Identifiers: Sapoxal(Oxygen bleach) process, France, Kraft pulp.

The production of fully bleached kraft hardwood pulp at the St. Gaudens mill of La Cellulose d'Aquitaine was scheduled for startup in mid-1973, using the 'Sapoxal' oxygen bleaching process. A preliminary study of factors affecting this operation with and without an oxygen bleaching stage is reported. Various effluent characteristics (notably color, BOD, and COD) were investigated as a function of the pulp's delignification degree (kappa-number) and of soda losses from the pulping-bleaching system. The adoption of the oxygen bleach process is shown to achieve important reductions in the pollution load of the total mill effluent, notably in color (ca. 50%), as well as in BOD (ca. 31%), and in COD (ca. 17%). (Brown-IPC)
W74-07376

WATER REUSE AND RECYCLE IN THE D(C)EDED BLEACH SEQUENCE,
CIP Research Ltd., Hawkesbury (Ontario).
J. A. Histed, and F. M. A. Nicolle.
Preprints, 1973 International Pulp Bleaching Conference, June 3-7, 1973, Vancouver, B.C., p 133-140. 4 fig, 4 tab, 10 ref. (Jointly sponsored by TAPPI and CPPA).

Descriptors: *Bleaching wastes, *Pulp wastes, *Waste water treatment, *Recirculated water, *Water reuse, *Discharge(Water), Chlorine, Temperature, Corrosion, Cooling, Sodium compounds, Chlorination, Chlorides, Chemical oxygen demand, Biochemical oxygen demand, Dissolved solids, Color, Canada, Pulp and paper industry.

entifiers: Chlorine dioxide, Bleaching agents, kaline extraction, Sodium hydroxide, Wash-g(Pulp), Market pulp, Countercurrent washing.

hen western softwood kraft pulps of high kappa-mber (residual lignin content) are bleached by e D(C)EDED sequence (D = chlorine dioxide, E alkaline extraction, C = chlorine), the volume effluents from the acid and alkaline sewers can lowered to 1685 U.S. gal per air-dry ton by ex-nsive recycling of chlorination filtrate and by untercurrent washing of the bleached pulp. In der to maintain the brightness of market pulp at .5 (Elrepho spectrophotometer units), an extra 3% of chlorine dioxide (based on pulp weight) ust be applied in the first chlorination stage. At rmal chlorination temperature (25C), neither the scosity nor the strength of the pulp suffered. A nall loss in both qualities was noted upon treat-ent at 57C, possibly due to slow mixing and non-niform chlorination. In practice, more rapid niform mixing seems advisable, or else the tem-erature must be reduced by cooling the filtrated ed on the first shower of the chlorination asher. Corrosion-resistant materials will be eeded, since chloride concentrations reached 4-5 liter in the chlorination stage, 2.4 g/liter in the rst extraction stage, and 1.7 g/liter in the first lorine dioxide stage. Countercurrent washing d recycling of chlorination filtrate also reduced e effluent's pollution load by 30% for COD, 40% r 5-day BOD, 25% for dissolved solids, and 40% r color. (Brown-IPC)

THE EFFLUENT-FREE BLEACHED KRAFT PULP MILL. PART IV. THE SALT RECOVERY PROCESS,
Erco Envirotech Ltd., Toronto (Ontario); and Erco Envirotech Ltd., Salt Lake City, Utah.
D. W. Reeve, J. A. Lukes, K. A. French, and W. H. Rapson.
Preprints, 1973 International Pulp Bleaching Conference, June 3-7, 1973, Vancouver, B.C., p 191-197. 3 tab, 2 fig, 13 ref. (Jointly sponsored by TAPPI and CPPA).

Descriptors: *Waste water treatment, *Pollution abatement, *Pulp wastes, *Bleaching wastes, *Sodium chloride, *Water pollution control, Pulp and paper industry, Sodium compounds, Sulfates, Chlorides, Chlorine, Sodium hydroxide, Recycling, Costs, Equipment, Carbonates, Crystallization.
Identifiers: Chemical recovery, Kraft mills, White liquor, Sodium hydroxide, Bleach plants.

The recovery of NaCl from kraft pulp mills is essential for regeneration of pulp bleaching chemicals, for cost reduction of effluent treatment, and for improved environmental protection. In the salt-recovery process described, white liquor is evaporated to a high concentration of NaOH plus Na sulfite, causing crystallization of NaCl and unregenerated pulping chemicals (Na carbonate and sulfate). The recovered NaCl is purified for regeneration of NaOH and Cl. Unregenerated pulping chemicals are removed separately and returned to the mill's chemical recovery cycle. The concentrated white liquor containing all active pulping chemicals may be diluted before addition to the wood chip digester. The new process does not require significant changes in pulp mill operations, yet is adaptable to a wide range of cooking and bleaching conditions. The NaCl concentration is kept at tolerable levels throughout the chemical recovery cycle. The process is unaffected by the composition of the white liquor (kraft cooking liquor). The chemistry, equipment needs, and costs of the salt-recovery process are discussed in some detail. (Brown-IPC)

Identifiers: Clarifiers, Ruthner clarifier, Attisholz waste treatment process.

The operating principles and effluent-purifying characteristics (including costs) of the Ruthner clarifier and of the Attisholz biological treatment process are described, with particular reference to the processing of pulp, paper, and paperboard mill waste waters. The Ruthner clarifier is a contact system for sludge sedimentation, using synthetic polyelectrolytes as flocculation aids. The Attisholz process is a modified activated sludge system adapted specifically to the characteristics of paper industry effluents. Experimental and industrial-scale data are given on the joint use of the Ruthner-Attisholz system in various fine-paper, paperboard, wood fiberboard, and sulfite pulp mills. (Speckhard-IPC)

Journal of Chromatography, Vol 89, No 2, p 185-190, Feb 27, 1974. 7 tab, 9 ref.

Descriptors: *Waste water treatment, *Chlorinated hydrocarbon pesticides, Water analysis, *Polychlorinated biphenyls, Gas chromatography, Chromatography, Resins, *Insecticides, DDD, DDE, DDT, Endrin, Dieldrin, Aldrin, Separation techniques, Analytical techniques, *Pollutant identification.
Identifiers: BHC(Benzene hexachloride-hexachlorocyclohexane), Lindane, Chemical recovery, *Amberlite XAD.

Amberlite XAD macroreticular resinous adsorbents were used to extract and recover both chlorinated insecticides (alpha- and beta-BHC, lindane, aldrin, dieldrin, endrin, p,p'-DDD, o,p'- and p,p'-DDT, and p,p'-DDE) and PCB's from water. One liter of tap water was doped at the ppb level and the resin-adsorbed insecticides were eluted with diethyl ether/hexane. When determined by electron capture gas chromatography, aldrin and p,p'-DDE were the only insecticides not quantitatively recovered. Recovery of PCB's was ca. 76%. (Brown-IPC)

Identifiers: Kraft mills, Chemical recovery, Board(Paperboard) mills, Washers(Pulp-thickening), Black liquor, Pulp washing, USSR.

A new Soviet process for the manufacture of high-yield unbleached kraft pulp from mixed softwoods and hardwoods with efficient recycling of treated effluent waters is described; the process is said to reduce freshwater consumption from 29.7 to 9.8 cu m and effluent volumes from 36.1 to 15 cu m per ton of pulp produced. Preliminary studies of the unbleached pulp manufacturing system, intended for boxboard production, focused on improvements of pulp washing conditions for efficient separation of black liquor, and on minimization of alkali and organic compound losses from the system. The new process features four double-chamber pulp-washing filters; a two-stage recovery of black liquor entrained with digester relief (blow gases); surface condensers in lieu of barometric condensers; partial reuse of purified effluents in various mill departments (wood preparation room, evaporator plant); automatic water quality control for cooling of bearings and other hydraulic functions; and monitoring of water consumption and effluent discharges in all mill departments. ON SOME SPECIAL PROBLEMS OF SULFITE PULP WASTE WATER PURIFICATION (ZU EINIGEN SPEZIELLEN PROBLEMEN DER SULFITZELLSTOFF-ABWASSERREINIGUNG),
Institut fuer Zellstoff und Papier, Heidenau, (East Germany).
H. Schmidt, and G. Weigt.
Zellstoff und Papier, Vol 22, No 9, p 263-269, Sept 1973. 7 fig, 6 tab, 20 ref.

Descriptors: *Sulfite liquors, *Bleaching wastes, *Pulp wastes, *Biological treatment, *Waste water treatment, Waste treatment, Water pollution control, Chlorination, Biochemical oxygen demand, Chemical oxygen demand, Color, Effluents, Activated sludge, Microorganisms, Bacteria, Organic loading, Kinetics, Biodegradation, Chemical reactions, Inhibition.
Identifiers: Sulfite pulp industry, Spent sulfite liquors, Evaporator condensates.

The characteristics (notably BOD load) of spent sulfite pulping liquors are outlined, and experiments are reported on the purification of spent bleaching liquors (especially from sulfite mills) by precipitation, flocculation, and/or ion-exchange adsorption. These processes are recommended where color and COD as well as BOD are to be reduced. Where the achievable BOD reductions are adequate, concentrated spent sulfite pulping liquor can be mixed with dilute spent pulp chlorination liquor and treated jointly in an activation basin for improved removals of BOD and COD. Manometric studies indicated that biodegradation kinetics often follow an initial semilogarithmic and subsequent linear course, suggesting an inhibitory effect. This can frequently be eliminated by inoculating the effluent with adapted microorganisms, thereby lowering the specific sludge loading. Some rate constants indicate particularly rapid oxygen consumption of evaporator condensates, compared to other sulfite mill effluents. (Ward-IPC)

Descriptors: *Biological treatment, *Waste water treatment, *Pulp wastes, Sulfur, *Hydrogen sulfide, *Sulfur bacteria, Sulfides, Bacteria, Oxidation, Biodegradation, Sulfates, Effluents, Waste treatment, Industrial wastes, Nutrients, *Filters.
Identifiers: Kraft mills.

A process for the purification of kraft mill effluents, such as digester relief condensates, containing hydrogen sulfide has been developed; it makes use of biological filters. Laboratory-prepared solutions of hydrogen sulfide were supplemented with the necessary nutrients and oxidized in model bio-filters. Thiobacillus thioparus was found to play the dominant role in the oxidation of hydrogen sulfide to elementary sulfur. Comparative analyses of the untreated and treated effluents showed a gradual reduction of hydrogen sulfide concentration accompanied by an increase in sulfate concentration and accumulation of sulfur. The sulfur was retained on the biofilter during the initial phase of filter formation. It could be readily recovered for reuse by washing the bacterial film mechanically. (Stapinski-IPC)

Identifiers: Dimethyl sulfoxide, Petroleum refining industry, Aerobacter aerogenes.

The recent introduction of dimethyl sulfoxide (DMSO) into the petroleum refining industry as a solvent for the extractive distillation of aromatic hydrocarbons prompted a pilot-plant study of the biodegradation of DMSO in the presence of phenol, which is also a pollutant in petroleum industry effluents, by activated sludge. The latter was obtained from a petroleum refinery and adapted in the laboratory to media containing phenol as a carbon source. In media containing phenol alone, the sludge achieved nearly 100% BOD reduction, 70% COD reduction, and 90% phenol degradation. The presence of DMSO lowered these efficiencies to 78%, 48%, and 63%, respectively. Inoculation of the mixed substrate with Aerobacter aerogenes (Strain Lo 1314, capable of degrading DMSO) improved the biodegradation process, but not to the levels attained in the absence of DMSO. The degradation of DMSO did not exceed 4-5% in the presence or absence of phenol. Analyses of the activated sludge showed a gradual drop in the number of bacterial species, the presence of a dominant species, and the development of a specialized enzyme system

HOW POLYACRYLAMIDES CAN HELP EFFLUENT PROBLEMS,
Allied Colloids Ltd., Bradford (England).
B. D. Fisher.
Paper (London), Vol 179, No 7, p 364-366, 368, April 4, 1973. 1 ref.

Descriptors: *Waste water treatment, *Polyelectrolytes, *Flotation, Sedimentation, *Flocculation, *Coagulation, *Pulp wastes, Chemicals, Chemical precipitation, Pulp and paper industry, Effluents, Industrial wastes, Pollution abatement, Water pollution control, Polymers.
Identifiers: Savealls, Paper machines, Polyacrylamide.

Polyacrylamides can serve in the paper industry as aids to the improved retention of fine fibers and fillers on the paper-machine wire (so as to reduce the effluent's pollution load). They can also improve the efficiency of various flotation- or sedimentation-type savealls when used as flocculants or coagulation aids. Laboratory techniques for evaluation of polyacrylamide preparations, their mechanism of action, and beneficial effects on effluent treatment processes are reviewed. (Witt-IPC)

ENVIRONMENTAL PROTECTION TECHNIQUES TO BE APPLIED IN A BLEACHED KRAFT PULP MILL IN SWEDEN,
Munksjo A.B., Jonkoping (Sweden).
U. Albertsson, and S. Bergkvist.
Tappi, Vol 56, No 12, p 135-138, Dec. 1973. 6 fig, 1 tab.

Descriptors: Pulp and paper industry, Europe, *Pulp wastes, *Bleaching wastes, *Pollution abatement, *Closed conduits, Industrial wastes, Water pollution, Evaporation, Oxygen, Effluents, Discharge frequency, Waste disposal, Lignins.
Identifiers: Closed systems, Kraft mills, White liquor(Kraft cooking liquor), Continuous digesters, Washing(Pulp), Oxygen bleaching, *Sweden.

An environmental protection project sponsored during 1970-1973 by the Swedish Pulp and Paper Association to provide a basis for near-future antipollution investments has already yielded results that will be put to work in the kraft mill of Munk-

AB. at Aspa, which was scheduled for startup the end of 1973. Pulping of wood in this mill is rformed in a completely closed cooking liquor stem, including a continuous digester with so- lled 'Hi-Heat' washing of cooked chips, plus reening, oxygen bleaching, and bleached pulp ashing equipment. The most heavily polluted ndensate is treated in a stripper column between o evaporation stages. A special system is under nstruction for controlled handling of temporary fluent discharges. The mill's total lignin scharge is estimated at one-half that of a conven- nal kraft pulp mill. (Brown-IPC)

ODEGRADATION OF RESIN ACID SODIUM LTS,
rest Service (USDA), Pineville, La. Southern rest Experiment Station.
W. Hemingway, and H. Greaves.
ppi, Vol 56, No 12, p 189-192, Dec 1973. 5 fig, 17 .

escriptors: *Waste water treatment, iodegradation, *Resins, *Salts, *Sodium com- unds, Water pollution sources, Sulfite liquors, ulp wastes, Microorganisms, *Activated sludge, acteria, Temperature, Incubation, Hydrogen n concentration, Sewage.
entifiers: Spent sulfite liquor, Resin acids, Resin aps, Palustric acid, Abietic acid, Pimaric acid.

e Na salts of resin acids were readily degraded microflora from two types of river water and om an activated sewage sludge. A lag phase with tle or no salt degradation but with rapid bacterial velopment was observed, which was greatly ex- nded by a decrease of incubation temperature. fter this lag phase, the salts were rapidly decom- sed with either of the three natural inocula. The a salts of levopimaric, palustric, and hydroabietic acids were most rapidly degraded, llowed by abietic and neoabietic acid salts. maric and isopimaric acid salts were the most re- stant to biodegradation. Addition of 10% of a eutralized spent bisulfite pulping liquor did not fect cell growth or resin salt degradation, but the ddition of acidic spent sulfite liquor restricted egradation by activated sludge until the pH had sen to 7.3. dentifiers: Washing(Pulp), Bleached pulps, Coun- rcurrent washing.

survey published Sept. 1970 by the Alkaline ulping Committee of the Canadian Pulp and aper Association's Technical Section showed hat effluent volumes leaving Canadian kraft mill leacheries ranged from 12,700 to 57,000 U.S. gal er ton of pulp. Methods of reducing these olumes were to be investigated in a study roposed to the Committee on Pollution Abate- ent Research (CPAR), Environment Canada. A urvey of current bleached pulp washing practices n North America indicated that three countercur- ent methods predominate in CEDED-sequence lants (C = chlorination, E = alklaine extraction, = chlorine dioxide), namely, direct, split-flow, nd jump-stage washing. The direct procedure roduced the least effluent, as low as 8100 gal per ir-dry ton. Laboratory studies showed that this can be further decreased to ca. 1600 gal/a.d. ton, without adverse effects on the quality of the bleached pulps. (Brown-IPC)

Descriptors: Water conservation, Treatment facilities, Recirculated water, *Waste water treatment, *Water reuse, *Pulp wastes, *Chlorination, *Coagulation, Suspended solids, Biochemical oxygen demand, Color, Biological treatment, Closed conduits, Pulp and paper industry, Europe, Aluminum, Industrial water, Industrial wastes, Polyelectrolytes.
Identifiers: Board mills(Paperboard mills), Board machines, *White water, Clarifiers, Aluminum sulfate, Polyacrylamide, Coagulants, *USSR.

A schematic description is given of a new water-recycling and reuse system for a paperboard mill to be added to an existing integrated pulp and paper mill at Zhidachev and a similar system to be installed at a board mill in Rostok, USSR. The Zhidachev board machine will produce 140,000 yearly tons of board made from waste paper plus a bleached chemical pulp facing. Effluent from this machine plus an older board mill will be treated first with chlorine for color removal, then coagulated with alum and polyacrylamide, and passed to contact clarifiers. The treatment should remove 100% of the color, 50% of the 5-day BOD, and 94-98% of suspended solids, so that the clarified water can be recycled and substituted for 40 cu m of the 70 cu m of fresh water needed per ton of board produced. Effluents from an existing paper mill and two pulp mills will be treated separately from the board machine white waters by mechanical and biological methods. A completely closed board-machine water circuit is contemplated as the next phase of this water economy drive. (Stapinski-IPC)
W74-07397

PILOT APPLICATION OF THE ROTATING BIOLOGICAL SURFACE CONCEPT FOR SECONDARY TREATMENT OF INSULATING BOARD MILL EFFLUENTS,
Boise Cascade Corp., Portland, Oreg.
D. J. Bennett, T. Needham, and R. E. Summer.
Tappi, Vol 56, No 12, p 182-187, Dec 1973. 7 fig, 6 tab, 10 ref.

Descriptors: *Pulp wastes, *Biological treatment, *Canada, Biochemical oxygen demand, Toxicity, Pollution abatement, Regulation, Effluents, Suspended solids, *Waste water treatment, Water pollution treatment, Water pollution control.
Identifiers: *Rotating biological surface, Groundwood mills, Mechanical pulping, Insulating board(Fiberboard), Board Mills.

The rotating biological surface (RBS) process was evaluated on a pilot scale as a potential method for the biological treatment of aqueous effluents from an insulating board (fiberboard) mill, which are typical of discharges resulting from the mechanical (groundwood) process of pulp manufacture. Reductions in BOD and total suspended solids were comparable to those reported for established secondary treatment schemes. The RBS-treated effluent's toxicity was reduced to a level complying with Canadian federal antipollution regulations. (Brown-IPC)

A REVIEW OF COLOUR REDUCTION TECHNOLOGY IN PULP AND PAPER MILL EFFLUENTS,
Beak (T. W.) Consultants Ltd., Montreal (Quebec).
M. A. Tyler, and A. D. Fitzgerald.
Canadian Pulp and Paper Association, Technical Section, Proceedings, p D116-125, 1972. 10 fig, 2 tab, 8 ref.

Descriptors: *Pulp wastes, *Bleaching wastes, *Color, *Waste water treatment, Water pollution control, Water quality control, Economic efficiency, *Costs, Lime, *Activated carbon, *Coagulation, Aluminum, Chlorine, Oxygen, Chlorination, Effluents, Adsorption, Operating costs, Capital costs, Sludge treatment, Dewatering, Reviews.
Identifiers: Aluminum sulfate, Oxygen bleaching.

Over 60 literature reports on effluent treatment for color removal were studied to assess the status of practices in the pulp and paper industry. Lime treatment seems to be the best established method, achieving 65% color removal from bleached kraft effluents at a capital cost of $1 to 1.5 million and operating costs of $1.0-1.5 per ton of pulp. Coagulation with alum gives similar results at similar costs, but requires improved systems for handling the sludge formed which is difficult to dewater. Adsorption on activated carbon accomplishes complete color removal but at high operating costs. Switching from chlorine to oxygen bleaching of kraft pulp would reduce effluent color by 60-65% and save ca. $2 per ton of

pulp in chemical costs. Capital costs for such a conversion are estimated at $2 million. (Brown-IPC)

POLLUTION CONTROL BY RECYCLING EFFLUENT,
Kimberly-Clark of Canada Ltd., Huntsville (Ontario).
R. F. Gropp.
Canadian Pulp and Paper Association, Technical Section, Proceedings, No 1, p D8-D11, Aug 1973. 4 fig, 2 ref.

Descriptors: Treatment facilities, *Pulp wastes, *Canada, *Flocculation, *Coagulation, Chemical precipitation, *Filtration, Lime, Magnesium hydroxide, *Waste water treatment, Waste water disposal, Water pollution control, Recirculated water, *Water reuse, Discharge(Water), Sewers, Pulp and paper industry, Solid wastes, Suspended solids, Industrial wastes, Waste treatment, *Recycling.
Identifiers: Tissue papers, Savealls, White water, Screen rejects, Stock pulp chests.

At Huntsville, Ontario, a tissue mill has been designed to meet stringent effluent quality regulations. A high proportion of the white water (paper machine waste water) is treated in a large disk-type saveall, using magnesium hydroxide as primary flocculant, and is then recycled to the tissue paper manufacturing process. A smaller portion is bled from the system, subjected to primary clarification, then passed through polishing basins and percolation beds before discharge to the relatively small river. Stock chests are designed for minimum fiber loss during paper grade changes. Screen rejects are thickened and treated as garbage, rather than flushed to U-drains. A flowchart of the water treatment cycle is given, along with a chemical description of Kimberly-Clark's patented lime process for precipitation of magnesium hydroxide. (Brown-IPC)

WATER REUSE IN PROTEIN FEED PROCESS UTILIZING LUMBER MILL WASTES,
Arizona Univ., Tucson.
D. H. White, and D. T. Simmons.
In: Proceedings of the National Conference on Complete Water Reuse (sponsored by the American Institute of Chemical Engineers and the U.S. Environmental Protection Agency), April 23-27, 1973. p 488-496 (1973). 11 fig, 2 tab, 12 ref.

Descriptors: *Water reuse, *Industrial water, *Saw mills, *Moisture availability, *Wood wastes, *Hydrolysis, *Fermentation, *Proteins, Feeds, Waste disposal, Solid wastes, Air pollution, Incineration, Water circulation, Cooling water, Cooling towers, Water consumption(Except consumptive use), Freshwater, Yeasts, Economic feasibility, United States, Moisture content.
Identifiers: Hydrolysis industry, Wood hydrolysis, Sawmill residues.

About 40 million tons of sawmill residues are produced annually in the U.S.A., of which 70% originate in the West and South where economic conditions may favor the development of a billion-dollar hydrolysis-fermentation industry for production of synthetic feed protein via yeast cultivation. This would greatly alleviate the need for wood waste disposal by incineration (and the attendant air pollution problems). Although the hydrolysis industry consumes large volumes of water, most of this can be recycled. In theory, the wood's natural moisture content could supply more water than would be needed for sawmill steam generation, but cooling towers may require some freshwater intake. (Brown-IPC)

AN OVERVIEW OF WATER REUSE POTENTIAL IN PULP AND PAPER MANUFACTURING,
Wapora, Inc., Washington, D.C.
H. W. Gehm.
In: Proceedings of the National Conference on Complete Water Reuse (sponsored by the American Institute of Chemical Engineers and the U.S. Environmental Protection Agency), April 23-27, 1973. p 458-462 (1973). 33 ref.

Descriptors: *Water consumption, *Industrial water, *Pollution abatement, *Recycled water, *Water reuse, Pulp and paper industry, *Pulp wastes, *Waste water treatment, Waste treatment, Effluents, Discharge(Water), Bleaching wastes, Water resources, Water management(Applied), United States.
Identifiers: Kraft mills, Resource sharing, Integrated corporations, Multiproduct enterprises.

The U.S. pulp and paper industry has made considerable progress in recycling its process waters, especially in kraft pulp and paper mills and bleach plants. Although further reductions in water usage and effluent volumes are being researched and developed, the limits of this approach are near. Future advances will more likely concentrate on external treatments for water reclamation. Several mills of a complex (integrated) enterprise manufacturing different products may have to share the available water resources, e.g., by reusing treated water from one operation in another in which quality requirements are less stringent. Centralized water and effluent treatment for such complex corporations is an attractive alternative solution. (Brown-IPC)

THE PULP AND PAPER INDUSTRY AND THE ENVIRONMENT,
British Paper and Board Makers' Association, London (England).
J. S. Evans.
International Conference on Plastics and Paper, London, May 22-23 1973, Paper No. 4.2, 2 p, Plastics Institute, London.

Descriptors: *Europe, *Pulp and paper industry, *Pulp wastes, *Water pollution control, *Costs, Capital costs, Operating costs, Pollution abatement, Water quality control, Water quality standards, Legislation, Regulation, Economics, Industrial water, Water consumption(Except consumptive use), Water resources, Water management, Effluents, Toxicity, Biodegradation, Waste water disposal, Waste disposal, Fresh water, Treatment facilities.
Identifiers: OECD Nations.

Total water consumption by the pulp and paper industries of all OECD countries was estimated at 21,842,000,000 cu m in 1970. Modern technology can design new mills requiring only 10-20% of this water quantity. Since the elimination of Hg and other toxic components from the papermaking process, most effluent constituents do not differ radically from natural materials (lignin, carbohydrates, and organic acids) and are fairly readily biodegraded. Their treatment is largely a matter of economics. Legislation on water pollution control follows two different approaches. In Finland, Spain, Sweden, and Switzerland, the basic principle is to maintain or restore natural water quality. Other countries compromise between various end-uses of water resources, including industrial development and waste disposal. In the U.K., the paper industry uses ca. 287,000,000 gal/day of freshwater. Between 1965 and 1970, British paper and board manufacturers have spent 6.5 million pound sterling on effluent-treatment facili plus 6.2 million pound sterling on operating co Capital investments in 1971/72 ran to 1.8 mil pounds, and the investment needed to meet legislative standards during 1973-1977 are j jected at 17.5 million pound sterling. AN EXPLANATORY WORK ON THE OXID TION OF AMMONIA BY POTASSIUM FE RATE (VI),
Ohio State Univ., Columbus. Dept. of Chemic Engineering.
A. W. Strong.
Available from the National Technical Informa tion Service as PB-231 873; $5.25 in paper cop $1.45 in microfiche. M Sc Thesis, 1973. 38 p, fig, 13 tab, 15 ref, append. OWRR A-031-OHIO(2

Descriptors: *Waste water treatment, *Oxidation *Ammonia, Nitrogen, Chemical reactions, Sewag treatment.
Identifiers: *Potassium ferrate.

Ferrate (VI) not only can be used to oxidize th ammonia but can also oxidize organic compounds serve as a bactericide, and could coagulat phosphates with the ferric hydroxide formed dur ing reaction. The rate of conversion of ammoni was substantially increased with increasing tem perature in the range studies. There was little con version of ammonia below a pH of 7. Reaction run without buffer took longer than those run with buffers. The approach used for ammonia removal did not prove practical. The only means by which it could become useful would be through either the use of a catalyst to promote ammonia reaction or through the continuous addition of ferrate (VI) to hold a constant concentration level. Sulfate ion did not effect the decomposition rate of ferrate (VI). (Knapp-USGS)

PRODUCTION FUNCTION THEORY FOR USE IN OPTIMAL PLANNING DECISIONS,
Kentucky Univ., Lexington.
J. R. Marsden, D. E. Pingry, and A. Whinston.
In: Proceedings of the Midwest AIDS Conference, April 21-22, 1972, Cincinnati, Ohio, 1972. 4 p, 2 ref. OWRR A-024-IND(3).

Descriptors: *Planning, *Waste water treatment, *Decision making, *Optimum development plans, Capital, Optimization, Variable costs.
Identifiers: *Production functions.

The approach considered uses engineering relationships within the context of economic analysis attempting to derive theoretical analytic production and cost functions. Given as complete specification of the production process, a production frontier of maximal output levels obtainable from differing input combinations is derivable. This production frontier forms the basis for the development of a 'production function' for the process. No information is contained in the production function that is not available directly from the full specification of the production process. The production function is thus treated as a convenient intermediate step in the determination of a general 'least-total-cost' relationship. This relationship can well serve the basis for optimum future planning decisions. (Wiersma-Purdue)

APPLICATION OF A LARGE SCALE NON-LINEAR PROGRAMMING PROBLEM TO POLLUTION CONTROL,
California Univ., Los Angeles.
G. W. Graves, D. E. Pingry, and A. Whinston.
In: AFIPS Conference Proceedings, Vol 39, p 123-134, 1971. 2 fig, 2 tab, 11 ref. OWRR B-020-IND(23).

Descriptors: *Water pollution treatment, *Pollution abatement, *Water quality control, *Flow augmentation, Algoriths, River basin development, *Dissolved oxygen, Mathematical studies, Water quality standards.
Identifiers: *Non-linear programming, By-pass piping, White river basin.

The procedure used in constructing the river basin model is to divide the river into small sections and place constraints on the water quality at the end of these sections. In all cases, the water quality criteria used is the level of dissolved oxygen concentration. The level of dissolved oxygen at the end of the river sections is calculated using the Streeter-Phelps equations or some later variation. Cost functions are then estimated and a mathematical programming problem of the following form is solved: Minimize: The total cost of pollution abatement structures, Subject to: Water quality in each section of the river better than some given set of quality goals. A model of a river basin of the form suggested is presented. Simultaneously considered are the following treatment methods: (1) Flow augmentation, (2) By-pass piping, and (3) Treatment plant (regional and at polluter). Also shown is that linear constraints, consistent with the linear programming technique, are not appropriate when these treatment alternatives are considered. Therefore, a nonlinear programming algorithm is used. Some details of the algorithm are discussed and the model applied to the White River Basin in Indiana. (Wiersma-Purdue)

APPLICATION OF NONLINEAR PROGRAMMING TO WATER QUALITY CONTROL,
Kentucky Univ., Lexington.
J. R. Marsden, D. E. Pingry, and A. Whinston.
Water, Air, and Soil Pollution, Vol 2, p 155-169, 1973. 3 fig, 5 tab, 6 ref. OWRR A-024-IND(7).

Descriptors: *Water quality control, *Optimization, *Model studies, *Water pollution treatment, *Water pollution control, Mathematical models, Economics, Flow augmentation, Cooling towers, Thermal, Water temperature, Biochemical oxygen demand.
Identifiers: By-pass piping, Regional treatment plants, Planning model, West Fork White River.

Planning the design of an efficient waste treatment system can be aided through the use of mathematical models and optimization theory. This point of view is illustrated by formulating a model and applying it to a specific river basin. While the models give useful insights, limitations remain inherent in the models. Suggestions and comments are made for resolving some of the resulting economic questions.

UTILIZATION OF FIBROUS WASTES AS SOURCES OF NUTRIENTS,
North Carolina State Univ., Raleigh. Dept. of Animal Science.
J. M. Leatherwood.
Available from the National Technical Information Service as PB-223 625, $3.00 in paper copy, $1.45 in microfiche. Environmental Protection Agency, Report EPA-670/2-73-090, 1973. 16 p, 4 tab, 3 ref. EPA EP-00274.

Descriptors: *Waste water treatment, *Nutrients, *Cellulose, Fermentation, Anaerobic bacteria, Biodegradation, Hydrolysis, Feeds, Enzymes, Biological treatment, Fungi.
Identifiers: *Ruminococcus albus, *Trichoderma viride.

To develop a biological system for conversion of natural cellulosic wastes to products utilizable as animal nutrients, Trichoderma viride, one of the most potent cellulolytic fungi, was introduced to long-term incubations of cotton linters with culture filtrates of T. viride resulting in the degradation of about one-half of the cellulose. An experiment was designed to yield nutrients from newsprint digested by enzymes in T. viride culture in a natural silo-type of anaerobic fermentation. The newsprint was unprinted and had been shredded in a hammer mill equipped with a large mesh screen. Cellulolytic activity was determined in 0.1 ml of the supernatant liquid of both the cultures prior to addition to the fermenter and the liquid samples and product collected from the fermenter. Cultures of T. viride varied in the amount of cellulolytic activity in the supernatant liquid. Sequential addition of cultures and newsprint approximately on a three-week interval was accepted as the best alternative plan. Subsequently 200 ml samples of fermenter liquid were collected for analyses. Soluble carbohydrates and proteins did not accumulate in the fermenter liquid as had been anticipated. (Jones-Wisconsin)

SELECTION AND OPERATION OF SMALL WASTEWATER TREATMENT FACILITIES - TRAINING MANUAL.
Environmental Protection Agency, Cincinnati, Ohio. Office of Water Program Operations.
Available from the National Technical Information Service as PB-224 266, $4.25 in paper copy, $1.45 in microfiche. Report No. EPA-430/1-73-005, April 1973. 137 p, 59 fig, 29 tab, 76 ref, 6 plates.

Descriptors: *Waste water treatment, *Treatment facilities, *Training, *Education, Operation and maintenance, Sewage treatment, Aquatic environment, Water pollution effects, Municipal wastes, Industrial wastes, Technology, Septic tanks, Settling basins, Monitoring, Eutrophication, Sampling, Coagulation, Activated carbon, Filtration, Water quality.
Identifiers: *Small waste flows.

Comprehensive information is presented on small wastewater treatment facilities which will be of great value as an adjunct to classroom presentations. The reference outlines have been selected and developed with a goal of providing the student with a fund of the best available current knowledge pertinent to the subject. All sewage treatment is accomplished by application of the natural phenomena of biological, physical, and chemical processes, which are described. Subjects covered include the freshwater environment, effects of pollution on aquatic life, water pollution by domestic wastes, and sources and effects of industrial wastes. Treatment methods for small flows include septic tanks, small treatment systems (package plants), advanced waste treatment plants for small waste flows, sewage lagoons, and sewage lagoon operation and maintenance. Surveillance and operations controls include general needs, reports and control measurements, control tests and sampling for operating wastewater treatment plants, sampling in water quality studies, and operational inspections. HYGIENIC FEATURES OF SILICATE ANTICORROSION COATINGS FOR WATER RESERVOIRS, (IN RUSSIAN),
Sanitarno-Gigienicheskii Meditsinskii Institut, Leningrad (USSR).
A. G. Ilichkina.
Gig Sanit. Vol 37, No 2, p 35-38. 1972. (English summary).
Identifiers: *Anti-corrosion coatings, Chlorine, Corrosion, Reservoirs, Silicates, *Potable water, *Public health, *Water treatment, Water pollution treatment, Water quality standards.

Anticorrosion coatings had a negative effect on drinking water quality. When reservoir walls coated with SNZhS (average modular Na liquid glass) and ZhS-80 (brand name of liquid glass) were disinfected with chloramin at a dose of 20 mg Cl/l and washed twice with water in the course of 2 days, the quality of the drinking water met the requirements of the 'Drinking Water' standard. VKZhS (highly modular K liquid glass) was unfit for use, because after its contact with Cl the Fe of the coating passed into the water and produced flocculation which persisted even after filtration of water.--Copyright 1973, Biological Abstracts, Inc.

ECONOMIC STUDY OF THE EFFECT OF MUNICIPAL SEWER SURCHARGES ON INDUSTRIAL WASTES AND WATER USAGE,
Clemson Univ., S.C. Dept. of Economics.
R. D. Elliott.
Water Resources Research, Vol 9, No 5, p 1121-1131, October, 1973. 5 fig, 3 tab, 9 ref.

Descriptors: *Regression analysis, *Non-structural alternatives, *Industrial wastes, *Industrial water, Wastes, Biochemical oxygen demand, Suspended solids, *Pollution taxes(Charges).
Identifiers: *Surcharges(Industrial wastes).

In an effort to control the discharge of industrial wastes, many cities have levied surcharges on industrial wastes having a strength greater than some specified minimum level of biochemical oxygen demand (BOD) or suspended solids (SS). Cities can better evaluate such surcharges by knowing (1) the effect of surcharges on the quantity of waste discharged by firms into municipal systems and (2) the effect of surcharges on the quantity of water demanded by firms from municipal systems. Regression equations, based on data from 34 cities using surcharges, indicate a negative relationship between amount and prices. A surcharge of $27.00/1000 lbs. of BOD would cause a 45% reduction in the pounds of BOD per $1000 value added discharged by industry and 42% reduction in industrial water consumption per $1000 value added. At this average surcharge, a 10% increase in the surcharge would result in an 8% decrease in wastes and a 6% decrease in water usage. Results also indicate that both industrial water usage and waste loads have increased directly with wage rates in the recent past. (Hoffman-North Carolina)

POLLUTION, PRODUCTION, AND COMPENSATION,
Oak Ridge National Lab., Tenn.
C. H. Patrick.
Available from the National Technical Information Service as CONF-73-0423-3, $3.00 in paper copy, $1.45 in microfiche. (1973). 15 p.

Descriptors: *Theoretical analysis, *Air pollution, *Water pollution, *Pollutants, *Cost allocation, Pollution abatement, Abatement, Industrial production, Industrial wastes, Costs, Cost sharing, Coal mines, Cost repayment.
Identifiers: Pollution, *External diseconomies, Coal industry.

The relationship between pollution and production is defined, and the effects of pollution limitation on production and the question of consumption are theoretically examined. Analysis shows that while individuals select desirable and undesirable results of activities to maximize their personal preference function, pollution problems arise when private economic activities impose costs upon a third person who does not share direct benefits of the activities. External diseconomies thus exist when social costs exceed private costs. Pollution, as a by-product of one firm, imposes higher costs on a second firm hence reducing its output. Therefore, prices of the two do not optimally allocate scarce resources as they would without pollution. Compensation is considered from the standpoint of the industry's ability to compensate firms affected by pollution restrictions. The coal industry is concerned that production will be cut as a result of pollution restrictions so this theoretical framework is applied to determine possible alternative levels at which coal could be produced with restrictions. Factors considered include demand and who determines output restrictions-the coal industry or government. (Grden-North Carolina)

Many people are losing jobs when plants shut down because companies are unable or unwilling to pay the cost of pollution-control equipment. American factories and powerplants are still belching poisonous gases, dust and wastes. While Congress is moving to enact tough, biting pollution control legislation, the administration is complaining of the 'useless hardships that are being thrust upon industry and workers by that process.' 160 iron foundries have stopped operation within the past three years as well as 59 other plants attributed primarily to environmental pressures. Then, Secretary of Commerce, Maurice Stans, said somewhere between $5 and $10 billion in public and private construction is being held up by environmental actions. Also, the Atomic Energy Commission (AEC) was ordered in court to broaden its consideration of environmental factors in licensing nuclear powerplants, affecting more then 100 plants operating or under construction. Because of these stricter regulations and environmental standards, higher cost will be passed on to consumers, either in rates or in taxes. One en-

onmentalist suggested a change in pricing elec-city from that in which the big consumer gets a wer rate to a social policy of reduced consump-n. (Silber-Florida)

HE INTERLAKE AFFAIR,
sinessmen for the Public Interest, Washington, C.
Polikoff.
ashington Monthly, Vol 3, No 1, p 7-16, March 71.

escriptors: *Lake Michigan, *Industrial wastes, Vater pollution sources, *Legal aspects, *Water w, Judicial decisions, Chemical wastes, Waste-ater discharge, Oily wastes, Solid wastes, Pollu-nts, Contaminants(Water), Legislation, Naviga-e waters, Administrative agencies, Federal vernment, Water policy, Water pollution, Waste mp, Public health, Impaired water quality, Pol-tant identification, Water pollution effects.

June, 1968, a steelworker, crossing the Little alumet River on his way to work saw a pipe, ex-nding from the steelplant, spewing black scharge into the river. He telephoned the U.S. oast Guard to report what he saw. So began the ght to save Lake Michigan. The steel company is terlake, Inc. Interlake prides itself on being a ader in the fight against pollution. The Coast uard was responsible for the enforcing the 1899 efuse Act which prohibits dumping of refuse in avigable waters. Analysis of the discharge owed the oil and mill scale were spewing from e outfall. Discharging either substance violated e Refuse Act. Interlake, after unsuccessfully eading for dismissal, changed its plea to nolo ontendere and entered affidavits stating that the roblem had been corrected by structural im-rovements and that the company was in the midst a $30 million pollution abatement program. espite this the court found Interlake guilty and ned it the minimum $500. Interlake has continued olluting the water in the same manner and with e same pollutants. The ultimate outcome was in-icated in a letter by then Attorney General John itchell that the Justice Department was not going 'vigorously enforce' the Refuse Act as Con-ress had mandated. OLLUTION SANCTIONS--NEW ALTERNA-IVES TO CIVIL LIABILITY,
ood and Agriculture Organization of the United lations, Rome (Italy). Environment Law.
. H. Sand.
ournal of Business Law, p 147-154, April 1973. 45 ef.

escriptors: *Civil law, *Penalties(Legal), Pollution abatement, Constraints, Pollution axes(Charges), Damages, Third party effects, osts, Contracts.
dentifiers: *Tort liability, Japan, Germany, weden.

While liability suits are used most frequently to deal with pollution, they are not the only nor necessarily best solution. Pollution sanctions attempt to serve a number of goals: equitable distribution of losses, including external diseconomies; effective reparation of the damages done at minimum overhead costs and prevention of future damages. Alternative remedies examined include emission charges, abatement agreements and criminal sanctions. To determine the best method or combination of methods that could lead to some desired outcome, it is also essential to improve the comparative research methodology being used to examine these alternatives. Existing methods must be improved to assure comparisons of alternatives and to assure that combinations of sanctions are evaluated. It must be also recognized that unilateral changes in pollution sanctions create second-best problems if other legal entities do not coordinate their own sanctions. Thus research must also consider alternatives which encompass international as well as national pollution sanctions or substituted performance by international agencies where states fail to take the required action. POSSIBLE IMPACT OF COSTS OF SELECTED POLLUTION CONTROL EQUIPMENT ON THE ELECTRIC UTILITY INDUSTRY AND CERTAIN POWER INTENSIVE CONSUMER INDUSTRIES. EXECUTIVE SUMMARY.
National Economic Research Associates, Inc., New York.
Available from the National Technical Information Service as PB207168 $3.00 in paper copy, $1.45 in microfiche. Council on Environmental Quality, Washington, D.C. January 1972. 11p.

Descriptors: *Economic impact, *Pollution abatement, *Costs, *Electric power industry, Industries, Regulation, Thermal pollution, Air pollution, Cooling towers, Equipment, Water pollution control, Employment.
Identifiers: Retrofitting.

A summarized study considers the impacts of pollution controls on the electric utility industry. A brief examination is first made of the demand-supply relationships in the industry, characteristics peculiar to electrical generation, sale and use of electricity, and regulating aspects of the industry. Because the industry is extensively regulated, cost impacts of any changes in technology will not quickly penetrate the market. A number of assumptions are made to estimate the costs of pollution control techniques and their impacts on society. Techniques examined include the burning of low sulfur coal and wet limestone scrubbers to control air pollution and mechanical draft cooling towers to control thermal pollution. Assumptions are made as to which alternative technique each generating plant will use, to the period over which the investment will be made and to operating and capital costs under each technique EPA cost estimates. Under these assumptions the price of electricity may rise by 7% by 1976. There would not, however, appear to be any significant dislocation as a result either in the electrical generating industry of industry in general. Even with some dislocation in the six most energy intensive industries employment impacts will be minimal. (Schroeder-Wisconsin)
W74-07140

METHOD OF AND APPARATUS FOR THE RECOVERY OF OIL FROM WATER,
Col-Mont Corp., Butte, Mont. (assignee).
C. O. Bunn.
U.S. Patent No 3,783,129, 8 p, 6 fig, 1 ref; Official Gazette of the United States Patent Office, Vol 918, No 1, p 419, January 1, 1974.

Descriptors: *Patents, *Pollution abatement, *Oil spills, *Oil pollution, Water pollution control, Water quality control, Equipment, Skimming, *Separation techniques, *Distillation.

A recovery vessel is directed through an area of oil spillage where oil and water are directed into special openings in the vessel. The oil and water are directed over and through a bed of matrix material carried by a conveyor. The oil is sorbed by the matrix material and the cleaned water gravitates through the conveyor to the water sump below the conveyor. The separation of the oil from the matrix material can be accomplished by distillation equipment housed within the vessel. The matrix is composed of finely divided coal and polyethylene and a sufficient amount of water and/or an organic solvent to facilitate the intimate mixing of coal and polyethylene. The organic solvent is used to reduce the temperature required to cause the plastic to develop the required binding characteristic which forms the porous matrix. (Sinha - OEIS)

SAFETY DEVICE AGAINST LEAKAGE FROM SHIPS, ESPECIALLY TANKERS,
Svenska Entreprenad A.B. Sentab, Stockholm. (assignee).
A. L. Backstrom.
U.S. Patent No 3,785,321, 3 p, 11 fig, 8 ref; Official Gazette of the United States Patent Office, Vol 918, No 3, p 1014, January 15, 1974.

Descriptors: *Patents, *Oil pollution, *Oil spills, *Leakage, *Pollution abatement, *Water pollution control, Water quality control, Ships.
Identifiers: Tankers, Gravity separation.

A ship such as a tanker for the transport of oil and oil products, is provided with a safety device to prevent leakage of the product being stored or transported. The safety device comprises a shield which is flexible and extends along the ship's hull in spaced relation so as to define vertically extending narrow spaces at the inner side of the hull. The narrow spaces open in the bottom region of the ship and shall contain a liquid having the same or a higher density than the transported product. As an example the product may rest on a bed of water at the ship's bottom, water also being present in the said narrow spaces. If, for instance, due to a collision a hole is formed in the ship's hull, the liquid level in the actual narrow spaces will be adapted after the sea level whereby the level of the product in the cargo space takes a balanced position in

which leakage of the product is prevented. As an alternative to water the transported product proper may be contained in the narrow spaces in which case a small leakage may occur if the hull of the ship becomes damaged. (Sinha - OEIS)
W74-07205

OIL RECLAIMING DEVICE FOR REMOVING OIL FROM THE SURFACE OF WATER,
Craftmaster, Inc., Williamsport, Pa. (assignee).
R. P. Smith, Jr.
U.S. Patent No 3,785,496, 3 p, 4 fig, 7 ref; Official Gazette of the United States Patent Office, Vol 918, No 3, p 1058, January 15, 1974.

Descriptors: *Patents, *Oil spills, *Oil pollution, *Pollution abatement, Water quality control, Water pollution control, *Skimming, *Separation techniques, Equipment.

An apparatus for removing oil slicks from the surface of the water includes two independently pivotable booms connected together to form a V. A paddle wheel is connected to the two booms across the open end of the V for skimming the oil off the surface of the water and forcing the oil towards the apex of the V. A sump is located at the apex of the V for collecting the oil forced to the apex of the V by the paddle wheel. A flexible stabilizer bar is connected between the two booms for stabilizing the booms and limiting the maximum amount that the booms may pivot with respect to each other. (Sinha - OEIS)
W74-07206

CONTAINING AND REMOVING OIL SPILLS ON WATER,
Phillips Petroleum Co., Bartlesville, Okla. (assignee).
A. C. Pitchford.
U.S. Patent No 3,785,972, 2 p, 1 tab, 3 ref; Official Gazette of the United States Patent Office, Vol 918, No 3, p 1173, January 15, 1974.

Descriptors: *Patents, *Oil spills, *Oil pollution, *Pollution abatement, Water pollution control, Water quality control, *Separation techniques, *Skimming.

A method is described to contain and then remove oil spills from the surface of a body of water by raising the liquification temperature of the oil to 50-80 deg F above the temperature of the Water. A mixture of wax and a volatile, inflammable substance is applied to the oil spill in sufficient amount to provide on ignition the amount of heat necessary to fuse the wax. The solidified mass may then be removed from the surface. The inflammable substance is selected from hydrocarbons in the kerosene boiling range. Waxes suitable for use include any low temperature melting wax such as the paraffinic waxes, naturally occuring ozocerite, carnauba wax, C12 to C25 alcohols and fatty acids such as stearic or palmitic. Additions of wax in the order of 5 to 50 percent by weight of the oil are effective. A range of 10 to 15 percent by weight of wax added to the oil should be used. (Sinha - OEIS)
W74-07208

METHOD AND APPARATUS FOR COLLECTING A FLOATING LIQUID,
W. P. Kirk, and D. W. Reynolds.
U.S. Patent No 3,788,079, 5 p, 9 fig, 5 ref; Official Gazette of the United States Patent Office, Vol 918, No 5, p 1743, January 29, 1974.

Descriptors: *Patents, *Oil spills, *Pollution abatement, *Oil pollution, Water quality control, Water pollution control, Equipment, *Separation techniques.

Methods and equipment are described for rapid deployment of a recovery membrane sheet and for subsequently closing or collapsing the sheet to concentrate the oil or unwanted floating liquid into a compact mass. The sheet with weighted periphery is delivered to the site in a compact, folded condition. The edges of the sheet fall and submerge into the surface, confining a quantity of the oil or other unwanted liquid. Further submergence of the peripheral edges is then accompanied by radially inward movements to concentrate the confined substance into a compact mass. The compact mass is retained for subsequent pumping into a receiver vessel. (Sinha-OEIS)
W74-07215

METHOD FOR THE ELIMINATION AND POSSIBLE RECOVERY OF THE FLOATING POLLUTING SUBSTANCES, MINERAL OILS IN PARTICULAR, FROM SHEETS OF WATER AND BOAT FITTED TO THIS AIM,
A. L. deAngelis.
U. S. Patent No 3,788,481, 3 p, 5 fig, 5 ref; Official Gazette of the United States Patent Office, Vol 918, No 5, p 1850, January 29, 1974.

Descriptors: *Patents, *Oil pollution, *Oil spills, *Pollution abatement, Water pollution control, Water quality control, Boats, *Separation techniques, Skimming.

A boat is furnished with one or more chambers having openings to admit water with floating oil layers. Within the chamber where it is sheltered from the action of wind or waves separation takes place. A funnel is submerged at an adjustable distance from the liquid to be removed. A pump sucks the liquid from the funnel(s) and conveys it to a tank where it is decanted. The separated water is discharged into the sea, while the oil is conveyed to another tank for temporary storage. The funnel(s) is connected with a float, the device moves vertically according to the greater or minor boat draft. Vertical slides are arranged at the sides of the funnel to facilitate the proper running of the device lateral shift. (Sinha-OEIS)
W74-07220

METHOD OF REMOVING OIL SPILLS,
Anheuser-Busch, Inc., St. Louis, Mo. Assignee.
J. Teng, J. M. Lucas, and R. E. Pyler.
U. S. Patent No 3,788,984, 3 p, 1 tab, 6 ref; Official Gazette of the United States Patent Office, Vol 918, No 5, p 1972, January 29, 1974.

Descriptors: *Patents, *Oil spills, *Oil pollution, *Pollution abatement, Water quality control, Water pollution control, Sawdust, Adsorption, *Separation techniques.
Identifiers: Carbohydrate fatty acid ester, Cellulose acetate, Cottonseed hulls, Cellulose ester.

A method is described for removing spilled oil from water surfaces without further injuring the environment. A carbohydrate fatty acid ester in powder, fibrous, or granule form is applied to the oil covered surface. The preferred ingredient is cellulose acetate. The additive is non-toxic, biodegradable, water insoluble, and is not degraded by the acids in petroleum fuels. The additive is sprinkled on the surface of the oil coated water and after absorbing many times its weight in oil is easily removed. The picked up oil is easily removed from the cellulose acetate and up to 95% recovery of spilled oil is possible. The cellulose acetate also can be reused. Cottonseed hulls and sawdust as the starting cellulose material are desirable because of low cost and the enhanced oil absorbing character of the resulting acetate. (Sinha-OEIS)
W74-07222

APPARATUS FOR REMOVING SURFACE POLLUTANTS FROM WATER AND OTHER LIQUIDS,
Societe Grenobloise d'Etudes et d'Applications Hydrauliques (France). Assignee.
B. Valibouse, and J. Pichon.
U. S. Patent No 3,789,988, 5 p, 9 fig, 5 ref, Official Gazette of the United States Patent Office, Vol 919, No 1, p 159, February 5, 1974.

Descriptors: *Patents, *Flotsam, *Oil pollution, *Oil spills, *Pollution abatement, Water pollution control, Water quality control, Equipment, *Separation techniques.

Surface pollutants are collected by utilizing the effect of the relative speed of displacement of water and the floating pollutant. These are led into one or more cyclone chambers through a tangential inlet so as to cause within the chamber, a rotation which creates a whirlpool area in which the lighter pollutant is concentrated. The pollutant is extracted through a fixed pipe whose axis is coincident with that of the cyclone chamber. The centrifuged water, freed of the pollutants is removed through the tip of the cyclone chamber. The equipment may be towed or pushed by a ship, or mounted on or built into a ship or a floating carrier, or placed in a stable position in a river. (Sinha-OEIS)

PETROLEUM REFINERY EFFLUENT REGULATIONS AND GUIDELINES.
Environment Canada Environmental Protection Service Regulations, Codes and Protocols Report EPS 1-WP-74-1 January, 1974. 29 p. (Text also in French).

Descriptors: *Oil pollution, *Water quality standards, *Regulation, Liquid wastes, Effluents, *Oil industry, Oil wastes, Toxicity, *Canada, Quality control, Oil, Phenols, Sulfides, Hydrogen ion concentration, Suspended load, Ammonia, Cooling water.

As of November 1973, regulations respecting deleterious substances in liquid effluents from petroleum refineries were annexed to the Canadian Fisheries Act. Specific substances included under these regulations include oil and grease, phenols, sulfide, ammonia nitrogen, total suspended matter, and any substance capable of altering the pH of liquid effluent or once-through cooling water. Simultaneously issued by the Department of the Environment were guidelines respecting acute toxicity of liquid effluents from petroleum refineries and the quality of liquid effluents from existing petroleum refineries. Explanatory notes regarding the regulations and both guideline criteria are included. (Sandoski-Franklin)

W AFFECTING THE QUALITY OF THE ARINE ENVIRONMENT,
A. Clingan, Jr.
ami Law Review, Vol 26, No 1, p 223-254, 1971.
148 ref.

escriptors: *Water quality control, *Oceans, egislation, *International law, Legal aspects, astes, Oil pollution, Heat, Nutrients, Sediments, deral government, Federal Water Pollution ntrol Act, Rivers and Harbors Act, State vernments, Florida, Minnesota, Maine, Water nagement(Applied).

e author reviews some of the current ap-oaches to the solution of water pollution oblems, particularly as they affect the oceans, in der to create a more coherent understanding of e adequacies and shortcomings of present legal medies. In order to show the great breadth of the oblems involved in the study of marine pollution e oceans are examined as a depository of waste, rticularly in terms of oil, toxic substances, heat, trients, and sediments. The discussion of na-onal regulation of marine pollution is an examina-on of several major enactments, including the ational Environmental Policy Act, the Federal ater Pollution Control Act (as amended), and the ivers and Harbors Act of 1899. In addition the ovisions of certain pieces of typical state legisla-on in Florida, Minnesota, and Maine are ex-mined to shed light on the operation of federal w. The impacts of international agreements on tional law, both in general and in terms of ocean mping, are discussed. (Widman-Florida)

Identifiers: *Sorbents, *Oil skimmer, *Polyurethane foam, *Oil spill recovery, Hay blower, Chain-Link belts, Recycled sorbent.

A system has been developed for recovering spilled oil from water surfaces under a wide variety of environmental conditions and for all types of oils. The system is designed to recover oil at rates up to 9,000 gal./hr. This system is based on the use of polyurethane foam, foamed on the job site, as a sorbent for the spilled oil. The foam is recirculated to increase efficiency and to lower unit costs. Equipment needed includes collection booms, an open-mesh chain-link belt for harvesting the oil-soaked sorbent, and a roller-wringer to remove oil and water from the foam. The foam is initially comminuted and distributed onto the water by means of a hay blower (mulcher), and recycled foam is distributed by an open-throat centrifugal blower. Recovered oil and water are transported to shore in large fabric bags for further treatment prior to disposal. Used foam is disposed of by incineration. (EPA)

Potassium azide and 2-chlor-6-(trichloromethyl) pyridine were evaluated as nitrification inhibitors for anhydrous NH3 field applied on irrigated and nonirrigated Ritzville silt loam and on nonirrigated Naff silt loam in eastern Washington. Formulations of KN3, N-Serve in liquid NH3, or NH3 alone were applied to fallow soil in midsummer at a rate of 90 kg N/ha. Irrigations were 15 cm of water sprinkler applied 1 day or 2 weeks after fer-

tilizer application, and 10 to 15 cm of water each time at 4, 8, and 13 weeks after NH3 application. The NH3 retention zone was sampled for NH+4 and NO-3 periodically through December for the Naff soil and through February for the Ritzville soil. Both KN3 and N-Serve effectively inhibited nitrification of the applied NH3 on nonirrigated Ritzville soil when temperature and soil moisture were favorable for rapid nitrification. However, KN3 was completely ineffective following irrigation or, for the Naff soil, after rainwater penetrated below the retention zone 2 weeks after N application. (Skogerboe-Colorado State)

P. F. Pratt, and D. C. Adriano.
Soil Science Society of America Proceedings, Vol 37, No 2, p 321-322, March-April, 1973. 1 fig, 1 tab, 5 ref.

Descriptors: *Drainage, *Nutrient removal, Nitrogen, Leaching, Denitrification, Crop response, Crop production, *California, *Nitrates.

Nitrate concentrations in the drainage water of the unsaturated zone beneath the soil-root zone were predicted from data for N inputs, N removal in harvested crops, and the drainage volume. Ratios of these predicted values to measured values were related to the volatilization losses or unaccounted-for inputs expressed as a fraction of the excess N defined as the N input minus N removal in harvested crops. Volatilization losses or unaccounted-for inputs were calculated as known inputs minus removal in harvested crops minus that removed from the soil-root system by leaching. (Skogerboe-Colorado State)

RESPONSE OF AQUATIC WEEDS TO LASER RADIATION,
Athens Coll., Ala. Dept. of Biology.
R. W. Couch.

Available from the National Technical Information Service as AD-754 590, $3.00 in paper copy, $1.45 in microfiche. Army Engineer Waterways Experiment Station, Vicksburg, Miss. Aquatic Plant Control Program, Technical Report 2, December 1972. 50 p, 17 fig, 8 tab, 34 ref. DACW01-69-C-0020-P00005.

Descriptors: *Aquatic weed control, *Radiation, Water hyacinth, Mortality, Aquatic plants, Plant growth, Alligatorweed.
Identifiers: *Laser radiation, Duckweed, Water lettuce, Water chestnut.

Results of experiments initiated to determine effect of carbon dioxide-laser energy (10.6 microns) on aquatic weeds, principally water hyacinths, are reported. Growth of water hyacinths and duckweed was inhibited. Irradiation levels as low as 0.3 J/sq cm significantly reduced water hyacinth growth when irradiating individual plants. Under group irradiations, where there was more crowding, shading, etc., radiation levels of the magnitude of 20-50 J/sq cm may be necessary to reduce growth significantly. Carbon dioxide-laser radiation of 10 J/sq cm significantly reduced duckweed growth. Laser energy seems to interfere with normal photosynthetic pigment production in water hyacinths. This interference may be via a mechanism that overloads the photoactivation system responsible for stimulating development of plastids from proplastids. The proper design for a field-study involving the effects of carbon dioxide-laser radiation on water hyacinths has been achieved. Neither alligator weed growth nor water chestnut was measurably inhibited by laser radiation. Inhibition by insect larvae rendered laser effects on water lettuce growth inconclusive. A neodymium laser (1.06 microns wavelength) possibly has potential for inhibiting water hyacinth growth. (Jones-Wisconsin)

LAWS AND REGULATIONS OF POLLUTION AND NAVIGATION IN PACIFIC NORTHWEST ESTUARIES,
Coast Guard, Portland, Oreg.
R. F. Malm.
In: Proceedings 2nd Annual Technical Conference on Estuaries of the Pacific Northwest, March 16-17, 1972. Oregon State Univ., Corvallis (Engineering Experiment Station Circular No 44), p 87-92 (1972).

Descriptors: *Coasts, Law enforcement, *Regulation, *Legislation, Navigation, *Pacific Northwest U.S., Estuaries, Safety, Environment, Water quality control, Boating, Harbors, Water pollution sources
Identifiers: Coast Guard.

The Coast Guard operates within five operational program areas directly related to law enforcement responsibilities. The field level execution of these programs is carried out by shore and floating units. The Coast Guard establishes, maintains, and operates aids to maritime navigation to facilitate navigation and prevent disasters, collisions, and wrecks. Merchant marine safety regulations provide for inspection of merchant vessels, approval of vessel plans and equipment, licensing and certification of merchant marine officers and seamen, documentation of United States' vessels, and containment and holding of hazardous goods in maritime transportation. Laws and regulations aimed at reducing accidents, injuries, and fatalities and improving the environmental quality related to the operation of pleasure craft are enforced. It also enforces laws and regulations designed to safeguard vessels, harbors, ports, and waterfront facilities. The detection, prevention, abatement, and elimination of pollution in the marine environment is the purpose of the laws and regulations enforced within the scope of the marine environmental protection. Protection is provided for large spills but most of the activity is directed towards the multitude of small daily spills. (See also W74-07491) (Jones-Wisconsin)

Descriptors: *Environment, *Environmental effects, *Ecology, *Social aspects, *Biology, Ecosystems, *Economics, Value, Recreation, Welfare(Economics), Water quality, Utilities, Evaluation, Social values.
Identifiers: *Environmental quality, Anthropology.

A state-of-the-art analysis is presented of the many approaches to evaluating environmental quality, with particular reference to water-related environments. Besides the usual engineering, economic, and systems analysis methodology, consideration is given to a wide spectrum of related methodology and concepts, including biological, anthropological, religious, aesthetic, philosophic and general literary writings. A number of approaches are shown to be basically inadequate or logically without merit. It is concluded that the categorization of environmental quality as 'recreation' or 'aesthetic values' is altogether too narrow. Men and especially children have a basic need for contact with natural environment, which need is based upon genetic characteristics. Although there are many different approaches and different points of view regarding environmental quality, the problem of evaluating it is not an insuperable one. Many of the relevant parameters are possible of description and some of them are evaluable in money terms. As regards others, physical standards can be set for achieving given social objectives, such as providing bathing facilities or nature trail walks for a given population. The main objective is that of providing (or maintaining) an outdoor environment suitable for all

enjoyment and psychic health; and other objectives, with their varied expressions, rrogates or supplements, rather than alterna- The basic environmental objective is not a prical imperative but is subject to tradeoffs other social goals and with marginal mic advantages, on terms which are capable termination, although just beginning to be n.

A COMPUTER SIMULATION MODEL FOR FLOOD PLAIN DEVELOPMENT. PART II: MODEL DESCRIPTION AND APPLICATIONS,
INTASA, Menlo Park, Calif.
N. V. Arvanitidis, J. Rosing, D. P. Petropoulos, C. H. Jolissaint, and J. L. Poage.
Available from the National Technical Information Service as AD-765 499; $9.75 in paper copy, $1.45 in microfiche. Final report IWR 73-1, Army Engineer Institute for Water Resources, November 1972. 155 p, 32 fig, 40 tab, 22 ref. DACW07-72-C-0012.

Descriptors: *Flood plains, Management, *Simulation analysis, *Computer models, Economic efficiency, Benefits, *Flood protection, *Land use, Evaluation, Alternative planning, Optimization, Flood damage, Economic rent, Costs, Systems analysis.
Identifiers: *Connecticut River Basin, Allocation models.

Presented is a computer simulation model for the evaluation of national economic efficiency benefits of various levels of flood protection and alternative land use plans. A description of the model, referred to as SIMULATOR, and the results of its application to Reach 13 of the Connecticut River Basin are given. The model has three major components: (1) calculation of flood damages and economic rent components; (2) allocation of land use requirements; and (3) benefit calculation based on locational advantage and damage reduction. The main components describing locational advantages are differences in flood damages, fixed area development cost, site development cost, transportation cost, amenity values and social environment effect. The land use allocation model provides a completely independent optimization procedure. In the SIMULATOR, implicit assumptions are kept to a minimum; data collection efforts are reduced by using results from sensitivity studies. The study area and dummy location are defined so as to limit the scope. Results show that damage reduction benefits to existing and future activities from additional protection through upstream reservoirs account for 80% of total benefits. C. E. Willis, and P. Alkiku.
Water Resources Bulletin, Vol 10, No 2, p 295-303, April 1974. 1 fig, 1 tab, 5 ref.

Descriptors: *Floodproofing, *Economic efficiency, *Alternative planning, *Constraints, *Risks, Flood damage, Estimating, *Benefits, Costs, Probability, Historic floods, Computers, Connecticut River, Mathematical models, Systems analysis.
Identifiers: Net benefits, Partial equilibrium framework, Means, Variances, Flood depth, Density functions, Standard deviation.

Adding flood proofing to other structural and nonstructural flood damage reduction measures widens the choice among existing alternatives for decision makers and consequently enables the possibility of improved expected net benefits from an overall flood damage reduction scheme. But planners are interested in more than just expected values of net benefits; the inherent riskiness (uncertainty) of various alternative plans must be considered as well. By focusing on a constrained (economic) efficiency criterion, a partial equilibrium framework is developed for purposes of estimating means and variances of a measure of net benefits from flood proofing. Both benefits (damage reductions) and flood proofing costs are assumed linear in terms of flood depth, where depth is stochastic with probabilities assigned to various states in accordance with historical data. In addition to treating flood depth in a probabilistic manner, the parameters of the linear benefit and cost functions are assigned density functions permitting the uncertainty to be reflected in the magnitude of the calculated standard deviation. The model is applied to selected communities in the Connecticut River Basin and sample computer results are provided. (Bell-Cornell)

SIMULATION--A TOOL FOR WATER RESOURCE MANAGEMENT,
Hydrocomp, Inc., Palo Alto, Calif.
A. Donigian, Jr., and W. H. Waggy.
Water Resources Bulletin, Vol 10, No 2, p 229-244, April 1974. 12 fig, 12 ref.

Descriptors: *Water quality, *Planning, *Management, *Simulation analysis, *Frequency analysis, Project planning, Damages, *Computer models, Evaluation, Economic efficiency, Digital computers, Probability, Methodology, Optimum development plans, Benefits, Systems analysis.
Identifiers: Economic analysis, Probabilistic analysis.

Water resource projects must be evaluated in economic terms in order to maximize the efficient utilization of the resources available for water resource management. A knowledge of the frequency of occurrence of the events being studied is necessary to fully make use of the advantages of economic evaluation in planning. (Frequency analysis, used widely in flood control and water supply, is here adapted to water quality planning.) Mathematical simulation for project evaluation and management is presented; the process involves the grouping of mathematical expressions into a computer model which duplicates the essential behavior of the water resource system. Presented is the Hydrocomp Simulation Program (HSP), a sophisticated model, for use on digital computers to simulate hydrologic and water quality processes in natural and man-made systems. In the methodology presented, the continuous, dynamic model develops frequency curves for various water quality criteria; damage-frequency curves are derived. The procedure estimates expected damages from the frequency distribution of adverse water quality events. The basic theory of probabilistic (frequency) analysis and the method of economic evaluation are presented, followed by a description of the HSP. Results from the Denver Regional Water Quality Management Study are discussed as an example of the use of frequency analysis for economic evaluation of water quality management. (Bell-Cornell)

A MODEL OF IRRIGATED AGRICULTURE AND REGIONAL DEVELOPMENT IN SOUTHERN ARGENTINA: THE RIO NEGRO BASIN,
Resources for the Future, Inc., Washington, D.C.
D. A. Fitchett.
The Annals of Regional Science, Vol 8, No 1, p 14-34, February 1974. 1 fig, 7 tab, 10 ref.

Descriptors: Agriculture, *Irrigation efficiency, *Linear programming, *Alternative planning, *River basins, *Economic impact, Optimization, Investment, Discount rates, Costs, Water demand, Mathematical models, Systems analysis.
Identifiers: *Argentina(Rio Negro basin), Economic expansion.

Linear programming is used to investigate some of the characteristics of alternative rates of expansion of the irrigated agricultural economy of the Rio Negro basin in southern Argentina over a twenty-year period. While essentially a demand-led model, expansion rates can be imposed and the economic impact of such suboptimizing behavior then compared to the optimal outcomes. Presented is a multiperiod linear programming model in which both farm and social infrastructure investments in a given period have an impact on both output and physical and human resource availabilities in subsequent periods. These activities give rise to time streams of costs and returns which are discounted at alternative discount rates to observe the behavior of the model under differing assumptions as to the proper rate. An analysis of the outcomes of model application indicates that the higher rates of expansion of irrigated agriculture in the basin are excessive and an economically optimal rate would be relatively modest. An attempt is made to relate this outcome to approximate overall labor force and population levels in the Rio Negro basin in the next two decades. (Bell-Cornell)

6B. Evaluation Process

A STUDY OF POTENTIAL INSTITUTIONAL ARRANGEMENTS FOR WATER QUALITY AND WATER RESOURCES (QUANTITY) PLANNING AND MANAGEMENT,
Cornell Univ., Ithaca, N.Y. Water Resources and Marine Sciences Center.
L. B. Dworsky.
Available from the National Technical Information Service as PB-231 557, $10.75 in paper copy, $1.45 in microfiche. Technical Report No. 83, March 1974. 533 p. OWRR C-1196(No 1963) (3). 14-01-0001-1963.

Descriptors: *Institutions, *Water quality control, *Hudson River, River Basin Commissions, Behavior, Political aspects, Water management(Applied), *Water policy, *New York, *Planning, *Management, Water supply.

Potential arrangements for water quality-quantity management institutions to meet future needs are examined. Part 1 describes specifications for water quality and integrating water quality - quantity planning. Part 2 proposes factors (25) for evaluating water management institutions; t the history and describes nine types of in tions, examines eight case studies (Missouri Columbia interagency committees, New Eng River Basin Commission, Hudson River V Commission, new concepts for River Basin ganization, Water Quality Management strate for the Holston River Basin and the Great La and Multistate Regionalism) Conclusions t that institutional development has grown ide out of the nation's experience; and suggest beginning of a focus on selected institutions P describes the Hudson River Basin, examines tempts, management institution designs, pres papers clarifying Hudson Basin problems, concludes with no specific organizational plan rather ideas to help reach a useful decision. P proposes synoptic and incremental w resources planning processes as the method choice, reviews the ideas used to strengthen Corps of Engineers role in water quality plann and assesses the value of ideas developed by research project in relation to PL 92-500, Federal Water Pollution Control Act.

DETERMINANTS OF USE OF WATER-BAS RECREATIONAL FACILITIES,
George Washington Univ., Washington, D Dept. of Economics.
M. A. Holman, and J. T. Bennett.
Water Resources Research, Vol 9, No 5, p 12 1218, October 1973. 3 tab, 10 ref.

Descriptors: *Recreation demand, Reservo *Motivation, *Regression analysis, Econometri Forecasting, Use rates, Recreation, Planni *Texas.
Identifiers: *Reservoir usage, *Dallas-Fort Wo Metropolitan Area.

An econometric model is developed to explain relationships between the use of various facilit at outdoor recreation sites and 15 variables t measure use characteristics of those areas. Eig reservoirs operated by the U.S. Army Corps Engineers in the Dallas-Fort Worth metropolit area were used in the case study. Fifteen separa regressions were computed with each of the me sures of use as the dependent variable. The ste wise regression procedure entered the indepe dent variables one by one in the order of their co tribution to the dependent variable. The variabl were grouped into classes. A relative ranking the importance of each class was based on t number of times the variables in that class enter the regression and the level of significance. order of decreasing importance, the relati rankings were: distance; season (time of year a weekend/weekday); fees; population, a measu of demand potential; facilities provided at the sit and quality of the reservoir environment, as me sured by the degree of commercializatio (Hoffman-North Carolina)

ironmental impact statement, required by ional Environmental Policy Act and state nsiders environmental concerns in plan- and project proposals. Whether this tool ill its potential depends on the develop- procedures to prepare and review the im- tement. Impact assessment is a three-stage (1) identifying environmental, social, and ic conditions possibly changed by the pro- predicting the intensity and spatial dimen- the changes and (3) evaluating costs and of the conditional changes. Assessment s are discussed in relation to these stages. Impacts to be considered and methods of impact identification, including networks, matrices, and project-type checklists, are presented. The degree and dimension of change is difficult to predict due to insufficient information, failure to use existing data, and lack of predictive methods. Questionable projects should be rejected when environmental effects cannot accurately be predicted. Methods for evaluation include aggregate vs. discrete measurement, public review, plan compliance-conflict, cost-benefit analysis, and cost-approval monitoring. Present assessment procedures must be analyzed continuously and new methods sought out and tested. (Grden-North Carolina)

URBAN IMPACTS OF RURAL RESOURCE DEVELOPMENT EXPENDITURES IN THE INTERLAKE AREA OF MANITOBA,
Manitoba Univ., Winnepeg. Agassiz Centre for Water Studies.
J. A. MacMillan, and C-M. Lu.
Research Report No. 7, 1973. 80 p, 4 fig, 24 tab, 6 append.

Descriptors: *Canada, *Economic impact, *Income distribution, *Input-output analysis, *Regional economics, Regional development, Industrial production, Public services, Productivity, Economic prediction, Resource allocation, Farm management, Regional analysis, Resource development, Rural areas, Marketing, Drainage, Land clearing.
Identifiers: Interlake Area(Manitoba-Canada), *Rural development, Trade center development, Economic activity, Resource development alternatives.

Future development of small areas such as the Interlake Area of Manitoba, Canada, is determined by the volume of export sales by area businessmen. The objective of the Interlake Area development plan is to improve income levels and job opportunities. Measurements of flows of economic activity among rural trade areas, trade centers, and metropolitan centers outside the area are therefore needed. If rural trade center development is a priority, alternative strategies must be assessed, including rural resource development programs (drainage, land clearing, and farm management training), upgrading public services such as education, and incentives to industrial location. Alternative methods for assessing strategies and providing estimates for resource development and public service programs are developed. Job and income impacts of resource development alternatives have been determined by input-output tables and employment-output functions. Farm management training has the greatest annual impact on income per unit of government expenditures, followed by land clearing, drainage, and educational expenditures. The methodology does not measure price or efficiency effects of the programs, since the focus is on geographical distribution of short-run program impacts. (Grden-North Carolina)

PUBLIC INVESTMENT CRITERIA: APPLICATION TO A PROJECT IN THE SOURIS RIVER BASIN,
Manitoba Univ., Winnepeg. Agassiz Centre for Water Studies.
E. A. Gardiner.
Research Report No. 8, 1973. 65 p, 5 fig, 22 tab.

Descriptors: *Canada, Economic justification, *Irrigation efficiency, Irrigation effects, *Water utilization, *Land use, *Regional planning, Irrigation districts, Irrigation programs, Irrigation, Economic efficiency, Benefits, Costs, *Investment, Economic feasibility, Economic impact, Economic justification, Cost-benefit analysis, Direct benefits, Employment opportunities, Land resources, Project planning, Resources allocation.
Identifiers: Manitoba(Canada), Coulter-Patterson Project(Manitoba-Canada), *Souris River Basin(Manitoba-Canada), Public investment, Income redistribution.

Public investment criteria are applied to the Coulter-Patterson Project, an irrigation project proposed for southwestern Manitoba's Souris River Basin. Although efficient in that irrigation benefits exceed project construction, operating, and maintenance costs, it is not an effective instrument for an income redistribution objective. It distributes benefits more in favor of wealthy farmers than poorer ones. From the regional view, all direct irrigation benefits accrue to the local region. However, secondary benefits are temporary. In addition, water used in the project must be considered just as if it was a purchased input, since there is an opportunity cost for the large amount of water used in irrigation that can no longer be used elsewhere. Data deficiencies handicapped the study; regional data on net farm income, information about the unemployment situation of the region, and development of regional multipliers are needed. While the study evaluates the income redistribution objective, a multiple-objective framework must exist to approximate trade-offs between objectives and to complement the revenue-expenditure picture. PLANNING AND DEVELOPING WATERFRONT PROPERTY,
Rick Engineering Co., San Diego, Calif.
W. B. Rick.
Urban Land Institute, Washington, D.C. Technical Bulletin 49. June, 1964. 24 p, 4 photo.

Descriptors: *Marinas, *Urbanization, *Harbors, Recreation, *Recreation facilities, *Boating, California, Florida, Economic feasibility, Value, Land use, Planning, Coordination, Financing, Operating costs, Operation and maintenance, Property values.
Identifiers: *Waterfront development, Waterfront property, Real estate, Residential development, Land value, Intergovernmental coordination, Ft. Lauderdale(Fla), San Diego(Calif), Boca Raton(Fla), Newport(Calif), Commercial operation.

Waterfront facilities involve a fixed location with high capital investment in a rapidly changing market situation. Tides, currents, and other water hazards complicate development. Because of the size of the projects and high cost level most recreational waterfront development is assisted or underwritten by government, especially the federal government. River and harbor development is generally viewed from a broad benefit to cost ratio. The role of private capital ranges from leasing and operating on prepared public-owned waterfront to dredging and developing water and land communities. Waterfront real estate not adversely affected by industry or the elements commands premium prices, especially when suitable for recreation use. Selected examples of waterfront development reviewed include Lake San Marcos, a new community developed on 1500 acres of semi-arid lands in San Diego County, California around a formerly unkempt reservoir, Royal Palm Yacht and Country Club, a residential, recreational development just south of Boca Raton, Fla., Newport Shores, a Newport, Calif., residential development of 435 homes on 40 acres on the old Santa Ana River, Bahia Mar Yachting Center, a complete marina development at Ft. Lauderdale, Fla., and Islandia, a marina on Mis-

sion Bay, San Diego, Calif. Commercial marina operation is also examined in detail. (Edwards-North Carolina)

PROGRAM DEVELOPMENT PLAN FOR THE MESA-NEW YORK BIGHT REGIONAL PROJECT.
Westinghouse Oceanic Div., Annapolis, Md.
Available from the National Technical Information Service as COM-73-10756; $6.00 in paper copy, $1.45 in microfiche. Final Report prepared for Office of Marine Resources, September 1, 1972. 358 p, 8 fig, 12 tab, 116 ref, 8 append. 2-35461.

Descriptors: *Regional analysis, *Optimum development plans, Water resources development, Management, Environment, *Environmental control, *Model studies, New York, Projects, Habitats, Water treatment, Environmental effects, Ecosystems, Ecology, Systems analysis, Regional development, Research and development, Marine animals, Marine biology, Marine plants, Oceans, Aquatic life, Marine geology, Research priorities, Methodology.
Identifiers: *New York Bight, Marine Ecosystem Analysis Project(MESA), *Program development plan, Regional planning, Technical integration.

The New York Bight is a coastal zone region where past decisions have had undesirable impacts on the marine environment, but where pressing needs forced decisions regardless of availability of complete data. Both scientific and administrative mechanisms are required to direct action. The Marine Ecosystem Analysis (MESA) Program is developing a plan for such decision-making. An initial conceptual model ecological data, continually updated, is used. With this model, further data requirements can be identified. Specific technical goals for the five-year period include provision of an environmental data base, systematic analysis of the source and fate of pollutants, development of procedural models, and establishment of regionalized monitoring systems. Results must be oriented to issues pressing for action, so technical integration, user-directed orientation, organizational participation, and adequate feedback will enhance project utility. As the project unfolds, benefits derived will include deepened understanding of the ecosystem, development of mechanism for airing and resolving issues, development of a comprehensive and interdisciplinary mechanism to acquire data, improved access to data, and improved coordination of public and private resources to meet common goals. ARIZONA STATE LAKE IMPROVEMENT FUND PLAN.
Arizona Outdoor Recreation Coordinating Commission, Phoenix.
1973. 90 p, 27 tab, 6 ref.

Descriptors: *Lakes, *Arizona, *Safety, *Recreation facilities, *Boating regulations, Boats, Boating, Water sports, Artificial lakes, Planning, Project planning, Taxes, Water resources development.

The Arizona Outdoor Recreation Coordinating Commission was required by law to determine boating needs in Arizona, and to be of guidance in the granting of funds derived from motorboat fuel taxes and the lieu tax paid annually by boat owners into the State Lake Improvement Fund. Based on allocations for various safety projects, boat-oriented recreation improvements, and lake construction, the plan presented identifies the most urgent need as one to make boating waters safer. Immediate priorities include construction of first-aid stations on each major lake, provision of patrol boats for boating law enforcement agencies, and development of additional areas in the water-short southern part of the State where the second highest registration of boats in the State exists. In making recommendations for allocation of funds, factors considered included description of spatial distribution of Arizona's registered watercraft, patterns of participation in boating activities on a statewide basis, an inventory of related facilities at the most preferred boating waters, an estimate of preference for boating-related facilities, and an estimate of the growth of registered watercraft in Arizona in the decade 1970-1980. These general factors, serving as a matrix for the plan, can be used to determine a project priority system for rating proposed State Lake Improvement Fund projects. (Paylore-Arizona)
W74-07108

BETHANY RESERVOIR RECREATION DEVELOPMENT PLAN.
California State Dept. of Water Resources, Sacramento.
Bulletin No 117-12, December 1970. 15 p, 1 fig, 3 tab.

Descriptors: *Recreation demand, *Reservoirs, *Recreation facilities, *Cost-benefit analysis, California, Water sports, Boat-launching ramps, Fishing, Camp sites, Reservoir operation, Capital costs, Operating costs, Replacement costs.
Identifiers: *Bethany Reservoir(Calif.), Recreation development plans.

A recreational development plan for Bethany Reservoir, located in the northeastern hills of Alameda County, California is examined. The reservoir, completed in 1967, presently serves as a forebay for the South Bay Pumping Plant and Aqueduct, and is a regulating reservoir for the California Aqueduct. Recreational facilities proposed for construction during the 1975-1981 period include a boat launching ramp, 40 picnic units, 40 camping units, 2 boat-in areas, 2 fishing access sites, a sandy beach, additional roads, parking facilities, water supply, sanitary and electrical facilities. Estimated capital cost is $800,000 (excluding land) with replacement costs estimated at 3.5% of annual capital costs and operating and maintenance costs assumed to about 30 cents per recreational day. The facilities are expected to provide 25,000 annual recreational days starting in 1976 and increase to a maximum of 70,000 by 1981. Total recreational benefits were determined by multiplying $1.72--a unit value which considers the variety and quality of the recreational experien and the aesthetics of the site--times the daily e mated use. The present value of the stream recreational benefits from this proposed develo ment for the 50-year analysis period was estima to be $1,885,000. (Schroeder-Wisconsin)
W74-07127

LAKE PERRIS RECREATION DEVELOPME PLAN.
California State Dept. of Water Resources, Sac mento.
Bulletin No 117-1, October 1972. 11 p, 1 fig, 2 ta

Descriptors: *Cost-benefit analysis, *Recreat facilities, *Reservoirs, California, Boat-launch ramps, Recreation demand, Multi-purpose p jects, Camp sites, Capital costs, Operating co Replacement costs.
Identifiers: *Lake Perris(Calif), Recreati development plans.

A proposed reservoir, Lake Perris, to meet wa supply requirements and recreation demand California is described. The lake, located 18 mi southeast of Riverside, will represent southernmost reservoir in the State Water Proj and will provide both water supplies and recr tional activities. Included in the development pl are riding and hiking trails, boat launching fac ties, a waste disposal systems, camping and pic units, beaches, and trailer parking facilit Minimum use facilities which include b launching, beaches, car packing, and minim sanitation are expected to be completed by 1 and will accommodate 650,000 recreation-d users annually. By 1980 completed facilit should provide for 2,995,000 recreation-day us annually. Capital costs to complete the propos development are estimated at $38,820,0 Benefits for each general recreation-day use assumed equal to $2.10. Unit benefits for war water fishing and trout fishing are set at $2.10 a $2.50, respectively, per angler day. Using a year life, 5% interest rates, the present value the project's stream of benefits and costs--exc sive of concessionaire costs, are estimated to $133,825,000 and $64,737,000, respectively, imp ing a benefit-cost ratio of 2.1 to 1.0. (Schroed Wisconsin)
W74-07128

NORTH COASTAL AREA ACTION PROGRA A STUDY OF THE MCKINLEYVILL TRINIDAD AREA: PUBLIC HEARING CO MENTS.
California State Dept. of Water Resources, Sac mento.
Bulletin No 105-2, December 1970. 28 p.

Descriptors: *Social participation, *Water supp *Decision making, *Distribution systems, Calif nia, Costs, Fish management, Wildlife conserv tion, Recreation, Reservoirs, Investment, Div sion.
Identifiers: *McKinleyville-Trinidad(Cali *Public hearings.

Comments at public hearings on the recommen tions resulting from the initial investigation possible water supplies for the McKinleyvil Trinidad area are summarized. Various Califor state agencies, and the U.S. Army Corps of E gineers generally concurred with the recommen tions which suggested that the McKinleyvil Trinidad area be annexed to the Humboldt B Municipal Water District. At the same time the respective agencies suggested that the initial w dlife studies were limited, the need for inter water supply measures was over emphasize trailer and campsite areas were being develop and would need water by 1973-74, and sep systems were a health hazard to some domes wells, requiring tighter control of groundwa development and an improved public wa supply. Humboldt County officials stressed t

ed for the project, the responsibility of govern-ent to provide water, the need for more public volvement in the issue, a concern with present ater related health hazards, and a concern with e project's cost. They also indicated that future ater needs were underestimated in the initial re-rt. Some technical questions were raised by ivate citizens, but a majority of this group en-rsed the report's recommendations. The Davis-runsky Act, a state program providing financial sistance for local water projects, was also ex-ained. (Slattery-Wisconsin)

AND USE IN CALIFORNIA.
alifornia State Dept. of Water Resources, Sacra-nento.
ulletin No 176, December 1971. 16p, 26 maps.

escriptors: *Surveys, *Land use, *Land classifi-cation, Land development, California, Mapping, rbanization, Irrigation, Recreation, Water esources, Soil classification, Agriculture, Com-prehensive planning.

he California Department of Water Resources ecognized in the late 1940's the need for land use ata in any water planning attempt and has con-sequently conducted two kinds of surveys. The first, land use, records the nature and extent of present water related land development. This sur-vey is typically accomplished through aerial photography and field inspection. An index of land use surveys conducted during the 1950-1970 period is presented. Land classification surveys are also made to determine the location and extent of land with physical characteristics suitable for specific kinds of development. Such a survey involves field examination of soil characteristics and land features. The nature of land characteristics is such that data are useful in determining possible future growth of both irrigated agriculture and urban development. An index of land classification sur-veys is provided. (Schroeder-Wisconsin)
W74-07131

NORTH COASTAL AREA ACTION PROGRAM: A STUDY OF THE SMITH RIVER BASIN AND PLAIN.
California State Dept. of Water Resources, Sacramento.
Bulletin No 105-3, December 1970. 36p, 2 fig., 4 tab.

Descriptors: *Water resources development, *Water supply, *Planning, California, Future planning(Projected) River basin development, Wells, Groundwater, Water pollution, Land use, Water requirements, Agriculture, Lumbering, Urbanization, Coastal plains, Recreation.
Identifiers: *Smith River(Calif.), *Del Norte County(Calif.), Crescent City(Calif.).

Existing and future water problems and potential development in the Smith River Basin of northern California are discussed. Present regional water requirements are being met through groundwater pumping and direct diversion from the unregulated streamflow. Projected water demand by 2020 for agricultural and urban uses of 13,200 and 5,500 acre-feet can also be accommodated by potential increases uses of ground and surface water supplies. As a result, a proposed Rowdy Creek dam and reservoir for the region cannot be economically justified. The Bertsch Tract, 2-1/2 miles southeast of Crescent City and within the basin presently faces serious water problems which include low well yields and contamination; these problems can best be alleviated through an extension of the Crescent City water system. A threat is posed to water quality from septic systems of existing and proposed developments surrounding Lakes Earl and Talawa in the basin. Periodic testing should be required to check diminished water quality in the lakes and in water supplies. Recurrent flood damage should be alleviated by floodplain management instead of levees and reservoirs and balanced land use planning. (Schroeder-Wisconsin)
W74-07132

WATER RESOURCES SEMINAR SERIES NO. 2.
Hawaii Univ., Honolulu. Water Resources Research Center.
December 1972. 88p, 23 fig, 9 tab, 38 ref,

Descriptors: *Hawaii, *Water resources development, Water law, Hydrogeology, Land classification, Land use, Regional economics, Zoning, Tunneling, Water supply, Groundwater barriers, Economic efficiency, Drilling, Aquifer characteristics, Water transfer, Sugar cane, Water pollution effects, Water pollution control, Grading, Geology, Water wells.

The papers presented at this seminar examine current thought in water and land resource development and its applicability to Hawaii. 'The economics of water transfer' considers problems of pricing, equity, efficiency and regional development. 'The hydrogeology of carbonate and volcanic rocks' were investigated in connection with the probability of obtaining specified well yields at given investment levels. Increasing the water supply in Hawaii through angle drilling of groundwater barriers is also probed; this method has a 10:1 advantage over tunneling and conserves substantial amounts of water. Two papers discuss the economic and ecological impact of sugar mill wastes on the Hamuka Coast. Improved water management, soil recovery, and harvesting techniques are suggested as means to ameleorate the existing problem. The increased demand for scarce land is the subject of another paper. A statewide land survey is examined and its utility in solving urban and regional development problems considered. Changes in grading regulations are also examined; these regulations attempt to reduce the potential damages of landslides and now may reflect greater environmental and aesthetic considerations. The potential advantages of research approaches found by the Illinois State Water Survey are evaluated. (Schroeder-Wisconsin)

CURRENT THINKING IN WATER RESOURCES RESEARCH AND THEIR APPLICABILITY TO HAWAII CONDITIONS,
Illinois State Water Survey, Urbana.
W. C. Ackermann.
In: Hawaii Univ., Honolulu, Water Resources Research Center, Water Resources Seminar Series No. 2, December 1972, p 55-56,

Descriptors: *Hawaii, *Water resources, Water policy, *Planning.
Identifiers: Oahu(Hawaii).

A paper presented at the seminar discussing the current evolution of thinking in water resources research is summarized. Planners in Hawaii face increasing demands on their limited resource base, rising problems resulting from waste siltation, insecticides, and the like, and rising public concern as a result of changing societal values. In particular, Hawaii's economy, which is highly dependent upon the groundwater system, faces challenges from a number of sources including seawater intrusion and contamination. In meeting this challenge, Hawaii has developed an integrated program of research, monitoring, planning and development, a partial result of aid provided under the 1964 Water Resources Research Act. In order to continue to meet this challenge, however, a greater level of integration between disciplines needs to be developed. The translation of environmental problems into forms which can be handled by engineers and decision makers represents one of the central tasks. (See also W74-07133) (Schroeder-Wisconsin)

RESEARCH ACTIVITIES OF THE ILLINOIS STATE WATER SURVEY,
Illinois State Water Survey, Urbana.
W. C. Ackermann.
In: Hawaii Univ., Honolulu, Water Resources Research Center, Water Resources Seminar Series No. 2, December 1972, p 59-60,

Descriptors: *Research and development, Meteorology, Water chemistry, Water quality, Waste treatment, Hydrology, Sampling, Sanitary Engineering, Administration, *Illinois.

A contribution to the seminar which examined current activities of the Illinois State Water Survey is summarized. The Survey, established in 1895 by the Trustees of the University of Illinois, had as its early objective the examination of potable water within Illinois. The Survey's responsibilities have continued to evolve, resulting in a variety of programs presently being conducted within each of its five sections. Within the Atmospheric Section, research is currently being conducted in areas which include the measurement of precipitation, cloud growth, and hail studies; and the effects of cloud seeding and urban-industrial activity upon weather conditions. The Chemistry Section has conducted extensive studies in water quality improvement, corrosion in pipe systems, encrustation, institutional management of water standards as well as analysis of water samples submitted by the public. The Hydrology Section is engaged in a number of studies covering stream flow and geomorphological studies, groundwater mapping, urban hydrological studies, and analytical model building to be used in ground water management studies. The Hydraulic Section's studies presently center on waste treatment problems. The major task currently before the Water Quality and Sanitary Engineering Section is the examination of water quality of the Illinois River. (See also W74-07133) (Schroeder-Wisconsin)

Toledo, Oregon lies on the Yaquina Bay. While the town's income comes primarily from lumber, the Bay's economy relies on both manufacturing and tourism. Effluent from a kraft mill constructed in 1958 posed a threat to the Bay's tourist income. Estimated demand curves for bottomfish, salmon and clams yielded direct yearly benefits of over $22,000 to the Bay prior to the mill. Indirect benefits found using input-output tables accounted for over $317,000 a year. Bioassays were conducted to determine the effect of the effluent through its effect on angling success, angling success being an element determining recreational demand. Direct disposal of effluent into the ocean, into the Bay at Toledo, or into the Bay at McLean Point produced differing effects on demand through angling success. Disposal into the ocean, the actual method chosen by the mill, was found to produce the greatest direct and indirect benefits of the three alternatives. Examination of existing institutions and community decision processes is also necessary to determine which plan should and can be implemented. Existing laws may prevent implementation of some solutions and may not provide agencies with the capacity to implement others. Community concern with benefit distribution may also cause rejection of possible solutions. (See W74-07143 thru W74-07148) (Schroeder-Wisconsin)

THE DEMAND FOR SPORT FISHING AT YAQUINA BAY,
Oregon State Univ., Corvallis. Dept. of Economics.
J. B. Stevens.
In: Multi-disciplinary Study of Water Quality Relationships. A Case Study of Yaquina Bay, Oregon, Oregon Agricultural Experiment Station, Corvallis, Special Report 348, February 1972. p 5-12, 2 tab. WP-00107.

Descriptors: *Recreational demand, *Sport fishing, *Cost-benefit analysis, Salmon, Clams, Bottomfish, Direct benefits, Oregon, Pacific Coast region, Elasticity of demand, Methodology.
Identifiers: *Pollution control, *Demand function, Yaquina Bay(Ore.).

One of the inherent difficulties in choosing between alternative pollution control systems is in valuing the benefits and costs arising from each. Many of these effects are not valued in the market. A model to estimate the demand function for one of these effects, sports fishing, is illustrated for Yaquina Bay, Oregon. An exponential demand function is estimated for bottomfish, salmon and clams, with transfer costs of angling effort per angler day as a proxy for price, family income of the angler, and distance from angler's home to the fishery representing the independent variables in a multiple regression analysis. Data were collected through field and mail survey. The net economic value of sports fishing is found by maximizing the net rent which anglers would pay from the estimated demand function and is found to equal $15,366, $5,383, and $1,998 gross revenue from bottomfish, salmon and clams, respectively. Income elasticities of -0.24, +1.38, and -0.8 are also found. The discussion is concluded with a brief consideration of the criticism of the chosen methodology. (See also W74-07142) (Schroeder-Wisconsin)
W74-07143

THE IMPACT OF SPORT ANGLING ON THE YAQUINA BAY ECONOMY,
Oregon State Univ., Corvallis. Dept. of Economics.
H. H. Stoevener.
In: Multi-disciplinary Study of Water Quality Relationships. A Case Study of Yaquina Bay, Oregon, Oregon Agricultural Experiment Station, Corvallis, Special Report 348, February 1972. p 13-28, 7 tab. WP-00107.

Descriptors: *Indirect benefit, *Input-output analysis, *Sport fishing, Recreational demand, Pacific Coast region, Oregon.
Identifiers: Yaquina Bay(Ore.).

In addition to benefits received by recreationists from sport fishing, benefits arise from the expenditures which recreationists make in the local area. These benefits may be significant in local decision making, and a method should be devised to measure their effects. An input-output framework is used to illustrate the measurement of secondary benefits arising from sports fishing in Yaquina Bay, Oregon. Recreationists' expenditures for fishing were obtained through interviews and postcard surveys. These same surveys also allocated total expenditures by business sectors. The input-output framework defines the interrelationship of the business sectors and the effects on the local economy of the exogenous changes in demand. The overall effect upon the local economy of the exogenous demand of recreationists is estimated at $317,000 a year or nearly twice their $154,550 expenditures. Of this total, nearly $59,380 came to households. (See also W74-07142) (Schroeder-Wisconsin)
W74-07144

AN ECONOMIC EVALUATION OF ALTERNATIVE LEVELS OF WATER QUALITY: THE ROLE OF WATER QUALITY IN RELATION TO ECONOMIC BENEFITS,
Oregon State Univ., Corvallis. Dept. of Agricultural Economics.
J. B. Stevens.
In: Multi-disciplinary Study of Water Quality Relationships. A Case Study of Yaquina Bay, Oregon, Oregon Agricultural Experiment Station, Special Report 348, February 1972. p 65-90, 2 fig, 7 tab. WP-00107.

Descriptors: *Estuarine fisheries, *Water pollution control, *Waste disposal, *Economic impact, Sport fishing, Pulp wastes, Alternate planning, Direct benefits, Indirect benefits, Comparative benefits.
Identifiers: *Yaquina Bay(Ore.).

An approach to estimate economic effects of different levels of water quality is related to fishing effort and fishing success, measures differences in income elasticities and is applied to types of fishing and kraft mill waste disposal alternatives for Yaquina Bay, Oregon. The quality variable was identified for sport angling and linked to the biological production function, making the possibility of determining the primary and secondary benefits of water pollution control apparent. The changes in angler effort due to water pollution, to changes in value of the fishery (primary benefits) and changes in incomes generated in the local economy (secondary benefits) are related empirically by a bio-economic model. The sport fishery was divided into three categories (bottomfish, salmon, and clams) and the biological effects on the fish population were estimated for each waste disposal alternative. Time series and cross-section estimation procedures and results were compared and long-run estimates chosen to estimate water pollution control benefits. The most appropriate estimates of success elasticities appear to be cross-section estimates of success elasticities for clam and bottomfish and long-run time series estimates for salmon fisheries. The largest benefit, $7,550 per year, would result from disposing pulp mill effluent in the ocean. (See also W74-07142) (Auen-Wisconsin)

WATER USES AND WATER DEVELOPMENT IN FALL CREEK--POSSIBLE CONFLICTS,
Cornell Univ., Ithaca, N.Y. Dept. of Conservation.
L. S. Hamilton.
New York Water Resources and Marine Sciences Center, Ithaca, Publication No. 31, March 1970. 1 fig.

Descriptors: *Water utilization, *Planning, Streams, Water supply, Irrigation, Floods, Recreation, Social impact, Environment, Dams, *New York, *Water demand.
Identifiers: *Fall Creek(N.Y.), Cayuga Lake Basin(N.Y.).

Diversified water uses and projected development of Fall Creek, a 30-mile stream which flows into Cayuga Lake at Ithaca, New York are examined. The Fall Creek watershed consists of some 127 sq miles and is predominantly rural; about 40% is woodland, 35% in pasture, and 25% cropland and contains three small lakes. Fall Creek is utilized for a number of purposes. Cornell University consumes as much as 3.5 million gallons per day, its consumption increasing 5% yearly. The New York Electric and Gas Corporation and Ithaca Gun Company also utilize the stream water for cooling; it is also used for irrigation water. Surveys indicate, however, that expansion in irrigation acreage in the future will be limited. High water quality has made the creek particularly attractive for aesthetic, recreational, and scientific purposes. An examination of projected demands for water suggests that supplies may be inadequate. However, future management of the stream must explicitly consider impacts on this unique water resource or any attempts to meet future demand lest valuable and fragile elements be irreversibly destroyed. (Schroeder-Wisconsin)

UTILITY ANALYSIS IN THE VALUATION OF EXTRA-MARKET BENEFITS WITH PARTICULAR REFERENCE TO WATER-BASED RECREATION,
Oregon State Univ., Corvallis. Water Resources Research Inst. and Massachusetts Univ., Amherst. Water Resources Research Center.
J. A. Sinden.
Available from the National Technical Information Service as PB231701 $4.75 in paper copy, $1.45 in microfiche. WRRI-17, March 1973. 124p, 14 fig, 28 tab, 48 ref, 4 append. OWRR B-017-MASS (2).

escriptors: *Recreation demand, *Value, Analysis, *Benefits, Methodology, Psychological spects, Evaluation, Regression analysis, Rivers, eservoirs, Fishing, Camping, Boating, esthetics.
dentifiers: *Utility analysis, Taste preferences, xtra-market benefits, Scenic quality, Indifference mapping.

he travel-cost method used to value extra-market enefits implicitly assumes that all users have identical tastes. An alternative approach is suggested which uses a photo-choice game to yield stimates of users' preferences in valuating these enefits. Data showing the utility of this approach collected from 189 reservoir and adjacent esource users in the Cascade Mountains of regon and includes estimates of tastes and socioconomic characteristics. Tastes were measured s the willingness of user to expend additional time r money using one of the choices in the photohoice game to obtain cardinal estimates of references. Modified demand functions were stimated for ten activities with distance as a roxy for price, and tastes as the independent varibles. Benefits under this method equal the area nder the demand curve. Alternatively, it is suggested that benefits from each of these activities an be determined using indifference curve analyis. Utility maps were generated using the Ramsey nethod of utility estimation. Demand curves were enerated from the indifference curve and benefits alculated. Finally, indifference curves are used to stimate option demand. Option demand curves an be used to value benefits which can arise from otential future activities. (Schroeder-Wisconsin)

PROBLEMS IN RECREATIONAL USE OF RESERVOIRS (PROBLEMY REKREATSIONNOGO ISPOL' ZOVANIYA VODOKHRANILISHCH),
Akademiya Nauk SSSR, Moscow. Institut Vodnykh Problem.
A. B. Avakyan, and V. B. Yakovleva.
Vodnyye Resursy, No 5, p 41-54, 1973. 2 tab, 29 ref.

Descriptors: *Reservoirs, *Reservoir operation, *Recreation, *Recreation demand, *Recreation facilities, Tourism, Economics, Costs, Foreign projects, Foreign research.
Identifiers: *USSR.

The value of recreation as an important component of reservoirs in the USSR is examined, and the reservoir-based recreation industry is compared with that of rivers and lakes. Present recreational use of reservoirs on the Middle and Lower Volga is analyzed, and foreign experience in the use of reservoirs for recreational activity is noted. Special attention is given to the recreational use of reservoirs for water supply. Reservoirs are classified on the basis of their potential recreational use, and scientific and practical problems in increasing recreation benefits of reservoirs are examined. To handle reservoir facilities for recreational use to satisfy the ever-growing demands of the working class, a special All-Union and Republic ministry must be established to coordinate finances, scientific investigations, and the design, construction, and operation of recreational facilities, and to introduce cost accounting to all facets of recreational services rendered to the public, excluding treatment at sanatoriums and health resorts. Identifiers: *West Boggs Creek Watershed(Ind), Purpose scale, Facility mix, Income classes, Geographic location.

Improving cost-sharing procedures would enable society to better allocate its resources to achieve desired social goals. The impact is analyzed of changing the cost-share rules on the efficiency and equity of the recreational purpose of a water resource development project. The relation of efficiency and equity is examined by determining the impact of various cost-share rules on the selection of the economically optimum recreation purpose scale and facility mix. The impact of various cost-sharing policies is examined in terms of the distribution of recreation benefits and costs among different geographic locations and different income classes. In the methodology, each project plan involves at least two groups, the federal and the nonfederal. A socially optimum plan refers to the design which maximizes net national benefits. The model developed in this study is designed for application to the West Boggs Creek Watershed in southern Indiana. A general form of linear programming has been utilized to develop the optimum aggregate design for the recreation purpose in the watershed project. The model determines the efficiency of the project given varying endowments for the constraints; the equity aspects of the model are developed after the specification of the linear programming model. This analysis considers two situations: the nonfederal budget constant and federal budget constant. Results are presented and policy implications are discussed in detail. (Bell-Cornell)

NEW CONCEPTS IN ENVIRONMENTAL PLANNING,
Oregon State Univ., Corvallis. Dept. of Civil Engineering.
D. A. Bella.
In: Proceedings 2nd Annual Technical Conference on Estuaries of the Pacific Northwest, March 16-17, 1972. Oregon State Univ., Corvallis (Engineering Experiment Station Circular No 44), p 13-17 (1972). 2 fig, 2 ref.

Descriptors: *Decision making, *Environment, Comprehensive planning, Projections.

The most significant element of the environmental predicament is the growing inability of man to predict the ecological results of any action taken and this gap appears destined to continue to grow. Traditional environmental decision making has refused to explicitly recognize this rising uncertainty, assuming instead that man's existing knowledge is adequate. This assumption may lead to resistance, reduction or elimination of those properties of ecological or social systems which are not explained within man's knowledge and which may be essential to the quality of life. A more appropriate environmental decision process would explicitly consider both man's knowledge and his ignorance. (See also W74-07491) (Schroeder-Wisconsin)

Descriptors: *Methodology, *Input-output analysis, Economics, Environment, Planning, *South Carolina, Pollutants, Environmental effects, *Model studies.
Identifiers: *Coastal zones, *Charleston(S.C), Matrix, Environmental goods, Pecuniary income, Case study.

A conceptual framework for studying the linkages between the ecologic system and the socioeconomic system is developed and applied to analysis of the problems related to environmental planning in the coastal zone. This model contains two parts: an input-output matrix of the pecuniary sectors of the economy and an environmental matrix which shows the inputs (or outputs) of various natural resources (or pollutants) required to produce one dollar's worth of gross output by each sector in the input-output matrix. When the matrices are combined, empirical estimates of the direct and indirect linkages between the socioeconomic system and the environment are produced. This model is applied in a case study of the Charleston, South Carolina area. Applications of economic analysis to problems of evaluating planning alternatives for resource use in the coastal zone and types of institutions necessary to make use of such planning techniques are discussed. 6D. Water Demand

COAL-ENERGY DEVELOPMENT IN THE NORTHERN GREAT PLAINS.
Wyoming Univ., Laramie. Water Resources Research Inst.
Available from the National Technical Information Service as PB-231 560, $4.75 in paper copy, $1.45 in microfiche. Completion Report, (October 1973). 131 p. OWRR B-024-WYO(1).

Descriptors: *Energy, *Great Plains, *Strip mines, *Demand, Coal mines, Lignite, Bituminous coal, Mining, Water resources development, Wyoming, North Dakota, Montana, Water demand, Research priorities, Projections, Decision making, Water quality management.
Identifiers: *Coal-energy development.

The growth demand for clean energy has focused attention on western coals, particularly the extensive lignite and sub-bituminous deposits in the Northern Great Plains. The Fort Union Powder River Coal beds, which underlie a large part of northeastern Wyoming, southeastern Montana and western North Dakota offer the greatest potential for development, because of the vast quantities of coal which can be strip mined. The U.S. Government has undertaken to assess coal/energy development problems through the Northern Great Plains Resources Program (NGPRP). The Water Resource Research Institutes of the three-state area, together with the Office of Water Resources Research, undertook the following tasks: (1) to determine the study needs, (2) to inventory current research efforts and to assess their potential contribution, (3) to establish the priorities for study as seen by the decision makers in the three states, and (4) to assess the capacity of the region's scientists to carry out the needed studies. Eight categories for study were identified: Trace elements; Atmospheric Effects; Surface Resources (including Reclamation); Coal Resources and Mining Techniques; Water (including Water Quality; Economic and Social Issues; Institutional and Legal Issues; and Technology Development.

MEASURES TO REDUCE WATER CONSUMPTION IN SOUTHEASTERN NEW YORK.
New York State Temporary Commission on the Water Supply Needs of Southeastern New York, Albany.
November 1, 1973. 106 p, 4 fig, 21 tab, 14 ref, append.

Descriptors: *Water distribution, *Water conservation, *Water supply, *Management, *Water policy, Water resources, Water shortage, Water utilization, Municipal water, New York, Water, Domestic water, Economics, Dependable supply, Water users, Water costs, Water delivery, Conservation, Planning, City planning, Estimated costs, Regional development, Bodies of water, Hudson River, Leakage, Water loss.
Identifiers: *New York City, Water distribution systems, Water pricing.

Public water supply deficits in southeastern New York are estimated to be between 410 and 570 MGD in 2000 and between 710 and 1000 MGD in 2020. Measures to decrease expected needs, including universal metering, reduction of leakage from water distribution systems, increased water price to consumers to reduce demand, replacement of residential water-using appliances and fixtures by those using less water, and public education campaigns, are analyzed. Universal metering for New York City is recommended to allow detailed analysis of where high water use and possible leakage occur. Metering requirements must be included in building codes. Use of water-saving toilets, shower heads, and appliances is encouraged, promoted through metering, public education, and higher-priced water. Water pricing to influence consumption is recommended. Retail price for metered water in the City should remain at $.525 per 100 cubic feet until additional information is obtained to develop a sophisticated pricing schedule. An intense campaign of education similar to the one used during the drought of the 1960's is recommended only in the event of water shortages, yet a long-range public education campaign should stress water-saving methods and appliances, water pricing, and metering. (Grden-North Carolina)
W74-07079

PROPOSED WATER SUPPLY PROJECTS FOR SOUTHEASTERN NEW YORK.
New York State Temporary Commission on the Water Supply Needs of Southeastern New York, Albany.
December 15, 1973. 300 p, 34 fig, 3 append, 17 tab.

Descriptors: *Water distribution, *Water supply, *Water demand, *Management, *Water policy, *New York, Water shortage, Water conservation, Water utilization, Municipal water, Domestic water, Economics, Water users, Water costs, Water delivery, Dependable supply, Estimated costs, Regional development, Hudson River, Bodies of water, Sources of supply, Supply, Water sources.

Local and regional water supply projects to overcome water deficiencies through 2020 in southeastern New York are discussed. Available water sources are inventoried to determine which can be developed for public water supply. Criteria to apply in project proposal development are presented to measure project value. Local projects recommended in previous water supply studies are reviewed to determine if they are feasible and offer the best alternatives for water supply use. If determined to be feasible, anticipated yields are subtracted from anticipated county and regional supply deficits. However, a large supply deficit still remains, which must be compensated for by regional projects. Eighteen regional projects are discussed and include data concerning supply capacity, construction stages, operating agencies, and requirements, and cost. All projects are combined into a regional plan to offer different possibilities for supplying regional deficits through 2020. Regional plans are first derived, assuming a middle level of population projection and universal metering, and the best alternative is selected. This plan is inspected to see how the combination and timing of projects would change if population projections and universal metering assumptions were modified. Additional projects to develop regional water supplies are then proposed. (Grden-North Carolina)

INSTITUTIONAL ARRANGEMENTS AND ALTERNATIVE FUTURES.
New York State Temporary Commission on the Water Supply Needs of Southeastern New York, Albany.
December 15, 1973. 255 p, 7 fig, 51 tab.

Descriptors: *Institutions, *Water resources development, *Water supply, *Management, *Water policy, Water resources, *Regional development, New York, Water distribution, Water demand, Water conservation, Water utilization, Municipal water, Hudson River, Water, Water users, Water costs, Water delivery, Conservation, Dependable supply, Planning, Supply, Sources of supply, Resources, Bodies of water, Estimated costs, Domestic water, Economics.
Identifiers: Regional corporation, *New York City, Institutional arrangements.

Numerous institutions governing water supply in southeastern New York are the product of ad hoc responses to individual water needs and preclude a unified effort to meet regional needs. This regional approach is needed to encompass source as well as service areas and can function more efficiently and equitably. Twenty-four recommendations are presented for regional water supply development, including the following examples: A regional self-supporting corporation should be established by the legislature to plan, develop, construct, and operate water supply facilities and to take over New York City's existing upstate facilities. Counties and N.Y. City would be the sole purchasers from the regional supplier and would then re-sell to local authorities. Federal, interstate, and state roles should be restricted to research, data collection, planning, regulation, and financial assistance functions. Local governments should consolidate water supply and related services, as well as integrate water supply and waste water disposal services. Developers should construct water, sewage, and drainage systems at their own expense, but municipalities should assume ownership and operational control. Each county should establish a sewer and drainage agency to perform water-related services. (Grden-North Carolina)

IPSWICH RIVER BASIN MODEL STUDY,
Geological Survey, Boston, Mass.
A. W. Burns.
Journal of the New England Water Works Association, Vol 87, No 4, p 307-320, December 1973. 7 fig, 9 ref.

Descriptors: *Water supply development, *Long-term planning, *Simulation analysis, River basins, *Water demand, *Management, Operation and maintenance, Hydrology, Water quality, Computer models, Digital computers, Streamflow, Reservoirs, Alternative planning, Evaluation, Estimating, Optimum development plans, Systems analysis, *Massachusetts.
Identifiers: *Ipswich River basin(Mass).

In the Ipswich River basin, just North of metropolitan Boston, planners predict a significant increase in the demand for water resources. Long-range plans are needed for water supply development; in addition to satisfying water demands, ideal plans would include waste disposal, recreation, and esthetics. The progress of a cooperative study between the Commonwealth of Massachusetts, Division of Water Resources, and the U.S. Geological Survey is reported in which emphasis has been on the development of a hydrologic model for planning and management. Described in detail is the Ipswich operational digital computer simulation model being used to analyze alternatives for municipal water supply. The model simulates the hydrologic regime resulting from operation of present and proposed supply systems; considered are streamflow, operation of supply systems, and quality of river and reservoir water. Streamflow simulation is based on unregulated mean monthly streamflows at gaging stations within the basin. Simulation of supply systems operations consists of pumping wells, diverting water from river or reservoirs, and purchasing water from external sources. The model evaluates effects of alternatives on the basin's water quality. Presented are study results which describe the relative performance of certain proposals for supply systems under certain management conditions. Level of demand, hydrologic sequence, and legislated operating restrictions seem to have the greatest influences on model results. (Bell-Cornell)

SIERRA CLUB V. FROEHLKE (INJUNCTION ACTION AGAINST RESERVOIR PROJECT).
486 F 2d 946-954 (7th Cir 1973).

Descriptors: *Environmental effects, *Flood control dam, *Environmental control, Judicial decisions, Environmental engineering, Ecology, Public welfare, Water law, Rivers, Habitats, Social aspects, Vegetation effects, Population, Public safety, Legal aspects, Permits, Standards, Regulations, Water policy.
Identifiers: *Injunction, *Sierra Club, *National Environmental Policy Act, *Environmental impact statement.

The United States Court of Appeals examined the primary issue of whether an environmental impact statement prepared by the Corps of Engineers concerning a flood control dam project complied with the mandates of the NEPA of 1969. A secondary issue considered was whether the failure of the Corps of Engineers to request and obtain local assurances of participation from two downstream communities voided the project. In 1962 Congress authorized the construction of a flood control dam on the Kickapoo River. Also involved were supplemental flood protection levees at two small downsteam communities. The Corps prepared a final environmental impact statement and forwarded to the Council on Environmental Quality. Plaintiffs argue that the Corps failed to include all possible detrimental effects and failed to give proper consideration to alternatives. Also argued was the failure of the district court to utilize the correct test to determine the sufficiency of the statement. The Corps argues that the environmental impact statement meets the requirements of NEPA. The court in affirming the lower court's decision for the defendants stated that the court was aware of several standards of review in assessing the adequacy of the environmental impact statement and that the decision was reached after a full, good faith consideration and balancing of environmental factors. (Proctor-Florida)

SCENIC RIVERS.
Pa. Stat. Ann., secs 821.1 thru 21.8 (1972).

Descriptors: *Pennsylvania, *Recreation, *Aesthetic, *Rivers, *Public lands, *Scenic easements, Engineering structures, Legislation, State governments, Adoption of practices, Coordination, Regulation, Conservation, Environmental sanitation, Land management, Water resources development, Parks, Watershed management, Federal government, Zoning, Natural resources, Wild rivers, Impounded waters, Watershed protection, Legal aspects, Economic aspects, Eminent domain.

This statute provides for the creation of a Pennsylvania scenic rivers system to preserve the aesthetic and recreational qualities of unspoiled streams. The system will be comprised of wild river areas, which are rivers that are free of impoundments and generally inaccessible except by trail, with primitive watersheds and shorelines and unpolluted waters. Also included are scenic rivers and recreational rivers. Scenic rivers are those

free of impoundments with undeveloped watersheds and shorelines, but accessible in places by roads. Recreational rivers are those rivers which are readily accessible, that may have some development along their shorelines, and that may have undergone some impoundment in the past. The Department of Environmental Resources is authorized to study and conduct public hearings to submit proposals for the designation of rivers as part of the scenic rivers system. The proposal will specify the category of the proposed river. A public hearing will be held in the county where the land is located concerning the proposed use. The department can acquire scenic easements within the boundaries of the river system by eminent domain or by other methods. The inclusion of rivers in a state river system is not meant to preclude the river from becoming part of a national scenic rivers system. (Sperling-Florida)
W74-07114

SEDIMENT CONTROL.
Ann. Cd of Md, art 96A, secs 105, 106 (Supp 1973).

Descriptors: *Maryland, *Project planning, *Adoption of practices, *Permits, *Soil erosion, *Sediment control, Legislation, Administrative agencies, State governments, Coordination, Watershed protection, Watershed management, Impaired water quality, Aquatic life, Recreation, Social aspects, Regulation, Specifications, Water resources development, Construction.

As a result of erosion and sediment deposition in waters within the watersheds of Maryland, such waters are being polluted and despoiled to such a degree that fish and the recreational use of the waters are being adversely affected. The Secretary of National Resources is to adopt criteria for the implementation of soil and shore erosion control programs. Before land is cleared, graded, transported, or otherwise disturbed, the proposed alteration is to be submitted for approval. Regulations for erosion and siltation control requirements for utility construction are to be adopted by the Washington Suburban Sanitary Commission. These regulations shall apply to all contractors doing work for the Commission. No utility construction will be undertaken until an erosion and sediment control plan has been submitted and approved. Upon review and approval by the county, the Commission can then issue a permit for construction. The county will inspect and enforce the conditions of the approved plans and permits. The Department of Natural Resources will assist the soil conservation districts in the preparation of a unified sediment control program. The Department will also review and approve all land clearing, soil movement, and construction undertaken by any agency of the state government. (Sperling-Florida)
W74-07115

NATURAL RESOURCES--WASTE CONTROL.
Ann Cd of Md, art 66C secs 411V-411AD, (1973).

Descriptors: *Maryland, *Specifications, *Waste water treatment, *Waste water disposal, *Sewage effluents, State governments, Legislation, Administration, Adoption of practices, Administrative agencies, Waste water(Pollution), Water pollution sources, Watershed protection, Environmental sanitation, Rivers, Engineering structures, Advanced waste treatment.
Identifiers: *Administrative regulations.

As a result of poorly treated effluent discharged from sewage disposal plants and from erosion and silt from construction on lands within the Patuxent River watershed, the river is being seriously polluted. The despoilation is severe enough that fish, marine life and recreational use of the river is being adversely affected and curtailed. All persons disposing of or treating sewage within the watershed shall anticipate the need for advanced waste treatment, and all future plants shall be constructed accordingly. The owners and operators of any existing plants that do not meet the standards will submit a plan for improved sewage disposal. The plan will indicate the necessary improvements required to insure purity of the effluent and a time schedule for the construction of those improvements within five years. If a plan is not submitted or it is submitted but construction does not take place, the county will proceed with the plan and the work. Owners of the plant will be liable for expenditures so made including attorney's fees. The county health department will take at least one monthly stream sample at the critical point of all sewage disposal plant overflows within the watershed. The discharge of raw sewage or waste into the river is a misdemeanor. Oyster and clam shells and other materials used in the culture of marine life are not considered waste. (Sperling-Florida)
W74-07116

ANSLEY V. TARRANT COUNTY WATER CONTROL AND IMPROVEMENT DISTRICT NO. ONE (LIABILITY FOR FLOODING AND AMOUNT OF DAMAGE).
498 S.W 2d 469-477 (Texas 1973).

Descriptors: *Texas, *Flood damage, *Flood recurrence interval, *Dam construction, Erosion, River flow, Construction, Spillways, Dams, Legal aspects, Judicial decisions, Water law, Floods, Flooding, Flood plains, Floodwater, Reservoirs, Reservoir construction, Damages, Water, Water control.

Appellant appealed decision in favor of appellee, water control district, to recover permanent damages to land alleged to have been caused by repeated flooding by a dam and spillway constructed by appellee. The appellee denied generally the allegations of the petition and specifically alleged that the land in question had been historically subject to floods prior to the construction of the dam and spillway and that they actually caused no damage to the lands because the land had always been and would be subject to flooding by the nearby river. In the alternative appellee alleged on temporary and sporadic damage and not a permanent one. The court held there was basic error in the assumption that property which had been floodlands from time to time suffers a decrease in value automatically as a matter of law, if the appellee's conduct contributed to additional flooding. The inquiry should be whether the property has, in fact, suffered a decrease in value by reason of the alleged unlawful interference. The jury is bound to decide the issue and opinion testimony does not establish any material fact as a matter of law. The court thinks the jury is authorized to consider before and after value and justified in leaving the parties where they found them. (Daniels-Florida)

METALLIC MINERAL MINING OPERATIONS, (ACQUISITION OF SURFACE LANDS FOR WATER QUALITY CONTROL).
Mich Comp Laws Ann, sec 425.181 (Supp 1973).

Descriptors: *Mining, *Environmental effects, *Michigan, *Legislation, Natural resources, Land use, Mine wastes, Minerals.

This act provides for the reclamation of lands subjected to the mining of minerals and seeks to control possible adverse environmental effects of mining. Its aim is to preserve the natural resources and to encourage the planning of future land use. The act further provides for the promotion of the orderly development of mining, encouragement of good mining practices, and the recognition and identification of the beneficial aspects of mining. INSTITUTIONAL CONSIDERATIONS,
Oregon State Univ., Corvallis. Dept. of Agricultural Economics.
A. Sokoloski.
In: Multi-disciplinary Study of Water Quality Relationships. A Case Study of Yaquina Bay, Oregon Agricultural Experiment Station, Special Report 348, February 1972. p 91-104, 2 tab. WP-00107.

Descriptors: *Institutional constraints, *Alternate planning, *Waste disposal, Riparian rights, Local governments, Legal aspects, Recreation, Welfare(Economics), Sport fishing, Estuarine fisheries.
Identifiers: *Yaquina Bay(Ore.).

The institutional context in which economic decisions are made may aid or impede the implementation of efficient choices. The potential impacts of existing institutions on the economic consequences of varying water quality standards in Yaquina Bay, Oregon is examined to illustrate this point. Included in the institutions considered were water rights and pollution laws. The legal limits and performance limitations of counties, special districts, and the state are also discussed. The most formidable barrier limiting the ability of existing institutions to alter disposal choices were found to be pollution laws which prohibit any degree of effluent dilution and the absence of any existing local management units which might facilitate whatever adjustments are possible. Four other issues are discussed: the criterion to evaluate governmental entities, the measurement of benefit and cost flows across governmental units, the relationship of these flows to compensation theory in welfare economics, and potential integration of functions best performed by alternative governmental units to aid in the implementation of economic choices. STREAM POLLUTION.
Tenn. Code Ann., secs. 70-324 through 70-342 (1971).

Descriptors: *Tennessee, *Water law, *Legislation, *Water quality, *Pollution, Water resources, Water resource planning, Water quality control, Pollution control, Pollution abatement, Waste disposal, Waste treatment, Waste water control, Waste water treatment, Waste discharge, Recreation, Water resources development.

The Water Quality Control Act of 1971 declares the interest of the public and the state of Tennessee in having unpolluted waters. This Act recognizes the obligation of the state to secure, protect and preserve this right and its purpose includes the abatement of existing pollution, the reclamation of polluted waters, the prevention of future pollution as well as a plan for the future use of the state's water resources so that they may be used and en-

joyed to the fullest extent consistent with the maintenance of unpolluted waters. The Act establishes the Tennessee water quality control board to adopt standards for all waters of the state, considering the size, depth, surface area covered, volume, direction, rate of flow, stream gradient and water temperature, as well as the character of the surrounding land. The board shall also consider all physical, chemical, biological, bacteriological or radiological properties that may be necessary for preserving the quality and purity of the waters. Alteration of water properties, construction or operation of treatment works, waste discharge facilities or waste discharge outlets shall henceforth require special permit issued by the board. (Silber-Florida)

SANITARY DISTRICTS FOR SEWAGE DISPOSAL.
W. Va. Code Ann., secs. 16-12-1 through 16-12-14 (1967).

Descriptors: *Sewage districts, *West Virginia, *Legislation, *Waste treatment, *Environmental sanitation, *Water quality control, Public health, Sewage treatment, Waste disposal, Waste water, Waste water treatment, Administrative agencies, Structures, Municipal wastes, Discharge, Drainage, Water pollution treatment, Pollution control, Pollution abatement.

One or more incorporated cities, towns and/or villages located in an area of contiguous territory are authorized to incorporate into one sanitary district for purposes of comfort, convenience or the preservation of the public health. The district may construct and maintain a plant or plants for the purification and treatment of sewage, and maintain one or more outlets for the drainage thereof. Each district may employ the necessary personnel needed to carry out its functions. The districts may provide for sewage disposal and drainage and provide for the savings and preservation of the water supplied to the districts from contamination, by contructing and maintaining sewage treatment plants, sewers, channels, drains or outlets. Nothing contained within the statute shall authorize the district to operate a system of waterworks for the purpose of furnishing or delivering water to any such municipality or its inhabitants. A district may acquire property necessary to carry out its functions. (Silber-Florida)
W74-07276

WEST VIRGINIA WATER DEVELOPMENT AUTHORITY.
W. Va. Code Ann., sec 20-5C-1 thru 20-5C-23 (1972).

Descriptors: *West Virginia, *Water law, *Legislation, *Water resources, *Water development, Water, Water purification, Water quality, Water quality control, Water policy, Project policy, Streams, Water pollution, Pollution control, Pollution abatement, Sewage, Sewage disposal, Water structures, Environmental engineering, Public health, Environment.

It is the responsibility of the state of West Virginia to establish, fund, operate and maintain water development projects, to maintain, preserve, protect, conserve, and in all instances possible to improve the purity and quality of water within the state. Other objectives include protecting and improving public health, assuring the fullest use and enjoyment of such water by the public and providing suitable environment for the propagation and protection of animal, bird, fish, aquatic and plant life. The state shall also provide water of the necessary quality and in the amount needed for the development, maintenance and expansion of all types of industries and businesses. The West Virginia Water Development Board is directed to assist in the preservation, protection, improvement and management of the purity and quality of the waters, prevent or abate pollution of water resources, promote the health and welfare of the state's citizens, improve stream quality, and remove harmful liquid and solid wastes from the waters. (Silber-Florida)
W74-07277

RIVER REGULATION--RESERVOIRS.
N.Y. Environmental Conservation Law, sections 15-2101 thru 15-2141, p 585-628 (1972).

Descriptors: *New York, *Legislation, *Rivers, *Water management, *Water development, Reservoirs, Dams, Floods, Flood control, Administrative agencies, State governments, Water resources, Water resources development, Water utilization, Power plants, Protection, Flood protection, Regulation, Drainage, Navigable waters, River flow, Water law, Planning, Cooperation, Coordination.

The establishment and operation of river development districts in New York are authorized. Each district is responsible for formulating and carrying out plans which regulate and maintain the orderly flow of rivers within their boundaries. Each district is also charged with determining the need for and feasibility of reservoirs and reservoir construction. Included within the scope of this duty is the power to discontinue or relocate highways, roads and streets. The districts are also authorized to grant access to their respective rivers for the purpose of developing sources and sites of potential water power resources. In addition, the districts shall have eminent domain powers to acquire lands and facilities necessary to fulfill their mandate, consistent with the best public interest. Moreover, each district may contract to dispose of the natural resources present upon any of their real property in any manner they deem appropriate, as long as it is consistent with the purposes of this statute and the public good. (Silber-Florida)

WILD, SCENIC RIVER SYSTEMS.
N.Y. Environmental Conservation Law, secs. 429v, p. 445-450 (1972).

Descriptors: *Water conservation, *Aquatic environment, *Water policy, *Rivers systems, *Water resources, *New York, Legislation, Administration, Inter-agency cooperation, Federal government, Water supply, Water quality, River flow, Boundaries(Property), Water resources development.

The establishment of a wild, scenic and recreational rivers system is described. Selected rivers shall be preserved in a free-flowing condition, so they and their immediate environs will be protected for the benefit and enjoyment of the people. The statute institutes a state river system, designating its initial components and prescribes methods and standards by which additional rivers may be added to the system. The commissioner of environmental conservation shall have exclusive jurisdiction over all river areas, other than those within the Adirondack Park, which shall be under control of the park agency. The rivers shall be classed either as wild, scenic or recreational rivers and the criteria for inclusion into one of those three categories are set forth, as well as the management objectives. After inclusion into the system, no structure impeding the natural flow shall be constructed. Land uses, within the exterior boundaries of the designated river areas are set forth and such boundaries shall be established by the commissioner. Cooperation is urged with the federal government and with other agencies. In case of a conflict with other laws, the more restrictive provision shall apply. (Sutton-Florida)
W74-07280

CLASSIFICATION OF WATER AND WATER STANDARDS.
N.Y. Environmental Conservation Law, secs. 17-0301 through 17-0303, p 656-668 (1972).

Descriptors: *Water pollution, *Water policy, *Water pollution control, *Water quality, Water supply, Legislation, *New York, Water conservation, Administration, Water quality control, Interagency cooperation, Water pollution sources, Waste water(Pollution), Water demand, Water quality standards.

Water pollution control, the classification of state waters and the promulgation of water standards are described. The (Department of Health), after investigation and public hearings, shall group designated state waters into classes. The classifications will be in accordance with the best usage in the public interest. Once classified, standards of water quality and purity will be assigned to each class, taking several criteria into consideration. Sources of water supply will be further classified according to the maximum amount of monthly median coliform allowed in each source, determined by a sampling technique. Further proceedings on the Commissioner's part are provided in case of violations and he may adopt and assign more restrictive standards for the best usage of the states waters. Regulations are set forth concerning the public hearings and notice therof. The general powers and duties applicable to the statute are detailed, with the department having administrative jurisdication to abate and prevent water pollution in the state's waters. The Commissioner's authority will include holding public hearings, requiring the discontinuance of sewage discharge, bringing suit to compel performances, issuing permits under proscribed conditions, as well as other powers. The duties and responsibilities of the department are then defined, including the right of inspection, at reasonable times, of operations and records. (Sutton-Florida)

RIPARIAN RIGHTS IN CERTAIN COUNTIES.
Md. Code Ann., art. 66C, sec 253 (Supp. 1973).

Descriptors: *Maryland, *Legislation, *Water law, *Water utilization, *Water rights, *Riparian rights, Water resources development, Riparian law, Fisheries, Competing uses, Legal aspects, Ownership of beds, Prescriptive rights.

The owner, tenant, or lessee of any land bordering on any tidal waters of the tributaries of the Chesapeake Bay, except the waters of the Great Choptank River, lying in the state of Maryland is entitled to make a choice of the set or position to place nets or establish a haul seine fishery in front of such property. If such owners of the riparian rights do not avail themselves of this privilege within twenty days after receiving notice from any other person who may desire to locate their nets or fishery in front of said person's property, then it shall be lawful for such persons to locate their nets. Permission of the owners shall always be necessary for the waters of Baltimore, Talbot, Caroline, Dorchester, Prince George's, St. Mary's and Charles counties. Fishing shall not be permitted in any waters within 500 yards of any shore used as a pleasure resort, or to interfere with bathing or boating without the owner's permission. Persons quilty of violating these provisions shall be subject to fine and forfeiture of their fishing equipment. (Silber-Florida)

FISHERIES AND GAME; GENERAL PROVISIONS.
Conn. Gen. Stat. Ann. secs. 26-3, 26-6, 26-8, 26-17a (Supp. 1972).

Descriptors: *Connecticut, *Wetlands, *Wildlife conservation, *Aquatic environment, Aquatic habitats, Inland waterways, Fish conservation, Fisheries, Game birds, Land classification, Spawning, Conservation, Legislation, Wildlife, Fish, Wildlife habitats, Environmental control.
Identifiers: Retaining ponds.

The Connecticut Commissioner of environmental protection shall enforce all laws relating to fish, birds and wildlife. He shall supervise hatcheries and retaining ponds and may designate any area of inland water as closed to fishing, in order to provide spawning beds. Acquisition may be made by gift, lease or purchase of lands for the establishment of fish hatcheries or game preserves. The commissioner may allocate the funds acquired for the purpose of preserving and propagating fish, birds and wildlife. Conservation officers and patrolmen will enforce the regulations issued by the commissioner, and may arrest any person found to be in violation of these provisions. An officer may, without a search warrent, examine various items of personal property if he believes that any animal is being kept within, in violation of the statutory provisions. Dwelling places may be likewise searched upon obtaining a search warrant. The commissioner is empowered to acquire title to or make agreements with the owners of any tidal wetlands area in order to limit the future use or otherwise conserve such tidal wetlands. (Ritchie-Florida)
W74-07286

UNITED STATES V. POT-NETS, INC. (VIOLATION OF RIVERS AND HARBORS ACT),
363 F. Supp. 812-817 (D.C. Delaware 1973). 6 p.

Descriptors: *Navigable waters, *Rivers and Harbors Act, *Tidal effects, *Channels, *Judicial decisions, Waterways, *Delaware, Tidal marshes, Lagoons, Bodies of water, Water levels, Water law, Dredging, Federal government, Legal aspects.
Identifiers: *Injunction.

The United States brought action against developers of projects which had been built in part on highlands and on abutting marshland for violation of the Rivers and Harbors Act. The government sought injunctive relief to bar further dredging, filling and bulkheading work and a mandatory order requiring the defendants at their expense to restore the marshes to their previous natural state. The plaintiff contended that all the waterways adjacent to defendant's projects were navigable in fact, and the adjacent marshes on which the projects were partially built were inundated by ordinary high tides of those navigable waters and are therefore also navigable waters of the United States. The defendants contended that the marshes were not navigable waters and that the natural or man-made canals or lagoons which do not lead to any public landing or place but merely dead-in into private property are either private or state waters and not navigable waters. The United States District Court concluded that the criterion for determining navigability is capability for commercial traffic rather than manner and extent of use. The court denied the motions for summary judgment concluding that material issues supported by affadavits and aerial photographs remained in dispute. (Proctor-Florida)
W74-07287

BURLEIGH V. CALLOWAY (INJUNCTION ACTION AGAINST A BEACH EROSION PROJECT).
362 F. Supp. 121-124 (D. Hawaii 1973). 4 p.

Descriptors: *Hawaii, *Beaches, *Beach erosion project, *Access routes(Recreation), *Cost-benefit analysis, *Environmental effects, Federal government, State governments, Administration, Economics, Recreational facilities, Tourism, Recreation demand, Judicial decisions, Project planning, Estimated costs, Estimated benefits.
Identifiers: *Environmental Impact Statements, *National Environmental Policy Act, Injunction.

The plaintiffs, citizens and community groups, sought under the National Environmental Policy Act (NEPA) to enjoin all acts on the part of the defendant, the Secretary of the Army, in furtherance of the Waikiki Beach erosion control project which threatened to demolish the Hawaii war memorial known as the Natatorium. The erosion control project was state and federally funded and is directed by the Army Corps of Engineers. Its purpose was to improve the beach by increasing beach land, improving access to the shoreland and preventing future beach sand erosion. The planned improvements in this segment of the project consisted of the construction of three new groins, placement of approximately 46,00 cubic yards of sand, and demolition of the Natatorium. The plaintiffs urge that the environmental impact statement and its supplement are insufficient to comply with NEPA. The court declared that the plaintiffs' motion for preliminary injunction must be dismissed as it appeared that (1) no viable alternatives to the Natatorium's destruction existed, (2) the restoration and incorporation of the Natatorium into the project was not feasible, and (3) no expert testimony showed a withholding of information of possible environmental impact as a result of the project. (Proctor-Florida)
W74-07288

PROTECTION OF THE ENVIRONMENT.
Federal Register, Vol 38, No 159, p 22298-11199 (1973).

Descriptors: *Legislation, *Regulations, *Permits, *Pollutants, *Discharge, Administrative agencies, Control, Wastes, Waste treatment, Effluents, Coliforms, Suspended solids, Sewers, Treatment facilities, Industrial wastes, Industrial pollution, Water quality, Water quality control, Legal aspects, Water law, Water policy, Pollution control, Pollution abatement, Impaired water quality, Water pollution sources.

The Environmental Protection Agency (EPA) has reorganized and clarified its regulations concerning secondary treatment within the scope of the Federal Water Pollution Control Act Amendments of 1972. Some of the major changes include: clarifying that in no case should the percentage removal of biochemical oxygen and suspended solids be less than eighty-five percent in any thirty day period, and a relaxing of certain of the above standards shall only be allowed for treatment works receiving flows from combined sewer systems during wet weather. The sections of the Act affected by the announced changes include those dealing with minimum level of effluents, biochemical oxygen demand, suspended solids, fecal coliform bacteria, combined sewers, secondary treatment works, industrial wastes, industrial pollution, sampling and test procedures. (Silber-Florida)
W74-07289

WILD AND SCENIC RIVERS.
Minn. Stat. Ann., secs. 104.31 to 104.40 (Supp. 1973), amended, ch. 271, secs. 1-10 (1973) Laws of Minn.

Descriptors: *River beds, *Management, *Water conservation, *Rivers, *Administration, Legislation, *Minnesota, Project planning, State governments, Inter-agency cooperation, Water resources development, Erosion control, Scenery, Land resources, Wildlife.
Identifiers: *Land acquisition.

This Minnesota statute relates to natural resources and the preservation and management of rivers. In the context of the Act, 'river' means a flowing body of water such as a stream or a segment or tributary thereof, including lakes through which the river or stream flows. A system of classification is established with three categories, wild, scenic or recreational rivers. The administration of the system is under the commissioner of natural resources and he shall promulgate statewide minimum standards and criteria for the preservation and protection of shorelands within the boundaries of the system. The Commission shall prepare a management plan, make it available to those affected and shall conduct public hearings. Local land use ordinances will be promulgated after the districts and management plans are made public. To futher the Act's purpose, acquisition of lands is provided for by all lawful means. Responsibilities of other governmental units, federal-state relations, and those situations where conflict with other laws arise are also dealt with. (Sutton-Florida)
W74-07290

UNITED STATES V. IRA S. BUSHEY AND SONS, INC. (INJUNCTION AGAINST OIL SPILLS).
363 F. Supp. 110-123 (D. Vermont 1973) 14 p.

Descriptors: *Vermont, *Oil spills, *Oil pollution, *Rivers and Harbors Act, *Water pollution sources, Oil, Water law, Common law, Water pollution, Regulation, Negligence, Judicial decisions, Coast Guard regulations, Legislation, Legal aspects, Federal Water Pollution Control Act.
Identifiers: *Nuisance(Legal aspects), Injunction.

Plaintiff-United States sued the corporate owners of vessels engaged in transporting oil on Lake Champlain, for injunctive relief with respect to oil spills. From April, 1967 to December, 1972 vessels of defendant corporation's subsidiaries were involved in nine oil spills. The court determined that the oil spills had occurred as a result of slack operations, including drinking on duty by crewmen, use of faulty equipment, and the employment of unlicensed operators. Such operation was said to be a continuing nuisance threatening the general public, wildlife, lakefront property owners and water quality of Lake Champlain. Defendant contended that the corporate veil shielded the parent firm from the torts of subsidiaries, that equitable relief was precluded by the Federal Water Pollution Prevention and Control Act of 1972, and that the Coast Guard's authority under the Navigation Rules precluded court action in the form of injunctive relief. The court held that equitable relief could be granted based on the Rivers and Harbors Act of 1899, and the federal common law of nuisance. The court issued a mandatory injunction to require compliance with a list of safety procedures adopted by the court. (Perrey-Florida)

PACIFIC NORTHWEST COASTAL ZONE MANAGEMENT AS IT RELATES TO ESTUARY PROTECTION,
Oregon Coastal Conservation and Development Commission, Port Siuslaw.
W. B. Ternyik.
In: Proceedings 2nd Annual Technical Conference on Estuaries of the Pacific Northwest, March 16-17, 1972. Oregon State Univ., Corvallis (Engineering Experiment Station Circular No 44), p 109-111 (1972).

Descriptors: *Oregon, *Legislation, *Estuaries, *Protection, Coordination, Jurisdiction, Political constraints, Federal government, Comprehensive planning, State governments, Local governments, Permits.
Identifiers: *Coastal zone.

There were some 208 governmental bodies (federal, state, and local) that have traditional and/or legal interests in the Oregon coastal zone management. A substantial portion of the coastal zone management problem arose out of interagency conflicts over jurisdiction in addition to a maze of duplicating mandates. The Oregon Coastal Conservation and Development Commission, consisting of 24 elected coastal zone officials plus six governor's appointees, representing statewide interests was authorized by the legislature. The commission's mandate is to prepare a coordinated comprehensive natural resource use plan for the coastal zone by 1975. The plan is to be in the form of a legislative proposal. To accomplish this task full cooperation of state and federal agencies, as well as local government units is required; in addition a massive citizen involvement is essential at the outset. Most of Oregon's estuaries are now utilized in the multi-use concept which includes lumbering and recreation, both essential to maintain a year-round economic balance. State measures have helped maintain the quality of the coastal zone even though wetlands and marshlands are as yet not identified. The development of policies and standards based on the carrying capacities of the natural resources should insure their protection. (See also W74-07491) (Auen-Wisconsin)

6G. Ecologic Impact Of Water Development

LANDSCAPE COMPARTMENTALIZATION: AN ECOLOGICAL APPROACH TO LAND USE PLANNING,
Duke Univ., Durham, N.C. School of Forestry.
J. E. Wuenscher, and J. M. Starrett.
Available from the National Technical Information Service as PB-231 554, $4.50 in paper copy, $1.45 in microfiche. North Carolina Water Resources Research Institute, Raleigh, Report No. 89, (UNC-WRRI-74-89), December 1973. 107 p, 22 fig, 38 ref. OWRR A-062-NC(1). 14-31-0001-3833.

Descriptors: Planning, *Environmental control, *Land use, Ecosystems, Land development, Land management, *North Carolina, Landscaping, *Preservation, Ecology, Multiple-purpose projects.
Identifiers: Symaps, *Landscape compartmentalization, *Eno River(NC), Durham(NC), Durham County(NC), Orange County(NC).

Basic objectives were to explore the use of the 'ecosystem concept' in land use planning and to develop methods of ecologically based planning. Basic ecosystem processes are reviewed and interpreted as services provided by natural systems to the human communities. A series of guidelines is presented for the use of ecosystem concepts in planning. Methods are developed and described for the use of the 'Landscape Compartmentalization' approach in which a planning area is divided into four compartments based on natural characteristics of the land and its ecosystems. Factors considered were distance from the nearest water course, slope, agricultural productivity index, forest site index, sub-soil permeability, shrink-swell potential of the soil, depth to bedrock, and position with respect to flood plains. The 'Protective Compartment' includes areas that must be protected from intensive use to maintain natural processes and environmental quality. 'The Productive Compartment' includes highly productive agricultural and forest land. 'The Urban Compartment' is composed of land well suited for intensive development. Remaining land is placed in the 'Multiple Use Compartment' and may be suitable locally for any prospective use. The compartmentalization method is applied to a specific land area--the Eno River Basin near Durham, North Carolina. (McJunkin-North Carolina)

REGIONAL ENVIRONMENTAL REFERENCE.
Denver Regional Council of Governments, Colo.
Available from the National Technical Information Service as PB-221 295; $10.25 in paper copy, $1.45 in microfiche. Final report DRCOG-73-003, May, 1973. 210 p. Colo. P-105.

Descriptors: *Bibliographies, Environment, *Environmental effects, *Environmental control, Environmental engineering, *Colorado, Regional development, Air pollution, Air pollution effects, Climatology, Meteorology, Oceanography, Conservation, Fish, Wildlife, Flood plain, Recreation, Geology, Minerology, Soils, Urbanization, Solid wastes, Water quality, Vegetation, Water resources, Pesticides, Energy, Remote sensing.
Identifiers: *Denver(Colo), *Regional environmental references, Environmental Impact Statements.

This bibliography contains 1450 regional environmental references, with special emphasis on publications of interest to the Colorado Front Range communities. Entries are categorized under fourteen major headings, including air pollution; climatology, meteorology, and oceanography; conservation; environment and ecology; fish and wildlife; flood plain; geology; recreation; soils and minerals; solid waste management; vegetation; wastewater and water quality; water resources; and energy, pesticides, and remote sensing. Subheadings under environment-ecology include environmental assessments, impact statements, legislation, planning and policy, preservation and urbanization. Each document entry lists a location in a Colorado library (Denver Regional Council of Governments, Colorado University, Colorado State University, Denver Public Library, Colorado Water Conservation Board, and Municipal Government Reference Center). Maps and overlays prepared by the Regional Transportation District and by the Denver Regional Council of Governments are listed in a graphics section. (Grden-North Carolina)

ENVIRONMENTAL IMPACT ANALYSIS: AN EXAMINATION OF THREE METHODOLOGIES,
Wisconsin Univ., Madison. Dept. of Agricultural Economics.
M. L. Warner.
Available from the National Technical Information Service as PB-231 763 $6.50 in paper copy, $1.45 in microfiche. Ph.D. Thesis, 1973. 248 p, 10 fig, 9 tab, 119 ref, 4 append. OWRR B-057-WIS (2) 14-31-0001-3354.

Descriptors: *Environmental effects, *Legislation, *Water quality, Federal Water Pollution Control Act, Law enforcement, *Regulation, *Water policy, *Planning, *Idaho.

The National Environmental Policy Act of 1969 (NEPA) required the filing of environmental impact statements by Federal agencies proposing major actions significantly affecting the water quality of the human environment. This research suggests bases for the evaluation and further development of methodologies used to prepare impact statements. Three methodologies are critically analyzed. They are: the 'Lepold approach,' suggested by Luna B. Leopold, and others, the 'Battelle approach,' developed at Battelle's Columbus Laboratories for the U.S. Bureau of Reclamation, and the 'WRC approach,' contained in the 'Proposed Principles and Standards for Planning Water and Related Land Resources' of the U.S. Water Resources Council. Specific criteria for methodology evaluation are developed within the areas of: technical ecological content, practical applicability, and political utility. These criteria are designed to emphasize a 'full-disclosure law' interpretation of NEPA. The methodologies are examined using each set of criteria in turn. To provide a more concrete setting for this analysis, a test case involving a proposed U.S. Bureau of Reclamation water resources development project in Southwest Idaho was used. Data collection consisted of a point-by-point comparison of criteria and related desirable characteristics to each methodology. These data are analyzed for overall methodological conformance to the criteria to yield conclusions on the strengths and weaknesses of the methodologies. For political utility criteria, conclusions are based upon a model and theory of the Federal reclamation project policy-making process.

DEVELOPMENT OF A DECISION ROOM FOR ENVIRONNTAL STUDIES, (FEASIBILITY STUDY),
Datametric C'OR H, McLean, Va.
J. G. Moore.
Available from the National Technical Information Service as PB-231 864, $6.50 in paper copy, $1.45 in microfiche. Environmental Protection Agency Report EPA-600/5-73-011, June 1973. 61 p, 10 fig. EPA Program Element 1HA097. Grant 801522.

Descriptors: *Decision making, *Simulation analysis, *Management, Model studies, *Environmental effects, *Research facilities, Facilities, Legal aspects, Data processing, Information retrieval, *Evaluation.

Existing 'Decision Room' facilities were studied to determine the initial feasibility of constructing a 'Decision Room' facility for development and use of environmental simulations. Through presentation of the simulations, public officials would be apprised of environmental measurements and could view the simulated consequences of decision making and legislative policy inputs. The study concluded that 'Decision Room' technology is feasible and recommends a 'Research and Analysis Facility' oriented to the development of a prototype facility and its supporting capabilities as an appropriate first step for EPA. The architectual renderings of such a facility are presented. The study indicates that recent developments in computer based technologies have so improved information processing, storage, retrieval, and presentation that EPA requirements involving large amounts of complex information handling in these areas can be met. (EPA)

AN IMPROVED CORE CATCHER FOR THE KIEL BOX CORER ('KASTENLOT'),
Kiel Univ. (West Germany). Geologisch-Palaeontologisches Institut und Museum.
F. Werner.
Marine Geology, Vol 15, No 5, p M59-M65, December 1973. 3 fig, 3 ref.

Descriptors: *Bottom sampling, *Cores, *Core drilling, *Sampling, *Bottom sediments, Equipment.
Identifiers: Kiel box corer.

The efficiency of the Kiel box corer ('Kastenlot') is dependent upon the mechanical properties of the sediments. To avoid this limitation, a new core catcher was constructed and has been tested for several years in both shallow and deep-water sediments. The essential part of this catcher is a reinforced canvas curtain which is pulled slantwise through the core before the corer is pulled out of the sediment. (Knapp-USGS)
W74-07159

AN INNOVATIVE AUTOMATIC STREAM GAGING METHOD,
Oklahoma Univ., Norman. School of Engineering and Environmental Science.
J. F. Harp.
Journal of Hydrology, Vol 21, No 1, p 27-31, January 1974. 2 fig, 3 ref.

Descriptors: *Stream gages, *Water measurement, *Current meters, *Instrumentation, Automation, Discharge measurement, Gaging stations.

An extension of the moving boat method for stream gaging allows intermediate sized streams to be gaged automatically, by means of a moving meter, by remote control with no operator at the point of the velocity measurement. No velocity magnitude measurement is required, only an angle measurement and a known input constant velocity of traversing meter. The technique combines the new technique with classical methodology to produce a reliable field measurement of stream-flow rates in a short time. (Knapp-USGS)

PORTABLE REFLECTANCE METER FOR ESTIMATING CHLOROPHYLL CONCENTRATIONS IN LEAVES,
California Univ., Riverside. Dept. of Soil Science and Agricultural Engineering.
E. F. Wallihan.
Agronomy Journal, Vol 65, No 4, p 659-662, July-August, 1973. 4 fig, 2 tab, 7 ref.

Descriptors: *Chlorophyll, *Measurement, *Leaves, *Citrus fruits.

The need to measure changes of chlorophyll concentration in citrus leaves required a nondestructive method of analysis applicable to field use. Light reflectance in the wavelength region of 600 nm had been shown to be useful but existing reflectance meters were too bulky for field use and generally required line power. The instrument described here is battery operated, compact, and measures light reflectance in a band of wavelengths from 610 nm to 700 nm from four miniature incandescent lamps. Arrangement of the light unit on a spring clamp permits readings in the field on several leaves per minute. Calibration against measured chlorophyll concentrations yields a log curve revealing maximum sensitivity at low chlorophyll concentrations. Tests on leaves from iron-deficient orange trees showed the coefficient of variability to be in the vicinity of plus or minus 15%. By reading 20 replicate leaves, sampling errors were compensated sufficiently to give precision of about plus or minus 3%. (Skogerboe-Colorado State)

SPECIAL REPORT: SEMICONDUCTOR MEMORIES ARE TAKING OVER DATA-STORAGE APPLICATIONS,
W. B. Riley.
Electronics, Vol 46, No 16, p 75-90, August 2, 1973. 4 fig, 2 tab.

Descriptors: *Data storage and retrieval, *Computers, Reliability, Electronic equipment.
Identifiers: *Semiconductors, Controllers, Calculators, Memory(Computers).

Semiconductor memories are finding wide application in computer, controller, and calculator design. A general review is provided of the current status of semiconductors. Described are what is available, who is using the equipment, some criteria for selecting equipment, some problems that have been encountered, and some of the benefits from the new semiconductor technology. There are 16 different types of semiconductors, divided into two classes in any of four different and independent ways. The divisions are dynamic and static circuits, bipolar and metal-oxide-semiconductor (MOS) technology, read-write and read-only memories and random-access and serial-access memories. Not all 16 types are, however, purchasable or even practical. (Holoman-Battelle)

A DIRECT COMPARISON OF SATELLITE AND AIRCRAFT INFRARED (10 MICROMETERS-12 MICROMETERS) REMOTE MEASUREMENTS OF SURFACE TEMPERATURE,
Commonwealth Scientific and Industrial Research Organization, Aspendale (Australia). Div. of Atmospheric Physics.
C. M. R. Platt, and A. J. Troup.
Remote Sensing of Environment, Vol 2, No 4, p 243-247, 1973. 2 fig, 4 tab, 8 ref.

Descriptors: *Remote sensing, *Measurement, *Water temperature, *Sea water, *Satellites(Artificial), *Aircraft, Surface waters, Data collections, Infrared radiation, Australia, Water quality, Water vapor, Vapor pressure.
Identifiers: Comparative data, Radiometers, Nimbus IV Satellite THIR.

Nimbus IV Satellite THIR (10 micrometers-12 micrometers) sea surface temperature data for a region off the NE coast of Australia were compared with data taken over the same region and period with a radiometer detecting in the same special interval flown aboard a DC 3 aircraft at altitudes ranging from the surface to 3 km. When the aircraft ascended from the surface to above the tradewind inversion, the apparent sea surface temperature decreased by 2.6 C, on average. An empirical formula for the water vapor absorption coefficient, which include a component proportional to the water vapor pressure, was used successfully to account for the apparent temperature decrease. From above the inversion, the aircraft radiometer sea surface temperatures were slightly greater than the Nimbus IV THIR sea surface temperatures. This discrepancy was accounted for by residual water vapor between the inversion and the tropopause, nadir angles of viewing from Nimbus IV, and the slight mismatch between the spectral filters of the two instruments. (Holoman-Battelle)

WATER RESOURCES OF THE TAUNTON RIVER BASIN SOUTHEASTERN MASSACHUSETTS,
Geological Survey, Washington, D.C.
J. R. Williams, D. F. Farrell, and R. E. Willey.
For sale by USGS, Washington, D.C. 20244; Price $1.25 per set. Hydrologic Investigations Atlas HA-460, 3 sheets, 1973. 31 fig, 6 tab, 2 map, 31 ref.

Descriptors: *Water resources, *Surface waters, *Groundwater, *Massachusetts, Glacial drift, Streamflow, Water quality, Iron, Manganese,

Water yield, Water utilization, Groundwater basins, *Maps.
Identifiers: *Taunton River basin(Mass).

Information is provided on the water resources of the Taunton River basin, Massachusetts. The data will assist in locating additional water supplies, planning, and protecting water supplies. The basin's drainage area of 528 square miles includes at least 50 square miles of swamps and about 23 square miles of lakes and ponds. Six of the ponds furnish an average of 24 mgd to New Bedford and Taunton. The largest potential source of surface water is the Taunton River which, if treated, could furnish about 80 mgd from a reservoir in the estuary between Somerset and Freetown. Streamflow from the basin during the period 1931-65 averaged about 230 billion gallons per year, or about 57% of the average annual precipitation. In 1967 the total water pumped from streams, lakes, and surface-water reservoirs was about 178 billion gallons. Approximately 25 square miles of the basin is underlain by permeable material that is capable of yielding 300 gpm or more per well. Groundwater in some of the area cannot be used, however, because of urbanization, proximity of potential sources of pollution, or economic reasons. Many of the high-yielding parts of the aquifer system are located in thick, permeable stratified glacial drift which fills depressions in the underlying surface of till and bedrock. These deposits are the sources of the 3.1 billion gallons of groundwater pumped in 1967 by 21 cities, towns, and water districts, and for the 1.2 billion gallons pumped by industrial, institutional, domestic, and agricultural wells. The water in streams, reservoirs, and wells is generally soft, acid to slightly acid, and low in dissolved solids. (Knapp-USGS)

T. M. Simundich.
Water Resources Research, Vol 10, No 1, p 73-79, February 1974. 1 fig, 6 tab, 23 ref. NSF Grant GK-31463X1 OWRR B-150-CAL(1).

Descriptors: *Data collections, *Hydrologic data, *Systems analysis, *Parametric hydrology, Mathematical models, Optimization.

In water resources field problems, unknown physical parameters in the governing partial differential equations must be determined before relevant numerical results can be obtained. The identification of these parameters is formulated as a minimization problem in which the function to be minimized is a least squares comparison between the model equation and the systems responses (the field data). The minimization technique utilized is the Fletcher-Powell method. Three typical water resources field problems are used as examples to demonstrate the technique. (Knapp-USGS)

A NOTE ON THE USE OF SPECTRAL ANALYSIS TO DETECT LEADS AND LAGS IN ANNUAL CYCLES OF WATER QUALITY,
Colorado Univ., Boulder. Dept. of Economics.
J. M. Dowling.
Water Resources Research, Vol 10, No 2, p 343-344, April 1974. 1 tab, 4 ref.

Descriptors: *Time series analysis, *Water quality, Statistics, Statistical methods, *Input-output analysis.
Identifiers: *Spectral analysis.

Spectral analytic phase statistics can be interpreted as absolute delays in physical time only if the two series are related as input and output by a simple delay process. For all other linear input-output systems it is incorrect to interpret phase as if there is a simple delay between input and output series. To clarify interpretation of phase leads and lags, an explicit model should be constructed in the time domain. Without such clarification, ambiguities will be present in the interpretation of phase statistics. (Knapp-USGS)

CALCASIEU RIVER AT COON ISLAND, LOUISIANA, SHIP CHANNEL (FINAL ENVIRONMENTAL IMPACT STATEMENT).
Army Engineer District, New Orleans, La.
Available from National Technical Information Service, Springfield, Va 22151, as EIS-LA-73-0467-F, $5.25 paper copy, $1.45 microfiche. November 30, 1972. 63 p, 1 tab, 6 map.

Descriptors: *Channel improvement, *Dredging, *Environmental effects, Construction, Hydraulics, Water quality, Land use, Fish, Wildlife, Pollution, Rivers, *Louisiana, Water pollution, Spoil banks, Navigation, Ships, Turbidity, Channels.
Identifiers: *Environmental Impact Statements, *Coon Island(La).

The environmental impact and adverse effects are described of the construction of a ship channel and turning basin in the Coon Island channel to allow for more efficient use of the channel by larger and deeper-draft vessels. The construction requires the removal and disposal of large amounts of dredged material from the channel. Potential adverse environmental effects include air and water pollution by vessels and industry on the enlarged channel. The use of hydraulic dredges during construction and maintenance may degrade the water quality of the Calcasieu River by inducing temporary turbidity. No significant aesthetical or environmental changes in land use are associated with the project; because of the increased turbidity there will be unavoidable adverse impact to the fish, wildlife, water, and recreational resources. The resultant industrial expansion will require a land-use change. Alternatives to this action include retention of the existing ship channel, channel enlargement or no ship channel at all. (Daniels-Florida)
W74-07118

INFLATABLE DAMS AND DAM UNITS,
D. C. E. Fish.
U.S. Patent No 3,786,638, 4 p, 5 fig, 4 ref; Official Gazette of the United States Patent Office, Vol 918, No 4, p 1364, January 22, 1974.

Descriptors: *Patents, *Surges, *Dams, *Tides, Water control, Saline water instrusion.
Identifiers: Inflatable dams.

Inflatable dams are designed to protect the upper reaches of a river from occasional tidal surges. The dam unit comprises an elongated flexible, watertight envelope. The dam is raised by inflating the envelope with water. The filled envelope becomes a barrier which spans the river from side to side and lies between the high water level of the 'upper pool' that forms on the tidal side of the envelope and the low water level that forms in the lower pool on the source side. The envelope is inflated from its collapsed state by a pumping station on the river bank which draws water from the upper pool through a pipe by way of a filter, and discharges it through a pipe to an inlet in the envelope. Transactions of the ASAE (American Society of Agricultural Engineers), Vol 16, No 6, p 1117-1120, November 1973. 14 fig, 1 tab, 3 ref.

Descriptors: Economics, *Pipelines, *Costs, *Size, *Equations, Flow rates, Interest rates, Pumping, Hazen-Williams equation, Optimization, Methodology, Systems analysis.
Identifiers: *Nomographs, Least-cost, Friction head, Pipe diameter.

Nomographs for selecting the most economical size of PVC pipe are considered for the design engineer. Two basic costs are involved in the operation of a piping system: the annual cost of owning the pipe and the cost of pumping. Small pipe has a low initial cost; however, the cost of pumping in small pipes is large due to the high friction loss. Large pipe will result in lower pumping costs, but the initial cost of the pipe will be higher. Equations developed for the total annual cost show that for a given flow rate and power cost, there is a least-cost diameter. These equations are developed and the results summarized in a series of nomographs, one for each class of pipe. The Hazen-Williams formula has been used to find the friction loss. (Bell-Cornell)

OPTIMUM DESIGN HEIGHT OF COFFERDAMS,
Imperial Government of Iran, Tehran. Plan Organization.
F. Neghabat, and R. M. Stark.
Ocean Engineering, Vol 2, No 5, p 231-241, November 1973. 6 fig, 2 tab, 4 ref.

Descriptors: *Cofferdams, *Design, *Height, Costs, Construction, *Flooding, *Risks, Probability, Poisson ratio, Reliability, Hydrologic data, Economics, Mathematical models, Operations research, Ohio River.
Identifiers: *Cost minimization, Sensitivity analysis.

The cost of cofferdams as a function of design height is described by a basic lot size model. Cofferdams function in a random environment characterized by fluctuations in surrounding water levels. Augmenting the height of the structure diminishes the chance of flooding and its associated costs but increases the cost of construction. Design height, therefore, is determined through achievement of an appropriate balance between the construction costs and flood risk costs. In a simple algebraic model for the total expected cost of the structure, the construction and flood risk costs are expressed in terms of design height; total expected cost minimization is the design criteria. Using an exponential function for the expected number of floods, together with Poisson assumptions, an expression is derived for the probability of no flooding. From this expression a reliability chart (for a given site) is constructed that can be used to estimate the flooding risk for a fixed design height and period. By minimizing the cost objective function, a design chart is presented giving optimum design height in terms of such parameters as (estimated) daily flooding cost, construction cost per unit height, average flood duration, and mean and variance of the hydrological data. Sensitivity of the solution to errors in estimating model parameters is discussed. (Bell-Cornell)

ECONOMIC EVALUATION AND DETERMINATION OF PLANT CAPACITY AND DAM HEIGHT,
Public Power Corp., Athens (Greece).
D. A. Xirokostas.
Water Power, Vol 26, No 1, p 17-22, January 1974. 6 fig, 5 ref.

Descriptors: Water resources development, *Economics, *Evaluation, *Dams, *Height, *Powerplants, *Cost-benefit analysis, Optimization, Design, Costs, Energy, Methodology, Fuels, Equations, Systems analysis.
Identifiers: Hydro plants, Installed capacity.

Using a revised definition of benefit-cost ratio, a method is developed for comparing different hydro plants to obtain optimum values of dam height and installed capacity; it is assumed that the main role of future hydro installations will be to cover peak and high-load requirements. The proposed definition is given by the ratio of the annual cost of alternative plant plus the cost of replacing the secondary energy divided by the annual cost of the hydro plant, where the annual cost of the alternative thermal plant is determined by considering that it replaces only the primary energy of the hydro plant. The secondary energy is assessed separately with the average incremental cost of the fuel consumed by the system's oil-fired steam-turbine stations since this is exactly what constitutes the contribution of the secondary energy to the system. The proposed method is based first on designing the dam height and installed capacity to the natural sizes and capacity factors at which they will render their maximum economically-justified service to a system, and then on incorporating them into the system on the dates when these services will be required. The method allows determination of the parameters of hydro plants separately from their incorporation into a system. The dam height and installed capacity are determined so as to maximize the difference between benefits and costs, provided that no physical or technical limits on these variables are exceeded, thus restricting the solution to the feasible optimum. STATE OF THE ART OF FLOATING BREAKWATERS,
Washington Univ., Seattle. Dept. of Civil Engineering.
E. P. Richey, and R. E. Nece.
In: Proceedings 2nd Annual Technical Conference on Estuaries of the Pacific Northwest, March 16-17, 1972. Oregon State Univ., Corvallis (Engineering Experiment Station Circular No 44), p 74-86 (1972). 10 fig, 18 ref.

Descriptors: *Floats, *Ocean waves, *Breakwaters, Hydraulic structures, Barriers, Design, Marinas, Costs, *Washington.
Identifiers: *Floating breakwaters, Puget Sound(Wash.).

Shutdown time of weather dependent, waterborne activities like construction, logging, cargo handling and boating could be reduced by floating, transportable breakwaters. Also the infant mariculture industry might find more sites suitable for its special facilities if suitable wave protection could be provided. In view of their potential uses it is timely to reexamine the floating breakwater with regard to types, transmission characteristics, anchoring forces, economics, and multiple-use prospects. The performance characteristics of

major concern for floating breakwaters are the transmission coefficients, anchor forces, and motion. Prospects for a floating breakwater to be competitive with fixed structures appear to be favorable at sites where conventional forms are not suitable and where the exposure to the extreme wave events is excluded by restricted seasonal use. Four points in favor and three points detracting from their use are given. Areas of research which will aid in refining the current procedures for design are theory development, systematic measurements, field experience, cost-effective analyses, and considerations of the three-dimensional, random aspects of wind-generated waves. ATTENUATION OF WATER WAVES AND CONTROL AND UTILIZATION OF WAVE-INDUCED WATER MOVEMENTS,
FMC Corp., San Jose, Calif. (assignee).
D. L. Hammond.
U.S. Patent No 3,785,159, 11p, 31 fig, 4 ref; Official Gazette of the United States Patent Office, Vol 918, No 3, p 972, January 15, 1974.

Descriptors: *Patents, *Barriers, *Breakwaters, *Shore protection, *Pollution abatement, Sedimentation, Beach erosion, Waves(Water), Equipment.

A series of curved vane-like structures are placed across the path of incident waves to reduce their height, speed and period, and to change the wave-induced water movements. They are positioned either horizontally beneath the mean water line or sloping upward at an angle with the upper portion exposed above the water's surface. They can be used as a breakwater or as a diverter. The currents produced by the structures may be useful but not limited to the dispersal of waters polluted by chemical, thermal or sewage discharges, to effect beach replenishment, and even to generate electric or hydraulic power. The structures can also be used as a dynamic barrier against the spread of floating contaminants such as oil or solid debris. (Sinha - OEIS)

APPARATUS FOR RECORDING SWELL FREQUENCY AND PROPAGATION DIRECTION OF WAVES,
Agence Nationale de Valorisation de la Recherche, Courbevoie (France). Assignee.
L. Erdely.
U. S. Patent No 3,765,236, 2 p, 5 fig, 9 ref; Official Gazette of the United States Patent Office, Vol 915, No 3, p 827, October 16, 1973.

Descriptors: *Patents, *Waves(Water), *Coastal structures, Equipment, Measurement, Gauges, Gauging stations.
Identifiers: *Swell frequency, *Swell propagation.

During the design of coastal structures, it is necessary to be able to predict the forces to which the structures would be subject. An installation is described for swell frequency and propagation direction recording. The swell collector is made up of a water gauge which is partially submerged. The collector is connected, by a rigid shaft, to a ballast. The thrust center of the unit is connected by a flexible connection to an anchoring device and the collector enclosing a magnetic compass on a horizontal balance on a pivot and a counter of the number of movements of the water gauge with respect to the compass which also identified the direction of movements. SOLUTIONS FOR LATERAL OUTFLOW IN PERFORATED CONDUITS,
Ghent Rijksuniversiteit (Belgium). Dept. of Civil Engineering.
J. Berlamont, and A. Van der Beken.
Journal of the Hydraulics Division, American Society of Civil Engineers, Vol 99, No HY9, p 1531-1549, September, 1973. 11 fig, 3 tab, 17 ref.

Descriptors: *Drainage, *Irrigation, Hydraulics, *Pipe flow, Sprinkler irrigation, Sewage disposal, Water distribution(Applied), *Conduits.

General solutions are presented for obtaining a uniform lateral outflow, either by varying the perforation area or the cross-sectional area. The distribution of the lateral outflow in a conduit with constant cross section and constant perforation area is analyzed under normalized form. Appropriate flow parameters are introduced which allow for inertia or pressure recovery, velocity distribution, laminar or turbulent out-flow, and laminar and turbulent smooth or rough flow. All results are presented in diagrams. A design rule for nearly uniform discharge under turbulent pipe flow conditions is derived. The agreement between experimental data and the presented solutions, when the velocity correction coefficient is properly chosen, sustains the actual approach. (Skogerboe-Colorado State)
W74-07433

A MIXING CELL MODEL FOR LONGITUDINAL DISPERSION IN OPEN CHANNELS,
Universidad Nacional Autonoma de Mexico, Mexico City. Facultad de Ingenieria.
R. B. Banks.
Water Resources Research, Vol 10, No 2, p 357-358, April 1974. 1 fig, 8 ref.

Descriptors: *Mixing, *Open channel flow, *Dispersion, Model studies, Mathematical models, Turbulent flow.

Mixing is described in a steady uniform flow in an open channel that consists of a series of cells arrayed in a longitudinal direction. At time zero a step function change in concentration is imposed at the origin, and it is assumed that complete mixing then occurs of the cells. The main result is that the longitudinal dispersion coefficient is essentially equal to the product of the flow velocity and the cell length. Relating this result to the well-known dispersion equation, a definition is obtained for the length of a dispersion unit. (Knapp-USGS)

8C. Hydraulic Machinery

HYDROELECTRIC POWER RESOURCES OF THE UNITED STATES, DEVELOPED AND UNDEVELOPED, JANUARY 1, 1972.
Federal Power Commission, Washington, D.C.
December 1972. 126 p, 3 fig, 2 map, 19 tab.

Descriptors: *Hydroelectric power, *Water resources development, *Pumped storage, Hydroelectric plants, Electric power production, Water utilization, *United States.
Identifiers: *Hydroelectric power resources.

As of January 1, 1972, the total potential conventional hydroelectric power capacity of the United States is estimated to be 178.6 million kilowatts, capable of generating an average of about 702 billion kilowatt-hours annually. Approximately 53.4 million kilowatts, or 30% of the total potential, had been developed, with the capability of an average annual generation of about 257 billion kilowatt-hours. Of the remaining undeveloped conventional hydroelectric potential of 125.2 million kilowatts, with a corresponding average annual energy production of about 445 billion kilowatt-hours, about 7.8 million kilowatts were under construction at the beginning of 1972. The total developed pumped storage capacity, as of January 1, 1972, amounted to 3.9 million kilowatts, including 2.6 million kilowatts in pure pumped storage plants and 1.3 million kilowatts in combined plants. A total of 6.0 million kilowatts were under construction in pure pumped storage plants, and 1.4 million kilowatts were under construction in combined plants. Of the major drainages, the North Pacific has the largest amount of both developed and undeveloped hydroelectric capacity, accounting for about one-third of the totals in each case. Among the states, Washington has the largest developed capacity and the largest total potential. Alaska has the largest undeveloped potential. (Knapp-USGS)

THE FOOD HABITS AND AGE AND GROWTH OF GOLDEYE, HIODON ALOSOIDES (RAFINESQUE), IN BEAVER CREEK, LAKE OAHE, NORTH DAKOTA, 1971-72,
North Dakota Univ., Grand Forks.
P. T. Schadewald.
Available from the National Technical Information Service as COM73-11338, $5.25 in paper copy, $1.45 in microfiche. National Marine Fisheries Service Report No NOAA 73073009, May 1973. 61 p, 5 fig, 20 tab, 28 ref.

Descriptors: *Freshwater fish, *Food habits, *Fish food organisms, *Animal growth, *North Dakota, Seasonal, Crustaceans, Daphnia, Insects, Diurnal distribution, Reservoirs, Spatial distribution, Commercial fish, Fish diets, Copepods, Fish parasites.
Identifiers: *Goldeye, Hiodon alosoides(Rafinesque), Lake Oahe(N.D.).

Food habits and growth of goldeye were studied in Lake Oahe, North Dakota to determine why the fish in that reservoir have better growth and can be harvested commercially while the Lake Sakakawea impoundment produced goldeye of smaller size, which were commercially unacceptable. Food availability may be the key to growth differences. A comparison of results from these two studies should provide a much better understanding of the status of goldeye in both reservoirs. The Beaver Creek site in Lake Oahe was selected as the study area. Stomach contents from 833 goldeye were analyzed to determine bihourly, and spring and summer food habits. Cladocera, principally Daphnia, comprised 75% of the average stomach volume. Frequency of occurrence was 98.4% for Cladocera and 87.2% for Insecta. Young-of-the-year goldeye fed entirely on microcrustaceans. The diet of older age classes was predominantly microcrustaceans, but always included insects. Goldeye were concentrated in surface waters when food was abundant, usually at night. At other times the population seemed to be distributed at all depths. The equation for the length-weight curve was log W = 5.3320 + 3.1211 log TL. K-TL was .9297. (Jones-Wisconsin)

DISEASES OF POND FISHES,
O. N. Bauer, V. A. Musselius, and Y. A. Strelkov.
Available from the National Technical Information Service as TT-72-50070, $5.75 in paper copy, $1.45 in microfiche. Bureau of Sport Fisheries and Wildlife and National Science Foundation, Translation TT-72-50070, 1973. 71 fig, 8 tab, 6 plates, 426 ref. Trans. of Bolezni Prudovykh Ryb.

Descriptors: *Fish diseases, *Ponds, *Epizootiology, Fisheries, Control, Vectors(Biological), Animal pathology, Hosts, Infection, Fish parasites, Treatment, Pathogenic bacteria, Viruses.
Identifiers: *Causative agents, *USSR, Immunity, Symptoms, Diagnosis, Drugs.

A comprehensive discussion of pone fish diseases and their control is presented. Described are diseases which have appeared in the USSR recently as a result of imports, as well as infectious, parasitic, and non-communicable diseases which have become especially dangerous due to current intensifications. Material published both in the USSR and elsewhere is included. Important therapeutic preparations used in pond fishery are compiled with an extensive bibliography. Diseases discussed are infectius, parasitic, those caused by infusoria, by helminths, by larvae of trematodes, by Crustacea, noncommunicable diseases (alimentary and functional), traumatic damage, and diseases caused by deterioration of rearing conditions, and diseases of unknown etiology. A chapter is devoted to pathological examination methods; bacteriological examination; media preparation, preparation and examination of stained preparations, pure cultures, morpbological and biochemical properties of microbes, and methods of examination for viruses and for parasitic diseases, including collection, fixation and storage of parasites in addition to formulas of common fixatives and stains. The volume is illustrated, especially in the 100 pages on parasitic diseases. (Jones-Wisconsin)

ABUNDANCE AND MORTALITY OF THE PERCH FRY (PERCA FLUVIATILIS, LINNACUS, 1758) IN THE KLICAVA RESERVOIR,
Karlova Universita, Prague (Czechoslovakia). Inst. of Zoology.
K. Cerny, and K. Pivnicka.
Vestn Cesk Spol Zool. Vol 37, No 1, p 1-13. 1973. Illus.
Identifiers: *Czechoslovakia(Klicava reservoir), Embryo development, Larva development, *Mortality, Perca-Fluviatilis, *Perch fry, Rervoirs.

The abundance of the perch fry in the Klicava reservoir (Czechoslovakia) during the years 1967, 1970, and 1971 was studied. There is a decreasing trend in successive values of all estimations, which is correlated with the initially great and subsequent lower numbers of fish captured. The successive estimated values descend to the final known value. On the basis of 2 consecutive estimations in the year 1971 the value of daily mortality of perch fry was calculated as 0.66%. Mortality values in fry of different fish species when compared among themselves lead to the conclusion that the values in the embryonal and larval development periods fluctuate considerably. After these periods (in the juvenile period) daily mortality is stable and similar in different fish species.—Copyright 1973, Biological Abstracts, Inc.

ON THE COMPOSITION OF MIXED FODDER RATIONS FOR TROUT IN NET CAGES, (IN GERMAN),
Munich Univ. (West Germany). Institut fuer Physiologie und Ernaehrung der Tiere.
J. Tiews, J. Gropp, H. Koops, and K. Tiews.
Z Tierphysiol Tierernaehr Futtermittelkd. Vol 29, No 6, p 267-275, 1972. Illus. English summary.
Identifiers: Corn(Field), Fish fodder, Rations, Soy, Starch, *Trout, Vitamins, *Fish cages.

Feeding experiments with trout in net cages were carried out in fresh water or coastal water (NaCl = 12-18%,respectively). A 92 g weight gain in 123 days was obtained with a ration containing 42% crude protein (3/4 derived from fishmeal) and 15% cooked corn starch. The addition of 15% untreated corn starch to the ration lowered the weight gain to 80 g and decreased feed efficiency (1.74) significantly, indicating that raw starch is poorly utilized by the fish, probably due to a lack of amylase-activity in the intestines. Even the 49% protein basal ration (without additional starch) resulted only in 86 g weight gain and a feed efficiency of 1.60, indicating that part of the protein may have served for energetic purposes in the metalolism of trout. All rations were supplemented with synthetic vitiams. Omitting the vitamins did not decrease weight gain and feed conversion in the first 100 days of the experiment, but later the appetite declined drastically. Cooked starch is better utilized than raw starch by the trout, and 42% crude protein in the trouts' ration is preferable to 32%. There was not a very large difference between protein of animal (fishmeal) or plant (soy) origin in the various protein levels. The best results (141 g weight gain in 76 days; feed conversion 1.46) were obtained with a 40% protein level in the ration, mainly derived from fishmeal. Therefore, commercial trout feeds should contain at least 40% crude protein derived from high quality fishmeals.--Copyright 1973, Biological Abstracts, Inc.

Available from the National Technical Information Service as PB-231 794, $6.50 in paper copy, $1.45 in microfiche. 1973. 49 p. OWRR A-999-DEL(5).

Descriptors: *Delaware, *Water Resources Institute, *Research, *Universities, Training, Colleges, Water resources development.

Delaware's principal natural resource is ground water, plentiful in its southern counties (Kent and Sussex) but becoming scarcer in northern New Castle County. Affinity was established between water availability and geologic features in the rock aquifers, resulting in new producing wells in the Newark water-short area. Well-development possibilities became predictable by gamma-ray logs of test holes in coastal plain aquifers characterized by alternate layers of sand and clay. The Delaware Water Resources Center's work has stimulated public and governmental debate on single (large) versus regional (small) sewage treatment facilities and on a new reservoir versus water-recycling plants. A Christina River Basin Study resulted in a flood-plain ordinance for Newark, a proposed erosion and sedimentation control ordinance for New Castle County; and distribution of a public information brochure on water conservation in developing areas. It also enlisted the guidance of a very distinguished Citizens' Council chaired by a former Delaware Governor and Senator in Washington. The Center is helping to find a solution to pollution of a large coastal aquifer by leachate from an old sanitary landfill. Affected are about 150,000 customers of a privately owned water company using the aquifer. (Varrin-Delaware)

EIGHTH ANNUAL REPORT, PROGRAM ACTIVITIES, JULY 1, 1971-JUN 30, 1972.
Maryland Univ., College Park.
Available from the National Technical Information Service as PB-231 804 $7.25 in paper copy, $1.45 in microfiche. Water Resources Research Center. 1972. 91p. OWRR A-999-MD(8).

Descriptors: *Water resources development, *Water Resources Institute, *Maryland, Bibliographies, *Projects, Reviews, *Universities, State governments, Water pollution, Grants, Training, Colleges, Publications.
Identifiers: Projects progress report.

Projects in progress during the 1972 FY by the Water Resources Research Center of the University of Maryland include: the thermal requirements and tolerance of key estuarine organisms; agricultural waste water accomodation and utilization by various forages; mechanism of organic adsorption on activated carbon; the transient behavior of recharge-discharge areas in regional groundwater systems; a statistical investigation and simulation of hydroclimatological events; pollution loads in percolate water from surface spread swine wastes; bacterial degradation of arylsulfonates in treatment of waste water; analysis of time variant waste treatment systems; chlorinated sewage effluents and avoidance reaction of stream fish; effects of economic development upon water resources; biogeochemistry of estuarine ecosystem with emphasis on heavy metals and shellfish; the effects of thermal loading and water quality on estuarine primary production; and the role of organic debris and associated microorganisms in pelagic estuarine food chains. (Woodard-USGS)

W74-07305 8A

Contributions to the Calculation of the Rood Territory Width and the Transversal Section Under the Retention Level at the Weirs and Dams of Fishery Purposes, (In Rumanian),
W74-07448 8I

DATA COLLECTIONS
Records of Ground-Water Levels in Wyoming, 1940-1971,
W74-07186 4B

A Systems Analysis of Water Quality Survey Design,
W74-07310 5B

Data for Municipal Wells in the City of Modesto, California,
W74-07320 4B

Annual Compilation and Analysis of Hydrologic Data for Urban Studies in the San Antonio, Texas Metropolitan Area, 1971,
W74-07323 2E

Parameter Identification in Field Problems,
W74-07428 7C

DATA STORAGE AND RETRIEVAL
A Computer System for Storage and Retrieval of Hydrogeological Data from Well Records,
W74-07328 7C

Special Report: Semiconductor Memories are Taking Over Data-Storage Applications,
W74-07553 7B

DDT
Volatility of DDT Residues in Soil as Affected by Flooding and Organic Matter Applications,
W74-07424 5B

DEALKYLATION
Biochemistry of Selective Toxicity and Biodegradability: Comparative O-Dealkylation by Aquatic Organisms,
W74-07126 5C

DEATH VALLEY
Distillation-Condensation of Water and Nutrient Movement in a Desert Ecosystem,
W74-07110 2I

DECAYING ORGANIC MATTER
Population Dynamics of Protozoa Associated with the Decay of Organic Materials in Fresh Water,
W74-07541 5C

DECISION MAKING
North Coastal Area Action Program. A Study of the McKinleyville-Trinidad Area: Public Hearing Comments.
W74-07129 6B

Multi-Disciplinary Study of Water Quality Relationships: A Case Study of Yaquina Bay, Oregon,
W74-07142 6B

Resource Management Decisions: Externalities and Public Policy,
W74-07148 6A

Development of a Decision Room for Environntal Studies, (Feasibility Study),
W74-07371 6G

Production Function Theory for Use in Optimal Planning Decisions,
W74-07460 5D

New Concepts in Environmental Planning,
W74-07492 6B

DECONTAMINATION
Hygienic Evaluation of Means of Enrichment with Salts and Decontamination of Demineralized Water, (In Russian),
W74-07365 5F

DEEP TILLAGE
Reactivating Soil Ripping Treatments for Runoff and Erosion Control in the Southwestern U.S.,
W74-07089 2G

DEGRADATION (DECOMPOSITION)
Volatility of DDT Residues in Soil as Affected by Flooding and Organic Matter Applications,
W74-07424 5B

Observations on the Gas Chromatography of Kelthane (Dicofol),
W74-07575 5A

Residues of Atrazine, Cyanazine, and Their Phytotoxic Metabolites in a Clay Loam Soil,
W74-07585 5A

DEL NORTE COUNTY (CALIF
North Coastal Area Action Program: A Study Of The Smith River Basin And Plain.
W74-07132 6B

DELAWARE
Annual Report/Fiscal Year 1973.
W74-07252 9D

United States V. Pot-Nets, Inc. (Violation of Rivers and Harbors Act),
W74-07287 6E

Small Beach Erosion Control Project, Lewes Delaware (Final Environmental Impact Statement)
W74-07295 4A

DELAWARE BAY
Suspended Sediment Transport in Delaware Bay,
W74-07233 2L

DEMAND
Coal-Energy Development in the Northern Great Plains.
W74-07056 6D

DEMAND FUNCTION
The Demand for Sport Fishing at Yaquina Bay,
W74-07143 6B

DEMINERALIZATION
Hygienic Evaluation of Means of Enrichment with Salts and Decontamination of Demineralized Water, (In Russian),
W74-07365 5F

DENITRIFICATION
Losses of Inorganic Nitrogen From Aquatic Systems,
W74-07426 5B

DENMARK
Sedimentation by Non-Tidal Currents Around Northern Denmark,
W74-07160 2L

DENSITY CURRENTS
Planar and Axisymmetric Bottom Withdrawal from a Density-Stratified Reservoir,
W74-07340 4A

DENVER (COLO)
Regional Environmental Reference.
W74-07085 6G

DENVER SMSA
User Charges and Industrial Cost Recovery, Denver SMSA,
W74-07370 5D

DEPOSITION (SEDIMENTS)
Biodeposition as a Factor in Sedimentation of Fine Suspended Solids in Estuaries,
W74-07231 2L

Supply of Terrigenous Material to the Baltic Sea (Pitaniye Baltiyskogo morya terrigennym materialom),
W74-07501 2J

DEPTH
Problem of Calculating Depth of the Quasiuniform Layer of the Ocean (K voprosu o raschete tolshchiny kvaziodnorodnogo sloya okeana),
W74-07506 2A

DESALINATION
Self Cleaning, Tubular Solar Still,
W74-07207 3A

Planning and Operational Studies in the Integrated Use of Desalination. Case Studies for Cyprus and Jersey,
W74-07308 3A

DESERT PLANTS
The Saguaro Giant Cactus, A Bibliography,
W74-07098 2I

Distillation-Condensation of Water and Nutrient Movement in a Desert Ecosystem,
W74-07110 2I

ESIGN
Optimum Design Height of Cofferdams,
W74-07304 8A

A Systems Analysis of Water Quality Survey Design,
W74-07310 5B

Water and Effluent Treatment Plants - Cost Considerations and Client, Contractor, Consultant Relationships, The Consultant's View,
W74-07312 5D

Development of an Agricultural Drainage Guide,
W74-07438 4A

ESORPTION
Phosphorus Supply Characteristics of Acid Organic Soils as Measured by Desorption and Mineralization,
W74-07345 2G

ETERGENTS
Laundry Detergents and Environmental Quality,
W74-07122 5C

Effect of Restricted Use of Phosphate-Based Detergents on Onondaga Lake,
W74-07566 5C

ETRITUS
Nutritive Importance and Structure of Detritus,
W74-07471 5C

IATOMS
The Marine Diatom Ethmodiscus rex: Its Morphology and Occurrence in the Plankton of the Sargasso Sea,
W74-07547 5A

ICOTS
A Contribution to the Botany of Ganganagar District, North Rajasthan,
W74-07357 3F

IELECTRIC CONSTANT
Broad Spectrum Microwave Systems for Remotely Measuring Soil Moisture Content,
W74-07052 2G

IFFUSION
Heat Dispersion Effect on Thermal Convection in a Porous Medium Layer,
W74-07156 2F

IFFUSIVITY
On The Determination of Turbulent Diffusivity in Shallow Waters by Aerial Photography of Floating Markers,
W74-07316 2H

The Estimation of Vertical Eddy Diffusivities Below the Thermocline in Lakes,
W74-07416 2H

Flux-Gradient Relationships and Soil-Water Diffusivity from Curves of Water Content Versus Time,
W74-07512 2G

DIGESTION
Reduction in Mercury Content of Fish Protein Concentrate by Enzymatic Digestion,
W74-07576 5A

DIPTERA
Vertical Migration of Spaniotoma akamusi Larvae (Diptera:Chironomidae) through the Bottom Deposits of Lake Suwa,
W74-07543 2H

DISCHARGE
Protection of the Environment.
W74-07289 6E

National Pollutant Discharge Elimination System.
W74-07293 6E

DISCHARGE (WATER)
Water Reuse and Recycle in the D(C)EDED Bleach Sequence,
W74-07377 5D

DISINFECTION
Ozone in Water and Waste Water Treatment, a Bibliography.
W74-07251 5D

High-Rate Disinfection of Combined Sewer Overflow,
W74-07263 5D

DISPERSION
Heat Dispersion Effect on Thermal Convection in a Porous Medium Layer,
W74-07156 2F

On The Determination of Turbulent Diffusivity in Shallow Waters by Aerial Photography of Floating Markers,
W74-07316 2H

Dispersion of Contaminated Sediment Bed Load,
W74-07446 5B

A Mixing Cell Model for Longitudinal Dispersion in Open Channels,
W74-07527 8B

DISSOLVED GASES
Processes Affecting Gas Distributions in Estuarine Sediments,
W74-07242 2L

DISSOLVED OXYGEN
Predicting the Quality of Stream Water Under Conditions of Oxygen Deficiency (O prognoze kachetva vody vodotokov pri bol'shikh defitsitakh kisloroda),
W74-07388 5B

Application of a Large Scale Nonlinear Programming Problem to Pollution Control,
W74-07461 5D

Some Aspects of the Temperature, Oxygen and Nutrient Distributions in Monterey Bay, California. Annual Report, Part 1, 1973,
W74-07469 5C

DISSOLVED SOLIDS
Quality of Well Waters of Jaipur District,
W74-07106 4B

Dissolved-Solids Discharge to the Oceans from the Conterminous United States,
W74-07162 5B

Evaporation of Water from Sand: 5. The Effect of Evaporation on the Concentration of Salts Dissolved in Water Stored in Sand,
W74-07169 2D

Quantitative Chemical Analysis of Specific Components of the Waters of Lost Creek and the Wabash River, Vigo County, Indiana,
W74-07405 5A

Supply of Terrigenous Material to the Baltic Sea (Pitaniye Baltiyskogo morya terrigennym materialom),
W74-07501 2J

DISTILLATION
Distillation-Condensation of Water and Nutrient Movement in a Desert Ecosystem,
W74-07110 2I

Method of and Apparatus for the Recovery of Oil from Water,
W74-07201 5G

Self Cleaning, Tubular Solar Still,
W74-07207 3A

DISTRIBUTION
Seasonal Abundance and Vertical Distribution of Crustacean Zooplankton in a Coloured Dystrophic Lake in Northeastern Ontario,
W74-07467 5C

Some Aspects of the Temperature, Oxygen and Nutrient Distributions in Monterey Bay, California. Annual Report, Part 1, 1973,
W74-07469 5C

Biological Investigations of Noxious Coelenterates and Ctenophores in Coastal North Carolina,
W74-07479 2L

Distribution and Chemistry of Phosphorus in an Albaqualf Soil After 82 Years of Phosphate Fertilization,
W74-07532 5B

Pharmacodynamics of Methyl Mercury in the Rainbow Trout (Salmo Gairdneri): Tissue Uptake, Distribution and Excretion,
W74-07597 5C

DISTRIBUTION FUNCTIONS
Just a Moment,
W74-07414 2A

DISTRIBUTION PATTERNS
Probability Distribution of Snow Course Data for Central Arizona,
W74-07094 2C

Mechanism of Element Distribution in the Pacific Ocean (Japanese Profile) (K poznaniyu mekhanizma raspredeleniya elementov v Tikhom okeane (Yaponskiy profil')),
W74-07503 2J

The Chemical Form and Bodily Distribution of Mercury in Marine Fish,
W74-07551 5A

DISTRIBUTION SYSTEMS
North Coastal Area Action Program. A Study of the McKinleyville-Trinidad Area: Public Hearing Comments.
W74-07129 6B

DISTRICT OF COLUMBIA
Hydrogen Peroxide Cures Filamentous Growth in Activated Sludge,
W74-07253 5D

DOLOMITE
Hydrogeology of the Sasso Lungo Group, a Dolomitic Reef Stock in the Alpine Dolomites of North Italy,
W74-07153 2F

DOMESTIC WATER
Economic Damages from Residential Use of Mineralized Water Supply,
W74-07417 5C

DRAINAGE
Solutions for Lateral Outflow in Perforated Conduits,
W74-07433 8B

DRAINAGE

Effects of Drainage on the Yield of Cacao, (In Portuguese),
W74-07435 3F

Development of an Agricultural Drainage Guide,
W74-07438 4A

Shallow Drain Performance in a Heavy Soil,

ESTIMATED COSTS
Phosphorus Removal Treatability Studies at C.F.B. Bordon, Petawawa, Trenton and Uplands,
W74-07273 5D

ESTUARIES

ESTUARIES

Environmental Framework of Coastal Plain Estuaries.
W74-07225 2L

Recent Investigations in Stratified Flows Related to Estuarial Hydraulics,
W74-07226 2L

Influence of Mineral-Water Reactions in Estuaries on Boron Budget in the Oceans,
W74-07227 2L

Comparison of Conditional Stability Constants of North Carolina Humic and Fulvic Acids with Co(II) and Fe(III),
W74-07228 5B

Amazon River Estuarine System,
W74-07229 2L

Biodeposition as a Factor in Sedimentation of Fine Suspended Solids in Estuaries,
W74-07231 2L

Spatial and Temporal Distribution of Suspended Sediment in Narragansett Bay and Rhode Island Sound,
W74-07232 2L

Suspended Sediment Transport in Delaware Bay,
W74-07233 2L

Distribution and Transportation of Suspended Sediment in Upper Cheasapeake Bay,
W74-07234 2L

Rio De La Plata Estuary Environments,
W74-07236 2L

Regional Clay Mineral Facies in Estuaries and Continental Margin of the United States East Coast,
W74-07237 2L

Source of Recent Nearshore Marine Clays, Southeastern United States,
W74-07238 2L

Mass Physical and Engineering Properties of Some York River Sediments,
W74-07239 2L

Strontium Isotope Composition and Sediment Transport in the Rio de la Plata Estuary,
W74-07240 2L

Techniques for use of Organic and Amorphous Materials in Source Investigations of Estuary Sediments,
W74-07241 2L

Texture and Organic Carbon Content of Bottom Sediments in some Estuaries of the United States,
W74-07243 2L

Biogeochemical Variables in Bottom Sediments of the Rapphannock River Estuary,
W74-07244 2L

Recent Estuarine Sediment History of the Roanoke Island Area, North Carolina,
W74-07245 2L

Erosional and Depositional Estuarine 'Terraces,' Southeastern United States,
W74-07246 2L

Santee Submergence, Example of Cyclic Submerged and Emerged Sequences,
W74-07247 2L

Marine Geology and Estuarine History of Mobile Bay, Alabama: Part 1. Contemporary Sediments,
W74-07248 2L

Effects of Man-Made Works on the Hydraulic, Salinity, and Shoaling Regimens of Estuaries,
W74-07249 5C

Effect of Increasing Depth on Salinity in the James River Estuary,
W74-07250 2L

Field and Experimental Studies on the Systematics and Ecology of Ulva curvata and Ulva rotundata,
W74-07473 5C

An Investigation of the Physical Impact of Sewage Outflow on a River-Estuarine Environment,
W74-07477 5C

A Study of the Movement of Phosphorous in the Little River Estuary, N.S.W.,
W74-07483 5B

Proceedings 2nd Annual Technical Conference on Estuaries of the Pacific Northwest.
W74-07491 2L

Some Estuarine Factors Influencing Ascent of Anadromous Cutthroat Trout in Oregon,
W74-07493 2L

Pacific Northwest Coastal Zone Management as it Relates to Estuary Protection,
W74-07500 6E

ESTUARINE FISHERIES

The Predicted Influence of Kraft Mill Effluent on the Fishery Resources,
W74-07145 5C

An Economic Evaluation of Alternative Levels of Water Quality: The Role of Water Quality in Relation to Economic Benefits,
W74-07146 6B

ETHMODISCUS REX

The Marine Diatom Ethmodiscus rex: Its Morphology and Occurrence in the Plankton of the Sargasso Sea,
W74-07547 5A

EUROPE

The Pulp and Paper Industry and the Environment,
W74-07411 5D

EUTROPHIC LAKES

Leech Communities (Hirudinea) in the Mazurian and Bialystok Regions and the Pomeranian Lake District,
W74-07542 5C

EUTROPHICATION

Factors Affecting Phytoplankton Production in a Eutrophic Reservoir,
W74-07121 5C

Function of Marshes in Reducing Eutrophication of Estuaries of the Middle Atlantic Region,
W74-07336 5C

Systems simulation of the effect of tertiary treatment for carbon, nitrogen, and phosphorus removal upon primary productivity, standing crop, and community structure of autotrophic and hetertrophic communities in receiving model streams.
W74-07337 5C

Utilization of ERTS-1 Data to monitor and Classify Eutrophication of Inland Lakes,
W74-07484 5C

Bacteria-Assimilable Organic Compounds, Phosphate, and Enhanced Growth of Bacteria-Associated Blue-Green Algae,
W74-07587 5C

EVALUATION

Economic Evaluation and Determination of Plant Capacity and Dam Height,
W74-07305 8A

Development of a Decision Room for Environmtal Studies, (Feasibility Study),
W74-07371 6G

EVAPORATION

Evaporation of Water from Sand: 5. The Effect of Evaporation on the Concentration of Salts Dissolved in Water Stored in Sand,
W74-07169 2D

Self Cleaning, Tubular Solar Still,
W74-07207 3A

Instability of Water Cooled from Above,
W74-07458 2H

Investigation of the Relation of Groundwater Evaporation to Lithological Structure of the Zone of Aeration (K izucheniyu zavisimosti ispareniya gruntovykh vod ot litologicheskogo stroyeniya zony aeratsii),
W74-07529 2D

EVAPORATION CONTROL

Model Tests with Thin Sheets to Reduce Evaporation,
W74-07103 3B

EVAPORATION PANS

Solar Evaporation Controlled Irrigation System,
W74-07211 2D

Irrigation and Sprinkler System,
W74-07212 3F

EVAPOTRANSPIRATION

Evapotranspiration on a Palouse Watershed,
W74-07087 2D

Evaporation from an Irrigated Rice Crop in a Semi-Arid Region,
W74-07096 2D

EXCAVATION

Annotated Bibliography of Explosive Excavation Related Research.
W74-07314 8H

EXPLORATION

Application of Geochemistry to the Search for Crude Oil and Natural Gas,
W74-07161 4B

EXPLOSIVE EXCAVATIONS

Annotated Bibliography of Explosive Excavation Related Research.
W74-07314 8H

EXPLOSIVES

Annotated Bibliography of Explosive Excavation Related Research.

LANCASTER (PENN)
The EPA Stormwater Management Model: A Current Overview,
W74-07265 5D

LAND ACQUISITION
Wild and Scenic Rivers.
W74-07290 6E

LAND CATEGORIES
Hawaii's Statewide Land Classification Proves Adaptability as Land Use and Environmental Concerns Change,
W74-07138 4A

LAND CLASSIFICATION
Land Use In California.
W74-07131 6B

Hawaii's Statewide Land Classification Proves Adaptability as Land Use and Environmental Concerns Change,
W74-07138 4A

LAND CLEARING
Snow Accumulation and Snowmelt as Influenced by a Small Clearing in a Lodgepole Pine Forest,
W74-07526 2C

LAND DEVELOPMENT
Utilities and Facilities for New Residential Development: A Survey of Municipal Policy,
W74-07071 5D

LAND DISPOSAL (WASTES)
Land Disposal of Wastewater--Literature Review for 1973,
W74-07327 5D

LAND MANAGEMENT
Land Application of Sewage Sludge,
W74-07266 5D

LAND RECLAMATION
Ecology and Productivity of Strip-Mine Areas in Mercer County, Pennsylvania,
W74-07055 5B

Effect of Irrigation with Thermal Water on Trace-Element Content in Some Soils of Geor-

gia (Vliyaniye orosheniya termal'nymi vodami na soderzhaniye mikroelementov v nekotorykh pochvakh Gruzii),
W74-07508 3F

LAND TYPES
Hawaii's Statewide Land Classification Proves Adaptability as Land Use and Environmental Concerns Change,
W74-07138 4A

LAND USE
Landscape Compartmentalization: An Ecological Approach to Land Use Planning,
W74-07053 6G

Wallowa Lake Basin Comprehensive Plan.
W74-07065 5D

The Relationship of Land Use to Water Use in San Antonio, Texas,
W74-07067 4A

Public Investment Criteria: Application to a Project in the Souris River Basin,
W74-07070 6B

Population, Land Use and Livestock Composition in India and Its Arid Zone,
W74-07105 3F

Land Use In California.
W74-07131 6B

Hawaii's Statewide Land Classification Proves Adaptability as Land Use and Environmental Concerns Change,
W74-07138 4A

A Computer Simulation Model for Flood Plain Development. Part II: Model Description and Applications,
W74-07296 6A

LANDSCAPE COMPARTMENTALIZATION
Landscape Compartmentalization: An Ecological Approach to Land Use Planning,
W74-07053 6G

LASER RADIATION
Response of Aquatic Weeds to Laser Radiation,
W74-07475 5G

LAUNDERING
Laundry Detergents and Environmental Quality,
W74-07122 5C

LEACHING
Relative Movement of Bromide and Nitrate Through Soils,
W74-07423 5B

Effectiveness of Two Nitrification Inhibitors for Anhydrous Ammonia Under Irrigated and Dryland Conditions,
W74-07436 5G

Leaching Losses of Sulfur During Winter Months When Applied as Gypsum, Elemental S or Prilled S,
W74-07449 5B

Salt Displacement into Drain Tiles under Ponded Leaching,
W74-07518 2G

LEAD
Rotating Ring-Disk Electrode Study of the Adsorption of Lead on Gold in 0.5M Potassium Chloride,
W74-07555 2K

LEAKAGE
Safety Device Against Leakage from Ships, Especially Tankers,
W74-07205 5G

LEAVES
Portable Reflectance Meter for Estimating Chlorophyll Concentrations in Leaves,
W74-07437 7B

LEECHES (HIRUDINEA)
Leech Communities (Hirudinea) in the Mazurian and Bialystok Regions and the Pomeranian Lake District,
W74-07542 5C

LEGAL ASPECTS
Pollution and Industry: Pros, Cons of Growing Fight.
W74-07112 5G

The Interlake Affair,
W74-07120 5G

LEGISLATION
Metallic Mineral Mining Operations, (Acquisition of Surface Lands for Water Quality Control).
W74-07119 6E

Control of Grading Practices in the City and County of Honolulu,
W74-07139 4D

Stream Pollution.
W74-07275 6E

Sanitary Districts for Sewage Disposal.
W74-07276 6E

West Virginia Water Development Authority.
W74-07277 6E

River Regulation--Reservoirs.
W74-07278 6E

Law Affecting the Quality of the Marine Environment,
W74-07282 5G

Riparian Rights in Certain Counties.
W74-07283 6E

A Bill to Authorize the Secretary of the Interior to Engage in Feasibility Investigations of Certain Potential Water Resource Developments.
W74-07284 6E

Protection of the Environment.
W74-07289 6E

National Pollutant Discharge Elimination System.
W74-07293 6E

Environmental Impact Analysis: An Examination of Three Methodologies,
W74-07339 6G

Laws and Regulations of Pollution and Navigation in Pacific Northwest Estuaries,
W74-07499 5G

Pacific Northwest Coastal Zone Management as it Relates to Estuary Protection,
W74-07500 6E

LEWES (DEL)
Small Beach Erosion Control Project, Lewes, Delaware (Final Environmental Impact Statement).
W74-07295 4A

LIGANDS
Gas Chromatographic Studies of Mixed-Ligand Complexes of Divalent Cations,
W74-07582 5A

LIGHT INTENSITY
Effect of Light Intensity and Glycerol on the Growth, Pigment Composition, and Ultrastructure of Chroomonas Sp.,
W74-07548 5C

LIGHT TRANSMITTANCE
Determination of Oil Concentration and Size Distribution in Ship Ballast Waters. Method and Representative Results,
W74-07564 5B

LIMNOLOGY
The Estimation of Vertical Eddy Diffusivities Below the Thermocline in Lakes,
W74-07416 2H

LINE INTERSECTION METHOD
Line Intersection Method for Estimating Drainage Density,
W74-07174 2J

LINEAR PROGRAMMING
A Model of Irrigated Agriculture and Regional Development in Southern Argentina: The Rio Negro Basin,
W74-07306 6A

Cost Sharing for Recreation: Efficiency and Equity,
W74-07307 6B

Planning and Operation of Urban Water Quality Management Systems,
W74-07334 5D

LITTLE ROCK METROPOLITAN AREA (ARK)
Interim Storm Drainage Plan Report-Little Rock-North Little Rock Metropolitan Area.
W74-07082 5D

LIVESTOCK
Population, Land Use and Livestock Composition in India and Its Arid Zone,
W74-07105 3F

LOESSIAL SOIL
The Heat Flux Density in a Non-Homogeneous Bare Loessial Soil,
W74-07346 2G

LONG ISLAND (NY)
Technology Transfer in the Marine Environment of Long Island,
W74-07059 6B

LONG-TERM PLANNING
Ipswich River Basin Model Study,
W74-07302 6D

Planning and Operational Studies in the Integrated Use of Desalination. Case Studies for Cyprus and Jersey,
W74-07308 3A

LOST CREEK (IND)
Quantitative Chemical Analysis of Specific Components of the Waters of Lost Creek and the Wabash River, Vigo County, Indiana,
W74-07405 5A

LOUISIANA
Calcasieu River at Coon Island, Louisiana, Ship Channel (Final Environmental Impact Statement).
W74-07118 8A

LUCERNE
Performance of Lucerne (Medicago sativa) Lines in Pure Stands Under Irrigated and Rain Grown Conditions in Sub-Coastal Central Queensland,
W74-07359 3F

LUMBERING
Relationship Between Logging Activities and Salmon Production,
W74-07468 4C

LUMBRINERIS
Taxonomic Position of Two Lumbrineris Spp.,
W74-07568 2L

MACROCYSTIS
Kelp Habitat Improvement Project, Annual Report July 1, 1970 - June 30, 1971.
W74-07489 5C

Kelp Habitat Improvement Project, Annual Report July 1, 1971 - June 30, 1972.
W74-07490 5C

MAGNETIC STUDIES
Remanent Magnetization of Modern Tidal Flat Sediments from San Francisco Bay, California,
W74-07173 2L

MALAWI
The Micro-Meteorology of an Extended Area of Tea Before and After Rain,
W74-07354 3F

MALAYA
Phenology of a Tropical Rain Forest in Malaya,
W74-07482 2I

MANAGEMENT
A Study of Potential Institutional Arrangements for Water Quality and Water Resources (Quantity) Planning and Management,
W74-07051 6B

Technology Transfer in the Marine Environment of Long Island,
W74-07059 6B

Measures to Reduce Water Consumption in Southeastern New York.
W74-07079 6D

Proposed Water Supply Projects for Southeastern New York.
W74-07080 6D

Institutional Arrangements and Alternative Futures.
W74-07081 6D

Wild and Scenic Rivers.
W74-07290 6E

Interdisciplinary Modeling in the Analysis of the Salinity Problems of the Safford Valley,
W74-07297 5B

Simulation--A Tool for Water Resource Management,
W74-07300 6A

Ipswich River Basin Model Study,
W74-07302 6D

Regional Water Quality Management by the Generalized Reduced Gradient Method,
W74-07311 5B

Management of South Westland Terrace Podocarp Forest Under a Selection Logging System,
W74-07347 4A

Development of a Decision Room for Environntal Studies, (Feasibility Study),
W74-07371 6G

MANGANESE
Manganese and Iron Solubility Changes as a Factor in Tile Drain Clogging: I. Observations During Flooding and Drying,
W74-07151 2G

Manganese and Iron Solubility Changes as a Factor in Tile Drain Clogging: II. Observations During the Growth of Cotton,
W74-07152 2G

Photometric Determination of Manganese in Water by Using O-Tolidine,
W74-07315 2K

MAPPING
Surface Temperatures of Lake Erie,
W74-07415 2H

The Past and Present Flora and Vegetation of the Hackensack Meadows,
W74-07476 2I

MAPS
Line Intersection Method for Estimating Drainage Density,
W74-07174 2J

Water Resources of the Taunton River Basin Southeastern Massachusetts,
W74-07190 7C

A Computer Atlas of Hydrologic and Geomorphologic Data for Small Watersheds in Indiana,
W74-07432 2A

MARINAS
Planning and Developing Waterfront Property,
W74-07072 6B

MARINE ALGAE
Field and Experimental Studies on the Systematics and Ecology of Ulva curvata and Ulva rotundata,
W74-07473 5C

The Marine Diatom Ethmodiscus rex: Its Morphology and Occurrence in the Plankton of the Sargasso Sea,
W74-07547 5A

MARINE FISH
The Chemical Form and Bodily Distribution of Mercury in Marine Fish,
W74-07551 5A

Psychrophilic Yeasts Isolated From Marine Fish,
W74-07563 5A

MARINE FUNGI
Marine Fungi Isolated from a Kraft Pulp Mill Outfall Area,
W74-07396 5B

MARSHES
Nematode Fishe Parasites from Sangalkam, Senegal,
W74-07589 2H

MARYLAND
Sediment Control.
W74-07115 6E

Natural Resources--Waste Control.
W74-07116 6E

Riparian Rights in Certain Counties.
W74-07283 6E

Eighth Annual Report, Program Activities, Ju 1, 1971-Jun 30, 1972
W74-07332 9

An Investigation of the Physical Impact Sewage Outflow on a River-Estuarine Enviro ment,
W74-07477 5

Effects of Temperature on Activity and Mo tality of the Scyphozoan Medusa, Chrysao quinquecirrha,
W74-07561 5

MASS TRANSFER
Evaporation of Water from Sand: 5. The Effe of Evaporation on the Concentration of Sa Dissolved in Water Stored in Sand,
W74-07169 2

Mass and Charge Transfer Kinetics and Co lometric Current Efficiencies. Part VII. Con tional Potentials, and Single-Scan Voltammet of Pure Vanadium(V) - Vanadium(IV) Syste in Various Media at Platinum Elec trodes P Treated By Five Methods,
W74-07557 2

Mass and Charge Transfer Kinetics and Co lometric Current Efficiencies. Part VIII. Sing Scan Voltammetry of Vanadium(V) - Vana um(IV) in the Presence of Chromium, Ma ganese and Iron, and the Kinetic Parameters the Vanadium System, at Platinum Electroc Pre-Treated by Five Methods,
W74-07558 2

MASSACHUSETTS
Water Resources of the Taunton River Ba Southeastern Massachusetts,
W74-07190 7C

Ipswich River Basin Model Study,
W74-07302 6D

MATHEMATICAL MODELS
Critical Analysis of the Alternating Direct Implicit Method of Aquifer Analysis,
W74-07154 2F

The EPA Stormwater Management Model: Current Overview,
W74-07265 5G

Planar and Axisymmetric Bottom Withdra from a Density-Stratified Reservoir,
W74-07340 8B

Predicting the Quality of Stream Water Un Conditions of Oxygen Deficiency (O progn kachetva vody vodotokov pri bol'shikh de sitakh kisloroda),
W74-07388 5B

Predicting Pesticide Runoff From Agricult Land: A Conceptual Model,
W74-07427 5B

An Investigation of the Physical Impact Sewage Outflow on a River-Estuarine Envi ment,
W74-07477 5

A Strategy for Modeling Primary Productio Stratified Fjords,
W74-07494 5C

Calibrating a Water Yield Model for Sm Ungaged Watersheds,
W74-07519 2A

CKINLEYVILLE-TRINIDAD (CALIF)
North Coastal Area Action Program. A Study of the McKinleyville-Trinidad Area: Public Hearing Comments.
W74-07129 6B

EADOWS
The Past and Present Flora and Vegetation of the Hackensack Meadows,
W74-07476 2I

EANDERS
Depositional Features of Braided-Meandering Stream,
W74-07163 2J

EASUREMENT
Portable Reflectance Meter for Estimating Chlorophyll Concentrations in Leaves,
W74-07437 7B

A Direct Comparison of Satellite and Aircraft Infrared (10 Micrometers-12 Micrometers) Remote Measurements of Surface Temperature,
W74-07578 7B

EDITERRANEAN (EASTERN BASIN)
Basin Plains in the Eastern Mediterranean: Significance in Interpreting Ancient Marine Deposits: 1. Basin Depth and Configuration,
W74-07158 2J

EDITERRANEAN ZONE
Mineralogical Composition of Clays in Soil Profiles of Israel: I. The Soils of the Mediterranean Zone,
W74-07099 2G

ELTING
Winter-Regime Thermal Response of Heated Streams,
W74-07511 5B

EMBRANE PROCESSES
The Influence of Geological Membranes on the Geochemistry of Subsurface Waters from Miocene Sediments at Kettleman North Dome in California,
W74-07513 2K

ERCER COUNTY (PENN)
Ecology and Productivity of Strip-Mine Areas in Mercer County, Pennsylvania,
W74-07055 5B

ERCURY
Methylmercury Formation in Mercury-Treated River Sediments During in Situ Equilibration,
W74-07425 5B

The Chemical Form and Bodily Distribution of Mercury in Marine Fish,
W74-07551 5A

Reduction in Mercury Content of Fish Protein Concentrate by Enzymatic Digestion,
W74-07576 5A

ERISTEMATIC ACTIVITY
Effects of Water Stress on Growth and Nitrogen-Fixing Activity of Trifolium repens,
W74-07352 3F

ETABOLISM
Study of Metabolism of Nickel Entering the Body with Drinking Water, (In Russian),
W74-07361 5C

ETABOLITES
Residues of Atrazine, Cyanazine, and Their Phytotoxic Metabolites in a Clay Loam Soil,
W74-07585 5A

METAL FINISHING WASTE TREATMENT
Regeneration of Chromated Aluminum Deoxidizers, Phase I Report,
W74-07254 5D

METAL-ORGANIC COMPLEXES
Comparison of Conditional Stability Constants of North Carolina Humic and Fulvic Acids with Co(II) and Fe(III),
W74-07228 5B

METHODOLOGY
Evaluation of Methods of Pumping Test Analyses for Application to Hawaiian Aquifers,
W74-07531 5C

Environmental Planning: An Economic Analysis. Applications for the Coastal Zone,
W74-07534 6B

METHYL MERCURY
Methylmercury Formation in Mercury-Treated River Sediments During in Situ Equilibration,
W74-07425 5B

Pharmacodynamics of Methyl Mercury in the Rainbow Trout (Salmo Gairdneri): Tissue Uptake, Distribution and Excretion,
W74-07597 5C

MICHIGAN
Metallic Mineral Mining Operations, (Acquisition of Surface Lands for Water Quality Control).
W74-07119 6E

Utilization of ERTS-1 Data to monitor and Classify Eutrophication of Inland Lakes,
W74-07484 5C

MICROCLIMATES
The Micro-Meteorology of an Extended Area of Tea Before and After Rain,
W74-07354 3F

MICROMORPHOLOGY
Research on the Micromorphology of the Flooded Poszolic Soils of Shallow Water Reservoirs, (In Russian),
W74-07235 2G

MICROORGANISMS
Plastic Moving-Surface Treatment of Sewage,
W74-07198 5D

Activity of the Microorganisms and the Mineralization of the Organic Matter Peat Soils with a Varying Level of Sub Soil Waters, (In Russian),
W74-07230 2G

MICROSCOPIC PHOTOGRAPHY
Determination of Oil Concentration and Size Distribution in Ship Ballast Waters. Method and Representative Results,
W74-07564 5B

MICROSTRAINERS
Application of Microstraining to Combined Sewer Overflow,
W74-07260 5D

MICROWAVES
Broad Spectrum Microwave Systems for Remotely Measuring Soil Moisture Content,
W74-07052 2G

MIGRATION
Some Estuarine Factors Influencing Ascent of Anadromous Cutthroat Trout in Oregon,
W74-07493 2L

MILWAUKEE (WISC)
Combined Sewer Overflow Treatment by the Rotating Biological Contactor Process.
W74-07374 5D

MINE WASTES
Acid Neutralization Doesn't Cost Much,
W74-07124 5D

MINERAL NUTRIENTS
The Effect of Waterlogging on the Mineral Nutrient Content of Trifolium Subterraneum,
W74-07355 3F

MINERAL WATER
Mineral Springs in the Suez Rift Valley--Comparison with Waters in the Jordan Rift Valley and Postulation of a Marine Origin,
W74-07167 2K

MINERALIZATION
Activity of the Microorganisms and the Mineralization of the Organic Matter Peat Soils with a Varying Level of Sub Soil Waters, (In Russian),
W74-07230 2G

Phosphorus Supply Characteristics of Acid Organic Soils as Measured by Desorption and Mineralization,
W74-07345 2G

MINING
Metallic Mineral Mining Operations, (Acquisition of Surface Lands for Water Quality Control).
W74-07119 6E

MINNESOTA
Wild and Scenic Rivers.
W74-07290 6E

MISSISSIPPI
Preliminary Water and Sewer Plan for Alcorn, Benton, Marshall, Prentiss, Tippah, Tishomingo Counties.
W74-07062 5D

MIXING
Recent Investigations in Stratified Flows Related to Estuarial Hydraulics,
W74-07226 2L

Amazon River Estuarine System,
W74-07229 2L

Summertime Temperature and Circulation Patterns in Lake Superior,
W74-07338 2H

The Estimation of Vertical Eddy Diffusivities Below the Thermocline in Lakes,
W74-07416 2H

An Experimental Study of Immiscible Displacement with an Unfavorable Mobility Ratio in Porous Media,
W74-07524 2F

A Mixing Cell Model for Longitudinal Dispersion in Open Channels,
W74-07527 8B

MOBILE BAY (ALA)
Marine Geology and Estuarine History of Mobile Bay, Alabama: Part 1. Contemporary Sediments,
W74-07248 2L

MODEL STUDIES
Program Development Plan for the Mesa-New York Bight Regional Project.
W74-07078 6B

MODEL STUDIES

Nonlinear Programming in River Basin Modeling,
W74-07298 5B

Generation Models for Synthetic Annual and Monthly Flows for Some Indiana Watersheds,
W74-07431 2A

Application of Nonlinear Programming to Water Quality Control,
W74-07462 5D

Physical Modeling of Residence Times in Tidal Basins,
W74-07496 2L

Environmental Planning: An Economic Analysis. Applications for the Coastal Zone,
W74-07534 6B

MOINA
Moina Sp. (Cladocera: Moinidae) in a Sewage Plant, Wellington, Referred to Moina tenuicornis Sars, 1896 (Note),
W74-07569 5A

MOISTURE AVAILABILITY
Water Reuse in Protein Feed Process Utilizing Lumber Mill Wastes,
W74-07409 5D

MOISTURE RETENTION
Water Retention of Granitic Soils in the Idaho Batholith,
W74-07170 2G

MOISTURE STRESS
Productivity and Water Stress in Cacti,
W74-07109 2I

Effects of Moisture Stress at Early Heading and of Nitrogen Fertilizer on Three Spring Wheat Cultivars,
W74-07351 3F

MOISTURE TENSION
Water Retention of Granitic Soils in the Idaho Batholith,
W74-07170 2G

MONITORING
A Systems Analysis of Water Quality Survey Design,
W74-07310 5B

A Practical and Trouble-Free Sewer Spill Monitor,
W74-07404 5D

MONOCOTS
A Contribution to the Botany of Ganganagar District, North Rajasthan,
W74-07357 3F

MONOMOLECULAR FILMS
Model Tests with Thin Sheets to Reduce Evaporation,
W74-07103 3B

MONTE CARLO METHOD
Just a Moment,
W74-07414 2A

MONTEREY BAY (CALIF
Some Aspects of the Temperature, Oxygen and Nutrient Distributions in Monterey Bay, California. Annual Report, Part 1, 1973,
W74-07469 5C

MONTMORILLONITE
Mineralogical Composition of Clays in Soil Profiles of Israel: I. The Soils of the Mediterranean Zone,
W74-07099 2G

Mineralogical Composition of Clays in Soil Profiles of Israel: II. The Soils of the Desert Zone,
W74-07100 2G

MORAINIC SOILS
Potential of Westland's Moraine Soils for Forest Management,
W74-07594 4A

MORTALITY
Effects of Temperature on Activity and Mortality of the Scyphozoan Medusa, Chrysaora quinquecirrha,
W74-07561 5C

Abundance and Mortality of the Perch Fry (Perca Fluviatilis, Linnacus, 1758) in the Klicava Reservoir,
W74-07588 8I

MOTIVATION
Determinants of Use of Water-Based Recreational Facilities,
W74-07058 6B

MUD
The Chemistry of Cadmium in Natural Water--II. The Adsorption of Cadmium on River Muds and Naturally Occurring Solids,
W74-07420 2K

MUD FLATS
Remanent Magnetization of Modern Tidal Flat Sediments from San Francisco Bay, California,
W74-07173 2L

MULLICA RIVER BASIN (N
Cross-Spectral Analysis of Rainfall and Runoff for Raritan and Mullica River Basins in New Jersey,
W74-07183 2A

MULTIPLE PURPOSE RESERVOIRS
Instrumentation for Engineering Management of a Multi-Purpose River Basin System (Trinity River Basin, Texas) Real-Time Engineering Management of a Multi-Purpose River Basin System,
W74-07369 4A

MUSSELS
Mussel Fishery Investigations, Tennessee, Ohio, and Green Rivers,
W74-07187 8I

NARRAGANSETT BAY (R
Spatial and Temporal Distribution of Suspended Sediment in Narragansett Bay and Rhode Island Sound,
W74-07232 2L

NATALITY RATE
Population Density, Biomass and Maximum Natality Rate and Food Conditions in Ligidium Hypnorum L. (Isopoda),
W74-07590 8I

NATIONAL ENVIRONMENTAL POLICY ACT
Procedures and Programs to Assist in the Environmental Impact Statement Process,
W74-07061 6B

Sierra Club V. Froehlke (Injunction Action Against Reservoir Project).
W74-07113 6E

Burleigh V. Calloway (Injunction Action Against a Beach Erosion Project).
W74-07288 6E

NAVIGABLE WATERS
United States V. Pot-Nets, Inc (Violation of Rivers and Harbors Act),
W74-07287 6E

NEMATODES
Nematode Fishe Parasites from Sangalkam, Senegal,
W74-07589 2H

NETHERLANDS
Size and Shape Sorting in a Dutch Tidal Inlet,
W74-07329 2L

NETWORK ANALYSIS
Network Approach to Management of Conjunctively Operated Ground Water - Surface Water Systems,
W74-07335 4A

NETWORKS
Capital Cost Minimization of Drainage Networks,
W74-07309 4A

NEUTRALIZATION
Acid Neutralization Doesn't Cost Much,
W74-07124 5D

NEUTRON ACTIVATION ANALYSIS
Micro-Determination of Cation-Exchange Capacity by Neutron Activation Analysis,
W74-07439 2G

NEW BERN (N
Flood Plain Information-Neuse and Trent Rivers and Jack Smith Creek, New Bern, North Carolina.
W74-07073 4A

NEW JERSEY
Cross-Spectral Analysis of Rainfall and Runoff for Raritan and Mullica River Basins in New Jersey,
W74-07183 2A

NEW JERSEY (HACKENSACK MEADOWS)
The Past and Present Flora and Vegetation of the Hackensack Meadows,
W74-07476 2I

NEW YORK
A Study of Potential Institutional Arrangements for Water Quality and Water Resources (Quantity) Planning and Management,
W74-07051 6B

Technology Transfer in the Marine Environment of Long Island,
W74-07059 6B

Proposed Water Supply Projects for Southeastern New York.
W74-07080 6D

Water Uses and Water Development in Fall Creek--Possible Conflicts,
W74-07149 6B

Water Resources Investigations in New York, 1973.
W74-07188 7C

Combined Sewer Overflow Seminar Papers.
W74-07255 5D

River Regulation--Reservoirs.
W74-07278 6E

Wild, Scenic River Systems.
W74-07280 6E

Classification of Water and Water Standards.
W74-07281 6E

Losses of Inorganic Nitrogen From Aquatic Systems,
W74-07426 5B

Effect of Restricted Use of Phosphate-Based Detergents on Onondaga Lake,
W74-07566 5C

EW YORK BIGHT
Program Development Plan for the Mesa-New York Bight Regional Project.
W74-07078 6B

Geologic Aspects of Waste Solids and Marine Waste Deposits, New York Metropolitan Region,
W74-07171 5B

Possible Effects of Construction and Operation of a Supertanker Terminal on the Marine Environment in New York Bight,
W74-07488 5C

EW YORK CITY
Measures to Reduce Water Consumption in Southeastern New York.
W74-07079 6D

Institutional Arrangements and Alternative Futures.
W74-07081 6D

EW ZEALAND
Taxonomic Position of Two Lumbrineris Spp.,
W74-07568 2L

Moina Sp. (Cladocera: Moinidae) in a Sewage Plant, Wellington, Referred to Moina tenuicornis Sars, 1896 (Note),
W74-07569 5A

EW ZEALAND (STEWART ISLAND)
Preliminary Diagnosis of a New Species of Marine Isopod From Stewart Island,
W74-07570 2I

EW ZEALAND (WESTLAND)
Management of South Westland Terrace Podocarp Forest Under a Selection Logging System,
W74-07347 4A

Potential of Westland's Morainic Soils for Forest Management,
W74-07594 4A

ICKEL
Study of Metabolism of Nickel Entering the Body with Drinking Water, (In Russian),
W74-07361 5C

IGERIA (SOKOTO RIVER BASIN)
Aquifers in the Sokoto Basin, Northwestern Nigeria, with a Description of the General Hydrogeology of the Region,
W74-07184 2F

ITRATE REDUCTASE
In Vitro Formation of Nitrate Reductase Using Extracts of the Nitrate Reductase Mutant of Neurospora crassa, Nit-1, and Rhodospirillum rubrum,
W74-07577 5B

The Effect of Lack of a Carbon Source on Nitrate-Reductase Activity in Aspergillus nidulans,
W74-07581 5C

ITRATES
Relative Movement of Bromide and Nitrate Through Soils,
W74-07423 5B

Determination of Nitrates in Soil Extracts,
W74-07443 2G

Nitrate Concentrations in the Unsaturated Zone Beneath Irrigated Fields in Southern California,
W74-07445 5G

Ammonium and Nitrate Uptake by Corn (Zea mays L.) as Influenced by Nitrogen Concentration and NH4(+)/NO3(-) Ratio,
W74-07459 3F

NITRIFICATION
Rotating Biological Disk Wastewater Treatment Process - Pilot Plant Evaluation,
W74-07373 5D

Effectiveness of Two Nitrification Inhibitors for Anhydrous Ammonia Under Irrigated and Dryland Conditions,
W74-07436 5G

Ammonium and Nitrate Uptake by Corn (Zea mays L.) as Influenced by Nitrogen Concentration and NH4(+)/NO3(-) Ratio,
W74-07459 3F

NITROGEN
Effects of Moisture Stress at Early Heading and of Nitrogen Fertilizer on Three Spring Wheat Cultivars,
W74-07351 3F

Losses of Inorganic Nitrogen From Aquatic Systems,
W74-07426 5B

Effectiveness of Two Nitrification Inhibitors for Anhydrous Ammonia Under Irrigated and Dryland Conditions,
W74-07436 5G

NITROGEN COMPOUNDS
Evaluation of Current Techniques for Nutrient Removal from Wastewaters,
W74-07441 5D

NITROGEN FERTILIZATION
Water Relations of Wheat as Affected by Irrigation and Nitrogen Fertilization,
W74-07596 3F

NITROGEN FIXATION
Effects of Water Stress on Growth and Nitrogen-Fixing Activity of Trifolium repens,
W74-07352 3F

Acetylene Reduction by Beijerinckia Under Various Partial Pressures of Oxygen and Acetylene,
W74-07572 5C

NITROGEN FIXING BACTERIA
Acetylene Reduction by Beijerinckia Under Various Partial Pressures of Oxygen and Acetylene,
W74-07572 5C

NITROGEN *PHOSPHORUS
Function of Marshes in Reducing Eutrophication of Estuaries of the Middle Atlantic Region,
W74-07336 5C

NOMOGRAPHS
Economic Size Selection for PVC Pipelines,
W74-07303 8A

NON-LINEAR PROGRAMMING
Application of a Large Scale Nonlinear Programming Problem to Pollution Control,
W74-07461 5D

NON-STRUCTURAL ALTERNATIVES
Economic Study of the Effect of Municipal Sewer Surcharges on Industrial Wastes and Water Usage,
W74-07057 5G

NONLINEAR PROGRAMMING
Nonlinear Programming in River Basin Modeling,
W74-07298 5B

Regional Water Quality Management by the Generalized Reduced Gradient Method,
W74-07311 5B

NORTH CAROLINA
Landscape Compartmentalization: An Ecological Approach to Land Use Planning,
W74-07053 6G

Water and Wastewater Systems Inventory - Region H, North Carolina,
W74-07063 5D

Flood Plain Information-Neuse and Trent Rivers and Jack Smith Creek, New Bern, North Carolina.
W74-07073 4A

Flood Plain Information-Neuse River and Buffalo Creek, Smithfield, North Carolina.
W74-07074 4A

Flood Plain Information: Burdens and Two Bottle Creeks at Research Triangle Area, Durham County, North Carolina.
W74-07075 4A

Comparison of Conditional Stability Constants of North Carolina Humic and Fulvic Acids with Co(II) and Fe(III),
W74-07228 5B

Recent Estuarine Sediment History of the Roanoke Island Area, North Carolina,
W74-07245 2L

Field and Experimental Studies on the Systematics and Ecology of Ulva curvata and Ulva rotundata,
W74-07473 5C

Biological Investigations of Noxious Coelenterates and Ctenophores in Coastal North Carolina,
W74-07479 2L

An Investigation of Propagation and the Mineral Nutrition of Spartina alterniflora,
W74-07486 5C

NORTH CAROLINA (COVE SOUND)
Seasonal Abundance and Distribution of Juvenile Blue Crabs in Core Sound, N.C. 1965-1966,
W74-07350 2L

NORTH CAROLINA (TIDEWATER REGION)
Phosphorus Supply Characteristics of Acid Organic Soils as Measured by Desorption and Mineralization,
W74-07345 2G

NORTH DAKOTA
Ground-Water Resources of McLean County, North Dakota,
W74-07313 2F

The Food Habits and Age and Growth of Goldeye, Hiodon alosoides (Rafinesque), in Beaver Creek, Lake Oahe, North Dakota, 1971-72,
W74-07474 8I

NORTH PLATTE BASIN (WYO)
Ninth Annual Report of the Water Resources Research Institute of the University of Wyoming (Activities During FY 1973).
W74-07457 9A

NORWAY
Pollution Caused by Agriculture,
W74-07366 5B

NORWAY (BYGLANDSFJORDEN)
Byglandsfjorden. Primary Production and Other Limnological Features in an Oligotrophic Norwegian Lake,
W74-07554 5C

NUISANCE (LEGAL ASPECTS)
United States v. Ira S. Bushey and Sons, Inc. (Injunction Against Oil Spills).
W74-07291 6E

NUMERICAL ANALYSIS
Numerical Studies of Two-Dimensional Saturated-Unsaturated Drainage Models,
W74-07168 2G

A Numerical Model Based on Coupled One-Dimensional Richards and Boussinesq Equations,
W74-07515 2F

Numerical Analysis of Hansenula, Pichia and Related Yeast Genera,
W74-07583 5A

NUTRIENT REMOVAL
Evaluation of Current Techniques for Nutrient Removal from Wastewaters,
W74-07441 5D

Nitrate Concentrations in the Unsaturated Zone Beneath Irrigated Fields in Southern California,
W74-07445 5G

Reactions of Chloramines with Active Carbon,
W74-07544 5B

NUTRIENTS
Distillation-Condensation of Water and Nutrient Movement in a Desert Ecosystem,
W74-07110 2I

Factors Affecting Phytoplankton Production in a Eutrophic Reservoir,
W74-07121 5C

Some Aspects of the Temperature, Oxygen and Nutrient Distributions in Monterey Bay, California. Annual Report, Part 1, 1973,
W74-07469 5C

Nutritive Importance and Structure of Detritus,
W74-07471 5C

Utilization of Fibrous Wastes as Sources of Nutrients,
W74-07472 5D

Effects of Thickness on Bacterial Film,
W74-07545 5C

Bacteria-Assimilable Organic Compounds, Phosphate, and Enhanced Growth of Bacteria-Associated Blue-Green Algae,
W74-07587 5C

NUTRIENTS REMOVAL
Systems simulation of the effect of tertiary treatment for carbon, nitrogen, and phosphorus removal upon primary productivity, standing crop, and community structure of autotrophic and hetertrophic communities in receiving model streams.
W74-07337 5C

OAHU (HAWAII)
Development of Dike Stored Water By Drilling, Waihee, Oahu,
W74-07137 2F

OCEAN WAVES
State of the Art of Floating Breakwaters,
W74-07498 8A

OCEANOGRAPHY
Problem of Calculating Depth of the Quasiuniform Layer of the Ocean (K voprosu o raschete tolshchiny kvaziodnorodnogo sloya okeana),
W74-07506 2A

OCEANS
Law Affecting the Quality of the Marine Environment,
W74-07282 5G

OFFSHORE PLATFORMS
Possible Effects of Construction and Operation of a Supertanker Terminal on the Marine Environment in New York Bight,
W74-07488 5C

OHIO
High-Rate Multi-Media Filtration,
W74-07261 5D

Habitat Distribution of the Shore Flies of Northeastern Ohio (Diptera: Ephydridae),
W74-07556 5C

OHIO RIVER
Mussel Fishery Investigations, Tennessee, Ohio, and Green Rivers,
W74-07187 8I

OIL
Application of Geochemistry to the Search for Crude Oil and Natural Gas,
W74-07161 4B

OIL FIELDS
Application of Geochemistry to the Search for Crude Oil and Natural Gas,
W74-07161 4B

The Influence of Geological Membranes on the Geochemistry of Subsurface Waters from Miocene Sediments at Kettleman North Dome in California,
W74-07513 2K

OIL INDUSTRY
Petroleum Refinery Effluent Regulations and Guidelines.
W74-07274 5G

OIL POLLUTION
Method of and Apparatus for the Recovery of Oil from Water,
W74-07201 5G

Apn aratus for Separating Oil and SolidsfFrm m Water,
W74-07202 5D

System and Method for Separating Heavier and Lighter Components of Liquid Mixtures,
W74-07203 5D

Safety Device Against Leakage from Ships, Especially Tankers,
W74-07205 5G

Oil Reclaiming Device for Removing Oil fro the Surface of Water,
W74-07206 5

Containing and Removing Oil Spills on Water,
W74-07208 5

Method and Apparatus for Collecting a Flo ing Liquid,
W74-07215 5

Method for the Elimination and Possibl Recovery of the Floating Polluting Substance Mineral Oils in Particular, From Sheets Water and Boat Fitted to This Aim,
W74-07220 5

Method of Removing Oil Spills,
W74-07222 5

Apparatus for Removing Surface Pollutan from Water and Other Liquids,
W74-07223 5

Petroleum Refinery Effluent Regulations an Guidelines.
W74-07274 5

United States v. Ira S. Bushey and Sons, In (Injunction Against Oil Spills).
W74-07291 6

An Oil Recovery System Utilizing Polyu rethane Foam--A Feasibility Study,
W74-07341 5

OIL SKIMMER
An Oil Recovery System Utilizing Polyu rethane Foam--A Feasibility Study,
W74-07341 5

OIL SPILL RECOVERY
An Oil Recovery System Utilizing Polyu rethane Foam--A Feasibility Study,
W74-07341 5

OIL SPILLS
Method of and Apparatus for the Recovery Oil from Water,
W74-07201 5

Safety Device Against Leakage from Ship Especially Tankers,
W74-07205 5

Oil Reclaiming Device for Removing Oil fro the Surface of Water,
W74-07206 5

Containing and Removing Oil Spills on Water,
W74-07208 5

Method and Apparatus for Collecting a Floa ing Liquid,
W74-07215 5

Method for the Elimination and Possib Recovery of the Floating Polluting Substance Mineral Oils in Particular, From Sheets Water and Boat Fitted to This Aim,
W74-07220 5

Method of Removing Oil Spills,
W74-07222 5

Apparatus for Removing Surface Pollutan from Water and Other Liquids,
W74-07223 5

United States v. Ira S. Bushey and Sons, In (Injunction Against Oil Spills).
W74-07291 6

An Oil Recovery System Utilizing Polyurethane Foamt-A Feasibility Study,
W74-07341 5G

Aerial Spill Prevention Surveillance During Sub-Optimim Weather,
W74-07342 5A

OIL WASTES
Study of the Adaptation of an Activated Sludge to the Purification of an Industrial Effluent (Etude de l'adaptation d'une boue activee a l'epuration d'un effluent industriel),
W74-07389 5D

OILY WATER
Determination of Oil Concentration and Size Distribution in Ship Ballast Waters. Method and Representative Results,
W74-07564 5B

OKLAHOMA
Depositional Features of Braided-Meandering Stream,
W74-07163 2J

OLIGOTROPHY
Byglandsfjorden. Primary Production and Other Limnological Features in an Oligotrophic Norwegian Lake,
W74-07554 5C

ON-SITE TESTS
Effects of Temperature on Activity and Mortality of the Scyphozoan Medusa, Chrysaora quinquecirrha,
W74-07561 5C

ONONDAGA LAKE (NY)
Effect of Restricted Use of Phosphate-Based Detergents on Onondaga Lake,
W74-07566 5C

OPEN CHANNEL FLOW
A Mixing Cell Model for Longitudinal Dispersion in Open Channels,
W74-07527 8B

OPERATING COSTS
High-Rate Multi-Media Filtration,
W74-07261 5D

OPTIMIZATION
Water and Effluent Treatment Plants - Cost Considerations and Client, Contractor, Consultant Relationships, The Consultant's View,
W74-07312 5D

Application of Nonlinear Programming to Water Quality Control,
W74-07462 5D

OPTIMUM DEVELOPMENT PLANS
Program Development Plan for the Mesa-New York Bight Regional Project.
W74-07078 6B

Network Approach to Management of Conjunctively Operated Ground Water - Surface Water Systems,
W74-07335 4A

Production Function Theory for Use in Optimal Planning Decisions,
W74-07460 5D

OREGON
Wallowa Lake Basin Comprehensive Plan.
W74-07065 5D

Nonlinear Programming in River Basin Modeling,
W74-07298 5B

Hydrology of the Dunes Area North of Coos Bay, Oregon,
W74-07325 2L

Some Estuarine Factors Influencing Ascent of Anadromous Cutthroat Trout in Oregon,
W74-07493 2L

Pacific Northwest Coastal Zone Management as it Relates to Estuary Protection,
W74-07500 6E

ORGANIC CARBON
Texture and Organic Carbon Content of Bottom Sediments in some Estuaries of the United States,
W74-07243 2L

ORGANIC COMPOUNDS
Extracellular Products of Algae in Freshwater,
W74-07353 5C

ORGANIC MATTER
Water Retention of Granitic Soils in the Idaho Batholith,
W74-07170 2G

Activity of the Microorganisms and the Mineralization of the Organic Matter Peat Soils with a Varying Level of Sub Soil Waters, (In Russian),
W74-07230 2G

Techniques for use of Organic and Amorphous Materials in Source Investigations of Estuary Sediments,
W74-07241 2L

Texture and Organic Carbon Content of Bottom Sediments in some Estuaries of the United States,
W74-07243 2L

Ultra-Violet Absorption Characteristics of Natural Waters,
W74-07419 2K

The Chemistry of Cadmium in Natural Water--II. The Adsorption of Cadmium on River Muds and Naturally Occurring Solids,
W74-07420 2K

Volatility of DDT Residues in Soil as Affected by Flooding and Organic Matter Applications,
W74-07424 5B

ORGANIC WASTES
Regional Water Quality Management by the Generalized Reduced Gradient Method,
W74-07311 5B

OVERFLOW
Combined Sewer Overflow Seminar Papers.
W74-07255 5D

Stormflow Pollution Control in the U.S.,
W74-07256 5D

Combined Sewer Overflow Regulator Facilities,
W74-07258 5D

Application of Microstraining to Combined Sewer Overflow,
W74-07260 5D

High-Rate Multi-Media Filtration,
W74-07261 5D

Screening/Dissolved-Air Flotation Treatment of Combined Sewer Overflows,
W74-07262 5D

High-Rate Disinfection of Combined Sewer Overflow,
W74-07263 5D

The Swirl Concentrator as a Combined Sewer Overflow Regulator,
W74-07264 5D

Combined Sewer Overflow Treatment by the Rotating Biological Contactor Process.
W74-07374 5D

OVERLAND FLOW
A Rainfall-Runoff Model Based on the Watershed Stream Network,
W74-07464 2A

OXIDATION
Catalytic Oxidation of Phenol in Dilute Concentration in Air,
W74-07086 5D

Ozone in Water and Waste Water Treatment, a Bibliography.
W74-07251 5D

Regeneration of Chromated Aluminum Deoxidizers, Phase I Report,
W74-07254 5D

Cyanide Waste Treatment Utilizing Catalytic Oxidation,
W74-07272 5D

The Identification of the Reaction Products Formed by the Oxidation of Aqueous Ammonia with Potassium Ferrate VI,
W74-07333 5D

An Explanatory Work on the Oxidation of Ammonia by Potassium Ferrate (VI),
W74-07454 5D

OXYCHLORDANE
Nature and Toxicity of Two Oxychlordane Photoisomers,
W74-07584 5C

OXYGEN
A Comparison of Effluent Characteristics from Conventional and Oxygen Bleaching Sequences: Results of a Laboratory Study,
W74-07375 5D

Oxygen Bleaching -- A Flexible Process for Pollution Abatement,
W74-07376 5D

Acetylene Reduction by Beijerinckia Under Various Partial Pressures of Oxygen and Acetylene,
W74-07572 5C

OXYGEN BLEACHING
A Comparison of Effluent Characteristics from Conventional and Oxygen Bleaching Sequences: Results of a Laboratory Study,
W74-07375 5D

OXYGEN SAG
Predicting the Quality of Stream Water Under Conditions of Oxygen Deficiency (O prognoze kachetva vody vodotokov pri bol'shikh defitsitakh kisloroda),
W74-07388 5B

OXYGENATION
Method of and Apparatus for the Purification of Water Containing Organic Contaminants,
W74-07199 5D

Sewage Treatment System,
W74-07217 5D

OXYGENATION

Rotating Biological Disk Wastewater Treatment Process - Pilot Plant Evaluation,
W74-07373 5D

OZONE
Ozone in Water and Waste Water Treatment, a Bibliography.
W74-07251 5D

PACIFIC NORTHWEST U
Proceedings 2nd Annual Technical Conference on Estuaries of the Pacific Northwest.
W74-07491 2L

Laws and Regulations of Pollution and Navigation in Pacific Northwest Estuaries,
W74-07499 5G

PACIFIC OCEAN
Th-234/U-238 Activity Ratios in Pacific Ocean Bottom Waters,
W74-07322 2K

Mechanism of Element Distribution in the Pacific Ocean (Japanese Profile) (K poznaniyu mekhanizma raspredeleniya elementov v Tikhom okeane (Yaponskiy profil')),
W74-07503 2J

PALOUSE WATERSHED (IDA-WASH)
Evapotranspiration on a Palouse Watershed,
W74-07087 2D

PARAMETRIC HYDROLOGY
Parameter Identification in Field Problems,
W74-07428 7C

PARAVIREIA
Preliminary Diagnosis of a New Species of Marine Isopod From Stewart Island,
W74-07570 2I

PARTICLE SHAPE
Size and Shape Sorting in a Dutch Tidal Inlet,
W74-07329 2L

PARTICLE SIZE
Size and Shape Sorting in a Dutch Tidal Inlet,
W74-07329 2L

Determination of Mean Cell Size of Tetrahymena in Growing Cultures,
W74-07586 5A

PASTURE MANAGEMENT
Study on the Pasture Establishment Technique VI. Effect of Different Spacings and Weedings on Establishment and Forage Production of Cenchrus ciliaris Linn., Lasiurus sindicus Henr. and Panicum antidotale Retz under Arid Conditions,
W74-07107 3F

PASTURES
Liveweight Gains of Shorthorn Steers on Native and Improved Pastures at Adelaide River Northern Territory,
W74-07453 3F

PATENTS

Distribution and Chemistry of Phosphorus in an Albaqualf Soil After 82 Years of Phosphate Fertilization,
W74-07532 5B

PHOSPHORUS REMOVAL
Phosphorus Removal Treatability Studies at C.F.B. Bordon, Petawawa, Trenton and Uplands,
W74-07273 5D

PHOTODECOMPOSITION
The Photochemistry of Carbamates. 1. The Photodecomposition of Zectran: 4-Dimethylamino-3,5-XYLYL-N-Methyl Carbamate,
W74-07552 5B

Nature and Toxicity of Two Oxychlordane Photoisomers,
W74-07584 5C

PHOTOISOMERS
Nature and Toxicity of Two Oxychlordane Photoisomers,
W74-07584 5C

PHOTOPRODUCTION
Hydrogen Sulfide Production by Synechococcus lividus Y52-si,
W74-07546 5C

PHOTOPRODUCTS
The Photochemistry of Carbamates. 1. The Photodecomposition of Zectran: 4-Dimethylamino-3,5-XYLYL-N-Methyl Carbamate,
W74-07552 5B

PHYLLOXERA-VITIFOLIAE
Occurrence and Distribution of the Vine Phylloxera, Phylloxera vitifoliae (Fitch), in the Olifants River Irrigation Area, Northwestern Cape Province,
W74-07356 3F

PHYTOPHAGOUS FISH
A New Type of Incubator Used in the Induced Spawning of Phytophagous Fishes, (In Rumanian),
W74-07434 8I

PHYTOPLANKTON
Factors Affecting Phytoplankton Production in a Eutrophic Reservoir,
W74-07121 5C

PILOT PLANTS
High-Rate Disinfection of Combined Sewer Overflow,
W74-07263 5D

PINUS-CONTORTA-VAR-LATIFOLIA
Extruded Peat Cylinders: Their Physical Characteristics as Affecting Tree Seedling Growth and Greenhouse Drought Tolerance,
W74-07180 2I

PIPE FLOW
Solutions for Lateral Outflow in Perforated Conduits,
W74-07433 8B

PIPELINES
Economic Size Selection for PVC Pipelines,
W74-07303 8A

PIPES
Land Disposal of Waste Gases: III. Sorption Patterns From Buried Gas Injection Pipes,
W74-07422 5B

PLANKTON
The Plankton of Ponds Enriched with Wastes from Beet Sugar Factories,
W74-07478 5C

PLANNING
A Study of Potential Institutional Arrangements for Water Quality and Water Resources (Quantity) Planning and Management,
W74-07051 6B

Preliminary Water and Sewer Plan for Alcorn, Benton, Marshall, Prentiss, Tippah, Tishomingo Counties.
W74-07062 5D

Utilities and Facilities for New Residential Development: A Survey of Municipal Policy,
W74-07071 5D

North Coastal Area Action Program: A Study Of The Smith River Basin And Plain.
W74-07132 6B

Current Thinking in Water Resources Research and Their Applicability to Hawaii Conditions,
W74-07135 6B

Water Uses and Water Development in Fall Creek--Possible Conflicts,
W74-07149 6B

Simulation--A Tool for Water Resource Management,
W74-07300 6A

Environmental Impact Analysis: An Examination of Three Methodologies,
W74-07339 6G

Production Function Theory for Use in Optimal Planning Decisions,
W74-07460 5D

PLANT CELL MODELS
Stomatal Mechanics,
W74-07593 2I

PLANT DISEASES
Annotated Checklist and Host Index for Arizona Wood-Rotting Fungi,
W74-07097 2I

PLANT GROWTH
Subsurface Heating and Irrigation of Soils: Its Effect on Temperature and Water Content and on Plant Growth,
W74-07054 2G

Study on the Pasture Establishment Technique VI. Effect of Different Spacings and Weedings on Establishment and Forage Production of Cenchrus ciliaris Linn., Lasiurus sindicus Henr. and Panicum antidotale Retz under Arid Conditions,
W74-07107 3F

An Investigation of Propagation and the Mineral Nutrition of Spartina alterniflora,
W74-07486 5C

Effect of Light Intensity and Glycerol on the Growth, Pigment Composition, and Ultrastructure of Chroomonas Sp.,
W74-07548 5C

PLANT MORPHOLOGY
The Marine Diatom Ethmodiscus rex: Its Morphology and Occurrence in the Plankton of the Sargasso Sea,
W74-07547 5A

The Effect of Selenite on the Physiological and Morphological Properties of the Blue-Green Alga Phormidium luridum Var. Olivacea,
W74-07550 5C

PLANT PHYSIOLOGY
The Saguaro Giant Cactus, A Bibliography,
W74-07098 2I

PLANT PIGMENTS
Effect of Light Intensity and Glycerol on the Growth, Pigment Composition, and Ultrastructure of Chroomonas Sp.,
W74-07548 5C

PLANTING MANAGEMENT
Effect of Seeding Rates and Row Spacings on Fodder Production of Moth Bean (Phaseolus aconitifolius),
W74-07091 3F

PLASTIC PIPES
Pressure Sewers,
W74-07259 5D

PLATINUM ELECTRODES
Mass and Charge Transfer Kinetics and Coulometric Current Efficiencies. Part VII. Conditional Potentials, and Single-Scan Voltammetry of Pure Vanadium(V) - Vanadium(IV) Systems in Various Media at Platinum Elec trodes Pre-Treated By Five Methods,
W74-07557 2K

Mass and Charge Transfer Kinetics and Coulometric Current Efficiencies. Part VIII. Single-Scan Voltammetry of Vanadium(V) - Vanadium(IV) in the Presence of Chromium, Manganese and Iron, and the Kinetic Parameters of the Vanadium System, at Platinum Electrodes Pre-Treated by Five Methods,
W74-07558 5A

PLOWING
Intensive Infiltrometer Studies on A Plowed Big Sagebrush Site,
W74-07166 2G

PODOCARP FORESTS
Management of South Westland Terrace Podocarp Forest Under a Selection Logging System,
W74-07347 4A

PODZOLIC SOILS
Research on the Micromorphology of the Flooded Poszolic Soils of Shallow Water Reservoirs, (In Russian),
W74-07235 2G

POLAND
The Plankton of Ponds Enriched with Wastes from Beet Sugar Factories,
W74-07478 5C

POLAND (POMERANIAN)
Leech Communities (Hirudinea) in the Mazurian and Bialystok Regions and the Pomeranian Lake District,
W74-07542 5C

POLAND (RIVER NIDA)
Structure of Fish Groupings in the Rivers and Streams of the River Nida Drainage Basin,
W74-07539 2I

POLLUTANT IDENTIFICATION
Determination of Chlorinated Insecticides in Suspended Sediment and Bottom Material,
W74-07317 5A

Aerial Spill Prevention Surveillance During Sub-Optimim Weather,
W74-07342 5A

Use of Amberlite XAD-4 for Extraction and Recovery of Chlorinated Insecticides and Polychlorinated Biphenyls from Water,
W74-07383 5D

Determination of Pentachlorophenol in Natural and Waste Waters,
W74-07385 5A

Quantitative Chemical Analysis of Specific Components of the Waters of Lost Creek and the Wabash River, Vigo County, Indiana,
W74-07405 5A

More Heat Than Light Thermal Pollution Versus Heat Energy Utilization,
W74-07465 5B

The Chemical Form and Bodily Distribution of Mercury in Marine Fish,
W74-07551 5A

The Photochemistry of Carbamates 1. The Photodecomposition of Zectran 4-Dimethylamino-3,5-XYLYL-N-Methyl Carbamate,
W74-07552 5B

A New Colorimetric Procedure for the Determination of Benomyl,
W74-07559 5A

The Bacterial Flora of the Atlantic Salmon (Salmo salar L.) in Relation to its Environment,
W74-07567 5A

Acid Ammonium Acetate Extraction and Electron Capture Gas Chromatographic Determination of Carbofuran in Soils,
W74-07574 5A

Kaempferol (3,5,7,4'-Tetrahydroxyflavone) as a Chromogenic Reagent for Tin(IV),
W74-07579 5A

POLLUTANTS
Pollution, Production, and Compensation,
W74-07064 5G

Protection of the Environment.
W74-07289 6E

National Pollutant Discharge Elimination System.
W74-07293 6E

POLLUTION
Waste Water Process Tank Control Facility,
W74-07216 5D

Stream Pollution.
W74-07275 6E

POLLUTION ABATEMENT
Pollution Sanctions--New Alternatives to Civil Liability,
W74-07123 5G

Possible Impact of Costs of Selected Pollution Control Equipment on the Electric Utility Industry and Certain Power Intensive Consumer Industries. Executive Summary.
W74-07140 5G

Water Treatment Apparatus,
W74-07196 5D

Method of and Apparatus for the Recovery of Oil from Water,
W74-07201 5G

Attenuation of Water Waves and Control and Utilization of Wave-Induced Water Movements,
W74-07204 8B

Safety Device Against Leakage from Ships, Especially Tankers,
W74-07205 5G

Oil Reclaiming Device for Removing Oil from the Surface of Water,
W74-07206 5G

Containing and Removing Oil Spills on Water,
W74-07208 5G

Method and Apparatus for Collecting a Floating Liquid,
W74-07215 5G

Method for the Elimination and Possible Recovery of the Floating Polluting Substances, Mineral Oils in Particular, From Sheets of Water and Boat Fitted to This Aim,
W74-07220 5G

Agitating and Aerating Apparatus,
W74-07221 5D

Method of Removing Oil Spills,
W74-07222 5G

Apparatus for Removing Surface Pollutants from Water and Other Liquids,
W74-07223 5G

Combined Sewer Overflow Seminar Papers.
W74-07255 5D

Stormflow Pollution Control in the U.S.,
W74-07256 5D

The Effects of Household Sanitary Systems on Effluent Phosphate Levels,
W74-07267 5D

The Effluent-Free Bleached Kraft Pulp Mill. Part IV. The Salt Recovery Process,
W74-07379 5D

Environmental Protection Techniques to be Applied in a Bleached Kraft Pulp Mill in Sweden,
W74-07392 5D

Pollution Control Through Training, Education, and Rigorous Follow-Up,
W74-07408 5G

An Overview of Water Reuse Potential in Pulp and Paper Manufacturing,
W74-07410 5D

Application of a Large Scale Nonlinear Programming Problem to Pollution Control,
W74-07461 5D

POLLUTION CONTROL

Pollution and Industry: Pros, Cons of Growing Fight.
W74-07112 5G

The Demand for Sport Fishing at Yaquina Bay,
W74-07143 6B

POLLUTION TAXES (CHARGES)

Economic Study of the Effect of Municipal Sewer Surcharges on Industrial Wastes and Water Usage,
W74-07057 5G

User Charges and Industrial Cost Recovery, Denver SMSA,
W74-07370 5D

POLYCHLORINATED BIPHENYLS

Use of Amberlite XAD-4 for Extraction and Recovery of Chlorinated Insecticides and Polychlorinated Biphenyls from Water,
W74-07383 5D

POLYELECTROLYTES

How Polyacrylamides can Help Effluent Problems,
W74-07391 5D

POLYPHOSPHATES

A Continuous Culture Study of Phosphate Uptake, Growth Rate and Polyphosphate in Scenedesmus Sp.,
W74-07549 5C

POLYURETHANE FOAM

An Oil Recovery System Utilizing Polyurethane Foam--A Feasibility Study,
W74-07341 5G

PONDS

Losses of Inorganic Nitrogen From Aquatic Systems,
W74-07426 5B

Diseases of Pond Fishes,
W74-07481 8I

POPULATION DENSITY (ISOPODS)

Population Density, Biomass and Maximum Natality Rate and Food Conditions in Ligidium Hypnorum L. (Isopoda),
W74-07590 8I

POPULATION DYNAMICS

Population Dynamics of Protozoa Associated with the Decay of Organic Materials in Fresh Water,
W74-07541 5C

POPULATIONS

Determination of Mean Cell Size of Tetrahymena in Growing Cultures,
W74-07586 5A

POROSITY

The Relationship of Porosity and Angle of Repose to Mixture Proportions in Assemblages of Different Sized Materials,
W74-07330 2J

POROUS MEDIA

Heat Dispersion Effect on Thermal Convection in a Porous Medium Layer,
W74-07156 2F

An Experimental Study of Immiscible Displacement with an Unfavorable Mobility Ratio in Porous Media,
W74-07524 2F

POTABLE WATER

A Study of the Intake of Drinking Water by Dairy Cows at Grass,
W74-07358 3F

Study of Metabolism of Nickel Entering the Body with Drinking Water, (In Russian),
W74-07361 5C

Hygienic Features of Silicate Anticorrosion Coatings for Water Reservoirs, (In Russian),
W74-07364 5F

Hygienic Evaluation of Means of Enrichment with Salts and Decontamination of Demineralized Water, (In Russian),
W74-07365 5F

POTASSIUM FERRATE

An Explanatory Work on the Oxidation of Ammonia by Potassium Ferrate (VI),
W74-07454 5D

POTENTIAL WATER SUPPLY

A Bill to Authorize the Secretary of the Interior to Engage in Feasibility Investigations of Certain Potential Water Resource Developments.
W74-07284 6E

POULTRY

Recovery of Arsenic by Dry Ashing from Animal Tissue Fortified with Organoarsenicals or Arsenic Trioxide,
W74-07573 5A

POWERPLANTS

Economic Evaluation and Determination of Plant Capacity and Dam Height,
W74-07305 8A

PRECIPITATION (ATMOSPHERIC)

Source and Budget of Sulfate in Precipitation from Central Alberta, Canada,
W74-07164 5B

PRECIPITATION EXCESS

Comparison of Rainfall-Runoff Models for Urban Areas,
W74-07463 2A

PRESERVATION

Landscape Compartmentalization: An Ecological Approach to Land Use Planning,
W74-07053 6G

PRESSURE SEWERS

Pressure Sewers,
W74-07259 5D

PRIMARY PRODUCTIVITY

Systems simulation of the effect of tertiary treatment for carbon, nitrogen, and phosphorus removal upon primary productivity, standing crop, and community structure of autotrophic and hetertrophic communities in receiving model streams.
W74-07337 5C

A Strategy for Modeling Primary Production in Stratified Fjords,
W74-07494 5C

Byglandsfjorden. Primary Production and Other Limnological Features in an Oligotrophic Norwegian Lake,
W74-07554 5C

PROBABILITY

Probability Distribution of Snow Course Data for Central Arizona,
W74-07094 2C

PRODUCTION FUNCTIONS

Production Function Theory for Use in Optimal Planning Decisions,
W74-07460 5D

PRODUCTIVITY

Productivity and Water Stress in Cacti,
W74-07109 2I

Factors Affecting Phytoplankton Production in a Eutrophic Reservoir,
W74-07121 5C

Nutrient Cycling and Productivity of Dystrophic Lake-Bog Systems (Part B),
W74-07466 5C

PRODUCTIVITY

Relationship Between Logging Activities and Salmon Production,
W74-07468 4C

An Ecosystem Study in the Inside Passage of Southeastern Alaska,
W74-07495 5C

PROGRAM DEVELOPMENT PLAN
Program Development Plan for the Mesa-New York Bight Regional Project.
W74-07078 6B

PROJECT BENEFITS
A Framework for Economic Planning of Watershed Drainage,
W74-07069 4A

PROJECT PLANNING
Procedures and Programs to Assist in the Environmental Impact Statement Process,
W74-07061 6B

A Framework for Economic Planning of Watershed Drainage,
W74-07069 4A

State Flood Control Program.
W74-07111 4A

Sediment Control.
W74-07115 6E

PROJECTIONS
Preliminary Water and Sewer Plan for Alcorn, Benton, Marshall, Prentiss, Tippah, Tishomingo Counties.
W74-07062 5D

Possible Effects of Construction and Operation of a Supertanker Terminal on the Marine Environment in New York Bight,
W74-07488 5C

PROJECTS
Water and Effluent Treatment Plants - Cost Considerations and Client, Contractor, Consultant Relationships, The Consultant's View,
W74-07312 5D

Eighth Annual Report, Program Activities, July 1, 1971-Jun 30, 1972.
W74-07332 9D

PROTECTION
Pacific Northwest Coastal Zone Management as it Relates to Estuary Protection,
W74-07500 6E

PROTEINS
Water Reuse in Protein Feed Process Utilizing Lumber Mill Wastes,
W74-07409 5D

PROTEOLYSIS
Reduction in Mercury Content of Fish Protein Concentrate by Enzymatic Digestion,
W74-07576 5A

PROTOZOA (CILIATES)
Population Dynamics of Protozoa Associated with the Decay of Organic Materials in Fresh Water,
W74-07541 5C

PROVENANCE
Regional Clay Mineral Facies in Estuaries and Continental Margin of the United States East Coast,
W74-07237 2L

Source of Recent Nearshore Marine Clays, Southeastern United States,
W74-07238 2L

PSYCHROPHILIC FUNGI
Psychrophilic Yeasts Isolated From Marine Fish,
W74-07563 5A

PTERIDOPHYTES
A Contribution to the Botany of Ganganagar District, North Rajasthan,
W74-07357 3F

PUBLIC HEALTH
Hygienic Features of Silicate Anticorrosion Coatings for Water Reservoirs, (In Russian),
W74-07364 5F

Hygienic Evaluation of Means of Enrichment with Salts and Decontamination of Demineralized Water, (In Russian),
W74-07365 5F

PUBLIC HEARINGS
North Coastal Area Action Program. A Study of the McKinleyville-Trinidad Area: Public Hearing Comments.
W74-07129 6B

PUBLIC LANDS
Scenic Rivers.
W74-07114 6E

PUERTO RICO
Investigation of the Biology and Control of Noxious Coelenterates Occurring in the Coastal Waters of Puerto Rico,
W74-07480 2L

PUGET SOUND (WASH)
A Strategy for Modeling Primary Production in Stratified Fjords,
W74-07494 5C

PULP AND PAPER INDUSTRY
Residuals in Manufacture of Paper,
W74-07399 5B

The Pulp and Paper Industry and the Environment,
W74-07411 5D

PULP WASTES
A Comparison of Effluent Characteristics from Conventional and Oxygen Bleaching Sequences: Results of a Laboratory Study,
W74-07375 5D

Oxygen Bleaching -- A Flexible Process for Pollution Abatement,
W74-07376 5D

Water Reuse and Recycle in the D(C)EDED Bleach Sequence,
W74-07377 5D

The Effluent-Free Bleached Kraft Pulp Mill. Part V. The R4 Process for Chlorine Dioxide Manufacture to Decrease Production of Sodium Sulphate,
W74-07378 5D

The Effluent-Free Bleached Kraft Pulp Mill. Part IV. The Salt Recovery Process,
W74-07379 5D

New Effluent Plant at Colthrop Board Mills.
W74-07380 5D

Mechanical Waste Water Clarification and Biological-Chemical Waste Water Purification Using the Attisholz and Ruthner System (Mechanische Abwasserklaerung und biologisch-chemische Abwasserreinigung nach System Attisholz und Ruthner),
W74-07381 5D

Possibilities of Effluent Clarification (Moeglichkeiten der Abwasserklaerung),
W74-07382 5D

Reduction of the Volume of Pollutants Discharged and of Fresh Water Consumption (Sokrashchenie sbrosa zagryaznenu i umen'shenie raskhoda svezhei vody),
W74-07384 5D

Determination of Pentachlorophenol in Natural and Waste Waters,
W74-07385 5A

On Some Special Problems of Sulfite Pulp Waste Water Purification (Zu einigen speziellen Problemen der Sulfitzellstoff-Abwasserreinigung),
W74-07386 5D

Microbiological Purification of Hydrogen Sulfide-Containing Kraft Mill Effluents (Mikrobiologicheskaya ochistka serovodorodnykh stochnykh vod sul'fatno-tsellyuloznogo proizvodstva),
W74-07387 5D

Predicting the Quality of Stream Water Under Conditions of Oxygen Deficiency (O prognoze kachetva vody vodotokov pri bol'shikh defitsitakh kisloroda),
W74-07388 5B

Some Equipment Used in Fibre Recovery and Effluent Treatment Operations.
W74-07390 5D

How Polyacrylamides can Help Effluent Problems,
W74-07391 5D

Environmental Protection Techniques to be Applied in a Bleached Kraft Pulp Mill in Sweden,
W74-07392 5D

Biodegradation of Resin Acid Sodium Salts,
W74-07393 5D

Water Reuse and Recycle in Kraft Bleacheries,
W74-07394 5D

Effluent - Fibre Recovery - Water Savings; Case History of a Recent Plant Installation,
W74-07395 5D

Marine Fungi Isolated from a Kraft Pulp Mill Outfall Area,
W74-07396 5B

Utilization of White Water in Board Mills (Ispol'zovanie oborotnoi vody na kartonnykh fabrikakh),
W74-07397 5D

Pilot Application of the Rotating Biological Surface Concept for Secondary Treatment of Insulating Board Mill Effluents,
W74-07398 5D

Residuals in Manufacture of Paper,
W74-07399 5B

A Practical and Trouble-Free Sewer Spill Monitor,
W74-07404 5D

A Review of Colour Reduction Technology in Pulp and Paper Mill Effluents,
W74-07406 5D

Pollution Control by Recycling Effluent,
W74-07407 5D

Pollution Control Through Training, Education, and Rigorous Follow-Up,
W74-07408 5G

An Overview of Water Reuse Potential in Pulp and Paper Manufacturing,
W74-07410 5D

The Pulp and Paper Industry and the Environment,
W74-07411 5D

PUMPED STORAGE
Hydroelectric Power Resources of the United States, Developed and Undeveloped, January 1, 1972.
W74-07189 8C

PUMPING
Evaluation of Methods of Pumping Test Analyses for Application to Hawaiian Aquifers,
W74-07531 5C

QUARTZ
A Scanning Electron Microscope Study of Surface Textures of Quartz Grains from Glacial Environments,
W74-07331 2J

RACINE (WIS)
Screening/Dissolved-Air Flotation Treatment of Combined Sewer Overflows,
W74-07262 5D

RADAR
Broad Spectrum Microwave Systems for Remotely Measuring Soil Moisture Content,
W74-07052 2G

RADIATION
Response of Aquatic Weeds to Laser Radiation,
W74-07475 5G

RADIATION SAFETY
Radiation Safety Problems in the Operation of Atomic Electric Power Stations, (In Russian),
W74-07363 5B

RADIOACTIVE SEWAGE
Organization of the Collection and Decontamination of Industrial and Domestic Radioactive Sewage, (In Russian),
W74-07362 5D

RADIOACTIVITY TECHNIQUES
Summary of the State of the Art in Radiochromatography,
W74-07571 5A

RADIOCHROMATOGRAPHY
Summary of the State of the Art in Radiochromatography,
W74-07571 5A

RADIOISOTOPES
A Study of the Movement of Phosphorous in the Little River Estuary, N.S.W.,
W74-07483 5B

RADIOMETERS
Surface Temperatures of Lake Erie,
W74-07415 2H

RADIOMETRIC TEMPERATURE
Broad Spectrum Microwave Systems for Remotely Measuring Soil Moisture Content,
W74-07052 2G

RAIN FORESTS
Phenology of a Tropical Rain Forest in Malaya,
W74-07482 2I

RAINBOW TROUT
Pharmacodynamics of Methyl Mercury in the Rainbow Trout (Salmo Gairdneri): Tissue Uptake, Distribution and Excretion,
W74-07597 5C

RAINFALL
An Irrigation Scheduling Model Which Incorporates Rainfall Predictions,
W74-07440 3F

RAINFALL-RUNOFF RELATIONSHIPS
Cross-Spectral Analysis of Rainfall and Runoff for Raritan and Mullica River Basins in New Jersey,
W74-07183 2A

The EPA Stormwater Management Model: A Current Overview,
W74-07265 5D

Comparison of Rainfall-Runoff Models for Urban Areas,
W74-07463 2A

A Rainfall-Runoff Model Based on the Watershed Stream Network,
W74-07464 2A

Effect of Grazing on Runoff from Two Small Watersheds in Southwestern Wisconsin,
W74-07525 4C

RANGE MANAGEMENT
Intensive Infiltrometer Studies on A Plowed Big Sagebrush Site,
W74-07166 2G

RAPPAHANNOCK ESTUARY
Biogeochemical Variables in Bottom Sediments of the Rapphannock River Estuary,
W74-07244 2L

RARITAN RIVER BASIN (N
Cross-Spectral Analysis of Rainfall and Runoff for Raritan and Mullica River Basins in New Jersey,
W74-07183 2A

RATES OF APPLICATION
Effect of Seeding Rates and Row Spacings on Fodder Production of Moth Bean (Phaseolus aconitifolius),
W74-07091 3F

RECIRCULATED WATER
Water Reuse and Recycle in the D(C)EDED Bleach Sequence,
W74-07377 5D

Reduction of the Volume of Pollutants Discharged and of Fresh Water Consumption (Sokrashchenie sbrosa zagryaznenii i umen'shenie raskhoda svezhei vody),
W74-07384 5D

RECREATION
Scenic Rivers.
W74-07114 6E

Problems in Recreational Use of Reservoirs (Problemy rekreatsionnogo ispol' zovaniya vodokhranilishch),
W74-07193 6B

Cost Sharing for Recreation: Efficiency and Equity,

W74-07578 7B

RESEARCH
Annual Report/Fiscal Year 1973.
W74-07252 9D

Annotated Bibliography of Explosive Excavation Related Research.
W74-07314 8H

RESEARCH AND DEVELOPMENT
Research Activities of the Illinois State Water Survey,
W74-07136 6B

Ninth Annual Report of the Water Resources Research Institute of the University of Wyoming (Activities During FY 1973).
W74-07457 9A

RESEARCH FACILITIES
Development of a Decision Room for Environntal Studies, (Feasibility Study),
W74-07371 6G

RESEARCH PRIORITIES
Technology Transfer in the Marine Environment of Long Island,
W74-07059 6B

Minutes, Iowa State Water Resources Research Institute Advisory Board and Council, Eighth Annual Meeting.
W74-07456 9A

RESERVOIR OPERATION
Problems in Recreational Use of Reservoirs (Problemy rekreatsionnogo ispol' zovaniya vodokhranilishch),
W74-07193 6B

Instrumentation for Engineering Management of a Multi-Purpose River Basin System (Trinity River Basin, Texas) Real-Time Engineering Management of a Multi-Purpose River Basin System,
W74-07369 4A

RESERVOIR USAGE
Determinants of Use of Water-Based Recreational Facilities,
W74-07058 6B

RESERVOIRS
Bethany Reservoir Recreation Development Plan.
W74-07127 6B

Lake Perris Recreation Development Plan.
W74-07128 6B

Silverwood Lake Recreation Development Plan.
W74-07130 6B

Problems in Recreational Use of Reservoirs (Problemy rekreatsionnogo ispol' zovaniya vodokhranilishch),
W74-07193 6B

RESEVOIR RELEASES
Planar and Axisymmetric Bottom Withdrawal from a Density-Stratified Reservoir,
W74-07340 4A

RESIDENCE TIME
Physical Modeling of Residence Times in Tidal Basins,
W74-07496 2L

RESINS
Biodegradation of Resin Acid Sodium Salts,
W74-07393 5D

RESORCINOL
Microdetermination of Resorcinol in Presence of Phenol,
W74-07580 5A

RESOURCES DEVELOPMENT
Kelp Habitat Improvement Project, Annual Report July 1, 1970 - June 30, 1971.
W74-07489 5C

Kelp Habitat Improvement Project, Annual Report July 1, 1971 - June 30, 1972.
W74-07490 5C

RETENTION
Physical Modeling of Residence Times in Tidal Basins,
W74-07496 2L

REVERSE OSMOSIS
Water Purification System,
W74-07213 5D

REVIEWS
Prevention and Control of Infiltration and Inflow,
W74-07257 5D

Land Application of Sewage Sludge,
W74-07266 5D

Land Disposal of Wastewater--Literature Review for 1973,
W74-07327 5D

Extracellular Products of Algae in Freshwater,
W74-07353 5C

Possibilities of Effluent Clarification (Moeglichkeiten der Abwasserklaerung),
W74-07382 5D

Summary of the State of the Art in Radiochromatography,
W74-07571 5A

RICE
Evaporation from an Irrigated Rice Crop in a Semi-Arid Region,
W74-07096 2D

RIPARIAN RIGHTS
Riparian Rights in Certain Counties.
W74-07283 6E

RISKS
Flood Proofing Decisions with Uncertain Events,
W74-07299 6A

Optimum Design Height of Cofferdams,
W74-07304 8A

RIVER BASINS
Nonlinear Programming in River Basin Modeling,
W74-07298 5B

A Model of Irrigated Agriculture and Regional Development in Southern Argentina: The Rio Negro Basin,
W74-07306 6A

Regional Water Quality Management by the Generalized Reduced Gradient Method,
W74-07311 5B

RIVER BEDS
Wild and Scenic Rivers.
W74-07290 6E

RIVER REGULATION
Flood Plain Information-Neuse River and Buffalo Creek, Smithfield, North Carolina.
W74-07074 4A

RIVER SYSTEMS
Instrumentation for Engineering Management of a Multi-Purpose River Basin System (Trinity River Basin, Texas) Real-Time Engineering Management of a Multi-Purpose River Basin System,
W74-07369 4A

RIVERS
Scenic Rivers.
W74-07114 6E

Dissolved-Solids Discharge to the Oceans from the Conterminous United States,
W74-07162 5B

River Regulation--Reservoirs.
W74-07278 6E

Wild and Scenic Rivers.
W74-07290 6E

An Investigation of the Physical Impact of Sewage Outflow on a River-Estuarine Environment,
W74-07477 5C

Winter-Regime Thermal Response of Heated Streams,
W74-07511 5B

RIVERS AND HARBORS ACT
United States V. Pot-Nets, Inc. (Violation of Rivers and Harbors Act),
W74-07287 6E

United States v. Ira S. Bushey and Sons, Inc. (Injunction Against Oil Spills).
W74-07291 6E

RIVERS SYSTEMS
Wild, Scenic River Systems.
W74-07280 6E

ROANOKE ISLAND (NC)
Recent Estuarine Sediment History of the Roanoke Island Area, North Carolina,
W74-07245 2L

ROCKY MOUNTAIN REGION
Water Yield, Annual peaks and Exposure in Mountainous Terrain,
W74-07165 2A

ROOT SYSTEMS
Effects of Subsurface Asphalt Layers on Corn and Tomato Root Systems,
W74-07447 3F

ROOT ZONE
Effects of Subsurface Asphalt Layers on Corn and Tomato Root Systems,
W74-07447 3F

ROTATING BIOLOGICAL SURFACE
Pilot Application of the Rotating Biological Surface Concept for Secondary Treatment of Insulating Board Mill Effluents,
W74-07398 5D

ROTATING DISKS
Rotating Biological Disk Wastewater Treatment Process - Pilot Plant Evaluation,
W74-07373 5D

ROTS
Annotated Checklist and Host Index for Arizona Wood-Rotting Fungi,
W74-07097 2I

ROUGH SURFACE DISTORTION
Broad Spectrum Microwave Systems for Remotely Measuring Soil Moisture Content,
W74-07052 2G

ROW SPACING
Effect of Seeding Rates and Row Spacings on Fodder Production of Moth Bean (Phaseolus aconitifolius),
W74-07091 3F

RUMINOCOCCUS ALBUS
Utilization of Fibrous Wastes as Sources of Nutrients,
W74-07472 5D

RUNOFF
Erosional Losses of S-Triazine Herbicides,
W74-07421 5B

Predicting Pesticide Runoff From Agricultural Land: A Conceptual Model,
W74-07427 5B

First Characterization of the Runoff From the Watershed of the Manso Superior River and its Basins (Argentina), (In Spanish),
W74-07536 2E

RUNOFF FORECASTING
Water Yield, Annual peaks and Exposure in Mountainous Terrain,
W74-07165 2A

RURAL DEVELOPMENT
Urban Impacts of Rural Resource Development Expenditures in the Interlake Area of Manitoba,
W74-07068 6B

SAFETY
Arizona State Lake Improvement Fund Plan.
W74-07108 6B

SAGUARO CACTUS
The Saguaro Giant Cactus, A Bibliography,
W74-07098 2I

SALAMANDERS
In Comparison of the Food of Salamanders and Fish in Marion Lake, British Columbia,
W74-07349 2H

SALINE SOILS
Effect of Gypsum in Reducing Boron Hazard of Saline Waters and Soils,
W74-07095 3C

SALINE WATER
Effect of Gypsum in Reducing Boron Hazard of Saline Waters and Soils,
W74-07095 3C

SALINE WATER BARRIERS
Flood Plain Information-Neuse and Trent Rivers and Jack Smith Creek, New Bern, North Carolina.
W74-07073 4A

SALINE WATER INTRUSION
Recent Investigations in Stratified Flows Related to Estuarial Hydraulics,
W74-07226 2L

SALINITY
Quality of Well Waters of Jaipur District,
W74-07106 4B

Effects of Man-Made Works on the Hydraulic, Salinity, and Shoaling Regimens of Estuaries,
W74-07249 5C

Effect of Increasing Depth on Salinity in the James River Estuary,
W74-07250 2L

The Bittersweet Waters of the Lower Colorado,
W74-07292 3F

Interdisciplinary Modeling in the Analysis of the Salinity Problems of the Safford Valley,
W74-07297 5B

Ultra-Violet Absorption Characteristics of Natural Waters,
W74-07419 2K

SALMON
Relationship Between Logging Activities and Salmon Production,
W74-07468 4C

SALMONELLA
Incidence of Resistance to Tetracycline, Chloramphenicol and Ampicillin Among Salmonella Species Isolated in the Netherlands in 1969, 1970 and 1971,
W74-07562 5C

SALT MARSHES
Function of Marshes in Reducing Eutrophication of Estuaries of the Middle Atlantic Region,
W74-07336 5C

SALTS
Evaporation of Water from Sand: 5. The Effect of Evaporation on the Concentration of Salts Dissolved in Water Stored in Sand,
W74-07169 2D

Use and Production of Iron Salts for Phosphorus Removal,
W74-07269 5D

Biodegradation of Resin Acid Sodium Salts,
W74-07393 5D

SAMPLE PREPARATION
Observations on the Gas Chromatography of Kelthane (Dicofol),
W74-07575 5A

SAMPLING
An Improved Core Catcher for the Kiel Box Corer ('Kastenlot'),
W74-07159 7B

A Groundwater Profile Sampler,
W74-07523 2F

Elemental Variability Within a Sampling Unit,
W74-07598 2K

SAN ANTONIO (TEX)
The Relationship of Land Use to Water Use in San Antonio, Texas,
W74-07067 4A

Annual Compilation and Analysis of Hydrologic Data for Urban Studies in the San Antonio, Texas Metropolitan Area, 1971,
W74-07323 2E

SAN FRANCISCO BAY
Remanent Magnetization of Modern Tidal Flat Sediments from San Francisco Bay, California,
W74-07173 2L

SAND WAVES
Sand-Wave Fields in Taiwan Strait,
W74-07175 2J

SANDSTONES
Sandstone Aquifers in Eastern Sullivan County, Indiana,
W74-07401 4B

SANITARY SERVICES INVENTORY
Sanitary Services in Tennessee, 1972.
W74-07060 5D

SANTEE RIVER (SO
Santee Submergence, Example of Cyclic Submerged and Emerged Sequences,
W74-07247 2L

SARGASSO SEA
The Marine Diatom Ethmodiscus rex: Its Morphology and Occurrence in the Plankton of the Sargasso Sea,
W74-07547 5A

SATELLITES (ARTIFICIAL)
Utilization of ERTS-1 Data to monitor and Classify Eutrophication of Inland Lakes,
W74-07484 5C

A Direct Comparison of Satellite and Aircraft Infrared (10 Micrometers-12 Micrometers) Remote Measurements of Surface Temperature,
W74-07578 7B

SATURATED FLOW
Numerical Studies of Two-Dimensional Saturated-Unsaturated Drainage Models,
W74-07168 2G

SAW MILLS
Water Reuse in Protein Feed Process Utilizing Lumber Mill Wastes,
W74-07409 5D

SCANNING ELECTRON MICROSCOPY
The Marine Diatom Ethmodiscus rex: Its Morphology and Occurrence in the Plankton of the Sargasso Sea,
W74-07547 5A

SCENEDESMUS
A Continuous Culture Study of Phosphate Uptake, Growth Rate and Polyphosphate in Scenedesmus Sp.,
W74-07549 5C

SCENIC EASEMENTS
Scenic Rivers.
W74-07114 6E

SCHEDULING
An Irrigation Scheduling Model Which Incorporates Rainfall Predictions,
W74-07440 3F

SEA NETTLES
Effects of Temperature on Activity and Mortality of the Scyphozoan Medusa, Chrysaora quinquecirrha,
W74-07561 5C

SEA URCHINS CONTROL
Kelp Habitat Improvement Project, Annual Report July 1, 1970 - June 30, 1971.
W74-07489 5C

SEA WATER
Th-234/U-238 Activity Ratios in Pacific Ocean Bottom Waters,
W74-07322 2K

A Direct Comparison of Satellite and Aircraft Infrared (10 Micrometers-12 Micrometers) Remote Measurements of Surface Temperature,
W74-07578 7B

SEASONAL
Seasonal Abundance and Distribution of Juvenile Blue Crabs in Core Sound, N.C. 1965-1966,
W74-07350 2L

SEDIMENT CONTROL
Sediment Control.
W74-07115 6E

SEDIMENT DISCHARGE
Sediment Discharge in the Lake Tahoe Basin, California, 1972 Water Year,
W74-07326 2J

Suspended-Sediment Yield in Rivers of Gor'kiy Oblast as an Indication of Recent Erosion Processes (Stok vzveshennykh nanosov v rekakh Gor'kovskoy obl. kak pokazatel' razvitiya sovremennykh erozionnykh protsessov),
W74-07507 2J

SEDIMENT LOAD
Spatial and Temporal Distribution of Suspended Sediment in Narragansett Bay and Rhode Island Sound,
W74-07232 2L

Supply of Terrigenous Material to the Baltic Sea (Pitaniye Baltiyskogo morya terrigennym materialom),
W74-07501 2J

SEDIMENT SORTING
Size and Shape Sorting in a Dutch Tidal Inlet,
W74-07329 2L

SEDIMENT TRANSPORT
Sand-Wave Fields in Taiwan Strait,
W74-07175 2J

Suspended Sediment Transport in Delaware Bay,
W74-07233 2L

Distribution and Transportation of Suspended Sediment in Upper Cheasapeake Bay,
W74-07234 2L

Supply of Terrigenous Material to the Baltic Sea (Pitaniye Baltiyskogo morya terrigennym materialom),
W74-07501 2J

SEDIMENT YIELD
A Note on the Areal Distribution of Suspended Sediment Yield in South Africa,
W74-07177 2J

Sediment Discharge in the Lake Tahoe Basin, California, 1972 Water Year,
W74-07326 2J

Suspended-Sediment Yield in Rivers of Gor'kiy Oblast as an Indication of Recent Erosion Processes (Stok vzveshennykh nanosov v rekakh Gor'kovskoy obl. kak pokazatel' razvitiya sovremennykh erozionnykh protsessov),
W74-07507 2J

Quality of Water Discharged from Two Agricultural Watersheds in Southwestern Iowa,
W74-07528 5B

SEDIMENTARY STRUCTURES
Depositional Features of Braided-Meandering Stream,
W74-07163 2J

SEDIMENTATION
Sedimentation by Non-Tidal Currents Around Northern Denmark,
W74-07160 2L

Environmental Framework of Coastal Plain Estuaries.
W74-07225 2L

Biodeposition as a Factor in Sedimentation of Fine Suspended Solids in Estuaries,
W74-07231 2L

Spatial and Temporal Distribution of Suspended Sediment in Narragansett Bay and Rhode Island Sound,
W74-07232 2L

Distribution and Transportation of Suspended Sediment in Upper Cheasapeake Bay,
W74-07234 2L

Rio De La Plata Estuary Environments,
W74-07236 2L

Regional Clay Mineral Facies in Estuaries and Continental Margin of the United States East Coast,
W74-07237 2L

Source of Recent Nearshore Marine Clays, Southeastern United States,
W74-07238 2L

Texture and Organic Carbon Content of Bottom Sediments in some Estuaries of the United States,
W74-07243 2L

Recent Estuarine Sediment History of the Roanoke Island Area, North Carolina,
W74-07245 2L

Erosional and Depositional Estuarine 'Terraces,' Southeastern United States,
W74-07246 2L

Santee Submergence, Example of Cyclic Submerged and Emerged Sequences,
W74-07247 2L

Marine Geology and Estuarine History of Mobile Bay, Alabama: Part 1. Contemporary Sediments,
W74-07248 2L

Effects of Man-Made Works on the Hydraulic, Salinity, and Shoaling Regimens of Estuaries,
W74-07249 5C

Effect of Increasing Depth on Salinity in the James River Estuary,
W74-07250 2L

Dispersion of Contaminated Sediment Bed Load,
W74-07446 5B

Relationship Between Logging Activities and Salmon Production,
W74-07468 4C

Supply of Terrigenous Material to the Baltic Sea (Pitaniye Baltiyskogo morya terrigennym materialom),
W74-07501 2J

Role of Turbidity Currents in Sedimentary Processes (O roli mut'yevykh potokov v protsessakh osadkonakopleniya),
W74-07502 2J

EDIMENTOLOGY
Mass Physical and Engineering Properties of Some York River Sediments,
W74-07239 2L

Strontium Isotope Composition and Sediment Transport in the Rio de la Plata Estuary,
W74-07240 2L

The Relationship of Porosity and Angle of Repose to Mixture Proportions in Assemblages of Different Sized Materials,
W74-07330 2J

EDIMENTS
A Scanning Electron Microscope Study of Surface Textures of Quartz Grains from Glacial Environments,
W74-07331 2J

Mechanism of Element Distribution in the Pacific Ocean (Japanese Profile) (K poznaniyu mekhanizma raspredeleniya elementov v Tikhom okeane (Yaponskiy profil')),
W74-07503 2J

Solvent Extraction of Sulfur From Marine Sediment and Its Determination by Gas Chromatography.
W74-07565 5A

SEEDS
An Investigation of Propagation and the Mineral Nutrition of Spartina alterniflora,
W74-07486 5C

SEEPAGE
Numerical Studies of Two-Dimensional Saturated-Unsaturated Drainage Models,
W74-07168 2G

Seepage Through a Hillside: The Steady Water Table,
W74-07517 2G

SELENITE
The Effect of Selenite on the Physiological and Morphological Properties of the Blue-Green Alga Phormidium luridum Var. Olivacea,
W74-07550 5C

SELF-PURIFICATION
Predicting the Quality of Stream Water Under Conditions of Oxygen Deficiency (O prognoze kachetva vody vodotokov pri bol'shikh defitsitakh kisloroda),
W74-07388 5B

SEMICONDUCTORS
Special Report: Semiconductor Memories are Taking Over Data-Storage Applications,
W74-07553 7B

SENEGAL (SANGALKAM MARSH)
Nematode Fishe Parasites from Sangalkam, Senegal,
W74-07589 2H

SEPARATION TECHNIQUES
Method of and Apparatus for the Recovery of Oil from Water,
W74-07201 5G

Apn aratus for Separating Oil and SolidsfFrm m Water,
W74-07202 5D

System and Method for Separating Heavier and Lighter Components of Liquid Mixtures,
W74-07203 5D

Oil Reclaiming Device for Removing Oil from the Surface of Water,
W74-07206 5G

Containing and Removing Oil Spills on Water,
W74-07208 5G

Method and Apparatus for Collecting a Floating Liquid,
W74-07215 5G

Method for the Elimination and Possible Recovery of the Floating Polluting Substances, Mineral Oils in Particular, From Sheets of Water and Boat Fitted to This Aim,
W74-07220 5G

Method of Removing Oil Spills,
W74-07222 5G

Apparatus for Removing Surface Pollutants from Water and Other Liquids,
W74-07223 5G

Screening/Dissolved-Air Flotation Treatment of Combined Sewer Overflows,
W74-07262 5D

Determination of Oil Concentration and Size Distribution in Ship Ballast Waters. Method and Representative Results,
W74-07564 5B

Solvent Extraction of Sulfur From Marine Sediment and Its Determination by Gas Chromatography.
W74-07565 5A

SEPTIC TANKS
The Effects of Household Sanitary Systems on Effluent Phosphate Levels,
W74-07267 5D

SEWAGE
Organization of the Collection and Decontamination of Industrial and Domestic Radioactive Sewage, (In Russian),
W74-07362 5D

Effect of Effluents from Hydrolysis Plant on the Survival of Typhoid Fever and Dysentery Bacteria, (In Russian),
W74-07367 5C

SEWAGE DISTRICTS
Sanitary Districts for Sewage Disposal.
W74-07276 6E

SEWAGE EFFLUENTS
Natural Resources--Waste Control.
W74-07116 6E

SEWAGE LAGOONS
The Plankton of Ponds Enriched with Wastes from Beet Sugar Factories,
W74-07478 5C

SEWAGE SLUDGE
Land Application of Sewage Sludge,
W74-07266 5D

SEWAGE TREATMENT
Laundry Detergents and Environmental Quality,
W74-07122 5C

Plastic Moving-Surface Treatment of Sewage,
W74-07198 5D

Foam Flotation Concentration of Sewage,
W74-07214 5D

Sewage Treatment System,
W74-07217 5D

Land Application of Sewage Sludge,
W74-07266 5D

SEWERAGE
Sanitary Services in Tennessee, 1972.
W74-07060 5D

Preliminary Water and Sewer Plan for Alcorn, Benton, Marshall, Prentiss, Tippah, Tishomingo Counties.
W74-07062 5D

Utilities and Facilities for New Residential Development: A Survey of Municipal Policy,
W74-07071 5D

SEWERS
Pressure Sewers,
W74-07259 5D

The Effects of Household Sanitary Systems on Effluent Phosphate Levels,
W74-07267 5D

Capital Cost Minimization of Drainage Networks,
W74-07309 4A

A Practical and Trouble-Free Sewer Spill Monitor,
W74-07404 5D

SHEAR
The Relationship of Porosity and Angle of Repose to Mixture Proportions in Assemblages of Different Sized Materials,
W74-07330 2J

SHEAR STRENGTH
The Relationship of Porosity and Angle of Repose to Mixture Proportions in Assemblages of Different Sized Materials,
W74-07330 2J

SHORE FLIES
Habitat Distribution of the Shore Flies of Northeastern Ohio (Diptera: Ephydridae),
W74-07556 5C

SHORE PROTECTION
Attenuation of Water Waves and Control and Utilization of Wave-Induced Water Movements,
W74-07204 8B

SIERRA CLUB
Sierra Club V. Froehlke (Injunction Action Against Reservoir Project).
W74-07113 6E

SILVERWOOD LAKE (CALIF
Silverwood Lake Recreation Development Plan.
W74-07130 6B

SIMULATION ANALYSIS
The EPA Stormwater Management Model: A Current Overview,
W74-07265 5D

A Computer Simulation Model for Flood Plain Development. Part II: Model Description and Applications,
W74-07296 6A

Simulation--A Tool for Water Resource Management,
W74-07300 6A

Ipswich River Basin Model Study,
W74-07302 6D

Planning and Operational Studies in the Integrated Use of Desalination. Case Studies for Cyprus and Jersey,
W74-07308 3A

Planning and Operation of Urban Water Quality Management Systems,
W74-07334 5D

Systems simulation of the effect of tertiary treatment for carbon, nitrogen, and phosphorus removal upon primary productivity, standing crop, and community structure of autotrophic and hetertrophic communities in receiving model streams.
W74-07337 5C

Development of a Decision Room for Environntal Studies, (Feasibility Study),
W74-07371 6G

Some Generalized Beta Distributions of the Second Kind Having Desirable Application Features in Hydrology and Meteorology,
W74-07412 2A

Algebraic Boundedness of Sample Statistics,
W74-07413 2A

Mathematical Simulation of Subsurface Flow Contributions to Snowmelt Runoff, Reynolds Creek Watershed, Idaho,
W74-07516 2F

Streamflow Simulation: 3. The Broken Line Process and Operational Hydrology,
W74-07520 2A

SINGLE SCAN VOLTAMMETRY
Mass and Charge Transfer Kinetics and Coulometric Current Efficiencies. Part VII. Conditional Potentials, and Single-Scan Voltammetry of Pure Vanadium(V) - Vanadium(IV) Systems in Various Media at Platinum Elec trodes Pre-Treated By Five Methods,
W74-07557 2K

Mass and Charge Transfer Kinetics and Coulometric Current Efficiencies. Part VIII. Single-Scan Voltammetry of Vanadium(V) - Vanadium(IV) in the Presence of Chromium, Manganese and Iron, and the Kinetic Parameters of the Vanadium System, at Platinum Electrodes Pre-Treated by Five Methods,
W74-07558 5A

SIZE
Economic Size Selection for PVC Pipelines,
W74-07303 8A

SKIMMING
Oil Reclaiming Device for Removing Oil from the Surface of Water,
W74-07206 5G

Containing and Removing Oil Spills on Water,
W74-07208 5G

SLIME
Effects of Thickness on Bacterial Film,
W74-07545 5C

SLOPES
A Rainfall-Runoff Model Based on the Watershed Stream Network,
W74-07464 2A

SLUDGE DIGESTION
Aerobic Digestion of Organic Sludges Containing Inorganic Phosphorus Precipitates: Phase I,
W74-07268 5D

SLUDGE TREATMENT
Mechanical Waste Water Clarification and Biological-Chemical Waste Water Purification Using the Attisholz and Ruthner System (Mechanische Abwasserklaerung und biologisch-chemische Abwasserreinigung nach System Attisholz und Ruthner),
W74-07381 5D

Some Equipment Used in Fibre Recovery and Effluent Treatment Operations.
W74-07390 5D

SMALL WASTE FLOWS
Selection and Operation of Small Wastewater Treatment Facilities - Training Manual.
W74-07485 5D

SMALL WATERSHEDS
A Computer Atlas of Hydrologic and Geomorphologic Data for Small Watersheds in Indiana,
W74-07432 2A

Calibrating a Water Yield Model for Small Ungaged Watersheds,
W74-07519 2A

Effect of Grazing on Runoff from Two Small Watersheds in Southwestern Wisconsin,
W74-07525 4C

SMITH RIVER (CALIF
North Coastal Area Action Program: A Study Of The Smith River Basin And Plain.
W74-07132 6B

SMITHFIELD (N
Flood Plain Information-Neuse River and Buffalo Creek, Smithfield, North Carolina.
W74-07074 4A

SNOW MANAGEMENT
Avalanche Studies (1971-1972),
W74-07319 2C

SNOWFALL
Probability Distribution of Snow Course Data for Central Arizona,
W74-07094 2C

SNOWMELT
Water Yield, Annual peaks and Exposure in Mountainous Terrain,
W74-07165 2A

Mathematical Simulation of Subsurface Flow Contributions to Snowmelt Runoff, Reynolds Creek Watershed, Idaho,
W74-07516 2F

Snow Accumulation and Snowmelt as Influenced by a Small Clearing in a Lodgepole Pine Forest,
W74-07526 2C

SNOWPACKS
Snow Accumulation and Snowmelt as Influenced by a Small Clearing in a Lodgepole Pine Forest,
W74-07526 2C

SOCIAL ASPECTS
Environmental Quality and its Evaluation,
W74-07533 5G

SOCIAL PARTICIPATION
North Coastal Area Action Program. A Study of the McKinleyville-Trinidad Area Public Hearing Comments.
W74-07129 6B

SODIUM CHLORIDE
The Effluent-Free Bleached Kraft Pulp Mill. Part IV. The Salt Recovery Process,
W74-07379 5D

SODIUM COMPOUNDS
Biodegradation of Resin Acid Sodium Salts,
W74-07393 5D

SOIL AIR PRESSURE
Infiltration and Water Table Effects of Soil Air Pressure Under Border Irrigation,
W74-07301 3F

SOIL ANALYSIS
Mineralogical Composition of Clays in Soil Profiles of Israel: II. The Soils of the Desert Zone,
W74-07100 2G

Acid Ammonium Acetate Extraction and Electron Capture Gas Chromatographic Determination of Carbofuran in Soils,
W74-07574 5A

SOIL CONSERVATION
Quality of Water Discharged from Two Agricultural Watersheds in Southwestern Iowa,
W74-07528 5B

SOIL CONTAMINATION
Pollution Caused by Agriculture,
W74-07366 5B

SOIL DISPOSAL FIELDS
Land Disposal of Waste Gases: III. Sorption Patterns From Buried Gas Injection Pipes,
W74-07422 5B

SOIL EROSION
Sediment Control.
W74-07115 6E

Sediment Discharge in the Lake Tahoe Basin, California, 1972 Water Year,
W74-07326 2J

Erosional Losses of S-Triazine Herbicides,
W74-07421 5B

SOIL HEAT
Subsurface Heating and Irrigation of Soils: Its Effect on Temperature and Water Content and on Plant Growth,
W74-07054 2G

SOIL MANAGEMENT
Reactivating Soil Ripping Treatments for Runoff and Erosion Control in the Southwestern U.S.,
W74-07089 2G

SOIL MOISTURE
Broad Spectrum Microwave Systems for Remotely Measuring Soil Moisture Content,
W74-07052 2G

Evapotranspiration on a Palouse Watershed,
W74-07087 2D

Effect of Contour Furrows and Contour Bunds on Water Conservation in Grasslands of Western Rajasthan,
W74-07090 3F

Water Retention of Granitic Soils in the Idaho Batholith,
W74-07170 2G

Soil Moisture Dynamics and Its Variations in Soils Under Field Crops (Dinamika vlazhnosti i stepen' yeye var'irovaniya v pochvakh pod polevymi kul'turami),
W74-07509 2G

SOIL PHYSICS
Soil Moisture Dynamics and Its Variations in Soils Under Field Crops (Dinamika vlazhnosti i stepen' yeye var'irovaniya v pochvakh pod polevymi kul'turami),
W74-07509 2G

SOIL PROFILES
Mineralogical Composition of Clays in Soil Profiles of Israel: I. The Soils of the Mediterranean Zone,
W74-07099 2G

Mineralogical Composition of Clays in Soil Profiles of Israel: II. The Soils of the Desert Zone,
W74-07100 2G

Application of the Spline Function to Soil Science,
W74-07344 2G

SOIL RIPPING
Reactivating Soil Ripping Treatments for Runoff and Erosion Control in the Southwestern U.S.,
W74-07089 2G

SOIL STABILIZATION
Sand Dune Reclamation in Iraq -- Present Status and Future Prospects,
W74-07104 2J

SOIL STRENGTH
Mass Physical and Engineering Properties of Some York River Sediments,
W74-07239 2L

SOIL TEMPERATURE
Subsurface Heating and Irrigation of Soils: Its Effect on Temperature and Water Content and on Plant Growth,
W74-07054 2G

SOIL THERMAL PROPERTIES
The Heat Flux Density in a Non-Homogeneous Bare Loessial Soil,
W74-07346 2G

SOIL TREATMENT
Subsurface Heating and Irrigation of Soils: Its Effect on Temperature and Water Content and on Plant Growth,
W74-07054 2G

Reactivating Soil Ripping Treatments for Runoff and Erosion Control in the Southwestern U.S.,
W74-07089 2G

Effect of Gypsum in Reducing Boron Hazard of Saline Waters and Soils,
W74-07095 3C

SOIL TREATMENTS
Effect of Contour Furrows and Contour Bunds on Water Conservation in Grasslands of Western Rajasthan,
W74-07090 3F

SOIL TYPES
Effect of Irrigation with Thermal Water on Trace-Element Content in Some Soils of Georgia (Vliyaniye orosheniya termal'nymi vodami na soderzhaniye mikroelementov v nekotorykh pochvakh Gruzii),
W74-07508 3F

SOIL WATER
Application of the Spline Function to Soil Science,
W74-07344 2G

SOIL WATER MOVEMENT
Numerical Studies of Two-Dimensional Saturated-Unsaturated Drainage Models,
W74-07168 2G

Soil Moisture Dynamics and Its Variations in Soils Under Field Crops (Dinamika vlazhnosti i stepen' yeye var'irovaniya v pochvakh pod polevymi kul'turami),
W74-07509 2G

Flux-Gradient Relationships and Soil-Water Diffusivity from Curves of Water Content Versus Time,
W74-07512 2G

A Numerical Model Based on Coupled One-Dimensional Richards and Boussinesq Equations,
W74-07515 2F

Salt Displacement into Drain Tiles under Ponded Leaching,
W74-07518 2G

SOIL-WATER-PLANT RELATIONSHIPS
Effect of Seeding Rates and Row Spacings on Fodder Production of Moth Bean (Phaseolus aconitifolius),
W74-07091 3F

Distillation-Condensation of Water and Nutrient Movement in a Desert Ecosystem,
W74-07110 2I

SOILS
Multiple Organochlorine Pesticide Residues in Japan,
W74-07560 5A

SOILS (ACID ORGANIC)
Phosphorus Supply Characteristics of Acid Organic Soils as Measured by Desorption and Mineralization,
W74-07345 2G

SOILS (DARK BROWN)
Effect of Irrigation on Dynamics of Microorganism Quantity in Dark-Brown Soils in Southern Ukraine, (In Ukrainian),
W74-07279 2G

SOLAR EVAPORATION
Solar Evaporation Controlled Irrigation System,
W74-07211 2D

SOLAR RADIATION
The Micro-Meteorology of an Extended Area of Tea Before and After Rain,
W74-07354 3F

SOLAR STILLS
Self Cleaning, Tubular Solar Still,
W74-07207 3A

SOLID WASTES
Geologic Aspects of Waste Solids and Marine Waste Deposits, New York Metropolitan Region,
W74-07171 5B

SOLIDS CONTACT PROCESSES
Sewage Treatment System,
W74-07217 5D

SOLUBILITY
Manganese and Iron Solubility Changes as a Factor in Tile Drain Clogging: I. Observations During Flooding and Drying,
W74-07151 2G

Manganese and Iron Solubility Changes as a Factor in Tile Drain Clogging: II. Observations During the Growth of Cotton,
W74-07152 2G

SOLVENT EX
Solvent Extraction of Sulfur From Marine Sediment and Its Determination by Gas Chromatography.
W74-07565 5A

SOLVENT EXTRACTIONS
Gas Chromatographic Studies of Mixed-Ligand Complexes of Divalent Cations,
W74-07582 5A

SONORAN DESERT
Productivity and Water Stress in Cacti,
W74-07109 2I

SORBENTS
An Oil Recovery System Utilizing Polyurethane Foam--A Feasibility Study,
W74-07341 5G

SORPTION
Land Disposal of Waste Gases: III. Sorption Patterns From Buried Gas Injection Pipes,
W74-07422 5B

SOURIS RIVER BASIN (MANITOBA-CANADA)
Public Investment Criteria: Application to a Project in the Souris River Basin,
W74-07070 6B

SOUTH AFRICA
A Note on the Areal Distribution of Suspended Sediment Yield in South Africa,
W74-07177 2J

SOUTH AFRICA (KALAHARI GEMSBOK NATIONAL PARK)
Short-Term Response in Ungulate Numbers to Rainfall in the Nossob River of the Kalahari Gemsbok National Park,
W74-07535 2I

SOUTH AFRICA (OLIFANTS RIVER)
Occurrence and Distribution of the Vine Phylloxera, Phylloxera vitifoliae (Fitch), in the Olifants River Irrigation Area, Northwestern Cape Province,
W74-07356 3F

SOUTH CAROLINA
Santee Submergence, Example of Cyclic Submerged and Emerged Sequences,
W74-07247 2L

Environmental Planning: An Economic Analysis. Applications for the Coastal Zone,
W74-07534 6B

SOUTHEAST U
Source of Recent Nearshore Marine Clays, Southeastern United States,
W74-07238 2L

Erosional and Depositional Estuarine 'Terraces,' Southeastern United States,
W74-07246 2L

Effects of Man-Made Works on the Hydraulic, Salinity, and Shoaling Regimens of Estuaries,
W74-07249 5C

SOUTHWEST U
Reactivating Soil Ripping Treatments for Runoff and Erosion Control in the Southwestern U.S.,
W74-07089 2G

SOVIET CENTRAL ASIA (AMUDAR'YA RIVER BASIN)
Problems in Distribution of Water Resources in the Arid Zone of the Amudar'ya River Basin (Voprosy raspredeleniya vodnykh resursov v arisnoy zone (na primere Amudar'i)),
W74-07192 4A

SOYBEAN
Effects of Water Stress on Growth and Nitrogen-Fixing Activity of Trifolium repens,
W74-07352 3F

SPARTINA ALTERNIFLORA
An Investigation of Propagation and the Mineral Nutrition of Spartina alterniflora,
W74-07486 5C

SPAWNING
A New Type of Incubator Used in the Induced Spawning of Phytophagous Fishes, (In Rumanian),
W74-07434 8I

SPECIATION
Numerical Analysis of Hansenula, Pichia and Related Yeast Genera,
W74-07583 5A

SPECIFICATIONS
Natural Resources--Waste Control.
W74-07116 6E

SPECTRAL ANALYSIS
A Note on the Use of Spectral Analysis to Detect Leads and Lags in Annual Cycles of Water Quality,
W74-07522 7C

SPECTROPHOTOMETRY
Kaempferol (3,5,7,4'-Tetrahydroxyflavone) as a Chromogenic Reagent for Tin(IV),
W74-07579 5A

SPECTROSCOPY (X-RAY)
Elemental Variability Within a Sampling Unit,
W74-07598 2K

SPHAEROTILUS
Hydrogen Peroxide Cures Filamentous Growth in Activated Sludge,
W74-07253 5D

SPINACH
In-Plant, Continuous Hot-Gas Blanching of Spinach,
W74-07368 3E

SPLINE FUNCTION
Application of the Spline Function to Soil Science,
W74-07344 2G

SPORT FISHING
The Demand for Sport Fishing at Yaquina Bay,
W74-07143 6B

The Impact of Sport Angling on the Yaquina Bay Economy,
W74-07144 6B

SPRINGS
Mineral Springs in the Suez Rift Valley--Comparison with Waters in the Jordan Rift Valley and Postulation of a Marine Origin,
W74-07167 2K

SPRINKLER IRRIGATION
Irrigation and Sprinkler System,
W74-07212 3F

Irrigation Survey.
W74-07451 3F

STANDARD PROJECT FLOOD
Flood Plain Information - Glade Creek, Vinton, Virginia.
W74-07076 4A

STANDING CROPS
Distribution and Standing Crops of Chironomid-Larvae in Shiozu Bay of Lake Biwa (In Japanese),
W74-07101 5C

Systems simulation of the effect of tertiary treatment for carbon, nitrogen, and phosphorus removal upon primary productivity, standing crop, and community structure of autotrophic and hetertrophic communities in receiving model streams.
W74-07337 5C

STATISTICAL METHODS
The Forecasting of Streamflow Using the Method of Characteristic Modes,
W74-07178 4A

Optimal Linear Extrapolation of Level Fluctuations of Closed Water Bodies (Optimal'naya lineynaya ekstrapolyatsiya kolebaniy urovnya zamknutykh vodoyemov),
W74-07195 4A

Some Generalized Beta Distributions of the Second Kind Having Desirable Application Features in Hydrology and Meteorology,
W74-07412 2A

Algebraic Boundedness of Sample Statistics,
W74-07413 2A

Just a Moment,
W74-07414 2A

STATISTICAL MODELS
A Synthetic Model for Daily Streamflow,
W74-07179 2E

Streamflow Simulation: 3. The Broken Line Process and Operational Hydrology,
W74-07520 2A

STATISTICS
Some Generalized Beta Distributions of the Second Kind Having Desirable Application Features in Hydrology and Meteorology,
W74-07412 2A

Algebraic Boundedness of Sample Statistics,
W74-07413 2A

Just a Moment,
W74-07414 2A

STERILIZATION
Water Treatment Apparatus,
W74-07196 5D

STOMATAL STUDIES
Stomatal Mechanics,
W74-07593 2I

STORAGE COEFFICIENT
Effect of Partial Penetration on Flow in Unconfined Aquifers Considering Delayed Gravity Response,
W74-07514 2F

STORM DRAINS
Interim Storm Drainage Plan Report-Little Rock-North Little Rock Metropolitan Area.
W74-07082 5D

STORM RUNOFF
Interim Storm Drainage Plan Report-Little Rock-North Little Rock Metropolitan Area.
W74-07082 5D

Combined Sewer Overflow Seminar Papers.
W74-07255 5D

Stormflow Pollution Control in the U.S.,
W74-07256 5D

The EPA Stormwater Management Model: A Current Overview,
W74-07265 5D

STORM WATER
Interim Storm Drainage Plan Report-Little Rock-North Little Rock Metropolitan Area.
W74-07082 5D

Stormflow Pollution Control in the U.S.,
W74-07256 5D

Combined Sewer Overflow Regulator Facilities,
W74-07258 5D

Application of Microstraining to Combined Sewer Overflow,
W74-07260 5D

The EPA Stormwater Management Model: A Current Overview,
W74-07265 5D

STRATIFICATION
Summertime Temperature and Circulation Patterns in Lake Superior,
W74-07338 2H

Planar and Axisymmetric Bottom Withdrawal from a Density-Stratified Reservoir,
W74-07340 4A

The Influence of Wind on the Surface Waters of Alberni Inlet,
W74-07497 2L

STRATIFIED FLOW
Recent Investigations in Stratified Flows Related to Estuarial Hydraulics,
W74-07226 2L

Amazon River Estuarine System,
W74-07229 2L

Planar and Axisymmetric Bottom Withdrawal from a Density-Stratified Reservoir,
W74-07340 4A

STREAM GAGES
An Innovative Automatic Stream Gaging Method,
W74-07181 7B

STREAM NETWORK
A Computer Atlas of Hydrologic and Geomorphologic Data for Small Watersheds in Indiana,
W74-07432 2A

A Rainfall-Runoff Model Based on the Watershed Stream Network,
W74-07464 2A

STREAM POLLUTION
Water Quality Management Element for the Kentucky River Area Development District Comprehensive Water and Sewer Program.
W74-07077 5D

STREAMFLOW FORECASTING
The Forecasting of Streamflow Using the Method of Characteristic Modes,
W74-07178 4A

A Synthetic Model for Daily Streamflow,
W74-07179 2E

STREAMS
Suspended-Sediment Yield in Rivers of Gor'kiy Oblast as an Indication of Recent Erosion Processes (Stok vzveshennykh nanosov v rekakh Gor'kovskoy obl. kak pokazatel' razvitiya sovremennykh erozionnykh protsessov),
W74-07507 2J

STRIP MINE LAKES
A Preliminary Description of the Physico-Chemical Characteristics and Biota of Three Strip Mine Lakes, Spencer County, Indiana,
W74-07403 5B

STRIP MINES
Ecology and Productivity of Strip-Mine Areas in Mercer County, Pennsylvania,
W74-07055 5B

Coal-Energy Development in the Northern Great Plains.
W74-07056 6D

STRONTIUM
Strontium and Other Notable Chemical Constituents of Well-Water of Allen County, Indiana,
W74-07400 2K

STRONTIUM RADIOSOTOPES
Strontium Isotope Composition and Sediment Transport in the Rio de la Plata Estuary,
W74-07240 2L

STRUCTURE OF DETRITUS
Nutritive Importance and Structure of Detritus,
W74-07471 5C

SUB-OPTIMUM WEATHER
Aerial Spill Prevention Surveillance During Sub-Optimim Weather,
W74-07342 5A

SUBSTRATE UTILIZATION
Effects of Thickness on Bacterial Film,
W74-07545 5C

SUBSURFACE DRAINAGE
Development of an Agricultural Drainage Guide,
W74-07438 4A

Shallow Drain Performance in a Heavy Soil,
W74-07442 4A

SUBSURFACE FLOW
Underflow in River Valleys of the Carpatho-Ukraine (Podruslovyy stok v rechnykh dolinakh Zakarpat'ya),
W74-07504 2F

SUBSURFACE RUNOFF
Mathematical Simulation of Subsurface Flow Contributions to Snowmelt Runoff, Reynolds Creek Watershed, Idaho,
W74-07516 2F

SUBSURFACE WATERS
Sandstone Aquifers in Eastern Sullivan County, Indiana,
W74-07401 4B

SUGAR BEET PROCESSING WASTES
The Plankton of Ponds Enriched with Wastes from Beet Sugar Factories,
W74-07478 5C

SULFATES
Source and Budget of Sulfate in Precipitation from Central Alberta, Canada,
W74-07164 5B

Strontium and Other Notable Chemical Constituents of Well-Water of Allen County, Indiana,
W74-07400 2K

Leaching Losses of Sulfur During Winter Months When Applied as Gypsum, Elemental S or Prilled S,
W74-07449 5B

SULFITE LIQUORS
On Some Special Problems of Sulfite Pulp Waste Water Purification (Zu einigen speziellen Problemen der Sulfitzellstoff-Abwasserreinigung),
W74-07386 5D

SULFUR
Leaching Losses of Sulfur During Winter Months When Applied as Gypsum, Elemental S or Prilled S,
W74-07449 5B

Solvent Extraction of Sulfur From Marine Sediment and Its Determination by Gas Chromatography.
W74-07565 5A

SULFUR BACTERIA
Microbiological Purification of Hydrogen Sulfide-Containing Kraft Mill Effluents (Mikrobiologicheskaya ochistka serovodorodnykh stochnykh vod sul'fatno-tsellyuloznogo proizvodstva),
W74-07387 5D

SULFUR COMPOUNDS
Study of the Adaptation of an Activated Sludge to the Purification of an Industrial Effluent (Etude de l'adaptation d'une boue activee a l'epuration d'un effluent industriel),
W74-07389 5D

SUPERTANKER TERMINALS
Possible Effects of Construction and Operation of a Supertanker Terminal on the Marine Environment in New York Bight,
W74-07488 5C

SURCHARGES (INDUSTRIAL WASTES)
Economic Study of the Effect of Municipal Sewer Surcharges on Industrial Wastes and Water Usage,
W74-07057 5G

SURFACE DRAINAGE PROGRAM
Study Design. Surface Drainage Program, Madison, St. Clair, Monroe and Randolph Counties, Illinois.
W74-07083 4A

SURFACE-GROUNDWATER RELATIONSHIPS
Hydrology of the Dunes Area North of Coos Bay, Oregon,
W74-07325 2L

Underflow in River Valleys of the Carpatho-Ukraine (Podruslovyy stok v rechnykh dolinakh Zakarpat'ya),
W74-07504 2F

SURFACE IRRIGATION
Trickle Irrigation in Australia,
W74-07450 3F

SURFACE RUNOFF
Study Design. Surface Drainage Program, Madison, St. Clair, Monroe and Randolph Counties, Illinois.
W74-07083 4A

SURFACE WATERS
Water Resources of the Taunton River Basin Southeastern Massachusetts,
W74-07190 7C

The Influence of Wind on the Surface Waters of Alberni Inlet,
W74-07497 2L

SURGES
Inflatable Dams and Dam Units,
W74-07210 8A

SURVEYS
Land Use In California.
W74-07131 6B

A Systems Analysis of Water Quality Survey Design,
W74-07310 5B

Irrigation Survey.
W74-07451 3F

SUSPENDED LOAD
A Note on the Areal Distribution of Suspended Sediment Yield in South Africa,
W74-07177 2J

Spatial and Temporal Distribution of Suspended Sediment in Narragansett Bay and Rhode Island Sound,
W74-07232 2L

Suspended Sediment Transport in Delaware Bay,
W74-07233 2L

Determination of Chlorinated Insecticides in Suspended Sediment and Bottom Material,
W74-07317 5A

SUSPENDED SOLIDS
Apn aratus for Separating Oil and SolidsfFrm m Water,
W74-07202 5D

Water Purification Apparatus,
W74-07209 5D

Suspended-Sediment Yield in Rivers of Gor'kiy Oblast as an Indication of Recent Erosion Processes (Stok vzveshennykh nanosov v rekakh Gor'kovskoy obl. kak pokazatel' razvitiya sovremennykh erozionnykh protsessov),
W74-07507 2J

SUSQUEHANNA RIVER
Distribution and Transportation of Suspended Sediment in Upper Cheasapeake Bay,
W74-07234 2L

SWEDEN
Environmental Protection Techniques to be Applied in a Bleached Kraft Pulp Mill in Sweden,
W74-07392 5D

SWELL FREQUENCY
Apparatus for Recording Swell Frequency and Propagation Direction of Waves,
W74-07224 8B

SWELL PROPAGATION
Apparatus for Recording Swell Frequency and Propagation Direction of Waves,
W74-07224 8B

SWIRL CONCENTRATOR
The Swirl Concentrator as a Combined Sewer Overflow Regulator,
W74-07264 5D

SWITZERLAND (FEEGLETSCHER)
A Scanning Electron Microscope Study of Surface Textures of Quartz Grains from Glacial Environments,
W74-07331 2J

SYNECHOCOCCUS LIVIDUS
Hydrogen Sulfide Production by Synechococcus lividus Y52-si,
W74-07546 5C

SYNTHETIC HYDROLOGY
A Synthetic Model for Daily Streamflow,
W74-07179 2E

Generation Models for Synthetic Annual and Monthly Flows for Some Indiana Watersheds,
W74-07431 2A

Streamflow Simulation: 3. The Broken Line Process and Operational Hydrology,
W74-07520 2A

SYSTEMATICS
Field and Experimental Studies on the Systematics and Ecology of Ulva curvata and Ulva rotundata,
W74-07473 5C

Taxonomic Position of Two Lumbrineris Spp.,
W74-07568 2L

Moina Sp. (Cladocera: Moinidae) in a Sewage Plant, Wellington, Referred to Moina tenuicornis Sars, 1896 (Note),
W74-07569 5A

Preliminary Diagnosis of a New Species of Marine Isopod From Stewart Island,
W74-07570 2I

Numerical Analysis of Hansenula, Pichia and Related Yeast Genera,
W74-07583 5A

SYSTEMS ANALYSIS
A Systems Analysis of Water Quality Survey Design,
W74-07310 5B

Parameter Identification in Field Problems,
W74-07428 7C

TAIWAN STRAIT
Sand-Wave Fields in Taiwan Strait,
W74-07175 2J

TAUNTON RIVER BASIN (MASS)
Water Resources of the Taunton River Basin Southeastern Massachusetts,
W74-07190 7C

TAXONOMIC STUDIES
Taxonomic Composition of Aquatic Invertebrates of the Don Basin in Comparison with Fauna of the Other Rivers of the Black Sea Caspian Basin, (In Russian),
W74-07537 2I

TEA
The Micro-Meteorology of an Extended Area of Tea Before and After Rain,
W74-07354 3F

TECHNOLOGY TRANSFER
Technology Transfer in the Marine Environment of Long Island,
W74-07059 6B

TEMPERATURE
Some Aspects of the Temperature, Oxygen and Nutrient Distributions in Monterey Bay, California. Annual Report, Part 1, 1973,
W74-07469 5C

Problem of Calculating Depth of the Quasiuniform Layer of the Ocean (K voprosu o raschete tolshchiny kvaziodnorodnogo sloya okeana),
W74-07506 2A

TENNESSEE
Sanitary Services in Tennessee, 1972.
W74-07060 5D

Stream Pollution.
W74-07275 6E

TENNESSEE RIVER
Mussel Fishery Investigations, Tennessee, Ohio, and Green Rivers,
W74-07187 8I

TERRACES (GEOLOGIC)
Erosional and Depositional Estuarine 'Terraces,' Southeastern United States,
W74-07246 2L

Santee Submergence, Example of Cyclic Submerged and Emerged Sequences,
W74-07247 2L

TERRAIN ANALYSIS
Line Intersection Method for Estimating Drainage Density,
W74-07174 2J

TERTIARY TREATMENT
Systems simulation of the effect of tertiary treatment for carbon, nitrogen, and phosphorus removal upon primary productivity, standing crop, and community structure of autotrophic and hetertrophic communities in receiving model streams.
W74-07337 5C

TETRACYCLINE
Incidence of Resistance to Tetracycline, Chloramphenicol and Ampicillin Among Salmonella Species Isolated in the Netherlands in 1969, 1970 and 1971,
W74-07562 5C

TEXAS
Determinants of Use of Water-Based Recreational Facilities,
W74-07058 6B

The Relationship of Land Use to Water Use in San Antonio, Texas,
W74-07067 4A

Ansley V. Tarrant County Water Control and Improvement District No. One (Liability for Flooding and Amount of Damage).
W74-07117 6E

Water-Resources Investigations in Texas, Fiscal Year 1974.
W74-07321 2E

Annual Compilation and Analysis of Hydrologic Data for Urban Studies in the San Antonio, Texas Metropolitan Area, 1971,
W74-07323 2E

Instrumentation for Engineering Management of a Multi-Purpose River Basin System (Trinity River Basin, Texas) Real-Time Engineering Management of a Multi-Purpose River Basin System,
W74-07369 4A

Effect of Anhydrous Ammonia on a Central Texas Pond, and a Review of Previous Research with Ammonia in Fisheries Management,
W74-07595 5C

THEORETICAL ANALYSIS
Pollution, Production, and Compensation,
W74-07064 5G

THERMAL POLLUTION
Regional Water Quality Management by the Generalized Reduced Gradient Method,
W74-07311 5B

More Heat Than Light: Thermal Pollution Versus Heat Energy Utilization,
W74-07465 5B

Winter-Regime Thermal Response of Heated Streams,
W74-07511 5B

THERMAL POWER
More Heat Than Light: Thermal Pollution Versus Heat Energy Utilization,
W74-07465 5B

THERMAL PROPERTIES
Instability of Water Cooled from Above,
W74-07458 2H

THERMAL STRATIFICATION
Instability of Water Cooled from Above,
W74-07458 2H

THERMAL WATER
Effect of Irrigation with Thermal Water on Trace-Element Content in Some Soils of Georgia (Vliyaniye orosheniya termal'nymi vodami na soderzhaniye mikroelementov v nekotorykh pochvakh Gruzii),
W74-07508 3F

THERMOCLINE
The Estimation of Vertical Eddy Diffusivities Below the Thermocline in Lakes,
W74-07416 2H

THERMOLINE
Instability of Water Cooled from Above,
W74-07458 2H

THORIUM
Th-234/U-238 Activity Ratios in Pacific Ocean Bottom Waters,
W74-07322 2K

DAL EFFECTS
United States V. Pot-Nets, Inc. (Violation of Rivers and Harbors Act),
W74-07287 6E

Physical Modeling of Residence Times in Tidal Basins,
W74-07496 2L

IDAL FLATS
Remanent Magnetization of Modern Tidal Flat Sediments from San Francisco Bay, California,
W74-07173 2L

IDAL FLOODS
Flood Plain Information-Neuse and Trent Rivers and Jack Smith Creek, New Bern, North Carolina.
W74-07073 4A

IDAL WATERS
Size and Shape Sorting in a Dutch Tidal Inlet,
W74-07329 2L

IDES
Inflatable Dams and Dam Units,
W74-07210 8A

ILE DRAINAGE
Salt Displacement into Drain Tiles under Ponded Leaching,
W74-07518 2G

ILE (DRAINS)
Manganese and Iron Solubility Changes as a Factor in Tile Drain Clogging: I. Observations During Flooding and Drying,
W74-07151 2G

Manganese and Iron Solubility Changes as a Factor in Tile Drain Clogging: II. Observations During the Growth of Cotton,
W74-07152 2G

TIME SERIES ANALYSIS
Generation Models for Synthetic Annual and Monthly Flows for Some Indiana Watersheds,
W74-07431 2A

A Note on the Use of Spectral Analysis to Detect Leads and Lags in Annual Cycles of Water Quality,
W74-07522 7C

TIN
Kaempferol (3,5,7,4'-Tetrahydroxyflavone) as a Chromogenic Reagent for Tin(IV),
W74-07579 5A

TOMATOES
Volcanic Air Pollution: Deleterious Effects on Tomatoes,
W74-07430 5C

Effects of Subsurface Asphalt Layers on Corn and Tomato Root Systems,
W74-07447 3F

TORT LIABILITY
Pollution Sanctions--New Alternatives to Civil Liability,
W74-07123 5G

TOXICITY
Biochemistry of Selective Toxicity and Biodegradability: Comparative O-Dealkylation by Aquatic Organisms,
W74-07126 5C

TRACE ELEMENTS
Mechanism of Element Distribution in the Pacific Ocean (Japanese Profile) (K poznaniyu mekhanizma raspredeleniya elementov v Tikhom okeane (Yaponskiy profil')),
W74-07503 2J

Effect of Irrigation with Thermal Water on Trace-Element Content in Some Soils of Georgia (Vliyaniye orosheniya termal'nymi vodami na soderzhaniye mikroelementov v nekotorykh pochvakh Gruzii),
W74-07508 3F

Elemental Variability Within a Sampling Unit,
W74-07598 2K

TRACERS
Strontium Isotope Composition and Sediment Transport in the Rio de la Plata Estuary,
W74-07240 2L

TRACKING TECHNIQUES
Ultra-Violet Absorption Characteristics of Natural Waters,
W74-07419 2K

TRAINING
Pollution Control Through Training, Education, and Rigorous Follow-Up,
W74-07408 5G

Selection and Operation of Small Wastewater Treatment Facilities - Training Manual.
W74-07485 5D

TRANSVERSAL SECTIONS
Contributions to the Calculation of the Rood Territory Width and the Transversal Section Under the Retention Level at the Weirs and Dams of Fishery Purposes, (In Rumanian),
W74-07448 8I

TREATMENT FACILITIES
Sanitary Services in Tennessee, 1972.

W74-07080 6D

Institutional Arrangements and Alternative Futures.
W74-07081 6D

NEW ZEALAND FOREST SERVICE, HARIHARI.
Management of South Westland Terrace Podocarp Forest Under a Selection Logging System,
W74-07347 4A

NEW ZEALAND FOREST SERVICE, HOKITIKA.
Potential of Westland's Morainic Soils for Forest Management,
W74-07594 4A

NORGES LANDBRUKSHOEGSKOLE, VOLLEBEKK. CHEMICAL RESEARCH LAB.
A New Colorimetric Procedure for the Determination of Benomyl,
W74-07559 5A

NORGES VETERINARHOEGSKOLE, OSLO. INSTITUTT FOR NAERINGSMIDDELHYGIENE.
Pollution Caused by Agriculture,
W74-07366 5B

NORTH CAROLINA AGRICULTURAL EXPERIMENT STATION, RALEIGH.
Leaching Losses of Sulfur During Winter Months When Applied as Gypsum, Elemental S or Prilled S,
W74-07449 5B

NORTH CAROLINA STATE UNIV., RALEIGH.
Phosphorus Supply Characteristics of Acid Organic Soils as Measured by Desorption and Mineralization,
W74-07345 2G

NORTH CAROLINA STATE UNIV., RALEIGH. DEPT. OF ANIMAL SCIENCE.
Utilization of Fibrous Wastes as Sources of Nutrients,
W74-07472 5D

NORTH CAROLINA STATE UNIV., RALEIGH. DEPT. OF BIOLOGICAL AND AGRICULTURAL ENGINEERING.
Experimental Evaluation of a Method for Determining Unsaturated Hydraulic Conductivity,
W74-07088 2G

NORTH CAROLINA STATE UNIV., RALEIGH. DEPT. OF SOIL SCIENCE.
An Investigation of Propagation and the Mineral Nutrition of Spartina alterniflora,
W74-07486 5C

NORTH CAROLINA UNIV., CHAPEL HILL. DEPT. OF BOTANY.
Field and Experimental Studies on the Systematics and Ecology of Ulva curvata and Ulva rotundata,
W74-07473 5C

NORTH CAROLINA UNIV., MOREHEAD CITY. INST. OF MARINE SCIENCES.
Biological Investigations of Noxious Coelenterates and Ctenophores in Coastal North Carolina,
W74-07479 2L

NORTH DAKOTA UNIV., GRAND FORKS.
The Food Habits and Age and Growth of Goldeye, Hiodon alosoides (Rafinesque), in Beaver Creek, Lake Oahe, North Dakota, 1971-72,
W74-07474 8I

NORTHEAST MISSISSIPPI PLANNING AND DEVELOPMENT DISTRICT, BOONEVILLE.
Preliminary Water and Sewer Plan for Alcorn, Benton, Marshall, Prentiss, Tippah, Tishomingo Counties.
W74-07062 5D

NORTHERN TERRITORY ADMINISTRATION, DARWIN (AUSTRALIA). ANIMAL INDUSTRY AND AGRICULTURE BRANCH.
Liveweight Gains of Shorthorn Steers on Native and Improved Pastures at Adelaide River Northern Territory,
W74-07453 3F

NORTHWESTERN UNIV., EVANSTON, ILL. DEPT. OF GEOLOGY.
Amazon River Estuarine System,
W74-07229 2L

NOTRE DAME UNIV., IND. DEPT. OF BIOLOGY.
Nutrient Cycling and Productivity of Dystrophic Lake-Bog Systems (Part B),
W74-07466 5C

NOTTINGHAM UNIV. (ENGLAND).
A Note on the Areal Distribution of Suspended Sediment Yield in South Africa,
W74-07177 2J

O'BRIEN AND GERE ENGINEERS INC., SYRACUSE, N. Y.
Effect of Restricted Use of Phosphate-Based Detergents on Onondaga Lake,
W74-07566 5C

OAK RIDGE NATIONAL LAB., TENN.
Pollution, Production, and Compensation,
W74-07064 5G

OAKLAND UNIV., ROCHESTER, MICH. DEPT. OF BIOLOGICAL SCIENCES.
In Vitro Formation of Nitrate Reductase Using Extracts of the Nitrate Reductase Mutant of Neurospora crassa, Nit-1, and Rhodospirillum rubrum,
W74-07577 5B

OCEANOGRAPHIC INST. (NEW ZEALAND). DEPARTMENT OF SCIENTIFIC AND INDUSTRIAL RESEARCH, WELLINGTON.
Preliminary Diagnosis of a New Species of Marine Isopod From Stewart Island,
W74-07570 2I

OFFICE DE LA RECHERCHE SCIENTIFIQUE ET TECHNIQUE OUTRE-MER, FORT-LAMY (CHAD).
A Study of the Communities of Invertebrates of Plants of Lake Chad: Preliminary Inquires, (In French),
W74-07538 2H

OFFICE OF WATER RESOURCES RESEARCH, WASHINGTON, D.C. WATER RESOURCES SCIENTIFIC INFORMATION CENTER.
Ozone in Water and Waste Water Treatment, a Bibliography.
W74-07251 5D

OHIO AGRICULTURAL RESEARCH AND DEVELOPMENT CENTER, WOOSTER.
Elemental Variability Within a Sampling Unit,
W74-07598 2K

OHIO STATE UNIV., COLUMBUS. DEPT. OF CHEMICAL ENGINEERING.
The Identification of the Reaction Products Formed by the Oxidation of Aqueous Ammonia with Potassium Ferrate VI,
W74-07333 5D

An Explanatory Work on the Oxidation of Ammonia by Potassium Ferrate (VI),
W74-07454 5D

OKLAHOMA STATE UNIV., STILLWATER. DEPT. OF AGRICULTURAL ENGINEERING.
Economic Size Selection for PVC Pipelines,
W74-07303 8A

OKLAHOMA STATE UNIV., STILLWATER. DEPT. OF GEOLOGY.
Depositional Features of Braided-Meandering Stream,
W74-07163 2J

OKLAHOMA UNIV., NORMAN. SCHOOL OF ENGINEERING AND ENVIRONMENTAL SCIENCE.
An Innovative Automatic Stream Gaging Method,
W74-07181 7B

ONTARIO MINISTRY OF AGRICULTURE AND FOOD, GUELPH. PESTICIDES RESIDUE LAB.
Residues of Atrazine, Cyanazine, and Their Phytotoxic Metabolites in a Clay Loam Soil,
W74-07585 5A

OREGON AGRICULTURAL EXPERIMENT STATION, CORVALLIS.
Micro-Determination of Cation-Exchange Capacity by Neutron Activation Analysis,
W74-07439 2G

OREGON COASTAL CONSERVATION AND DEVELOPMENT COMMISSION, PORT SIUSLAW.
Pacific Northwest Coastal Zone Management as it Relates to Estuary Protection,
W74-07500 6E

OREGON STATE GAME COMMISSION, CORVALLIS.
Some Estuarine Factors Influencing Ascent of Anadromous Cutthroat Trout in Oregon,
W74-07493 2L

OREGON STATE UNIV., CORVALLIS. DEPT. OF AGRICULTURAL ECONOMICS.
An Economic Evaluation of Alternative Levels of Water Quality: The Role of Water Quality in Relation to Economic Benefits,
W74-07146 6B

Institutional Considerations,
W74-07147 6E

Resource Management Decisions: Externalities and Public Policy,
W74-07148 6A

OREGON STATE UNIV., CORVALLIS. DEPT. OF CIVIL ENGINEERING.
New Concepts in Environmental Planning,
W74-07492 6B

OREGON STATE UNIV., CORVALLIS. DEPT. OF ECONOMICS.
Multi-Disciplinary Study of Water Quality Relationships: A Case Study of Yaquina Bay, Oregon,
W74-07142 6B

The Demand for Sport Fishing at Yaquina Bay,
W74-07143 6B

The Impact of Sport Angling on the Yaquina Bay Economy,
W74-07144 6B

OREGON STATE UNIV., CORVALLIS. DEPT. OF OCEANOGRAPHY.
An Ecosystem Study in the Inside Passage of Southeastern Alaska,
W74-07495 5C

OREGON STATE UNIV., CORVALLIS. DEPT. OF SOIL SCIENCE.
Subsurface Heating and Irrigation of Soils: Its Effect on Temperature and Water Content and on Plant Growth,
W74-07054 2G

OREGON STATE UNIV., CORVALLIS. SEA GRANT MARINE ADVISORY PROGRAM.
The Predicted Influence of Kraft Mill Effluent on the Fishery Resources,
W74-07145 5C

OREGON STATE UNIV., CORVALLIS WATER RESOURCES INST.

OREGON STATE UNIV., CORVALLIS. WATER RESOURCES RESEARCH INST. AND MASSACHUSETTS UNIV., AMHERST. WATER RESOURCES RESEARCH CENTER.
Utility Analysis in the Valuation of Extra-Market Benefits with Particular Reference to Water-Based Recreation,
W74-07150 6B

OREGON UNIV., EUGENE. DEPT. OF GEOLOGY.
Sand-Wave Fields in Taiwan Strait,
W74-07175 2J

OSLO UNIV. (NORWAY). DEPT. OF LIMNOLOGY.
Byglandsfjorden. Primary Production and Other Limnological Features in an Oligotrophic Norwegian Lake,
W74-07554 5C

OSLO UNIV. (NORWAY). INST. OF GEOPHYSICS.
Numerical Studies of Two-Dimensional Saturated-Unsaturated Drainage Models,
W74-07168 2G

OSLO UNIV. (NORWAY). INST. OF PHYSICS.
Summary of the State of the Art in Radiochromatography,
W74-07571 5A

PAKISTAN COUNCIL OF SCIENTIFIC AND INDUSTRIAL RESEARCH LAHORE.
Microdetermination of Resorcinol in Presence of Phenol,

ABSTRACT SOURCES

Source	Accession Number	Total
A. Centers of Competence		
Battelle Memorial Institute, Methods for Chemical and Biological Identification of Pollutants	W74-07544 – 07587	44
Colorado State University, Irrigation Return Flow Quality	W74-07433 07436 -- 07447 07449 -- 07452	17
Cornell University, Policy Models for Water Resources Systems	W74-07296 – 07300 07302 – 07312	16
Franklin Institute, Municipal Wastewater Treatment Technology	W74-07255 -- 07274	20
Institute of Paper Chemistry, Water Pollution from Pulp and Paper Industry	W74-07375 – 07411	37
University of Arizona, Arid Land Water Resources	W74-07089 – 07100 07102 – 07111	22
University of Florida, Eastern U.S. Water Law	W74-07112 -- 07120 07275 – 07278 07280 – 07284 07286 – 07295 07465	29
University of North Carolina, Metropolitan Water Resources Planning and Management	W74-07057 -- 07083 07085	28
University of Wisconsin, Eutrophication	W74-07466 – 07475 07477 -- 07481 07483 – 07491 07493 -- 07499	31
University of Wisconsin, Water Resources Economics	W74-07122 – 07125 07127 – 07150 07492, 07500	30

SELECTED WATER RESOURCES ABSTRACTS

VOLUME 7, NUMBER 15
AUGUST 1, 1974

W74-07601 -- W74-08150

SELECTED WATER RESOURCES ABSTRACTS is published semimonthly for the Water Resources Scientific Information Center (WRSIC) by the National Technical Information Service (NTIS), U.S. Department of Commerce. NTIS was established September 2, 1970, as a new primary operating unit under the Assistant Secretary of Commerce for Science and Technology to improve public access to the many products and services of the Department. Information services for Federal scientific and technical report literature previously provided by the Clearinghouse for Federal Scientific and Technical Information are now provided by NTIS.

SELECTED WATER RESOURCES ABSTRACTS is available to Federal agencies, contractors, or grantees in water resources upon request to: Manager, Water Resources Scientific Information Center, Office of Water Resources Research, U.S. Department of the Interior, Washington, D. C. 20240.

SELECTED WATER RESOURCES ABSTRACTS is also available on subscription from the National Technical Information Service. Annual subscription is $45 (domestic), $56.25 (foreign). Certain documents abstracted in this journal can be purchased from the NTIS at prices indicated in the entry. Prepayment is required.

SELECTED
WATER RESOURCES ABSTRACTS

A Semimonthly Publication of the Water Resources Scientific Information Center,
Office of Water Resources Research, U.S. Department of the Interior

VOLUME 7, NUMBER 15
AUGUST 1, 1974

W74-07601 -- W74-08150

The Secretary of the U. S. Department of the Interior has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through August 31, 1978.

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interests of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in Island Territories under U.S. administration.

FOREWORD

Selected Water Resources Abstracts, a semimonthly journal, includes abstracts of current and earlier pertinent monographs, journal articles, reports, and other publication formats. The contents of these documents cover the water-related aspects of the life, physical, and social sciences as well as related engineering and legal aspects of the characteristics, conservation, control, use, or management of water. Each abstract includes a full bibliographical citation and a set of descriptors or identifiers which are listed in the **Water Resources Thesaurus.** Each abstract entry is classified into ten fields and sixty groups similar to the water resources research categories established by the Committee on Water Resources Research of the Federal Council for Science and Technology.

WRSIC IS NOT PRESENTLY IN A POSITION TO PROVIDE COPIES OF DOCUMENTS ABSTRACTED IN THIS JOURNAL. Sufficient bibliographic information is given to enable readers to order the desired documents from local libraries or other sources.

Selected Water Resources Abstracts is designed to serve the scientific and technical information needs of scientists, engineers, and managers as one of several planned services of the Water Resources Scientific Information Center (WRSIC). The Center was established by the Secretary of the Interior and has been designated by the Federal Council for Science and Technology to serve the water resources community by improving the communication of water-related research results. The Center is pursuing this objective by coordinating and supplementing the existing scientific and technical information activities associated with active research and investigation program in water resources.

To provide WRSIC with input, selected organizations with active water resources research programs are supported as "centers of competence" responsible for selecting, abstracting, and indexing from the current and earlier pertinent literature in specified subject areas.

Additional "centers of competence" have been established in cooperation with the Environmental Protection Agency. A directory of the Centers appears on inside back cover.

Supplementary documentation is being secured from established discipline-oriented abstracting and indexing services. Currently an arrangement is in effect whereby the BioScience Information Service of Biological Abstracts supplies WRSIC with relevant references from the several subject areas of interest to our users. In addition to Biological Abstracts, references are acquired from Bioresearch Index which are without abstracts and therefore also appear abstractless in SWRA. Similar arrangements with other producers of abstracts are contemplated as planned augmentation of the information base.

The input from these Centers, and from the 51 Water Resources Research Institutes administered under the Water Resources Research Act of 1964, as well as input from the grantees and contractors of the Office of Water Resources Research and other Federal water resources agencies with which the

Center has agreements becomes the information base from which this journal is, and other information services will be, derived; these services include bibliographies, specialized indexes, literature searches, and state-of-the-art reviews.

Comments and suggestions concerning the contents and arrangements of this bulletin are welcome.

FOREWORD_____iii

SUBJECT FIELDS AND GROUPS

(Use Edge Index on back cover to Locate Subject Fields and Indexes in the journal.)

01 NATURE OF WATER
Includes the following Groups: Properties; Aqueous Solutions and Suspensions

02 WATER CYCLE
Includes the following Groups: General; Precipitation; Snow, Ice, and Frost; Evaporation and Transpiration; Streamflow and Runoff; Groundwater; Water in Soils; Lakes; Water in Plants; Erosion and Sedimentation; Chemical Processes; Estuaries.

03 WATER SUPPLY AUGMENTATION AND CONSERVATION
Includes the following Groups: Saline Water Conversion; Water Yield Improvement; Use of Water of Impaired Quality; Conservation in Domestic and Municipal Use; Conservation in Industry; Conservation in Agriculture.

04 WATER QUANTITY MANAGEMENT AND CONTROL
Includes the following Groups: Control of Water on the Surface; Groundwater Management; Effects on Water of Man's Non-Water Activities; Watershed Protection.

05 WATER QUALITY MANAGEMENT AND PROTECTION
Includes the following Groups: Identification of Pollutants; Sources of Pollution; Effects of Pollution; Waste Treatment Processes; Ultimate Disposal of Wastes; Water Treatment and Quality Alteration; Water Quality Control.

06 WATER RESOURCES PLANNING
Includes the following Groups: Techniques of Planning; Evaluation Process; Cost Allocation, Cost Sharing, Pricing/Repayment; Water Demand; Water Law and Institutions; Nonstructural Alternatives; Ecologic Impact of Water Development.

07 RESOURCES DATA
Includes the following Groups: Network Design; Data Acquisition; Evaluation, Processing and Publication.

08 ENGINEERING WORKS
Includes the following Groups: Structures; Hydraulics; Hydraulic Machinery; Soil Mechanics; Rock Mechanics and Geology; Concrete; Materials; Rapid Excavation; Fisheries Engineering.

09 MANPOWER, GRANTS, AND FACILITIES
Includes the following Groups: Education—Extramural; Education—In-House; Research Facilities; Grants, Contracts, and Research Act Allotments.

10 SCIENTIFIC AND TECHNICAL INFORMATION
Includes the following Groups: Acquisition and Processing; Reference and Retrieval; Secondary Publication and Distribution; Specialized Information Center Services; Translations; Preparation of Reviews.

THE METHODOLOGY OF BAYESIAN INFERENCE AND DECISION MAKING APPLIED TO EXTREME HYDROLOGIC EVENTS,
Massachusetts Inst. of Tech., Cambridge. Dept. of Civil Engineering.
E. F. Wood, I. Rodriguez-Iturbe, and J. C. Schaake.
Available from the National Technical Information Service as PB-232 009, $6.75 in paper copy, $1.45 in microfiche. Ralph M. Parsons Laboratory for Water Resources and Hydrodynamics, Technical Report No 178, January 1974. 297 p, 56 fig, 42 tab, 50 ref. OWRR/C-4118(No 9021)(2).

Descriptors: Floods, Rainfall-runoff relationships, Model studies, *Risks, *Decision making, Rhode Island, *Flood discharge, *Flood frequency, *Flood protection, Flood damage, Statistical methods, Statistical models.
Identifiers: *Bayesian analysis.

This study presents the methodology of Bayesian inference and decision making applied to extreme hydrologic events. Inference procedures must consider both the natural or 'modelled' uncertainty of the hydrologic process and the statistical uncertainty due to a lack of information. Two types of statistical uncertainty were considered. The first type is the uncertainty in modelling the hydrologic process, and the second type is the uncertainty in the values of the model parameters. The uncertainty is reduced by considering prior sources of information (regional regression, theoretical flood frequency analysis or subjective assessment) and historical flood data. A 'Bayesian distribution' of flood discharges is developed that fully accounts for parameter uncertainty. In an analogous manner, model uncertainty is analyzed, which leads to a 'composite Bayesian distribution'. The uncertainty in flood frequency curves from rainfall-runoff models is also analyzed, due to the uncertainty in the parameters of the models. The Bayesian inference model is then applied to a Bayesian decision model, where the decision rule is the maximization of expected net monetary benefits. A case study of determining the optimal size of local flood protection for Woonsocket, Rhode Island, was considered, using realistic flood damage and cost functions. The results indicate that Bayesian inference procedures can be used to fully account for statistical uncertainty and that Bayesian decision procedures provide a rational approach for making decisions under uncertainty.

A STREAMFLOW MODEL FOR METROPOLITAN PLANNING AND DESIGN,
Metropolitan Sanitary District of Greater Chicago, Ill.
R. F. Lanyon, and J. P. Jackson.
Available from National Technical Information Service as PB-232 181, $3.75 in paper copy, $1.45 in microfiche. American Society of Civil Engineers, New York, N.Y., Urban Water Resources Research Program Technical Memorandum No 20, January, 1974, 49 p, 4 tab, 18 fig, 4 ref. OWRR C-4048(9009)(3). 14-31-0001-9009.

Descriptors: *Computer models, *Urbanization, *Streamflow, *Drainage systems, *Project planning, *Design, *Storm runoff, Surface runoff, Rainfall-runoff relationships, Flood routing, Flood protection, Remote control, Cities, Mathematical models, *Illinois.
Identifiers: *Metropolitan studies, *Storm sewers, *Combined sewers, Urban areas, *Chicago(Ill).

The mathematical model described is quite unusual. While sufficiently simple and flexible to serve as a planning tool, it is adequately detailed for use in at least preliminary design. Developed by The Metropolitan Sanitary District of Greater Chicago, the computer program has been employed by the MSD in the analysis of streamflows and sewer systems and for sizing several reservoirs. That it was developed by an operating agency and not a research organization is particularly significant. A disadvantage of the present version of the model is that it does not include provision for generating water quality characteristics. Using the model, adequate approximations of observed hydrographs for several catchments in the Chicago region were obtained without modification of the programming or the constants involved. The model appears to have a good potential for satisfactory application to watersheds in other parts of the country with possible alteration of the constants being the only change necessary. The computer program in the form of a FORTRAN IV card deck is available. (McPherson-ASCE)

HYDROLOGICAL ASPECT OF SURFACE RUNOFF,
Jadavpur Univ., Calcutta (India).
B. Bose, and M. Bandyopadhyay.
Science and Culture, Vol 39, No 6, p 248-252, June, 1973. 1 fig, 1 tab, 5 ref.

Descriptors: *Hydrologic aspects, *Surface runoff, *Model studies, *Rational formula, Rainfall intensity, Frequency analysis, Estimating equations, *Runoff forecasting.
Identifiers: *India(Calcutta).

The problems associated with the hydrologic aspect of surface runoff with particular reference to the city of Calcutta, India are discussed briefly. A model based on rainfall-intensity-frequency was obtained from the available data. This model then was used to estimate the runoff by the rational method. (Sanduski-Franklin)

DOCUMENTATION OF PROSPER - A MODEL OF ATMOSPHERE-SOIL-PLANT WATER FLOW,
Oak Ridge National Lab., Tenn.
R. A. Goldstein, J. B. Mankin, and R. J. Luxmoore.
Available from NTIS, Springfield, Va., as Rept. No. EDFB-IBP-73-9; $5.45 per copy, $1.45 microfiche. Report No. EDFB-IBP-73-9, February 1974. 76 p, 1 fig, 23 ref.

Descriptors: *Model studies, *Hydrologic models, *Hydrologic data, *Hydrologic cycle, Atmosphere, Soils, Soil-water-plant relationships, Water balance, Phenology, Ecology, Ecosystems, Evapotranspiration, Vegetation, Flow, Precipitation, Deciduous forests, Computer programs.

A phenomenological model, PROSPER, has been developed that simulates atmosphere-plant-soil moisture relations on a day-to-day basis. The model is explained in detail, and a computer program of the model is listed. Computer output resulting from an application of PROSPER to a forested watershed is also presented. This report has been produced with the sole objective of documentation and no attempt is made to interpret the results of the application which is included. (Houser-ORNL)

APPLICATION OF REMOTE SENSING TO HYDROLOGY--FINAL TECHNICAL REPORT,
IBM Electronics Systems Center, Huntsville, Ala.
R. Ambaruch, and J. W. Simmons.
September 1973. 104 p, 32 fig, 17 tab, 18 ref, 3 append. NASA Contract NAS8-14000/SA 2171.

Descriptors: *Remote sensing, *Mathematical models, *Rainfall-runoff relationships, Tennessee, Data collections, Hydrologic data, Aerial photography, *Model studies, Small watersheds, Computer programs, *Simulation analysis, *Watersheds(Basins).
Identifiers: *Tennessee River Valley.

Data produced by remote observation from space and aircraft were tested for use in reducing the time and expense normally involved in predicting the hydrological behavior of an ungaged watershed. Such a capability can enhance effective planning for urban and industrial development, flood control, hydroelectric power, navigation, and water resources management. The continuous simulation model chosen for the study is the Kentucky Watershed Model (KWM). This model is based upon the Stanford Watershed Model IV, adapted and refined for application to this project. The area from which test watersheds are chosen for the study is the Tennessee River Valley, a major watershed of approximately 104,000 sq kms in the southeastern United States. This is a well-instrumented, throughly photographed and mapped area for which copious historical data records are available. The remote sensing imagery used to determine watershed physical characteristics was actually aerial photographs, mostly at a scale of 1:24,000. The five validation runs produced simulated streamflows which correlated remarkably well with observed streamflow. Daily correlation coefficients ranged from 0.83 to 0.87; monthly, from 0.92 to 0.97. Many major storms were reasonably well matched with respect to peak flows and timing of peaks. For a multiyear open-loop simulation, this is adequate for most applications, and it strongly indicates the feasibility of using remotely sensed data to forecast the hydrologic performance of an ungaged watershed. 2B. Precipitation

PRECIPITATION CHARACTERISTICS OF THE NORTHERN NEW JERSEY, NEW YORK CITY METROPOLITAN AREA,
Rutgers-The State Univ., New Brunswick, N.J.
A. R. Greenway.
Available from the National Technical Information Service as PB-231 981, $7.00 in paper copy, $1.45 in microfiche. M Sc Thesis, May 1972. 71 p, 26 fig, 9 tab, 27 ref. OWRR B-044-NJ(2). 14-31-0001-3615.

Descriptors: *Precipitation, *Meteorological data, *Rainfall disposition, *Weather patterns, *Temporal distribution, Rain, Local precipitation, Meteorology, Climatology.

The precipitation process in the New York metropolitan area has been studied from physical and synaptic points of view. Influences of topography and urban growth have been considered. Relevant synaptic conditions include extra tropical cyclones and air mass thunderstorms. With these controlling factors in mind, monthly and annual precipitation characteristics were analyzed for trends and variability. The area of maximum decade mean precipitation has been shown to be moving eastward, possibly under the influence of increasing population and industrialization. However, no large urban-induced maximum appears to be present.

ADHESION OF ICE FROZEN FROM DILUTE ELECTROLYTE SOLUTIONS,
Cold Regions Research and Engineering Lab., Hanover, N.H.
H. H. G. Jellinek.
Research Report 317, March 1974. 8 p, 3 fig, 2 tab, 10 ref.

Descriptors: *Ice, *Cryology, *Adhesion, Freezing, *Electrolytes, Crystallography, Deicers, Snow removal.

The adhesion of ice frozen from a number of electrolyte solutions to a wax-treated aluminum surface was tested at -10 deg C. The adhesive strength measured by the stress needed to shear the ice off the substrate surface is mainly due to a liquid interfacial solution layer between the ice and the substrate surface. The thickness of such a layer is largely determined by the same considerations as the thickness of grain boundary layers in ice obtained from dilute electrolyte solutions. (Knapp-USGS)

ISUA, GREENLAND: GLACIOLOGICAL INVESTIGATIONS DURING 1973,
Cold Regions Research and Engineering Lab., Hanover, N.H.
S. C. Colbeck, and A. J. Gow.
Research Report 318, March 1974. 13 p, 8 fig, 1 tab, 9 ref.

Descriptors: *Glaciohydrology, *Glaciology, Glaciers, Melt water, Boreholes, Ice, Core drilling, Mining.
Identifiers: *Greenland(Isua).

Two holes were drilled through the Greenland ice sheet during 1973, and temperature measurements were made in one hole drilled during 1972. These measurements show that the area of liquid water beneath the ice cap extends to ice depths as shallow as 100 m. The consequences of removing the frozen margin of glacial ice could be serious. Petrographic studies of a few ice cores revealed a strongly oriented crystal fabric and an appreciable surface accumulation of superimposed ice. (Knapp-USGS)

HISTORIC FLOOD INFORMATION FOR NORTHERN CALIFORNIA STREAMS FROM GEOLOGICAL AND BOTANICAL EVIDENCE,
Geological Survey, Washington, D.C.
E. J. Helley, and V. C. LaMarche, Jr.
For sale by Sup Doc, GPO, Washington, D.C. 20402, Price $1.45 Professional Paper 485-E, 1973. 16 p, 7 fig, 1 tab, 27 ref

Descriptors: *Historic floods, *California, *Sedimentation, *Sedimentary structures, Stratigraphy, Dating, Radioactive dating, Dendrochronology, Floods, Flood frequency

Severe flooding in the mountainous region of northern California has produced texturally and morphologically distinct gravel deposits. Study of the erosion and deposition produced by the devastating floods of December 1964 allowed comparison and identification of ancient flood deposits. Long-lived coniferous trees, both living and those killed by the 1964 floods, were used to assign minimum ages to these deposits. Maximum ages were determined on the basis of radiocarbon dating of material entrained in the same deposits. Comparison with historic records at the four detailed study sites suggests that severe floods of magnitude similar to that of December 1964 have occurred several times in the last few hundred years. ESTIMATING THE MAGNITUDE OF PEAK DISCHARGES FOR SELECTED FLOOD FREQUENCIES ON SMALL STREAMS IN EAST TEXAS,
Geological Survey, Austin, Tex.
E. E. Schroeder.
Open-file report, Febraury 1974. 16 p, 4 fig, 2 tab, 6 ref.

Descriptors: *Floods, *Texas, *Stage-discharge relations, *Peak discharge, Flood frequency, Flood recurrence interval, Regression analysis.

Peak-discharge data from 28 stream-gaging stations with long-term records (10-33 years) and 60 stations with short-term records (less than 10 years) were used in multiple linear-regression procedures to obtain equations for estimating the peak discharge of floods with recurrence intervals of 10, 25, and 50 years on small rural streams in East Texas. The significant independent variables were drainage area, channel slope, and channel length. The relationships are presented in nomographs that can be used for estimating the peak discharges on small streams for floods of the selected recurrence intervals, provided that the magnitude of the independent variables is within the range of those used to develop the relationships. (Knapp-USGS)
W74-07664

ANNUAL PEAK DISCHARGES FROM SMALL DRAINAGE AREAS IN MONTANA, THROUGH SEPTEMBER 1972,
Geological Survey, Helena, Mont.
M. V. Johnson, and R. J. Omang.
Open-file report, 1973. 141 p, 1 fig.

Descriptors: *Peak discharge, *Small watersheds, *Montana, Water levels, Stage-discharge relations, Data collections, Hydrologic data, Floods, Flood forecasting, Gaging stations.

Annual peak stage and discharge at each crest-stage gaging station in Montana are tabulated. At each gaging station one or more standard Geological Survey crest-stage gages record the maximum stage reached by the water surface. Throughout the 1972 water year, 182 gages were in operation. The gaging stations provide information on drainage areas that range in size from less than 1 square mile to several hundred square miles and that represent various hydrologic conditions. The network presently has 24 stations having drainage areas less than 1 sq mi, 92 stations having from 1 to 10 sq mi, 50 stations having from 10 to 50 sq mi, and 16 stations having more than 50 sq mi. (Knapp-USGS)
W74-07667

DRAINAGE AREA AND RIVER MILEAGE OF NEBRASKA STREAMS: PART 1--SALT AND WEEPING WATER CREEKS, BIG AND LITTLE NEMAHA RIVERS, AND MINOR STREAMS IN SOUTHEASTERN NEBRASKA,
Geological Survey, Lincoln, Nebr.
G. G. Jamison.
Open-file report 7404, April 1974. 111 p, 6 fig.

Descriptors: *Drainage area, *Watersheds(Basins), *Nebraska, Hydrologic data, River basins, Drainage density, Drainage patterns(Geologic).

Drainage areas and river mileages for streams in southeastern Nebraska drainage basins are presented in two tables. The first table for each basin is a list of distances in river miles above stream mouth and corresponding drainage areas for selected sites and features. The second table is a list of distances above stream mouth for all contour-line crossings as shown on 7 1/2-minute topographic quadrangles. In addition to giving the name of the stream basin, the heading of each table indicates in parentheses the rank of the stream in relation to those of higher rank within the Missouri River basin. THE 7-DAY 10-YEAR LOW FLOWS OF ILLINOIS STREAMS,
Illinois State Water Survey, Urbana.
K. P. Singh, and J. B. Stall.
Bulletin 57, 1973. 24 p, 12 fig, 15 tab, 39 ref.

Descriptors: *Low flow, *Illinois, Streamflow forecasting, Data collections, Hydrologic data, Waste dilution, Water pollution control.

Low flow values expected for a 7-day period at a recurrence interval of 10 years are given at intervals along the course of each stream in Illinois. These flows are useful for calculating the in-stream dilution available for waste-water effluents. Flow records from 266 stream-gaging stations were the primary data used. The amount of effluent waste-water flow during low-flow periods was obtained for about 300 existing waste-water treatment plants now discharging into Illinois streams. These locations and flow amounts are shown on maps. The hydrologic effects of natural lakes, manmade lakes, gains and losses from groundwater, navigation dams, and evaporation from the river surface are considered. The timing, or season, of the 7-day 10-year low flows is described. The special cases of the controlled waterways within the Metropolitan Sanitary District of Greater Chicago, the Illinois River, the Mississippi River, and the Ohio River are also described. (Knapp-USGS)

Descriptors: *Hydrodynamics, *Rivers, Temperature, *Thermoelectric power, Ice, Mathematical models, Heat transfer, *Thermal pollution, Waste disposal, Dispersion, Heat exchangers, Convection, *Illinois.
Identifiers: Cordova(Ill), *Temperature distribution.

The increase in water temperature in natural streams due to waste heat disposal from thermal power plants leads to extensive ice-free reaches during winter periods. Once the hot water is completely mixed with the streamflow, the temperature distribution in the stream is mainly controlled by the surface heat exchange between water and the atmosphere; the mathematical formulation of the temperature distribution is represented by the one-dimensional convection-diffusion equation. Generally, the surface heat exchange between water and the atmosphere is a complex function of the water temperature; however, it is shown that it can be expressed, for most practical purposes, as a linear function of the water temperature. Using this approximation a closed-form solution of the one-dimensional unsteady convection-diffusion equation is developed to predict temperature distributions in streams and the lengths of ice-free reaches downstream from the thermal discharge sections.

TRENDS AND PROBLEMS IN INVESTIGATION OF LONG-TERM FLUCTUATIONS OF RIVER RUNOFF (NAPRAVLENIYA I ZADACHI ISSLEDOVANIYA MNOGOLETNIKH KOLEBANIY RECHNOGO STOKA),
Akademiya Nauk SSSR, Moscow. Institut Vodnykh Problem.
S. N. Kritskiy, M. F. Menkel', and D. Ya. Ratkovich.
Meteorologiya i Gidrologiya, No 10, p 55-62, October 1973. 26 ref.

Descriptors: *Runoff, *Streamflow, *Discharge(Water), *Fluctuations, *Statistical methods, Correlation analysis, Stochastic processes, Markov processes.
Identifiers: *USSR, Probability distribution.

The present state of science in the field of prediction and description of fluctuations of river runoff was investigated in light of the problems of engineering hydrology. Studies of probability laws in long-term runoff fluctuations can be divided into three basic parts: (1) establishment of probability distribution types expressing the recurrence rate of runoff values; (2) estimation of numerical parameters individualizing distributions as applied to individual basins and runoff characteristics; and (3) expression of autocorrelation functions which reflect a tendency toward formation of extended periods of increased and reduced water discharges. Further studies are needed to (1) improve methods and technical procedures for effective evaluation of probability distribution parameters; (2) study of distributions of errors of a sample estimate of parameters and quantiles in the application of effective evaluation methods; and (3) improve methods for a combined analysis of observations on the basis of sets of analog basins. Basic objectives of future investigations include: (1) refinement of the type of correlation and of the type and parameters of conditional probability distributions of annual runoff; (2) detailed analysis of relations between discharges of successive years on rivers with small runoff; (3) study of the laws of runoff variability of lacustrine rivers; and (4) testing and further investigation of hypotheses on the causes of occurrence of stochastic relations between runoff of successive years. Journal of the Hydraulics Division, American Society of Civil Engineers, Vol 100, No HY5, Paper 10523, p 645-665, May 1974. 13 fig, 1 tab, 10 ref, append.

Descriptors: *Flood waves, *Dam failure, *Mathematical models, Bores, Flood control, Flood protection, Numerical analysis, *Computer programs.
Identifiers: *Morocco(Bou Regreg Dam).

Dam failure flood waves may be solved by numerical analyses made with the use of computer programs which calculate propagation of transient flow. The continuity equation is written for the node instead of the link. This allows the analysis of more complex networks. The hypothetical gradual collapse of the cofferdam of the Bou Regreg Dam in Morocco was studied to assist in the preparation of emergency plans. These results are compared to those of an instantaneous collapse of the same project and of a dam in a rectangular channel. (Knapp-USGS)

GROUND-WATER RESOURCES OF MONTGOMERY COUNTY, INDIANA,
Geological Survey, Washington, D.C.
L. W. Cable, and T. M. Robison.
Indiana Dept. of Natural Resources, (Indianapolis), Division of Water, Bulletin No 36, 1974. 20 p, 4 fig, 4 tab, 16 ref, append.

Descriptors: *Hydrogeology, *Indiana, Water sources, Aquifers, Groundwater, Water quality, Water yield, Shales, Sandstones, Glacial drift, Alluvium.
Identifiers: *Montgomery County(Ind).

Both consolidated bedrock and unconsolidated deposits contain significant water-bearing zones which may serve as a water supply in Montgomery County, Indiana. The uppermost part of the consolidated rocks consist of a wide variety of lithologic types, with shale predominating. Shales and siltstones of the Bordon Group of Mississippian age are the best aquifers. All rock types yield ample domestic supplies and in some places yield supplies adequate for small to moderate municipal or industrial needs. The maximum reported yield from the consolidated rock is 270 gpm. The chief aquifers in the unconsolidated rocks are the sand and gravel beds of the glacial outwash deposits. Valley-train aquifers in buried bedrock valleys offer the best potential for large municipal or industrial supplies. Water in both the unconsolidated rocks and in the shallow consolidated rocks is potable and of the calcium bicarbonate type. (Knapp-USGS)

GEOHYDROLOGY AND WATER RESOURCES OF THE TUCSON BASIN, ARIZONA,
Geological Survey, Washington, D.C.
E. S. Davidson.
Available from Sup Doc, GPO, Washington, D.C. 20402; Price $6.40 paper cover (includes plates). Water-Supply Paper 1939-E, 1973. 81 p, 3 fig, 7 plate, 3 tab, 75 ref.

Descriptors: *Groundwater, *Hydrogeology, *Arizona, Aquifer characteristics, Water yield, Water levels, Water supply, Water balance, Recharge, Transmissivity.
Identifiers: Tucson basin(Ariz).

The major source of water in the Tucson basin of Arizona is groundwater in storage in the aquifer underlying the basin. Groundwater is pumped for irrigation, public supply, and industrial uses and is only partially replenished by the infiltration of streamflow along the major streams and the basin perimeter. The basin is a broad northwest-trending valley bounded by mountain ranges on the eastern and western sides. The mean annual precipitation is about 12 inches on the basin surface and 25 inches or slightly more in the mountains. Because most of the precipitation is evaporated or transpired, the mean annual streamflow is only about 10,000 to 20,000 acre-feet. The major streams generally are dry during more than 300 days each year, and the flows generally last 3 days or less. Because of the erratic occurrence and quantity of flow, streamflow is not used directly as a water supply. The mean annual streamflow out of the basin is slightly more than 17,000 acre-feet. The aquifer that underlies the basin surface consists of the Pantano Formation and Tinaja beds of Tertiary age and the Fort Lowell Formation and surficial deposits of Quaternary age. These units are more than 2,000 feet thick and are composed mainly of loosely consolidated to moderately cemented silty sand to silty gravel. The chemical quality of the groundwater in most of the basin is suitable for public supply. The dissolved solids are mainly calcium, sodium, and bicarbonate. The amount of groundwater in storage to a depth of 500 feet below the 1966 water table was about 30.5 million acre-feet, and that to a depth of 1,000 feet below the water table was about 52 million acre-feet. Less than 2 million acre-feet of water was withdrawn from storage in 1940-65. Transmissivity values for the aquifer average about 50,000 gallons per day per foot and range from 1,000 to almost 500,000 gallons per day per foot. About 85,000 acre-feet of groundwater was removed from storage in 1965. (Knapp-USGS)

HYDROLOGIC RECONNAISSANCE OF T NORTHERN GREAT SALT LAKE DESE AND SUMMARY HYDROLOGIC RECONNA SANCE OF NORTHWESTERN UTAH,
Geological Survey, Salt Lake City, Utah
J. C. Stephens.
Utah Department of Natural Resources Techni Publication No 42, 1974. 55 p, 5 fig, 2 plate, 12 t 44 ref, append.

Descriptors: *Deserts, *Groundwater, *Ut Great Salt Lake, Brines, Saline water, Wa balance, Hydrologic budget, Hydrogeology, A lands, Hydrologic data, Aquifers.
Identifiers: *Great Salt Lake Desert(Utah).

In the northern Great Salt Lake Desert in the ce tral part of northwestern Utah, average annu precipitation ranges from about 4.5 to slight more than 12 inches. Runoff is scanty and reach the desert floor only during or immediately aft thunderstorms and periods of rapid snowme Drainage is internal except for the part of the ar immediately adjacent to Great Salt Lake. Surfa outflow to Great Salt Lake is estimated to avera less than 500 acre-feet annually. Three aquifers a present in much of the northern Great Salt Lak Desert. An aquifer composed of crystalline s and jointed lakebed deposits at and just benea the land surface averages 25 feet in thickness, u derlies about 1,650 square miles of the dese floor, and yields brine. An aquifer of unknow thickness and extent is present in surficial and b ried alluvial fans along the mountain flanks ar yields fresh to moderately saline water. The mo extensive aquifer underlies the entire area whe consolidated rocks are exposed and is made up o unconsolidated to partly consolidated valley fil This aquifer yields brine to wells completed depths of 1,000 to 1,600 feet below land surface i the Bonneville Salt Flats area. Locally in th mountains and peripheral alluvial slopes, fresh t moderately saline groundwater is present. I northwestern Utah, groundwater is present in allu vium, valley fill, and consolidated rocks. Recharg from infiltration of precipitation is estimated t average about 100,000 acre-feet annually. Subsur face inflow supplies at least 43,000 acre-feet o recharge annually. An estimated 5.6 million acre feet of groundwater could be recovered fro storage in the upper 100 feet of saturated aquife material in northwestern Utah. At least three-quar ters of the recoverable water would be highl saline or briny. (Knapp-USGS)

YDROLOGY OF LIMESTONE KARST IN REENBRIER COUNTY, WEST VIRGINIA,
eological Survey, Morgantown, W. Va.
. K. Jones.
Vest Virginia Geological and Economic Survey, Morgantown, Bulletin 36, 1973. 49 p, 23 fig, 3 late, 2 map, 5 tab, 26 ref.

Descriptors: *Karst hydrology, *West Virginia, Karst, Hydrogeology, Caves, Limestones, Water pollution, Path of pollutants, *Sinks, Springs, Aquifers.
Identifiers: *Greenbrier County(W. Va.).

n the Fort Spring--Spring Creek karst area, Greenbrier County, W. Va., karst drainage is ominant over surface drainage. All surface runoff s diverted through sinkholes or sinking streams nto subsurface flow channels in cavernous Mis-issippian limestones. Subsurface drainage basins nd flow directions were determined by dye-trac-ng techniques and by utilizing maps of un-erground conduits. The direction of subsurface low is generally independent of the topography. Traced subsurface flow paths cross under surface idges and often trend opposite to surface slope. The overall direction of underground flow routes s toward lower base level streams but is in-luenced locally by the combined effects of com-plex variations in geologic structure, lithology, egetal cover, climate, former surface and subsur-ace flow paths, and the length of time the aquifer ad undergone development. The karst water is sed locally for domestic purposes, and the cave conduits and water are used for sewage and waste lisposal. The dye-tracer studies showed that con-aminated waste water could easily enter the karst quifer and be transmitted through it. (Knapp-USGS)

BURIED TRIASSIC BASIN IN THE CENTRAL SAVANNAH RIVER AREA, SOUTH CAROLINA AND GEORGIA,
Geological Survey, Aiken, S.C.
I. W. Marine, and G. E. Siple.
Geological Society of American Bulletin, Vol 85, p 311-320, February 1974. 12 fig, 1 tab, 13 ref.

Descriptors: *Aquifers, *South Carolina, *Georgia, *Groundwater basins, Hydrogeology, Stratigraphy, Aquifer characteristics.
Identifiers: *Dumbarton Triassic basin(So. Car-Geo).

A basin filled with Triassic red beds, located on the South Carolina-Georgia line about 32 km southeast of Augusta, Georgia, is buried beneath about 350 m of Coastal Plain sediments. An extensive aeromagnetic survey, seismic refraction and reflection surveys, and geophysical logs and samples from three wells define the extent and character of the basin. This basin is 50 km long, 10 km wide, and trends northeast. Near the center of the Triassic basin, a well passed through 902 m of Triassic mudstone and sandstone of fluvial origin without penetrating the bottom of the basin. The permeability of the Triassic rock is extremely low, and water-transmitting fractures were not penetrated. Even slight water-level disturbances in the Triassic wells require many years to recover. Total dissolved solids of the water from the Triassic basin are about twice that in the crystalline metamorphic rocks that surround it. (Knapp-USGS)
W74-07916

HYDROLOGY AND CHLORIDE CONTAMINATION OF THE PRINCIPAL ARTESIAN AQUIFER IN GLYNN COUNTY, GEORGIA,
Geological Survey, Atlanta, Ga.
R. L. Wait, and D. O. Gregg.
Georgia Earth and Water Division, Atlanta, Water Resources Survey of Georgia Hydrologic Report, 1, 1973. 93 p, 38 fig, 16 tab, 54 ref, 2 append.

Descriptors: *Hydrogeology, *Saline water intrusion, *Artesian aquifers, *Georgia, Withdrawal, Hydrologic data, Drawdown, Water yield, Aquifer testing, Potentiometric level.
Identifiers: Glynn County(Ga).

The principal artesian aquifer in Glynn County, Georgia, yielded 122.3 million gallons of water per day in 1964. This limestone aquifer is at a depth of 500 feet and is about 500 feet thick. A permeable zone at the top ranges from 86 to 140 feet in thickness and a basal permeable zone at a depth of 860 feet ranges from 16 to 110 feet in thickness. Dense dolomites, from 1,000 to 1,060 feet and 1,350 to 1,385 feet, generally confine a zone of brackish water with as much chloride as 2,000 mg/liter. Pressure head increases irregularly with depth from 1.6 feet at 500 feet below the surface to over 30 feet at 1,500 feet. Transmissivity of the principal artesian aquifer is 1,500,000 gpd per foot as determined by short-term tests, and 1,600,000 gpd per foot by long-term tests. Storage coefficient is 0.0006 by short-term tests and 0.004 by long-term tests. Native groundwater in the principal artesian aquifer is of the calcium bicarbonate type, very hard, alkaline, and low in chloride. In a roughly triangular area of downtown Brunswick, brackish water in the zone confined by dolomites is rising through a locally porous part of the upper dolomite and is spreading northward in both permeable zones of the principal artesian aquifer at rates up to 700 feet per year. Any increase in pumpage which would enlarge present cones of depression would accelerate this rate. (Knapp-USGS)
W74-07919

EXPLORATION FOR A BURIED VALLEY BY RESISTIVITY AND THERMAL PROBE SURVEYS,
Harshbarger and Associates, Tucson, Ariz.
E. M. Smith.
Ground Water, Vol 12, No 2, p 78-83, March-April 1974. 12 fig, 14 ref.

Descriptors: *Geophysics, *Geothermal studies, *Hydrogeology, *Alluvial channels, *Glacial aquifers, Glacial drift, *Ohio, Electrical resistance, Resistivity.
Identifiers: *Buried valleys.

Electrical resistivity and thermal probe surveys were conducted in the vicinity of Morning Sun, Ohio, to locate a buried glacial valley. The resistivity survey along six roughly parallel traverse lines was able to distinguish buried valley gravel from glacial till and Upper Ordovician limestone bedrock. Two buried valleys east of Morning Sun coalesce under Morning Sun, then continue as one valley to its junction with the Four Mile Creek buried valley at the northeast corner of Action Lake. The thermal probe survey was unable to distinguish a summer low-temperature anomaly trend, indicative of a buried valley. The depth of the buried valley under the till overburden is 90 to 150 feet which is too deep to contact the summer segment of the annual wave; therefore, a near-surface low-temperature anomaly is not produced. Michigan Technological Univ., L'Anse. Ford Forestry Center.
S. G. Shetron.
Soil Science Society of America Proceedings, Vol 38, No 2, p 359-362, March-April 1974. 4 fig, 2 tab, 22 ref.

Descriptors: *Soil water, *Iron, *Organic matter, *Forest soils, Productivity, Moisture availability, Available water.
Identifiers: *Organic carbon.

The amount of available water (0.1-15 bar tension) in the B21 horizons of six sandy soil series increased as amount of free iron and organic carbon increased. Soils of the Typic Udipsamment subgroup had the lowest, and soils of the Typic Haplorthod subgroup the highest available water retention values. Retention of available water in the C horizons of these soils was positively correlated with free iron and specific surface. Growth of hardwood and pine stands increased as amounts of free iron, organic carbon, and available water increased. (Knapp-USGS)

FIXATION OF ZINC BY CLAY MINERALS,
Georgia Agricultural Experiment Station, Athens.
M. R. Reddy, and H. F. Perkins.
Soil Science Society of America Proceedings, Vol 38, No 2, p 229-230, March-April 1974. 3 tab, 15 ref.

Descriptors: *Clay minerals, *Adsorption, *Zinc, *Clays, Bentonite, Illite, Kaolinite, Ion exchange, Soil chemistry, Ion transport.
Identifiers: *Ion entrampment.

Samples of bentonite, illite, and kaolinite clays were studied for their Zn fixation properties under various pH levels, alternate wetting and drying conditions, and incubation at moisture saturation. Bentonite and illite fixed significant quantities of Zn under wetting and drying. Fixation was directly related to pH and the amount of Zn added. Incubation of treated samples at moisture saturation resulted in approximately half the amount of Zn fixed as when subjected to repeated wetting and drying. Kaolinite fixed relatively small amounts of Zn as compared to bentonite and illite regardless of treatment. X-ray and DTA did not reveal mineralogical change; therefore it is concluded that Zn was fixed as a result of precipitation, physical entrapment in clay lattice wedge zones, and strong adsorption at the exchange sites. Cation exchange capacity values were inversely related to Zn fixation. (Knapp-USGS)
W74-07629

PACKING-INDUCED RADIAL PARTICLE-SIZE SEGREGATION: INFLUENCE ON HYDRODYNAMIC DISPERSION AND WATER TRANSFER MEASUREMENTS,
Geological Survey, Menlo Park, Calif.
C. D. Ripple, R. V. James, and J. Rubin.
Soil Science Society of America Proceedings, Vol 38, No 2, p 219-222, March-April 1974. 3 fig, 8 ref.

Descriptors: *Sediment sorting, *Dispersion, *Soil water movement, Particle size, Diffusivity, Leaching, Path of pollutants, Infiltrometers, Bulk density.
Identifiers: Soil columns.

Radial particle-size segregation occurs when soil columns are prepared with the aid of vibratory compaction. This segregation is characterized by a greater proportion of coarser particles near the periphery than in the central region of the column. A specially devised, alternative repacking technique, utilizing a vibration-free impacting apparatus, reduced such segregation in soil columns to an acceptably low level. Soil columns prepared by the above two packing procedures exhibited significant differences in their water flow and salt transport properties. Miscible displacement tests could be interpreted by one-dimensional dispersion theory in the case of nonsegregated soil columns. The results from segregated soil columns could not be reconciled with this theory. Horizontal infiltration into either segregated or nonsegregated soil columns produced significantly different moisture content profiles. (Knapp-USGS)

ANION EXCLUSION AND COUPLING EFFECTS IN NONSTEADY TRANSPORT THROUGH UNSATURATED SOILS: II. LABORATORY AND NUMERICAL EXPERIMENTS,
Agricultural Research Organization, Bet-Dagan (Israel). Dept. of Soil Physics.
E. Bresler, and A. Laufer.
Soil Science Society of America Proceedings, Vol 38, No 2, p 213-218, March-April 1974. 8 fig, 1 tab, 11 ref.

Descriptors: *Ion transport, *Leaching, *Soil water movement, Osmosis, Dispersion, Convection, Ion exchange, Chlorides, Mathematical models, Numerical analysis.

A numerical model for the simultaneous transport of anions and water was compared with measured chloride and water flow data. Laboratory soil-column experiments were conducted under conditions of infiltration, redistribution, and evaporation of water in the upper part of the soil profile. The effects of convection, ionic diffusion, mechanical dispersion, anion exclusion, and water flow in response to salt concentration gradients were considered jointly. The agreement between theory and experiment, as expressed by flow into and out of the soil column and by water content and salt distribution profiles, was generally good. The results were relatively insensitive to anion exclusion and osmotic effects. Estimates of dispersivity as obtained from miscible displacement experiments were sufficient for prediction. For the conditions studied, osmotic gradients and anion exclusion effects are of minor importance. (See also W74-00611) (Knapp-USGS)
W74-07631

ANION ADSORPTION BY ALLOPHANIC TROPICAL SOILS: I. CHLORIDE ADSORPTION,
California Univ., Riverside. Dept. of Soil Science and Agricultural Engineering.
H. Gebhardt, and N. T. Coleman.
Soil Science Society of America Proceedings, Vol 38, No 2, p 255-259, March-April 1974. 1 fig, 5 tab, 12 ref.

Descriptors: *Adsorption, *Anions, *Soil chemistry, Laterites, Chlorides, Weathering, Leaching, Sulfates, Phosphates, Mexico, Hawaii.
Identifiers: *Volcanic soils, Colombia, Tropical soils, Andepts, Allophane.

The adsorption of Cl by Andepts from Mexico, Colombia, and Hawaii was measured in solutions of HCl, HCl + NaCl, and AlCl3. Chloride adsorption varied from 0-8 meq/100 g at pH 6 to as much as 32 meq/100 g at pH 3.8. At given pH, adsorption was concentration-dependent in a manner consistent with the Langmuir adsorption equation. For a B-horizon sample from San Gregorio, Mexico, the Cl adsorption maxima, in meq/100 g, were 7.4 at pH 6, 10.7 at pH 4.8, 13.4 at pH 4.4, 17.3 at pH 4.2, and 31.6 at pH < 4. The average a from the Langmuir equation was 0.04 liter/meq. Adsorbed Cl was removed by leaching with water, and was exchanged by NO3. Chloride adsorption from HCl or HCl-NaCl was accompanied by the consumption of protons; adsorption from AlCl3 resulted in the hydrolysis and precipitation of Al. Protons consumed or Al hydrolyzed exceeded Cl adsorbed by amounts corresponding closely to the effective CEC. The results suggest that protons are adsorbed to produce positively charged sites, which bind Cl nonspecifically. Chloride adsorption capacity can be conveniently measured by shaking soil with AlCl3 solution and measuring Cl uptake. Chloride capacities of soils and clay minerals determined by the AlCl3 procedure, were, in meq/100 g, 7-30 for Dystrandepts; 16-18 for Hydrandepts; 2-4 for acid soils containing crystalline clay and oxide minerals; 4 for kaolinite; zero for montmorillonite and illite. ANION ADSORPTION BY ALLOPHANIC TROPICAL SOILS: II. SULFATE ADSORPTION,
California Univ., Riverside. Dept. of Soil Science and Agricultural Engineering.
H. Gebhardt, and N. T. Coleman.
Soil Science Society of America Proceedings, Vol 38, No 2, p 259-262, March-April 1974. 2 fig, 2 tab, 15 ref.

Descriptors: *Adsorption, *Anions, *Soil chemistry, Laterites, Chlorides, Weathering, Leaching, Sulfates, Phosphates.
Identifiers: *Volcanic soils, Tropical soils, Andepts, Allophane.

Volcanic ash-derived soils (Andepts) from Mexico, Colombia, and Hawaii have large capacities for sulfate adsorption: 10-20 meq/100 g for surface soils and 15-60 meq/100 g for subsoils. The sulfate adsorption capacity is pH-dependent. For a typical case, B-horizon material from San Gregorio, Michoacan, Mexico, capacity in meq/100 g was 13 at pH 6.3, 22 at pH 5.1, 38 at pH 4.4, and 48 at pH 4.1. Sulfate adsorption was accompanied by and dependent upon the simultaneous adsorption, or consumption, of protons. Increasing solution concentration of sulfate beyond 5-10 meq/liter at a given pH resulted in relatively minor additional uptake by the soil. At a given pH, sulfate adsorption capacities, expressed as mmole/100 g soil, nearly equaled Cl adsorption maxima. This, together with the consumption of 1 meq H for each mmole of HCl or H2SO4 absorbed, suggests that the two anions are adsorbed on the same sites and that site protonation is a prerequisite for adsorption. Sulfate adsorbed by the San Gregorio soil at pH 4 was strongly bound against hydrolysis (removal by water leaching) and was only partly displaced by 1 N KNO3. It was completely displaced by 1 N NH4OAc, pH7. Sulfate may be adsorbed by Andepts, specifically, by ligand exchange. Its affinity for soil is at least 10 times that of nonspecifically adsorbed anions such as Cl and NO3. (See also W74-07634) (Knapp-USGS)
W74-07635

ANION ADSORPTION BY ALLOPHANIC TROPICAL SOILS: III. PHOSPHATE ADSORPTION,
California Univ., Riverside. Dept. of Soil Science and Agricultural Engineering.
H. Gebhardt, and N. T. Coleman.
Soil Science Society of America Proceedings, Vol 38, No 2, p 263-266, March-April 1974. 2 fig, 2 tab, 18 ref.

Descriptors: *Adsorption, *Anions, *Soil chemistry, Laterites, Chlorides, Weathering, Leaching, Sulfates, Phosphates.
Identifiers: *Volcanic soils, Tropical soils, Andepts, Allophane.

Andepts from Mexico and Hawaii bound 30-70 millimoles P/100 g air-dry soil at pH 4.3-4.7 during a 1-hour reaction with 0.05M mixed H3PO4-NaH2PO4 solution. As much as 130 millimoles P/100 g were taken up from H3PO4 at pH 2.4. A B-horizon sample, San Gregorio from Michoacan, Mexico, adsorbed P from H3PO4 and consumes H in nearly equimolar amount, with 38 millimoles/100 g of each removed from solution in bringing soil from an initial pH of 5.4 to 4.3. Larger additions of H3PO4 dissolved appreciable Al, gave pH < 4, and yielded solutions that were supersaturated with respect to variscite. High-affinity adsorption of P from H3PO4 appeared limited by the supply of H-ions to protonate sites or react with displaced OH. Phosphate uptake from NaH2PO4 was accompanied by coadsorption of Na. At a given pH and level of tightly bound P established with H3PO4, addition of NaH2PO4 resulted in low-affinity adsorption of P and coadsorption of Na. Around half of the P bound from NaH2PO4 was readily eluted with water. Phosphate bound from H3PO4 was virtually insoluble in water. Some P was eluted by 0.5M arsenate or selenite. The Andepts bound P through at least three mechanisms: high-affinity adsorption on protonated sites; low-affinity adsorption with coadsorption of Na; and formation of insoluble variscite-like substances. THE RELATIONSHIPS BETWEEN SOIL WATER AND ENGINEERING PROPERTIES OF THE CLAYEY SOILS, (IN JAPANESE),
Tokyo Univ. (Japan). Dept. of Argicultural Engineering.
M. Komamura, and H. Takenaka.
J Agric Sci Tokyo Nagyo Daigaku. Spec. Issue. p 151-162. 1971. Ilus. Engl summ.
Identifiers: *Clayey soils, Compaction pressure, *Japan, *Soil water, Soils, *Mositure tension, *Soil physical properties, Loam, Volcanic ash soils.

Soil water contents are shown by moisture tension (pF), and relationships are examined between soil water and engineering properties. The samples were from Kanto loam volcanic ash soil, Shinshu loam volcanic ash soil and Iwate red-yellow soil. Soil structure and water holding capacity have much effect on dry density and porosity. Kanto loam (subsoil), Shinshu loam and Iwata red-yellow soil have a blocky structure. Kanto loam (surface soil) has an aggregated structure. Optimum moisture content is evaluated about pF3 which is closely related to compaction pressure. Optimum moisture content of Kanto loam (surface soil) is a low-pF because of the interlocking of soil aggregates. In the compaction test, permeability is changed by soil moisture and minimum permeability is observed at nearly pF2. This report shows that pF is closely related to the cohesion and internal friction angle of soils. Consolidation yield point is nearly equal to the compaction pressure of a rummer.--Copyright (c) 1973, Biological Abstracts, Inc.

Available from NTIS, Springfield, Va., as Rept. No. ARH-SA-169; $4.00 per copy, $1.45 microfiche. Report No. ARH-SA-169 (SM-182/6), January 1974. 25 p, 6 fig, 1 tab, 28 ref.

Descriptors: Hydrology, *Soil moisture, *Measurement, *Transport depletion, *Ion transport, Movement, Transfer, Fallout, *Tritium, Hydrogen, Radioactivity, Soil water movement, Arid lands, Precipitable water, Water table, Temperature, Lysimeters, Humidity, Model studies, Research and development, *Washington, Groundwater.
Identifiers: Hanford site(Wash).

Soil moisture transport processes in the arid soils of the Atomic Energy Commission's Hanford site are being evaluated. The depth of penetration of meteoric precipitation has been determined by profiling fallout tritium at two locations where the water table is about 90 meters below ground surface. In situ temperatures and water potentials were measured with temperature transducers and thermocouple psychrometers at the same location to obtain thermodynamic data for identifying the factors influencing soil-moisture transport. Neutron probes are being used to monitor soil moisture changes in two lysimeters, three meters in diameter by 20 meters deep. The lysimeters are also equipped to measure pressure, temperature, and relative humidity as a function of depth and time. Theoretical models based on conservation of momentum expressions are being developed to analyze nonisothermal soil moisture transport processes. Future work will be concerned with coupling the theoretical and experimental work and determining the amount of rainfall required to cause migration of soil-moisture to the water table. (Houser-ORNL)

Descriptors: *Infiltration, Soil drainage, Porous media, Hydraulic properties, Saturation, *Pore pressure, Mathematical models, *Model studies, *Soil water, Soil properties.
Identifiers: *Axisymmetric infiltration, *Similitude requirements.

Infiltration of water into soils from a constant circular source was studied through the use of a mathematical model and a physical model. The boundary conditions were selected for the purpose of deducing the soil hydraulic properties from the infiltration process. Infiltration rate was related to the properties of the soil, to the initial condition of the soil, and to the size of the infiltration source. The similitude requirements were specified for studying infiltration using models. Some experimental data was presented to show the need for considering similitude. A general expression was presented relating capillary pressure with soil-water content during imbibition. The relationship is given in terms of the parameters obtained from a drainage capillary pressure-desaturation curve. The similitude requirements depend upon the imbibition and drainage curves. A tentative theoretical equation was presented for determining the pore size distribution of the soil from the infiltration capacity. It is suggested that small scale infiltration experiments in the field may be used to characterize the soils according to their hydraulic properties.

Soil Science Society of America Proceedings, Vol 37, No 2, p 327-329, March-April, 1973. 3 fig, 1 tab, 10 ref.

Descriptors: *Salinity, *Electrical conductance, Specific conductivity, *Soil chemistry, Water chemistry, *Saline soils, Measurement.

An oscillator circuit is described that enables automatic reading of salinity sensors and other a.c. conductivity cells by measuring frequency of oscillation. The oscillator frequency varies between 0.13 to 30 KHz and changes linearly with conductance in the range of 0.03 to 10 mmho/cm. The temperature sensitivity of the frequency of the oscillator is negligible between 8 and 31 C. The calibration curves between frequency and conductance obtained with the oscillator circuit for both the electrical conductivity and thermistor elements of the salinity sensor are linear and readings can be obtained with lead lengths of several hundred meters. MODEL FOR ESTIMATING SOIL WATER, PLANT, AND ATMOSPHERIC INTERRELATIONS: I. DESCRIPTION AND SENSITIVITY,
Utah Water Research Lab., Logan.
M. N. Nimah, and R. J. Hanks.
*Drainage, *Soil-water-plant relationships, *Soils water, Evapotranspiration, *Computer models, Root systems, Soil water movements, Model studies.

A model and its numerical solution were developed to predict water content profiles, evapotranspiration, water flow from or to the water table, root extraction, and root water potential under transient field conditions. Soil properties needed are hydraulic conductivity and soil water potential as functions of water content. Plant properties needed are rooting depth and limiting root water potential. Climatic properties needed are potential evaporation and potential transpiration. The model predicted significant changes in root extraction, evapotranspiration, and drainage due to the variations in pressure head-water content relations and root depth. Variations in the limiting root water potential had a small influence on estimated evapotranspiration, drainage, and root extraction. (See also W74-08085) (Skogerboe-Colorado State)

MODEL FOR ESTIMATING SOIL WATER, PLANT, AND ATMOSPHERIC INTERRELATIONS: II. FIELD TEST OF MODEL,
Utah Water Research Lab., Logan.
M. N. Nimah, and R. J. Hanks.

Descriptors: *Drainage, *Soil-water-plant relationships, *Soil water, Evapotranspiration, *Computer models, Root systems, Soil water movement, Model studies.

A mathematical model was developed to predict water content profiles, evapotranspiration, water flow from or to the water table, root extraction, and root water potential at the surface under transient conditions. The model was field tested in 1970 and 1971. With alfalfa as the crop, predicted and computed water content-depth profiles show best agreement 48 hours after any water addition. The poorest agreement for all crops tested was right after irrigation. The computed cumulative upward water flow from the water table was 4.80 cm as compared to 0.0 cm measured for the whole 1971 season of 116 days. (See also W74-08084) (Skogerboe-Colorado State)

EFFECT OF HUMIDITY AND TEMPERATURE ON MICROBIAL ACTIVITY IN MOOR PEAT SOILS, (IN RUSSIAN),
T. G. Zimenko, and L. S. Revinskaya.
Mikrobiologiya. Vol 41, No 5, p 891-895, 1972. Illus. (English summary).
Identifiers: Actinomycetes, Bacteria, *Microbial activity, Microorganisms, Moor, *Peat soils, Minerals, Organic compounds, Ammonia, *Soil humidity, *Soil temperature.

Mineralization of organic compounds in moor peat soils depended on humidity and temperature. Ammonification was sufficiently active when the soil humidity was 10-80% of the pore volume. The maximal energy of nitrification was found when the soil humidity was 40% of the pore volume; nitrification was inhibited at the humidity of 10-20% and almost absent at 80%. The microbiological processes in moor peat soils were most intensive at 35 deg. The decrease of temperature down to 15 deg. inhibited the activity of ammonifying and nitrifying bacteria, microorganisms assimilating mineral nitrogen, actinomycetes and spore-forming bacteria. The activity of cellulose-decomposing, oligonitrophilous and other microorganisms also decreased. The intensive microbial activity in moor peat soils with the humidity of 40% of the pore volume resulted in a higher loss of total organic substances, nitrogen and carbon than at other values of the humidity.--Copyright (c) 1973, Biological Abstracts, Inc.

CORRELATIONS BETWEEN P, FE AND MN AVAILABILITY IN WATER-LOGGED SOIL AT DIFFERENT FERTILITY LEVELS,
Uttar Pradesh Inst. of Agricultural Sciences, Kanpur (India). Div. of Soils and Agricultural Chemistry.
A. N. Pathak, Shri Krishna, and K. N. Tiwari.
J Indian Soc Soil Sci. Vol 20, No 4, p 385-389, 1972.
Identifiers: Iron, *Manganese, *Phosphorus, Rice, *Soils(Waterlogged), *Fertilizers.

Correlations between P, Fe and Mn availability in waterlogged soils at different levels of fertility were studied. The available P, Mn++ and Fe++ content of soil increased up to the 70th day after transplanting (of rice plants) and decreased thereafter until the 90th day. Application of fertilizers increased the amount of available soil P as well as Mn. The availability of Fe, however, decreased with increasing fertility levels. Significant positive correlations were recorded between available soil P and Mn and negative values between P and Fe and also between Mn and Fe.-- Copyright 1973, Biological Abstracts, Inc.

EFFECT OF DILUTE SALT SOLUTIONS ON CHERNOZEM SOIL ESTIMATED THROUGH THE HYDRATION PROPERTIES OF THE COLLOIDS,
Indian Inst. of Tech., Kharagpur. Dept. of Agricultural Engineering.
B. Datta, and I. Szabolcs.
J Indian Chem Soc. Vol 49, No 11, p 1131-1136. 1972.
Identifiers: *Chernozem soils, Colloids, Differential thermal analysis, Hydration, *Illite, Moisture, *Montmorillonite, *Salt solutions, Soils, X-ray analysis, Sodium.

Samples of chernozem soil (containing initially illite and montmorillonite) enriched with 3 levels of pure illite and bentonite were leached for a number of times in columns with single salt solution of Na2CO3, NaCl and MgCl2, and their clay fractions were studied by differential thermal and X-ray methods. Illite treated samples adsorbed less moisture at maximum hygroscopicity than montmorillonite treated ones, and the energy needed to drive off the moisture from the illite treated samples, as indicated by differential thermal analysis, was relatively higher than for montmorillonite samples. The location and force of Na bonding on the surfaces of illite and montmorillonite indicated that Na ions had a tendency towards less hydration on illite than on montmorillonite.--Copyright 1973, Biological Abstracts, Inc.

dentifiers: *Capillary action, Flow, Germany(Lower Saxony), Ground water table, Hydraulic conductivity, *Soil moisture suction, teady-state(Conditions), Velocity, Root zone, oil profiles, Darcy's Law.

he capillary rise from groundwater table to the ottom of the effective root zone under steady-tate conditions was calculated numerically for 20 dealized single-layer and multi-layer soil profiles ommonly found in large areas of Lower Saxony, ermany. The calculations are based on Darcy's aw, using the relations between soil moisture suc-ion and hydraulic conductivity experimentally etermined on soil cores. Both the height of capil-ary rise and the capillary flow rate very strongly epend on soil texture and on soil structure. mong the single-layer soil profiles the height of apillary rise at the same flow rates is greatest in lay silt (loess) and loamy sand, and lowest in ravelly sand and silty clay. On 2-layer soil rofiles besides texture and structure of the layers he depth of groundwater table below the layer-oundary is also of great importance on height and low rate of capillary rise.--Copyright 1973, Biological Abstracts, Inc.

WORLD'S GREATEST SOURCE OF FRESH WATER,
Geological Survey, Albany, N.Y. Water Resources Div.
R. M. Waller.
Journal of the American Water Works Associa-tion, Vol 66, No 4, p 245-247, April 1974. 2 fig.

Descriptors: *Great lakes, *Great lakes region, *Water resources, Groundwater, Lakes, Water supply, Hydrologic cycle, Water reuse, Water resources development.

The Great Lakes are the largest system of fresh-water lakes in the world. As such, they offer opportunities for virtually unlimited supplies of freshwater to their region, provided the water is properly treated for reuse. The abundance of the basin's water resources is not the result of exceptionally high precipitation, which averages only 31 in. annually. Runoff is not exceptional either, with a general range of 30-40 per cent of the precipitation. The large storage capacity of the lakes and, to a lesser extent, the storage capacity of the glacial deposits and underlying bedrock cause retention and slow release of runoff and modify extremes of outflow from the lake system. The average annual discharge of the St. Lawrence River is 239,000 cfs, or 154,000 mgd. The range in discharge is extremely small in comparison with that of other major streams. (Knapp-USGS)

Descriptors: *Great Lakes, *Precipitation(Atmospheric), Evaporation, Runoff, Hydrology, *Model studies, *Statistical methods, *Water balance, Regression analysis.
Identifiers: Statistical analysis.

It is demonstrated that net basin supply values (equivalent to precipitation on the lake minus the evaporation from the lake plus the runoff into the lake) obtained from water balance studies without accounting for the thermal expansion and concentration of water may be in error by as much as 100 percent during some months for each lake. The individual hydrologic components are assumed to be normally distributed for each month and linear regression equations are estimated for predicting the value of the individual monthly hydrologic components. It is shown that some of the hydrologic components for down wind (in this case downstream) lake are dependent upon hydrologic events for the upwind lakes. This is particularly so for precipitation in the down wind lake basins which appears to be highly dependent upon evaporation values for up wind lakes.

THE BIOLOGY AND ECOLOGY OF RIVER CARPSUCKER, CARPIODES CARPIO (RAFINESQUE), IN THE LITTLE MISSOURI ARM OF LAKE SAKAKAWEA, NORTH DAKOTA,
North Dakota Univ., Grand Forks.
D. J. Trzpuc.
Available from the National Technical Information Service as COM-73-11531. MS thesis, December 1972. 49 p. 3 fig, 13 tab, 47 ref.

Descriptors: *Carpsucker, *North Dakota, *Distribution, *Life history studies, Turbidity, Water temperature, Animal growth, Spawning, Reproduction, Age, Fish diets, Sexual maturity, Fecundity, Water levels.
Identifiers: *Carpiodes carpio, Little Missouri Arm(N.D.), Lake Sakakawea(N.D.).

The life history, growth, and ecologic distribution of river carpsucker were studied in the Little Missouri Arm of Lake Sakakawea, North Dakota, between May 15 and August 14, 1970. The distribution of the carpsucker seemed to be governed by water level, temperature, and turbidity. Dissolved oxygen concentration, which was near saturation, throughout the study, did not seem to affect their distribution. Hydrogen ion concentra-

tion was optimal for fish throughout the study. The size of carpsuckers taken at the nine stations was found to vary considerably; those taken at four stations in the eastern segment of the arm had mean lengths and mean weights greater than the average of the total catch. This growth rate may be a result of the high concentrations of zooplankton, especially Daphnia, which were taken at these stations. The larger sized carpsuckers at these stations may also indicate that adults prefer a less turbid habitat. Limited observations of reproduction and spawning habits were made, and the evidence indicated that carpsuckers spawn in the Little Missouri River upstream from the area studied. (Jones-Wisconsin)

PHYTOPLANKTON COMMUNITY STRUCTURE AND NUTRIENT RELATIONSHIPS IN LAKE CARL BLACKWELL, OKLAHOMA,
Oklahoma State Univ., Stillwater.
A. R. Faust.
Available from the National Technical Information Service as ORD-4254-13, $5.00 in paper copy, $1.45 in microfiche. PhD thesis, July 1973. 59 p. 12 fig, 9 tab.

Descriptors: *Algae, *Phytoplankton, *Biological communities, *Nutrients, *Aeration, Oklahoma, Light penetration, Dissolved oxygen, Water temperature, Nitrates, Phosphorus, Carbon, Organic matter, Limiting factors, Reservoirs, Chlorella, Taste, Hydrogen ion concentration, Carbon dioxide, Cyanophyta, Diatoms, Odor, Eutrophication, Montmorillonite, Turbidity, Sediments, Fish, Zooplankton, Insects.
Identifiers: *Lake Carl Blackwell(Okla.), Species diversity.

Phosphorus, nitrogen, carbon, and other physiochemical parameters were studied to provide basic data on limiting factors of planktonic algae which impart malflavors. Number-based diversity of phytoplankton enclosed in enriched, isolated columns was compared to diversity in Lake Carl Blackwell, Oklahoma. Taste and odor in the water supply were related to algal blooms. Species diversity of phytoplankton as indicators of eutrophic conditions was reviewed. Data are presented to support the theory that no single limiting nutrient hypothesis is applicable to Lake Carl Blackwell. Blue-greens probably contribute more than diatoms or greens to taste and odor in late summer. Taste and odor in spring months prior to June algal blooms may be due to bacterial decomposition of allchthonous organic material washed in by rains. Aeration did not affect algal numbers but slightly reduced surface temperature and water clarity and increased oxygen content of the bottom water. Release of sedimentary phosphorus and addition of orthophosphate produced significant increases in algal numbers in two days for a juvenile community and in four days for a senile community. Blue-greens responded less than greens to added phosphorus. Diatoms did not respond. (Jones-Wisconsin)

ECOLOGICAL FACTORS AFFECTING ANADROMOUS FISHES OF LAKE PONCHARTRAIN AND ITS TRIBUTARIES,
Louisiana Wild Life and Fisheries Commission, New Orleans.
J. T. Davis, and B. J. Fontenot.
Available from the National Technical Information Service as COM-72-11047, $3.00 in paper copy, $1.45 in microfiche. National Marine Fisheries Service, Arlington, Va., Report No. NOAA-72070612, May 1969. 96 p. 1 fig, 42 tab, 7 ref. 7301000. PL 89-304.

Descriptors: *Striped bass, *Fish populations, Louisiana, Anadromous fish, Shellfish, Systematics, Salinity, Brackish water, Fish establishment, Sampling, Freshwater, Water quality, Estuarine fisheries, Fish food organisms.
Identifiers: *Lake Ponchartrain(La.), Atlantic sturgeon, Alabama shad, Lake St. Catherine(La.), Lake Borgne(La.), Lake Maurepas(La.).

The extent and significance of anadromous fishes in Louisiana were evaluated by trawl and trammel net sampling in Lakes Pontchartrain, Borgne, Maurepas, and St. Catherine and hoop-net and electro-fishing sampling was conducted of their tributary streams. The species caught are listed. Water quality data was compiled to extract pertinent or limiting factors. The striped bass population formerly present in fishable numbers in the coastal areas of eastern Louisiana in now extinct. There is a reproducing Atlantic sturgeon population in the coastal streams that is supporting a very minor commercial fishery. No sport fishing has been observed. Alabama shad were recorded both as juveniles and adults which indicates that at least a reproducing population is present although in insufficient numbers to comprise a fishery. Inasmuch as the water quality in the study area has improved during the past ten years and there is a plentiful supply of forage organisms to support an introduced striped bass population, attempts should continue to introduce this species. No evidence was discovered to indicate the presence of direct competition from other species. (Jones-Wisconsin)

THE FRESHWATER MOLLUSKS FROM THE DUNE AREA NORTH OF THE HAGUE,
W. J. Kuijper.
Basteria. Vol 37, No 1/2, p 1-20. 1973. Illus. (English summary).
Identifiers: Ducks, *Dune lakes, *Mollusks, *Netherlands(Hague), Aquatic insects, *Species migration.

The mollusks found in the dune lakes and pools in the catchment area of the waterworks of the Hague, Netherlands, were surveyed during 1966-1970. These lakes and pools were formed by infiltration of Rhine water from 1955. Before that time the area was dry with the exception of 3 localities. The hydrology of the infiltrated water is described, as well as general aspects of flora and fauna of the newly formed waters. Two types of water are distinguished here: lakes which receive river water by means of a pipeline and pools caused by rising of the ground water table. Drought periods caused by interruption of the infiltration greatly influence the local distribution of the mollusks. The shallow pools may dry out easily and completely. Deep, permanent pools harbor comparatively more species than shallow ones. The mollusks probably populated the new lakes and pools in the dunes by means of transport of birds, among which ducks are common, and aquatic insects. All species found are common in the Netherlands, except for Gyraulis laevis. In the future more species will probably migrate to this by now well watered dune area.--Copyright 1973, Biological Abstracts, Inc.

PRESENT AND FUTURE OF LAKE SEV (SOVREMENNOYE SOSTOYANIYE I B DUSHCHEYE OZERA SEVAN),
G. G. Vardumyan.
Meteorologiya i Gidrologiya, No 10, p 94-103, C tober 1973. 1 fig, 3 tab, 5 ref.

Descriptors: Lakes, *Lake morphology, *La morphometry, *Diversion, *Alteration of flo Diversion tunnels, Reservoirs, Pumping plan Hydroelectric plants, Irrigation canals, Therm properties, Water temperature, Dissolved oxyge Water balance, Runoff, Water storag Hydrobiology, Maps, Forecasting, Investment.
Identifiers: *USSR(Lake Sevan-Armenia).

Lake Sevan basin in northern Armenia is a hu tectonic depression having the shape of a triang bounded by the Gegamskiy, Vardenis, Aregu and Sevan mountain ridges. The height of ridg above the lake varies between 500 and 1,800 The lake is a large high-mountain body of wat The area of the lake drainage basin, including t water surface area, is 4,890 sq km. Between 19 and 1971, the level of the lake declined by 18 The volume of water in the lake dropped from 58 billion cu m to 35.0 billion cu m. The water surfa area was reduced from 1,420 sq km to 1,254 sq k The lake level declined from 1,916 m and as January 1, 1972 was 1,898.02 m. Measures divert flow to Lake Sevan include: (1) annu transfer of 250 million cu m of runoff from th Arpa River beginning in 1976; (2) annual transf of 50 million cu m of runoff from the Vorot River beginning in 1981 and later, if necessar transfer of 100-150 million cu m of runoff per yea (3) annual transfer of 40 million cu m of runo from the Getik River (right tributary of the Agst River) beginning in 1981; and (4) annual transfer 100 million cu m of runoff from the Azat and Ve Rivers beginning in 1991. Provisions have bee made to divert a total of 440 million cu m of wat to the lake annually. Upon completion of all me sures the lake level can conceivably be raised by m by the year 2000. Data are presented on use long-term water storage of the lake for hydroelec tric power and irrigation and on the state of th lake's physicochemical and biological regimes connection with lowering of the lake level. Annua water balances of the lake for 1927-71 and forecast of the lake's water balances for differen periods between 1972 and the year 2000 are tabu lated. (Josefson-USGS)

ZONATION OF MOSSES ON THE BANKS O THE NOVY CEPSKY POND. (IN CZECH.),
Jihoceske Muzeum Ceske Budejovic (Czechoslovakia).
M. Rivola, and M. Vondracek.
Preslia (Prague). Vol 44, No 4, p 359-363, 1972.
Identifiers: Bolboschoenus-maritmus, *Czechoslovakia(Novy Cepsky pond), Forests, Glyceria, Mineral, *Mosses, Phragmites-communis, Pine, Ponds, Sedges, Sphagnum-fallax, Substrates, Typha-angustifolia, *Vegetation zones.

A total of 6 vegetation zones were differentiated on the banks of the Novy Cepsky pond (near Cep, Trebon district, Bohemia, Czechoslovakia) in the summer of 1971: pine forest on mineral substrate similar to associations of the alliance Pino-Quercion, pine forest on peat (originally probably belonging to the alliance Rhynchosporion albae, now forming a transition to the alliance Pino-Ledion), a muddy phase of the pond with Sphagnum fallax and other loosely distributed species, sedge stands with isolated areas of Phragmites communis, stands of Bolboschoenus maritimus and Glyceria maxima with island-like occurrence of Typha angustifolia, the bare pond bottom with typical associations. Occurrence and distribution of 24 moss species in the individual zones are presented.--Copyright 1973, Biological Abstracts, Inc.

RELICS OF THE BOGGY VEGETATION IN SODIC TERRITORIES, (IN HUNGARIAN),
Lajos Kossuth Univ., Debrecen (Hungary). Dept. of Botany.
M. Balogh.
Acta Biol Debrecina. 9, p 111-112, 1971.
Identifiers: *Boggy areas(Dystrophic), Floristics, *Hungary(Velence Lake), Organic matter, Peat, Relics, *Sodic steppe areas, Vegetation, *Dystrophy.

The dystrophic bogs of the Velence Lake in Hungary are now assumed not to have been formed in alkaline water, but to form relics preserved through the accumulation of masses of acidic peat and other organic substances with high adsorption capacity. The new hypothesis is fortified by well-known erosion phenomena, by floristic observations by Kerner in the 19th century and by data on a recently discovered bog relic in a sodic steppe in Hungary.--Copyright 1973, Biological Abstracts, Inc.

AN ECOLOGICAL STUDY OF THE MISSOURI RIVER PRIOR TO CHANNELIZATION,
Univ., South Dakota Vermillion. Dept. of Biology.
J. C. Schmulbach.
Available NTIS as PB-232 150, microfiche $1.45. South Dakota Water Resources Institute, Brookings, Completion Report, March 1974, 34 p. OWRR B-024-SDAK(1) 14-31-0001-3333.

Descriptors: *Missouri River, Aquatic environment, *Benthos, Aquatic drift, Zooplankton, Fish, Food habits, *Fish populations, *Periphyton, *South Dakota, Ecology, Production, Caddisflies, Marshes, Fish diets, *Biota.
Identifiers: *Sturgeon(Shovelnose).

Aquatic biota in the unchannelized Missouri River (South Dakota) was studied prior to construction of bank-stabilizing structures. Cattail-dominated marsh habitat adjacent to the main channel was important to the production of benthos, aufwuchs, drift, fishes and, to a lesser extent, zooplankton. The importance of this habitat to the integrity and stability of the biota of this large botic ecosystem was emphasized. Colonization rates and taxonomic diversity on artificial samplers by aufwuchs macroinvertebrates were faster and larger and the standing crop was 71% greater in the unchannelized river than in the bank-stabilized river. The drift was dominated by aufwuch taxa, principally caddisflies (Hydropsyche spp.); many originated from substrates in chutes which course the marshes. Fishes from 35 species utilized marsh habitat; primarily as a nursery while immature. Fish standing crop and annual production values (dry wt.) conservatively were estimated as 48.2 kg/ha and 121 kg/ha, respectively. An unexplained movement of all fishes from the marshes was observed in late summer. Shovelnose sturgeon populations were high (2500/linear km) in the spring and fall. Extensive seasonal movement and very slow growth was characteristic of this species. Sturgeon subsisted on a minimal ration except in the early winter when benthic and aufwuchs macroinvertebrates became accessible in the main stream as a result of mancontrolled water level changes. (Wiersma-South Dakota)

THE EFFECTS OF RIVER FLUCTUATIONS RESULTING FROM HYDROELECTRIC PEAKING ON SELECTED AQUATIC INVERTEBRATES,
Idaho Univ., Moscow. Coll. of Forestry, Wildlife and Range Sciences.
C. MacPhee, and M. A. Brusven.
Available from the National Technical Information Service as PB-232 268, $3.25 in paper copy, $1.45 in microfiche. Idaho Water Resources Research Institute, Moscow, Completion Report, January 1974. 21 p, 2 fig, 3 tab, 3 ref. OWRR A-035-IDA(2). 14-01-0001-3512.

Descriptors: *Aquatic insects, *Littoral drift, Intertidal areas, Diel migration, *Idaho, *Invertebrates, Hydroelectric power, *River flow, Caddisflies, Stoneflies, Mayflies.
Identifiers: Dworshak Dam(Ida), Clearwater River(Ida), Dicosmoecus spp., Pteronarcys californica, Nymphs.

Near-shore variation in number and weight of riffle insects was shown to be affected by changes in depth (15, 30 and 45 cm) and current velocity, interacting with data and station of sampling. This differential littoral distribution of riffle insects resulted in variation of the littoral community structure. In the non-fluctuating system, community diversity and diversity per individual decreased with increasing depths of 45 cm and current velocity to 1.1 m/sec. Fluctuating flows appear to reverse the order of the community structure, i.e., community diversity and diversity per individual increase with increasing depth to 45 cm and current velocity to 1.1 m/sec. A flow reduction exponentially increased the number of drifting insects in zones adjacent to the exposed substrate in the shoreline. Insects tested in the laboratory demonstrated variability in temperature-exposure tolerances. The case-bearing caddisfly, Dicosmoecus sp., was generally more tolerant than the stonefly, Pteronarcys californica, at most temperature regimes. Older age-class nymphs of the latter were more tolerant than younger nymphs. Shore migration studies indicated stoneflies were much more successful in maintaining contact with the water column during flow reductions than caddisflies and mayflies; mayflies were most vulnerable.

TRICHOPTERA IN THE RESERVATION AREA HEILIGES MEER IN WESTPHALIA,
W. Wichard, and H. Beyer.
Decheniana. Vol 125, No 1/2, p 43-48. 1972. Illus.
Identifiers: Ecnomidae, *West Germany(Westphalia), Hydroptilidae, Leptoceridae, Limnephilidae, Molamnidae, Phyrganeidae, Polycentropodidae, Psychomyiidae, Reservation areas, *Trichoptera, *Distribution patterns.

The distribution of Trichoptera species in surf and silted-up areas of the Heiliges Meer in Westphalia (West Germany) was determined from collections conducted from 1961-1970. Of the 36 spp. identified, Phyrganeidae, Hydroptilidae and Limnephilidae showed above average representation in silted-up areas, while the representation of Polycentropodidae and Ecnomidae was medium, and that of Leptoceridae, Molamnidae and

Psychomyliidae was below average. The populations of Trichoptera in water areas decreased in the order Psychomyiidae, Leptoceridae, Molamnidae, Economidae, Polycentropodidae, Limnephilidae, and Hydrophilidae.--Copyright 1973, Biological Abstracts, Inc.

FRESHWATER FAUNA AND FLORA IN HASWELL ISLAND (QUEEN MARY LAND, EASTERN ANTARCTICA),
Polish Academy of Sciences, Warsaw. Inst. of Experimental Biology.
K. W. Opalinski.
Pol Arch Hydrobiol. Vol 19 No 4, p 377-381, 1972. Illus.
Identifiers: *Antarctica(Haswell Island), Bidulphia-sp., Birds, Charcotia-actinochilus, Chlorella-Antarctica, Eastern, *Fauna, *Flora, Fragilariopsis-Antarctica, Fragilariopsis-rhombica, Gloeocapsa-cohaerens-Antarctica, Gulls, Islands, Mineral, Organic matter, Oscillatoriales, Penguins, Prasiola, Rotatoria, Sediments, Tardigrada.

In December 1969, qualitative samples of organic sediments were drawn from the bottom of the freshwater lake in Haswell Island (Queen Mary Land, Eastern Antarctica). Numerous colonies of birds live in the island. The lakes in the island are supplied with several organic and mineral substances originating from guano of gulls and penguins. Among flora and fauna of the investigated lake, the following groups were found: Tardigrada and Rotatoria (2% of the total density of flora and

fauna), Cyanophyta (53%), Diatomeae (23%) and Chlorophyta (17%). Only 2 among 19 plant species (Gloeocapsa cohaerens var. antarctica (Breb) Wille (Cyanophyta) and Chlorella antarctica (Fritsch) Wille (Chlorophyta)) are endemic plants in Antarctica. Among Diatomeae, 4 brackish species were found, characteristic for Antarctic seas (Fragilariopsis rhombica Hust., F. antarctica (Castr.) Hust., Charcotia actinochilus Hust, and Bidulphia sp.). These species were probably brought to the lake by birds. The inflow of allochthonic matter into lakes makes the development of nitrofil forms, such as Prasiola and Oscillatoriales, possible. The investigated lake is similar, as to its flora and fauna composition, to other lakes in the shore oases of Eastern Antarctica.--Copyright 1973, Biological Abstracts, Inc.

INVERTEBRATE FAUNA OF THE BODIES OF WATER OF THE STATIONARY 'AGAPA' (WESTERN TAIMIR). (IN RUSSIAN),
Moscow State Univ. (USSR). Dept. of Vertebrate Zoology.
N. M. Shalaeva.
Vestn Mosk Univ Ser 6 Biol Pochvoved. Vol 27, No 4, p 98-100, 1972. English summary.
Identifiers: Acanthocyclops-viridis, Asplanchna-priodonta, Biomass, Cyclops-strenuus, Daphnia-pulex, Eurycercus-glacialis, *Fauna, Heterocope-borealis, *Invertebrate, Lepidurus-arcticus, Stationary, *USSR(Taimir).

Altogether 12 lakes and 4 rivers were investigated for the species composition of zooplankton, bottom fauna and the fauna of the zone of vegetation beds. A list of all the invertebrate species recorded in the bodies of water of the stationary is given. The greatest variety of fauna was observed in middle Aug. This seemed also to be the period of its maximum biomass. In analyzing the general character of the hydrofauna a group of widespread forms is noted (Acanthocyclops viridis, Cyclops strenuus, Daphnia pulex, Asplanchna priodonta), and a number of species in herent in northern bodies of water (Heterocope borealis, Eurycercus glacialis, Lepidurus arcticus).--Copyright 1973, Biological Abstracts, Inc.

STUDIES ON THE OCCURRENCE OF PLANKTONIC ROTATORIA IN URBAN WATERS AND THEIR RELATIONSHIP TO SAPROBISM. (IN GERMAN),
Hamburg Univ. (West Germany). Museum of Zoology.
H. Wilkens.
Mitt Hamb Zool Mus Inst. 68, p 1-20, 1972. Illus. English summary.
Identifiers: Anuraeopsis-fissa, Asplanchna-priodonta, Brachionus-angularis, Brachionus-calyciflorus, Brachionus-rubens, Brachionus-urceolaris, Epiphanes-senta, Filinia-longiseta, Keratella-cochlearis, Keratella-quadrata, *Plankton, Pollution, Polyarthra, Pompholyx-sulcata, *Rotatoria, *Saprobism, Synchaeta, *Urban waters.

A series of planktonic rotifers can be observed in moderately as well as nonpolluted urban water: Keratella cochlearis, K. quadrata, Anuraeopsis fissa, Brachionus angularis, B. calyciflorus, Asplanchna priodonta, Filinia longiseta, Pompholyx sulcata, Synchaeta and Polyarthra spp. Only one member of the community, B. calyciflorus, was found in heavily polluted conditions. All other rotifers to be observed here as well, B. urceolaris, B. rubens and Epiphanes senta, are littoral forms in nonpolluted waters, but they become planktonic and numberous in heavy pollution.--Copyright 1973, Biological Abstracts, Inc.

ZOOPLANKTON OF FRESH AND BRACKISH WATERS OF THE BERING ISLAND (COMMANDER ISLANDS). (IN RUSSIAN),
Moscow State Univ. (USSR). Dept. of Invertebrate Zoology.
N. V. Vekhov.
Zool Zh. Vol 52, No 2, p 185-190, 1973. Illus. English summary.
Identifiers: Anostraca, Biomass, Brackish water, Cladocera, Copepods, Freshwater, Islands, Plankton, Rotifers, Succession, *USSR(Commander Islands), *Zooplankton.

Zooplankton of brackish water (Commander Island, USSR) consisted of rotifers (Notholcaacuminata, N. labis, N. foliacea, Synchaeta sp.) and a copepod Eurythemora Kurenkovi. Lakes are usually populated by various rotifers (Filinia major, Keratella cochlearis, Polyarthra dolichoptera) and Cyclops scutifer. Small freshwater 'puddles' of the island can be divided into 3 groups: non-overgrown, weakly overgrown and strongly overgrown. Each of them is characterized by its own complex of zooplankton: non-overgrown snow type: Branchinecta paludosa (Phyllopoda), Acanthocyclops vernalis, Chydorus sp.; non-overgrown type: wide-spread lake rotifers (F. major, P. dolichoptera et al.) and copepods, few Cladocera; weakly overgrown type: lake and thicket rotifers (family Euchlanidae and Ascomorpha ecaudis) and Cladocera (Daphnia pulex, Bosmina longirostris, Simocephalus sibiricus); strongly overgrown type: numerous Cladocera and thicket rotifers, no lake rotifers. The community biomass grows during succession; diversity is insignificant in the beginning, then sharply increases and decreases at the final stages of succession.--Copyright 1973, Biological Abstracts, Inc.

EXPERIMENTS ON THE MOVEMENT BEHAVIOR OF UNICELLULAR ALGAE IN FLOWING WATER,
Oekologiska Stationen, Meassaure (Sweden).
A. Mueller-Haeckel.
Hydrobiologia. Vol 41, No 2, p 221-246,1973. Illus. English summary.
Identifiers: *Algae(Unicellular), Diurnal, Movement, Periodicity, Model studies, *Drift, *Algal growth, *Colonization(Algae).

A schematic model is given of the drifting and recolonization of algal cells in an artifical channel with algal growth on the bottom when water free of algae was flowing through, as well as of the colonization of a clean channel by algal cells, when water of a brook was flowing through. Both phenomena are compared with drift and colonization in a natural channel by means of quantitative samplying. Before settling down again after drifting awary, a single algal cell may cover a distance no greater than 38 m. Multiple sampling over a period of 24 hr demonstrated diurnal periodicity in the drifting and colonization of various algal species from running water.--Copyright 1973, Biological Abstracts, Inc.

BIOLOGICAL CHARACTERISTICS OF THE VOLGA SCHOOL OF BELUGA AND STELLATE STURGEON, (IN RUSSIAN),
L. M. Pashkin.
Tr Volgogr Otd Nauchno-Issled Inst Ozern Rechn Rybn Khoz. 6, p 28-47. 1972.
Identifiers: Acipenser-Huso, Age, *Beluga, Biological studies, Fecundity, Size, Spawning, *Stellate, *Sturgeon(Stellate), USSR(Volgagrad), Weight.

The maximum concentrations of beluga (Acipenser huso) in the dam zone of the Volgograd (USSR) hydroelectric development (VHD) were observed in Oct. and remain at a high level until May. The size of the females was 181-320 cm (most often 220-270 cm) and of the males from 171-340 cm (190-270cm); females weighing 80-140 kg and males 50-110 kg predominate. The long stay of the fishes at the VHD had an adverse effect on the development of sexual products; mass resorption of eggs was observed. The fecundity of the Volga beluga increased markedly with increase of the size of the females: it was 250,000-400,000 eggs for fishes 200-220 cm long and 1.0-1.3 million eggs for those 280-300 cm long; the average fecundity/female for the present-day population structure was about 700,000 eggs. The age composition of the spawning population of the beluga was relatively constant, from 9-36 yr. The males of 1 generation participated in spawning for the first time within 11 yr and females 12 yr (both sexes, 17 yr); the beluga matured at an age of 15-23 yr, repeated spawning occurred on the average after 5 yr. The stellate sturgeon spawners appeared at the VHD in May, the maximum concentrations were found in June, and the total time of stay was about 60 days. The constant predominance of females and 'aging' of the spawning school on the whole was reflected in the change of the size-weight structure of the population of stellate sturgeons. The age of the stellate sturgeons in the region of the VHD was 8-26 yr (males aged 11-14 yr and females 15-18 yr predominated). Maturation of 1 generation occurred within 15 yr, ranging from 8-22 yr (females in 12 yr and males in 9). Repeated spawning occured after 3-5 yr.--Copyright 1973, Biological Abstracts, Inc.
W74-08126

EFFECT OF CLIMATIC AND PHYTOCENOTIC FACTORS ON ANNUAL INCREMENT OF TREES IN STANDS, (IN RUSSIAN),
Ural Science Center, Sverdlovsk (USSR). Inst. of Plant and Animal Ecology.
G. E. Komin.
Ekologiya. Vol 4, No 1, p 74-83. 1973. Illus.

Identifiers: *Annual increment, Climatic factors, *Phytocenotic factors, *Trees(Stands).

Phytocenotic factors have a substantial effect on the dynamics of the annual increment of trees in dense stands, especially in multiple-species uneven-aged stands, close stands and successional stands. Therefore, the increment of trees from such stands cannot always be used as an indicator of changes of climatic elements in past years. When trees from dense stands are used, a preliminary analysis is needed to ascertain that the increment of trees in them is determined to a greater degree by annually varying climatic factors than by phytocenotic factors.--Copyright 1973, Biological Abstracts, Inc.

THE MOSS VEGETATION OF THE FORESTS IN THE RHINE LOWLAND BETWEEN BASEL AND MANNHEIM, (IN GERMAN),
Landessammlunge fuer Naturkunde, Karlsruhe (West Germany).
G. Philippi.
Beitr Naturkd Forsch Suedwestdtsch. 31, p 5-64. 1972. English summary.
Identifiers: Acidity, Anthropogenous, Deciduous trees, *Flooding, *Forests, *West Germany(Rhine lowland), Lowlands, *Moss, Pinus, Soils, Species, Vegetation.

The moss vegetation of the forests in the Rhine lowland between Basel and Mannheim (W. Germany) is described. On periodically inundated localities on the bole of Salix alba and Populus canadensis the Tortulo-Leskeetum characterized by Leskea polycarpa, Tortula latifolia, Dialytrichia mucronata and Zygodon viridissimus var. occidentalis is found. On the uninundated base of deciduous trees, the following moss communities are observed: Basi- to neutro-philous communities: the Neckero-Anomodontetum characterized by Anomodon viticulous, A. attenuatus, Homalia trichomanoides, Neckera complanata, Porella platyphylla, rarely Anomodon longifolius, especially in the subassociation with Homalia trichomanoides, the Mnietum cuspidati and the Brachythecietum populei, communities with Fissidens cristatus, Taxiphyllum depressum and Mnium stellare; acidophilous (to neutrophilous) communities: the Isothecietum myuri and a community with Dicranum viride. In the lower and middle part of the bole of deciduous trees the following moss communities are found: Basi- to neutrophilous communities: the Neckero-Anomodontetum, especially in the typical subassociation, the Leucodontetum sciuroidis, the Homalothecietum sericei and the Neckeretum crispae; acidophilous moss communities: the Isothecietum myosuroidis, the Dicrano-Hypnetum cupressiformis, the Dicranoweisietum cirratae and a community with Microlejeunea ulicina; other moss communities: the Pylaisietum polyanthae, the Ulotetum crispae and communities with Tortula papillosa and Orthotrichum obtusifolium (both nitrophilous). The frequency of the occurrence of epiphytic mosses on the single phorophytes and in the single forest communities was examined. The moss vegetation on the soil of the forest communities which is forming only synusia is described.--Copyright 1973, Biological Abstracts, Inc.

OBSERVATIONS AND ANALYSIS OF BOTTOM TURBID LAYERS ON THE OREGON CONTINENTAL SHELF,
Oregon State Univ., Corvallis. School of Oceanography.
P. D. Komar, L. D. Kulm, and J. C. Harlett.
Journal of Geology, Vol 82, No 1, p 104-111, January 1974. 3 fig, 16 ref. USGS Contracts 14-08-001-10766, -11941, -12187 NSF Grant GA-32122.

Descriptors: *Turbidity currents, *Continental shelf, *Oregon, *Sediment transport, Suspended load, Littoral drift, Density currents, *Bottom sediments.

Turbid layers were observed on the Oregon continental shelf. These turbid layers are confined to valleys or swales, flowing around topographic highs. They are probably initiated by water currents associated with surface and internal tides, wind-driven currents, and by sediment stirring due to surface wave activity. A velocity maximum is found within 2 m of the bottom, the velocity decreasing both toward the bottom due to bottom drag and upward in the water column. This near-bottom velocity maximum is produced by the flow of a turbid layer whose highest density core is within approximately 2 m of the bottom. The maximum velocity is approximately 20 cm/sec, but unreasonably high sediment concentrations would be required to generate this velocity. Alternatively, the velocity maximum could be produced by a density flow of 3-5 cm/sec superimposed on a normal water current of about 15 cm/sec; these concentrations and currents are reasonable for the Oregon shelf. Sedimentation rates off Oregon are highest on the lower continental slope and within submarine canyons, where they are several times higher than the adjacent upper continental slope. These slope deposits may be derived from turbid layer transport from the continental shelf. (Knapp-USGS)

A DERIVATION OF THE HYDRAULIC GEOMETRY OF STEADY-STATE CHANNELS FROM CONSERVATION PRINCIPLES AND SEDIMENT TRANSPORT LAWS,
University of Western Ontario, London. Dept. of Geography.
T. R. Smith.
Journal of Geology, Vol 82, No 1, p 98-104, January 1974. 1 fig, 5 ref.

Descriptors: *Channel morphology, *Sediment transport, Erosion, Sedimentation, Alluvial channels, Discharge(Water), Slopes, Velocity.

It is possible to build an analytical model of channel growth using necessary conditions for the existence of a river channel of finite width; namely, that sediment mass is conserved, that the channel form is sufficient to transport the water, and that the channel form is sufficient to transport the total load of sediment, using reasonable approximations to laws of sediment transport. The following geometry is derived: channel width varies as the 0.6 power of Q, channel depth varies as the 0.3 power of Q, stream velocity varies as the 0.1 power of Q, and water slope varies as the 0.2 power of Q, where Q is the total stream discharge. INVESTIGATION OF THE SEDIMENTS AND POTENTIAL MANGANESE NODULE RESOURCES OF GREEN BAY, WISCONSIN,
Wisconsin Univ., Madison. Geo-Environmental and Mineral Resources Program.
J. R. Moore, R. P. Meyer, and C. L. Morgan.
Wisconsin University Sea Grant Program Report WIS-SG-73-218, 1973. 144 p, 52 ref.

Descriptors: *Lake Michigan, *Wisconsin, *Bottom sediments, *Manganese, Mineralogy, Sedimentology, Bays, Sampling, Chemical precipitation.
Identifiers: *Green Bay(Wisc), Manganese nodules.

A comprehensive survey was made of the sediments, sub-lake geologic structures, and manganese nodule resources of Green Bay, Wisconsin. A low-grade manganese resource in the form of small nodules (1.5 to 10.0 mm in diameter) was identified and mapped. While the manganese content varies from 4.4% to 16.0% by weight, the nodules in themselves are of potential economic value due to their high specific surface area and possible use in catalysis and chemical adsorption applications. The Mn-rich nodules are largely confined to two sites in the middle bay area, and the largest nodules--potentially useful in adsorption processes--are confined to the area around Sturgeon Bay. A fairly strong correlation was found between Mn and Mg, Sr, and Ba. The Green Bay sands are predominantly quartzose and feldspathic with low concentration of carbonate minerals. (Knapp-USGS)

EVOLUTION OF MEANDER LOOPS,
Washington Univ., St Louis, Mo. Dept. of Earth Sciences.
J. C. Brice.
Geological Society of America Bulletin, Vol 85, No 4, p 581-586, April 1974. 6 fig, 15 ref.

Descriptors: *Meanders, *Stream erosion, *Channel morphology, Geomorphology, Sediment transport, Alluvial channels, Terrain analysis, Aerial photography.

The evolution of the meanders on reaches of 10 alluvial streams in the United States was reconstructed. A scheme for the evolution and classification of meander loops was derived from a study of the meandering pattern of 125 alluvial streams. In the main evolutionary trend, a low symmetrical arc of approximately constant curvature tends to increase in height but decrease in radius as it grows. When its length exceeds its radius, the arc is termed a simple symmetrical meander loop. A simple loop becomes asymmetrical by the growth on its perimeter of a second arc of constant curvature, which is commonly tangent to the first and curved toward the same side of the stream. A simple loop becomes compound when a second arc on its perimeter has developed into a loop. Four main categories of loops (simple symmetrical, simple asymmetrical, compound symmetrical, and compound asymmetrical) and about 16 form types are proposed. The compound loops are regarded as aberrant forms of indefinite radius and length, but the meandering patterns can be analyzed into simple loops whose properties can be measured and treated statistically. (Knapp-USGS)

SEDIMENT DISTRIBUTION IN A BEACH RIDGE COMPLEX AND ITS APPLICATION TO ARTIFICIAL BEACH REPLENISHMENT,
Geological Survey, Urbana, Ill.
G. S. Fraser, and N. C. Hester.
Environmental Geology Note 67, March 1974. 26 p, 20 fig, 1 tab, 17 ref.

Descriptors: *Beach erosion, *Lake Michigan, *Illinois, *Erosion control, Coastal engineering, Shore protection.

Severe erosion of much of the beach ridge complex is occurring along the Illinois shore of Lake Michigan east of Zion and Waukegan. One proposed method for solving the problem involves replenishing the eroded shore, either by filling or feeding. The material supplied should match that now found on the shore, and the material must be available in sufficient quantities nearby to make the project economically possible. The sand body along the Illinois shore is approximately 7 miles long and 2.5 miles wide, including a subaqueous platform 1.5 miles wide, and it is as much as 35 feet thick, The subaqueous portion consists of an offshore segment of fine to very fine sand and a nearshore area where sand and granules occur. The shore material ranges from medium-sized sand to pebbles. West of the shore, medium-sized sands are found in dunes and on eolian sand plains. Material similar to that currently being deposited on the shore is available in sufficient quantity for use in a replenishment program. (Knapp-USGS)
W74-07666

INFLUENCE OF OLDER RELIEF ON THE LOCATION OF SAND WAVES IN A PART OF THE SOUTHERN NORTH SEA,
British Petroleum Co. Ltd., Sunbury-on-Thames (England). Research Centre.
V. N. D. Caston, and A. H. Stride.
Estuarine and Coastal Marine Science, Vol 1, No. 4, p 379-386, October 1973. 4 fig, 1 plate, 20 ref.

Descriptors: *Sand waves, *Sounding, *Atlantic Ocean, Surveys, Sediment transport, Ocean currents, Tides.
Identifiers: *North Sea.

A field of large sand waves occupies much of the southern bight of the North Sea. The large sand waves occur as narrow tongues up to about 11.5 km long by 3.5 km broad, which lie between low, northerly-trending ridges presumed to be of Pleistocene age. Evidence of the growth of a new sand wave implies an effective localized movement of the boundary of 1,450 m to the north. (Knapp-USGS)
W74-07676

THE ROLE OF SEDIMENT GRADATION ON CHANNEL ARMORING,
Georgia Inst. of Tech., Atlanta. Environmental Resources Center.
W. C. Little, and P. G. Mayer.
Available from the National Technical Information Service as PB-232 164, $9.25 in paper copy, $1.45 in microfiche. Report No ERC-0672, May 1972, 104 p, 34 fig, 20 tab, 21 ref, 1 append.

Descriptors: *Channel erosion, Stream erosion, Scour, Channel morphology, *Stream stabilization, Erosion control, *Sediment transport.
Identifiers: *Channel armoring.

The effects of sediment gradation on channel armoring were systematically investigated. A geometric mean diameter of 1.0 mm was used for sediments with geometric standard deviations of 1.12, 1.50, 2.00, 2.50, and 3.00 mm. These five mixtures of crushed quartz were each placed in a flume, and depths and flows were kept constant to induce armoring. The armour was considered stable when the sediment transport rate dropped to less than one percent of the initial rate. The surface layer of particles was then removed by the wax method and the distribution of the armored particles determined. An empirical equation was developed relating the properties of the original and armored sediment distributions to the flow properties. The geometric mean diameter of the armored material is calculated from flow conditions and sediment properties. Criterion was also developed to determine if a sediment bed will armor for given sediment and flow properties. With the broadly graded materials where channel armoring occurred, the bed degraded uniformly along its length. For uniform materials, little armoring could be induced, and the bed degraded more at the entrance and less at the outlet end resulting in a reduced bed slope. Armoring of the surface had no significant change on the average bed shear stress throughout the armoring process. After an 'armor coat' had developed, sediment transport continued at a low rate for a long time. This transport was by scour of fine material 'hiding' in the wake or zone of separation of the large particles. (James-Georgia Tech)

SEDIMENT TRANSPORT BY STREAMS IN THE UPPER COLUMBIA RIVER BASIN, WASHINGTON, MAY 1969-JUNE 1971,
Geological Survey, Tacoma, Wash.
L. M. Nelson.
Water-Resources Investigations 39-73, 1974. 69 p, 11 fig, 22 tab, 12 ref.

Descriptors: *Sediment transport, *Columbia River, *Washington, *Sediment yield, Sediment discharge, Suspended load, Bed load, Land use, Soil erosion.
Identifiers: Columbia Plateau(Wash), Columbia River basin.

Sediment transport by streams in the upper Columbia River basin of eastern Washington was studied from 1969 to 1971. In the mountainous areas snowmelt transports most of the sediment during April through June. In the lower, semiarid parts of the basin most of the sediment is transported when warm rain falls on extensive accumulations of snow. During the 1970 and 1971 water years the measured suspended-sediment concentrations ranged from less than 1 mg per liter in many streams to more than 200,000 mg per liter in Providence Coulee. The estimated long-term annual suspended-sediment yields range from less than 10 tons per square mile in many basins to more than 500 tons per square mile in Providence Coulee. Man's activities have caused only a slight increase in the magnitude of sediment discharge to the Columbia River. Although cultivation has initiated a large increase in erosion on the Columbia Plateau, the sediment transport by streams has not increased greatly, because there is little surface runoff on the plateau to transport soils to streams. (Knapp-USGS)
W74-07911

PATTERNS OF WATER FLOW AND SEDIMENT DISPERSION ADJACENT TO AN ERODING BARRIER ISLAND,
Skidaway Inst. of Oceanography, Savannah, Ga.
G. F. Oertel.
Georgia Marine Science Center, Skidaway Island, Technical Report Series No 73-9, January 1974. 35 p, 19 fig, 2 tab, 9 ref.

Descriptors: *Sediment transport, *Tides, Littoral drift, *Georgia, Currents(Water), Sands, Bottom sediments, Beaches, Continental shelf.
Identifiers: *Tybee Island(Ga).

Hydrography and sediment transport were studied adjacent to Tybee Island, Georgia, to illustrate the role of tidal currents and residual currents in producing sediment transport patterns. Onshore currents associated with the flooding tide are the important mechanisms of sediment transport toward the Savannah River entrance. At two stations, there was a net flow of water in one direction and a potential net transport of sediment in the opposite direction. (Knapp-USGS)
W74-07920

DELIMITATION OF WEATHERING ZONES IN THE FIORD AREA OF EASTERN BAFFIN ISLAND, CANADA,
Colorado University, Boulder. Inst. of Arctic and Alpine Research.
S. J. Boyer, and D. R. Pheasant.
Geological Society of America Bulletin, Vol 85, No 5, p 805-810, May 1974. 5 fig, 8 tab, 10 ref. NSF Grants GA-20883 and GA-10992.

Descriptors: *Weathering, *Arctic, *Soil formation, *Canada, Statistical methods, *Distribution patterns, Mineralogy, Fjords.
Identifiers: *Baffin Island(Canada).

Three weathering zones are delimited near Maktak and Narpaing Fiord, Baffin Island. Detailed sampling of weathering characteristics in Maktak Fiord and subsequent use of character analysis and discriminant analysis techniques supports the tri-zonal classification. The best combination of weathering characteristics for use in statistical delimination of weathering zones was tested by multiple stepwise discriminant analysis procedures. Weathering zones appear to have a regional distribution. The zones are stratigraphic units that can be used as a framework upon which a late Cenozoic history of the Cumberland Peninsula and perhaps eastern Baffin Island could be constructed. (Knapp-USGS)

RANGER SUBMARINE SLIDE, NORTHERN SEBASTIAN VIZCAINO BAY, BAJA CALIFORNIA, MEXICO,
Minnesota Univ., Minneapolis. Dept. of Geology and Geophysics.
W. R. Normark.
Geological Society of America Bulletin, Vol 85, No 5, p 781-784, May 1974. 5 fig, 1 tab, 16 ref.

Descriptors: *Landslides, *Mass wasting, *Sediment transport, *Mexico, Continental shelf, Bottom sediments.
Identifiers: *Baja California, *Submarine landslides.

Ranger submarine slide, on the upper continental slope of the Pacific margin of Baja California, Mexico, covers more than 300 sq km. The slide involves partially indurated, late Pliocene and younger hemipelagic muds which moved down a 3 deg slope in late Pleistocene time. A detailed bathymetric survey of the surface of sliding and slide sheet shows that the sediments, which were as much as 125 m thick, moved down a gently folded, disconformable surface on probable Miocene sedimentary rock. The slide was probably initiated by earthquakes occurring within the Sebastian Vizcaino Bay region. (Knapp-USGS)

URANIUM, THORIUM, AND LEAD CONCENTRATIONS IN THREE SILICATE STANDARDS AND A METHOD OF LEAD ISOTOPIC ANALYSIS,
Geological Survey, Denver, Colo.
M. Tatsumoto, R. J. Knight, and M. H. Delevaux.
Professional Paper 800-D, p D111-D115, 1972. 5 tab, 16 ref.

Descriptors: *Isotope fractionation, *Heavy metals, *Rocks, *Standards, Analytical techniques, Chemical analysis, Lead, Thorium, Uranium, Basalts, Minerology, Samples, Laboratory tests, Measurements, Evaluation.

Lead, uranium and thorium concentrations in U.S. Geological Survey rock standards, BCR-1 (basalt) and AGV-1 (andesite) and in a basalt standard distributed by the National Aeronautics and Space Administration, were determined by the isotope dilution procedure. Concentrations were 1.73 ppm U, 5.99 ppm Th and 13.56 ppm Pb in BCR-1; 1.96 ppm U, 6.27 ppm Th and 36.53 ppm Pb in AGV-1; and 1.87 ppm U, 6.42 ppm Th and 5.13 ppm Pb in the NASA basalt. A comparison of lead contents for BCR-1 and the origional split sample indicated that the standard was contaminated by lead; however, homogeneity of the sample was established and variation of the concentration was less than 1%. A new technique for isotopic analysis of lead, the silica gel-phosphate method, was tested for analytical uncertainties. The lead isotopic composition for BCR-1 obtained by the method using double-spike fractionation correction is Pb 206/Pb 204 = 18.794, Pb 207/Pb 204 = 15.610, and Pb 208/Pb 204 = 38.660. (Jerome-Vanderbilt)
W74-07947

AN INSTRUMENTAL TECHNIQUE FOR THE DETERMINATION OF SUB-MICROGRAM CONCENTRATIONS OF MERCURY IN SOILS, ROCKS, AND GAS,
Geological Survey, Denver, Colo.
W. W. Vaughn, and J. H. McCarthy, Jr.
Professional Paper 501-D, Geological Survey Research, p D123-D127, 1964. 3 fig, 2 tab, 5 ref.

Descriptors: *Instrumentation, *Mercury, *Geological surveys, *On-site investigations, Soil investigations, Metals, Gold, Analytical techniques, Rocks, Gases, Sampling, Testing, Geochemistry.
Identifiers: *Atomic absorption spectroscopy, Sensitivity, Accuracy.

In the technique described and evaluated, detection of mercury is based on the principle of atomic absorption. An analog signal, produced when mercury vapor absorbs ultra-violet light, is converted to digital form and calibrated to mercury concentration. Interferences are eliminated by selectively trapping the mercury on gold. The lower limit of sensitivity, using a 1-gram sample, is 5 parts per billion. A model of the instrument mounted in a station wagon has been tested successfully in the field. (Olesziewicz-Vanderbilt)

IRON AND ASSOCIATED TRACE MINERAL PROBLEMS IN MAN AND ANIMALS,
Food and Drug Administration, Washington, D.C. Div. of Nutrition
J. C. Fritz
Geological Society of America Bulletin, Vol 83, p 805-812, March, 1972, 5 tab, 51 ref.

Descriptors: *Iron, *Trace elements, *Human pathology, *Nutrient requirements, Animal pathology, Foods, Diets, Hazards, Livestock, Farms, Nutrients, Public health, Deficient elements.
Identifiers: Anemia, Iron deficiency

There is a high incidence of iron-deficiency anemia in the United States and throughout the world. The prevalence is high in adult women and infants because of their greater needs for iron. The typical human diet furnishes less than 6 mg iron per 1,000 kcal and does not meet the current recommended dietary allowance for critical groups because so much of the iron in whole, raw foodstuffs is removed in processing. Farm animals fare better because they receive fractions removed from human foods. A few livestock groups, notably baby pigs, do need supplemental iron. The cereal enrichment program failed to alleviate human anemia because of reduced consumption of cereals and because poorly utilized sources of supplemental iron were employed. The source of supplemental iron had more influence on bio-availability than did other diet components. It is recommended that the level of iron be increased in enriched cereals, that milk and other foods be fortified with iron, and that iron sources with good bioavailability be used in the fortification program. (Oleszkiewicz-Vanderbilt)

EGETATION AND SOIL RELATIONSHIPS IN OUTHERN BEAUFORT COUNTY, NORTH AROLINA,
rganisation for Tropical Studies, San Jose (Costa ica).
. S. Hartshorn.
Elisha Mitchell Sci Soc. Vol 88, No 4, p 226-238. 972, Illus.
dentifiers: Acer-Rubrum, Bitterlich, Drainage, agus-Grandifolia, Hardwoods, Liquidambar-tyraciflua, Liriodendron-Tulipifera, *North arolina(Beaufort County), Nyssa-Sylvatica-Var-iflora,inus-Palustris, Pinus-Taeda, Quercus-lba, *Soil analysis, *Physiochemical analysis, Forest stands, *Vegetation.

nalyses of vegetation and soils in 27 forest stands n southern Beaufort County, North Carolina were ıade. The Bitterlich variable plot radius method vas used to sample relatively undistrubed stands. lants in the shrub and herbaceous layers were ampled by square quadrat. Samples of the redominant soil type in each stand were sub-ected to several physical and chemical analyses. exture and lack of drainage were determined to e the dominant soil features determining vegeta-on patterns. As a result of the marked influence f texture and drainage on vegetation and the resence of large areas of disturbed forest and lantations, vegetation patterns were developed or 3 soil families. The clayey, mixed, thermic amily and the fine-loamy, mixed, thermic family iffer only slightly in texture and have Pinus aeda, Liquidambar styraciflua and Liriodendron ulipifera as predominant trees. In addition, Fagus randifolia, Quercus alba and other mesic species re important on the better-drained sites, while Nyssa sylvatica var. biflora and Acer rubrum are mportant on the wetter sites. A strinkingly dif-erent vegetation pattern occurs on the siliceous, hermic family associated with the Suffolk Scrap, Pleistocene shoreline. P. taeda or P. palustris ominates the better-drained sites. A seepage zone n both flanks of the sand ridge is dominated by vergreen bays: Persea borbonia, Gordonia la-ianthus and Magnolia virginiana. Four vegetation ypes are recognized: open pine, evergreen bay, wamp forest and pine-mixed hardwood (which vas further differentiated into 3 phases: white ak, ravine slope and sweet gum-swamp tupelo).--opyright 1973, Biological Abstracts, Inc.

COASTAL VEGETATION OF DELAWARE,
Delaware Univ., Newark. Coll. of Marine Studies.
V. Klemas, F. C. Daiber, D. S. Bartlett, O. W. Crichton, and A. O. Fornes.
Available from the National Technical Informa-ion Service as COM-73-11537, $3.00 in paper opy, $1.45 in microfiche. Sea Grant Program Re-ort DEL-SG-15-73, June 1973. 29 p, 4 fig, 7 ref.

Descriptors: *Mapping, *Wetlands, *Coasts, Delaware, *Vegetation, Remote sensing, Aerial hotography, Marshes, Swamps, Estuaries, Bays, Lagoons, Environment, Ecology, Planning, Land nanagement.

Delaware's coastal wetlands were mapped as part f an evaluation of the relative value of different arcels of marsh and the settling of priorities for se of these marshes. The mapping approach re-ied heavily on aerial photography and multispec-ral analysis, utilizing conventional ground recon-naissance only to aid and check the photoin-terpretation. Coastal wetlands of the type found along the entire East Coast of the United States are well suited to remote sensing techniques, particularly multispectral analysis. The uniform flatness of marsh topography eliminates variations in reflectance due to sloping surfaces and shadows. The most common marsh plant species are few in number, thus simplifying photointerpretation. Environmental changes generally take place over large horizontal distances in the marsh; therefore zones of relatively uniform vegetation are usually large enough to be discernible even on very high altitude imagery. The major plant species are different enough in their morphologies to have distinct reflectance characteristics, particularly in the near-infrared portion of the spectrum. The net result is that multispectral imagery can be used to make detailed wetlands maps sowing vegetation growth patterns which are related to local environmental factors. The fifteen maps of Delaware's coastal zone which follow were prepared to show the dominant species or groups of species of vegetation present. (Knapp-USGS)

A SIMILARITY SOLUTION FOR STEADY-STATE GRAVITATIONAL CIRCULATION IN FJORDS,
Washington Univ., Seattle. Dept. of Oceanography.
D. F. Winter.
Estuarine and Coastal Marine Science, Vol 1, No 4, p 387-400, October 1973. 6 fig, 1 tab, 14 ref.

Descriptors: *Water circulation, *Fjords, Currents(Water), Estuarines, Stratified flow, Mathematical studies, Equations, Saline water intrusion, Path of pollutants, Convection, Density currents, *Washington, *Canada.
Identifiers: Hood Canal(Wash), Puget Sound(Wash), Knight Inlet(B.C.-Canada).

The dominant circulation mode in fjords which receive ample freshwater runoff is gravitational convection, which takes place primarily near the surface in a brackish phase with one or two current reversals. Approximate analytic expressions were obtained for the velocity components and the density distribution in a fjord segment where conditions for a similarity analysis are statisfied. The method is illustrated by applications to Hood Canal and the central basin of Puget Sound, Washington, and to Knight Inlet on the mainland coast of British Columbia, Canada. Comparisons of measured and computed salinity and velocity profiles indicate that the circulation patterns are reasonably well represented by the approximate solutions. The flow description given may be of use in studies of pollutant dispersal and biological production in fjords. (Knapp-USGS)

PLEISTOCENE-HOLOCENE SEDIMENTS INTERPRETED BY SEISMIC REFRACTION AND WASH-BORE SAMPLING, PLUM ISLAND-CASTLE NECK, MASS.,
Army Coastal Engineering Research Center, Fort Belvoir, Va.
E. G. Rhodes.
Technical Memorandum No. 40, July 1973. 75 p, 34 fig, 1 tab, 31 ref, 1 append.

Descriptors: Seismology, *Subsurface mapping, *Seismic studies, *Coasts, Marshes, Shores, Coastal structures, Islands, *Massachusetts, Sedimentation.
Identifiers: *Refraction seismology, *Wash-bore sampling, Barrier bar, Point bar, Estuaries, Pleistocene, Coastal environment, Barrier beach, Plum Island-Castle Neck(Mass).

Refraction seismology and the 'wash-bore' method of soil sampling were combined to define the geology and the three-dimensional geometry of the coastal environment near Plum Island - Castle Neck, Massachusetts. Although refraction seismology was successful in defining the geometry of the Pleistocene-bedrock interface, many of the problems inherent to the refraction technique were encountered. These problems, which generally led to ambiguous interpretations and poor data quality, included the occurrence of (1) a 'Blind zone,' (2) non-zero time intercepts, (3) severe interface geometries, and (4) apparent velocities. The appropriated field input and recording techniques necessary to minimize their unwanted effects are discussed. It was found that the bedrock topography was quite irregular and that it had played a dominant role in the geologic development of the coastal environment since the Pleistocene. Barrier islands were found to anchor on bedrock highs, while thick sequences of estuarine and marsh sediments accumulated in estuaries behind these barrier beaches. As sea level rose the estuarine and marsh sediments migrated landward behind the migrating barrier. (Martino-NWWA)

Descriptors: *Water circulation, *Bays, *Continental shelf, Model studies, *Florida, Winds, Currents(Water), Path of pollutants, Numerical analysis, Tides.

The steady-state circulation in a rectangular bay was studied numerically in a model assuming homogeneous water and vertical coasts. The competing influences of surface winds and longshore currents flowing by the open side of the bay and the effects of the bathymetry are emphasized. For a wind-stress field that does not vary along the coast but decays linearly inshore from the open side of the bay, the mass-transport stream function contours form a gyre rotating in the sense of the wind-stress curl. A uniform continental shelf slope distorts the gyre by creating depth variations that cause vortex stretching. Consequently, the streamlines become more packed to the right of the downslope direction. The nonlinearity tends to destroy symmetry by crowding streamlines in the direction of the induced current. The influence of large-scale ocean currents along the open side is normally confined to the outer half of the bay. When the wind is blowing against these currents, the influence of the wind creates two gyres, one at each inshore corner of the bay. (Knapp-USGS)

TIDAL CURRENTS AND ZIG-ZAG SAND SHOALS IN A WIDE ESTUARY ENTRANCE,
Old Dominion Univ., Norfolk Va. Inst. of Oceanography.
J. C. Ludwick.
Geological Society of America Bulletin, Vol 85, No 5, p 717-726, May 1974. 8 fig, 4 tab, 38 ref. ONR-GP Contract N00014-70-C-0083.

Descriptors: *Sediment transport, *Chesapeake Bay, Shoals, Sand bars, Shores, *Tides, *Currents(Water), Sedimentation, *Estuaries.

Zig-zag shoals extend from the north cape three-fourths of the distance to the south across the entrance of Chesapeake Bay. This line of shaols consists of oppositely opening sinuses, or parabolas, which are alternately ebb dominated and flood dominated. The shoals represent spit-building action in the presence of strong reversing tidal currents which are mutually evasive. Other shoals in the entrance are due to subaqueous levee building marginal to main channels. Still other shoals in the entrance are constructed when a flood-dominated channel intersects the ebb-directed path of net sediment transport; the interdicted sediment then is flushed landward to form a secondary shoal when spreading of the flood current occurs. At ebb strength, surface current speed ranges from 132 to 64 cm/sec; near-bottom speed ranges from 79 to 24 cm/sec. At flood strength, surface current speed ranges from 104 to 57 cm/sec; near-bottom speed ranges from 65 to 35 cm/sec. Near the bottom at more than half the stations, flood flow dominates over ebb flow in both peak speed and duration. At ebb strength, stress ranges from 185 to 13 dynes per sq cm. At flood strength, this stress ranges from 80 to 4 dynes per sq cm. Peak flows at all stations are competent to move bed sediment. Net transport of bed sediment usually is ebb directed. Prominent indentations, or sinuses, in the margins of shoals are strongly dominated by net sediment transport toward the closed end of a channel. (Knapp-USGS)

B. M. Brown, and E. L. Ray.
U. S. Patent No 3,789,993, 5 p, 1 fig, 2 tab, 5 ref; Official Gazette of the United States Patent Office, Vol 919, p 161, February 5, 1974.

Descriptors: *Patents, *Reverse osmosis, *Membranes, *Desalination, Water treatment, Water quality control.
Identifiers: Cellulose acetate, Formic acid.

The asymmetric cellulose ester reverse osmosis membrane is characterized by having only one active surface which can selectively exclude from passage under applied pressure dissolved sodium chloride ions. It has an integral porous substructure adjacent to the active surface with a substructure flux under 600 psi pressure of at least about 10,000 gallons of water per square foot per day. The membrane has 36 to about 41 percent combined acetyl and at least about one percent combined formyl and a porosity of at least 70 percent. (Sinha-OEIS)

METHOD AND EQUIPMENT FOR DESALINATION OF LIQUIDS,
Mannesmann A.G., Duesseldorf (West Germany). (Assignee)
H. Schug.
U. S. Patent No 3,796,320, 5 p, 3 fig, 8 ref; Official Gazette of the United States Patent Office, Vol 920, No 2, p 393, March 12, 1974.

Descriptors: *Patents, *Desalination, *Filtration, *Water treatment, *Water purification, Water quality control, Ion exchange.

Liquids are desalinated in equipment from which filter material is continuously withdrawn, regenerated and mixed with the raw, saline liquid prior to charging the filter. The regenerated filter material may circulate through a post desalinated filter prior to recycling into the principal filter. Liquid to be desalinated is continuously contacted by fresh, regenerated ion exchange material and exhausted material is discharged from the filter on a continuous basis. The series connection or

ascading of two filters permits use of completely esh and regenerated ion exchange material in the nal and more critical desalination stage. The pre-esalinating filter is subdivided into an upper and wer chamber. Inflow of raw saline liquid is ixed with regenerated ion exchange material. he latter is flushed against the divider. Partially esalinated liquid is forced through nozzles in the ivider. Separate drainage systems below and bove the nozzle plate discharge desalinated or artially desalinated liquid from the filter con-ainer. (Sinha-OEIS)

COMMERCIAL DESALTING PLANT DATA AND ANALYSIS, VOLUMES I-VI,
OSS Engineers, Inc., Ft. Lauderdale, Fla.
C. D. Hornburg, R. E. Bailie, O. J. Morin, and W. J. Suratt.
Available from the National Technical Information Service as PB-226 808 SET/AS; $27.00 in paper copy, $1.45 in microfiche. Office of Saline Water, Reports INT-OSW-RDPR-74-906 thru 911, 1973. 1057 p, 181 fig, 106 tab, 43 ref.

Descriptors: *Desalination plants, *Data collections, Equipment, Failures, *Design, *Operating costs, Corrosion, *Corrosion control, *Waste water treatment, *Maintenance, Economics, Evaporators, Flash distillation, Sea water, Chemical analysis, Water utilization, Waste disposal, Water costs, Iron, Copper.
Identifiers: Operating experience, Virgin Island plants, Key West plant, Nassau plant.

A 6-volume report on commercial plant operating data and experiences. Separate volumes cover the following plants: 1.0 mgd, St. Croix; 1.0 mgd and 2.5 mgd, St. Thomas, 2.62 mgd, Key West; and 2.4 mgd, Nassau. Each volume includes background information covering water demand growth and plant history; design data, including flowsheets and layouts; reports on operational tests, visual inspections and eddy current testing of tubes; performance data and analysis for 3-year period; operating staff and their duties; documentation of material failures and corrosion of plant components; discussions of operating problems, including boilers, sea water supply, fouling and corrosion control problems; economic evaluations, including production cost analysis for a 3-year period; and steam allocation methods for dual-purpose plants. Each volume includes recommendations on modifications, improvements, and procedural changes. The first volume summarizes and compares the 5 plants giving insight into actual operating experiences. A separate section of Volume I contains chemical analysis of effluents from the plants. Emphasis was placed on quantities of iron and copper being discharged. (OSW)

THE POTENTIAL OF DESALTING FOR INDUSTRIAL WATER SUPPLIES IN NORTHEASTERN WYOMING,
R. L. Streeter.
Available from the National Technical Information Service as PB-226 649/AS; $15.50 in paper copy, $1.45 in microfiche. Office of Saline Water Report INT-OSW-74-904, June 1973. 281 p, 21 fig, 21 tab, 61 ref. (Prepared for Wyoming State Engineer's Office). OSW Contract 14-30-2975.

Descriptors: *Desalination, Desalination plants, *Water supply, Water utilization, Water costs, *Wyoming, *Industrial water, Membrane processes, *Planning, *Feasibility studies, Energy, Coals.

Under the Wyoming Water Planning Program, various water and resources studies have been made of N.E. Wyoming. This report supplements that program. The area has great future industrial potential because of its coal deposits which are estimated at 95 billion tons of mapped reserves. This is one of the most arid parts of the state and, hence, water is a key to development. Hence, the State of Wyoming entered into a cooperative agreement with OSW to conduct a reconnaissance-level desalting of brackish waters to augment the meager water supplies. The objectives of the study were to identify potential industrial applications, assess available water supplies, and prepare conceptual designs of water systems for identified applications and prepare reconnaissance-level costs for the total system, whether desalting was required or not. A location was assumed for the coal plant (power or conversion). For the plants, five potential groundwaters and six potential surface waters were evaluated. Reverse osmosis and electrodialysis were the desalting processes considered. It is concluded that in the long term importation of water will be required to fully develop the coal. For the short term, it will be necessary to depend on supplies available within the area. The report states that desalting must and will play an important role in this development. (OSW)
W74-08062

IMPROVING MUNICIPAL WATER SUPPLIES IN ARIZONA BY DESALTING,
Arizona Water Commission, Phoenix.
Available from the National Technical Information Service as PB-226 708/AS; $13.50 in paper copy, $1.45 in microfiche. Office of Saline Water, Report INT-OSW-74-919, March 1973. 212 p, 25 fig, 45 tab, 23 ref, 4 append. OSW Contract 14-30-2728.

Descriptors: *Desalination, Desalination plants, *Water supply, *Municipal water, Water costs, *Arizona, *Planning, Brackish water, *Feasibility studies.

This report examines the technical and economic feasibility of applying desalting technology to provide improved quality water supply to meet the future needs of selected communities in Arizona. Eight communities were selected for study as a representative cross-section of communities throughout the State with varying degrees of water quality, with the objective that the economic feasibility demonstrated would be applicable to other communities in the state with like water quality supplies. The selected communities were Apache Junction, Casa Grande, Gila Bend, Joseph City, Kearney, Parker, Safford, and Somerton. The study indicates that many Arizona communities could conceivably save money through the use of desalting. The study indicates that benefits to a community may exceed costs for desalting where water supplies exceed 1,000 ppm TDS, where the population exceeds 2,000 people and where the average family income equals or exceeds that for the State. It was concluded that a community which now has a satisfactory water supply but may need a future growth supply can economically justify desalting future saline sources which may be available. Processes found applicable to the various waters were ion exchange, electrodialysis, and reverse osmosis. (OSW)
W74-08063

POTENTIAL CONTRIBUTION OF DESALTING SYSTEFS TO MUNICIPAL WATER QUALITY AND SUPPLY IN SOUTH DAKOTA.
Banner (J.T.) and Associates, Inc., Brookings, S. Dak.
Available from the National Technical Information Service as PB-226 719/AS; $21.50 in paper copy, $1.45 in microfiche. Office of Saline Water, Report INT-OSW-74-918, March 1973. 390 p, 67 fig, 73 tab, 40 ref, 13 append. OSW Contract 14-30-2804.

Descriptors: *Desalination, Desalination plants, *Water supply, *Municipal water, Water costs, Benefits, *South Dakota, *Planning, Brackish water, Computer programs, *Feasibility studies.

This was a feasibility study performed under a cooperative agreement between the South Dakota Department of Health and the Office of Saline Water to determine the potential for desalting in South Dakota. Ten communities were selected for study from among 150 communities in South Dakota having water supplies of more than 1,000 ppm TDS. These communities were Bryant, Dupree, Eureka, Gettysburg, Lemmon, Madison, Miller, Parkston, Platte and Redfield. Following OSW cost calculating procedures and criteria, desalting processes were selected for each location based on the most favorable costs. Economic benefits to the community were assessed and a description provided of each desalting process. For the electrodialysis process, cost comparisons are made with the electrodialysis plant at Webster, S.D. To facilitate calculations, a computer program was established and the program is detailed in an appendix. (OSW)

THE FUTURE ROLE OF DESALTING IN NEVADA,
Southwest Research Inst., San Antonio, Tex.
W. L. Prehn.
Available from the National Technical Information Service as PB-226 760/AS; $14.25 in paper copy, $1.45 in microfiche. Office of Saline Water, Report INT-OSW-74-920, April 30, 1973. 234 p, 41 fig, 41 tab, 209 ref, 11 append. Prepared for Nevada Division of Water Resources. OSW Contract 14-30-2846.

Descriptors: *Desalination, Desalination plants, *Water supply, Municipal water, Water costs, *Nevada, *Planning, Brackish water, Geothermal studies, Water sources, *Feasibility studies.

An important aspect of the on-going development of the State Water Plan is the exploration of alternative sources of water supply. The purpose of this report is to determine the feasibility of desalting in Nevada and review the potential for its future applications. Detailed cost information is presented on ten representative Nevada water supply situations. Five of these studies dealt with community or area water needs: Fallon, Gabbs, Hawthorne, the Logandale/Moapa Valley, and Mesquite/Bunkerville. Of the five remaining sites, three were oriented toward agricultural or wildlife management needs: a dual-purpose desalt/nuclear power plant at Carson Sink to provide water for an entire valley's needs; a plant at Fallon to provide municipal water for the city and surrounding area as well as for Stillwater wildlife management area needs; and reduction of the level of dissolved solids in Walker Lake in order to maintain a safe environment for the fishery. In addition, one study situation dealt with development of a geothermal resource, and the final study was comprised of a series of evaluations of small desalt plants suitable for use in ranch-type applications. For four of the sites, conventional sources appeared more economical. Opportunities are indicated for developing the geothermal resources and ranch type units. The appropriate process was selected for each site with consideration given to reverse osmosis, electrodialysis, ion exchange, distillation and freezing. (OSW)
W74-08065

PRELIMINARY STUDY TO INVESTIGATE FEASIBILITY OF DESALTING GROUND WATER IN NORTH DAKOTA,
North Dakota State Water Commission, Bismarck.
T. C. Owens, A. M. Cooley, G. O. Fossum, and David Schaaf.
Available from the National Technical Information Service as PB-225 976; $10.75 in paper copy, $1.45 in microfiche. Office of Saline Water, Report INT-OSW-73-902, August 23, 1973. 163 p, 24 fig, 26 tab. OSW Contract 14-30-2875.

Descriptors: Costs, Brackish water, Conjunctive use, Municipal water, *North Dakota, *Desalination processes, Water supply, *Groundwater, *Economic feasibility, *Water quality, *Feasibility studies.

Groundwater in North Dakota is used by a large number of communities and by most of the farms in the state as a source of water. The quality of the water used varies widely, but very few community supplies satisfy the criteria established by the U.S. Public Health Service. The quality of water available for domestic uses on farms is probably lower because of the need for a well in close proximity to the farm buildings. The technical and economic feasibility of desalting groundwater for domestic, agricultural, and industrial purposes has been studied. The costs of desalting groundwater by a number of methods to provide municipal water for eleven communities were estimated. In addition, the availability of desalting units suitable for use by individual farms and homes was investigated. (OSW)

HIGH TEMPERATURE ELECTRODIALYSIS, PHASE I,
Ionics, Inc., Watertown, Mass.
F. B. Leitz.
Available from the National Technical Information Service as PB-226 825/AS; $4.00 in paper copy, $1.45 in microfiche. Phase I thru III available as PB-226 824-SET/AS, $11.00. Office of Saline Water, Report INT-OSW-RDPR-74-912, January 1974. 87 p, 16 fig, 23 tab. OSW Contract 14-01-0001-1158.

Descriptors: *Desalination, *Electrodialysis, *Ion transport, *Membrane processes, Membranes, Saline water, Brackish water, Plastics.
Identifiers: Polystyrene, Hittorf transport numbers.

An investigation was made of the properties of organic ion-transfer membranes at room temperature and at temperatures approaching the normal boiling point of water. Five parameters were measured: electrical resistance, Hittorf transport number, electroosmotic water transport, water permeation and salt diffusion. The membranes evaluated were of crosslinked polystyrene which had been polymerized around a fibrous material in the presence of a soluble nonpolymerizing agent and subsequently chemically reacted to form fixed positive or negative sites. Standard (22 mil) commercial membranes and thin (4 to 6 mil) experimental membranes were evaluated. (See also W74-08068 thru W74-08070) (OSW)
W74-08067

HIGH TEMPERATURE ELECTRODIALYSIS, PHASE II,
Ionics, Inc., Watertown, Mass.
F. B. Leitz, and H. I. Viklund.
Available from the National Technical Information Service as PB-226 826/AS; $4.00 in paper copy, $1.45 in microfiche. Office of Saline Water, Report INT-OSW-74-913, January 1974. 94 p, 19 fig, 20 tab, 3 ref. OSW Contract 14-01-0001-1158.

Descriptors: *Desalination, Desalination processes, *Electrodialysis, Membranes, Saline water, Sea water, *Ion transport, *Membrane process.
Identifiers: Polycarbonate, Polysulfone, Nylon, Hittorf transport numbers.

The economic evaluation of high temperature electrodialysis showed a large parameter region in which high temperature operation would be substantially cheaper than source temperature operation. This would be true in the case where the required number of stages is large or where cheap heat is available. Standard resins perhaps with a lower water content are suitable for high temperature application. Techniques and materials were developed for lamination of a high temperature thin spacer. The synthetic Webster, S D , plant water used in this program did not present any particular hazards at high temperature compared to sodium chloride solutions or synthetic desalted sea water. (See also W74-08067) (OSW)
W74-08068

HIGH TEMPERATURE ELECTRODIALYSIS, PHASE III,
Ionics, Inc., Watertown, Mass.
F. B. Leitz, M. A. Accomazzo, and H. I. Viklund.
Available from the National Technical Information Service as PB-226 827/AS; $5.00 in paper copy, $1.45 in microfiche. Office of Saline Water, Report INT-OSW-74-914, January 1974. 156 pages, 3 references, 29 tables, 42 figures. OSW Contract 14-01-0001-2322.

Descriptors: *Desalination, *Electrodialysis, Ion transport, *Membrane processes, Membranes, Saline water, Brackish water, *Design, Testing.
Identifiers: Economic analysis.

The program covered the development and testing of a thin spacer (20 mil), which could be utilized with thin membranes (6 mil) in a high temperature (160 deg - 180 deg F) field test unit. Results indicated that a low cut per pass (20-30%) is desirable for good area utilization. Hence, for a thin spacer, this requires a fairly short flow path. The relationship between (CN/N)o and velocity plus the relationship between pressure drop and velocity were used to predict the performance of a unit as a function of total pressure drop. The Phase III report summarizes the following: (1) analytical studies, (2) experimental results from short term and long term tests, (3) design and testing of a thin spacer for utilization in high temperature electrodialysis, and (4) design of a field test unit. (See also W74-08067) (OSW)
W74-08069

HIGH TEMPERATURE ELECTRODIALYSIS, PHASE IV,
Ionics, Inc., Watertown, Mass.
M. A. Accomazzo, F. B. Leitz, H. I. Viklund, and R. L. Sampson.
Available from the National Technical Information Service as PB-227 280/AS; $6.50 in paper copy, $1.45 in microfiche. Office of Saline Water, Report INT-OSW-73-915, November 1973. 70 p, 17 fig, 18 tab, 12 ref. OSW Contract 14-30-2963.

Descriptors: *Desalination, Desalination processes, *Electrodialysis, Pilot plants, *Membrane processes, *Design, Testing, *Cost comparisons.
Identifiers: Spacers.

The overall objective of this program is the development of improved electrodialysis technology. On previous contracts the effect and applicability of two process improvements: high temperature operation and use of thinner than standard components were determined. The technical and economic aspects of these developments are discussed. The present program has dealt with the design, fabrication, testing and specification of a means of manufacture of thin spacers and membranes for use at temperatures up to 80 deg C. Satisfactory means of manufacture were developed for both spacers and membranes. Design equations and empirical relationships for the new components are presented. Performance and economics are predicted for plants of 3780 cubic meters/day (1 MGD) and two lower capacities. An economic comparison is made between these plants and conventional plants in sea water service. These estimates indicate that in this capacity range, electrodialysis can be competitive with distillation for sea water desalting. (See also W74-08067) (OSW)

WATER IN THE OKANOGAN RIVER BASIN, WASHINGTON,
Geological Survey, Tacoma, Wash.
K. L. Walters.
Washington State Department of Ecology, (Olympia), Water-supply Bulletin 34, 1974. 136 p, 35 fig, 1 plate, 8 tab.

Descriptors: *Water resources, *Washington, *Surface waters, *Groundwater, Water balance, Water utilization, Water yield, Water quality, Hydrologic data, Data collections.
Identifiers: *Okanogan River Basin(Wash).

Water information is presented for use in developing, protecting, and managing the water resources of the Okanogan River basin of Washington. Based on records compiled from 1930 through 1969, the estimated mean annual precipitation over the study area is 17.5 inches. About 2.1 million acre-feet of water enters the study area each year from Canada as streamflow. Alluvial and glacial sedimentary deposits ranging from a few feet to several hundred feet thick contain the main volume of groundwater in the basin, with sand and gravel layers constituting the principal water-bearing zones. Most of the sedimentary deposits are underlain by poorly permeable bedrock. In some places, the sedimentary deposits are thick and consist almost entirely of sand and gravel containing large quantities of groundwater. In other

aces, the deposits are thin or impermeable, and old little water. Streamflow accounts for most of ie water leaving the basin. The discharge veraged about 2.2 million acre-feet per year in ater years 1959-69. Evapotranspiration loss exeeds the average annual precipitation for most irgated crops. Water in the Okanogan and Similameen Rivers is of the calcium-magnesium bicarbonate type, and is suitable for most common sed. Some lakes contain water of about the same uality as the streams that feed them. However, ie closed-basin lakes contain saline water. roundwater generally is more mineralized and iore variable in chemical composition than the urface water, but in the Okanogan River basin it till is suitable for most common uses. Most of the ertile land of the basin that can be readily supplied from surface-water sources is being irrigated. Knapp-USGS)

SOME CLIMATOLOGICAL CHARACTERISTICS OF SEEDABLE UPSLOPE CLOUD SYSTEMS IN THE HIGH PLAINS,
National Oceanic and Atmospheric Administration, Boulder, Colo. Environmental Research Labs.
C. D. Whiteman.
Technical Report 268-APCL 27, March 1973. 43 p, 32 fig, 3 tab, 6 ref, append.

Descriptors: *Meteorology, *Mathematical models, *Cloud seeding, Weather modification, Cloud physics, Winds, Climatology, Great Plains.

A model to describe seeding opportunity was developed for shallow wintertime cloud systems in the High Plains of the United States. The model uses rawinsonde network data for the High Plains to determine climatological characteristics of seedable upslope cloud systems. Included are annual, monthly, and diurnal frequencies of occurrence of seedable cloud systems as well as characteristics of the cloud systems themselves. Such characteristics include cloud thicknesses, heights of cloud tops and bases, lapse rates, cloud top temperatures, upslope wind components, and the relative frequencies of precipitating and non-precipitating cloud systems. 3C. Use Of Water Of Impaired Quality

THE SIGNIFICANCE OF RAINFALL ON SALT AND SODIUM ACCUMULATIONS UNDER IRRIGATION,
South Dakota State Univ., Brookings. Dept. of Plant Science.
L. O. Fine.
Available NTIS as PB-232 165, microfiche $1.45. South Dakota Water Resources Institute, Brookings, Completion Report, March 1974. 18 p, 1 fig, 6 tab. OWRR A-020-SDAK(1). 14-01-0001-1862.

Descriptors: *Irrigation effects, *Rainfall, Water quality standards, Salts, *Salinity, *Sodium, Sodium compounds, adsorption, Cations, Anions.
Identifiers: Residual sodium carbonate, *Sodium adsorption ratio.

Since irrigation water quality standards were established for use under arid conditions, it has been rationalized that they may be too stringent where natural precipitation may have a modifying effect on either or both of the sodium and salinity hazards. The rationalization was studied in a 17 inch rainfall belt using groundwaters with electrical conductivities of about 2000 micromhos per cm at 25C and having sodium adsorption ratio (SAR) values of about 10. The results determined from the field and plot experiments indicate that there is no justification for raising tolerable sodium adsorption ratio levels in irrigation water used in this rainfall belt; rather it showed that there may be reason for lowering them from three to four units. (Wiersma-South Dakota State)

LEACHING REQUIREMENT STUDIES: SENSITIVITY OF ALFALFA TO SALINITY OF IRRIGATION AND DRAINAGE WATERS,
Agricultural Research Service, Riverside. Salinity Lab.
L. Bernstein, and L. E. Francois.
Soil Science Society of America Proceedings, Vol 37, No 6, p 931-943, November-December, 1973. 4 fig, 10 tab, 17 ref.

Descriptors: *Alfalfa, *Lysimeters, *Leaching, *Water quality control, Irrigation operation and management, Irrigation effects, Salt balance, Drainage water, Investigations, *Salts, Chlorides, Soil profiles, Water requirements.

Alfalfa was grown in 0.6 by 1.5 meter greenhouse lysimeters and irrigated with two waters of EC 1 and 2 mmho/cm prepared by adding equivalent amounts of NaCl and CaCl2 to a 0.4 mmho/cm tap water. Yields showed relatively little effect of leaching fraction (LF) within the limits consistent with steady-state salt balance for suction-drained lysimeters but decreased 26 percent at the lowest LF for gravity-drained lysimeters. Cessation of leaching or reduction of LF to levels requiring drainage water salinities for salt balance at steady state to exceed 35 mmho/cm eventually reduced yields. Yield response appears to be related to the calculated mean salinity against which water was absorbed, which is influenced more by the salinity of the irrigation water than by the salinity of the drainage water. LF in the broad range that permitted nearly maximum growth had essentially no effect on water requirement or on Na and Cl contents of the harvested alfalfa. Increasing irrigation water salinity in the range 0.4 to 2 mmho/cm consistently increased plant Na and Cl contents, but had no effect on water requirement. Implications of the demonstrated lower leaching requirements for irrigation management and drainage and for water quality assessment are discussed. (Sandoski-Franklin)

EFFECTS OF COLORADO RIVER WATER QUALITY AND SUPPLY ON IRRIGATED AGRICULTURE,
Economic Research Service, Davis, Calif.
C. V. Moore, H. H. Snyder, and P. Sun.
Water Resources Research, Vol 10, No 2, p 137-144, April 1974. 7 fig, 2 tab, 4 equ, 8 ref.

Descriptors: *Irrigation water, *Water supply, *Saline water, *Water quality, Agriculture, Estimating, Linear programming, Regional analysis, Water demand, Irrigated land, Optimization, Colorado River, Farms, Size, Soils, Prices, Water rates, Mathematical models, Systems analysis, *California.
Identifiers: *Imperial Valley(Calif.), *Crop yield, Demand elasticity, Cost structure, Electroconductivity, Demand schedule.

Considered are salination effects upon irrigation water supplies in the Imperial Valley of California. A production function relating irrigated crop yield to the quality and supply of irrigation water is developed. The objective function is to maximize the return to land and water. Described is a linear programming, farm model constructed to estimate the probable effects of various levels of supply and quality. A regional programming model, an aggregation of three different size individual farms, reflects the distribution of soils and the cost structure representative of farm size. Given the production function, cropping pattern and irrigation management can be optimized using the linear programming models. Use of the regional model for estimating the demand schedule for irrigation water is discussed. Results show that the adverse effects of saline irrigation water can be offset by applying additional water over and above that required for plant transpiration. A degradation of the water supply in the Colorado River at Imperial Dam from the existing level of electroconductivity to the projected level for the year 2000 would cause a decline in the return to land and water of about 14%. Because of the relatively elastic demand for irrigation water at the current price, any attempt to ration water through a market price mechanism would have no effect, unless water rates were about double their current levels. (Bell-Cornell)

INFLUENCE OF TEMPERATURE AND MOISTURE STRESS FROM SODIUM CHLORIDE SALINIZATION ON OKRA EMERGENCE,
Florida Univ., Dover. Agricultural Research Center.
E. E. Albregts, and C. M. Howard.
Agronomy Journal, Vol 65, No 5, p 836-837, September-October, 1973. 1 tab, 7 ref.

Descriptors: *Soil moisture, *Stress, *Salinity, *Crop response, Crop production.
Identifiers: *Okra.

Okra seed were planted in a Scranton fine sand soil at 20, 25, and 30 C with six levels of moisture stress, 1.18, 1.75, 2.41, 4.33, 5.90, and 10.84 atm. Moisture stress was obtained by varying the moisture level in the soil and by NaCl salinization. The emergence rate and fresh plant weight decreased as the temperature decreased and soil moisture stress increased. The optimum temperature and soil moisture stress for total and earliness of emergence was 25 to 30 C and 1.18 atm. No emergence occurred at 10.84 atm of moisture stress and total emergence was reduced only at 5.90 atm and 20 C. (Skogerboe-Colorado State)
W74-08073

TOLERANCE OF RICE (ORYZA SATIVA L.) TO SALT DURING BOOT, FLOWERING, AND GRAIN-FILLING STAGES,
Agricultural Research Service, Brawley, Calif. Imperial Valley Conservation Research Center.
M. T. Kaddah, W. F. Lehman, and F. E. Robinson.

Agronomy Journal, Vol 65, No 5, p 845-847, September-October, 1973. 1 fig, 14 ref.

Descriptors: *Salinity, *Crop response, *Rice, Soil moisture, Stress, *Crop production.

The effect of soil salinity on rice development at the boot, flowering, and grain-filling stages was tested for three varieties transplanted in a greenhouse. The irrigation waters used had electrical conductivities of 1.4, 3.0, and 6.0 mmho/cm at 25C. The last two irrigation waters were introduced at the three stages of development and used until harvest. Weights of grain and straw and lengths of plants and panicles did not differ significantly between the treatments, indicating that rice is not sensitive to salt after the boot stage. (Skogerboe-Colorado State)
W74-08080

EFFECTS OF DRAINAGE AND ORGANIC AMENDMENTS ON THE RECLAMATION OF A SODIC SOIL CROPPED WITH RICE,
California Univ., Riverside. Dept. of Soil Science and Agricultural Engineering.
B. S. Puttaswamygowda, E. F. Wallihan, and P. F. Pratt.
Soil Science Society of America Proceedings, Vol 37, No 4, p 621-625, July-August, 1973. 6 fig, 3 tab, 22 ref.

Descriptors: *Salinity, *Sodium, *Alkaline soils, Soil chemistry, Organic matter, *Drainage, Soil physics, *Rice, Crop response.

In a greenhouse pot culture study, effects of drainage and organic amendments on the reclamation of a saline sodic soil material under submerged conditions were studied with and without the presence of a rice crip. In drained soils, application of dairy manure, sugar, straw or straw + CaC12 increased the rate of drainage and decreased the electric conductivity and exchangeable sodium percentage. Without drainage, treatments were less effective. Crop growth hastened the reclamation process by increasing the volume of water drained and the concentration of Ca + Mg in the drainage water. Drainage had a significant effect on the vegetative growth of rice, percentage of earbearing tillers, and straw and grain yield. In the undrained condition, organic soil amendments, except dairy manure, adversely affected the straw and grain yield. (Skogerboe-Colorado State)
W74-08087

RELATIONSHIP BETWEEN SOIL OXYGEN DIFFUSION RATE AND YIELD OF OATS IN A COASTAL ALLUVIAL SOIL AT CRITICAL SALINITY LEVEL,
Department of Agriculture, Frederiction (New Brunswick). Research Station.
G. R. Saini.
Agronomy Journal, Vol 65, No 5, p 841-842, September-October, 1973. 1 fig, 1 tab, 7 ref.

Descriptors: *Salinity, *Oxygenation, Root distribution, Root zone, Root development, *Oats, Crop production, Alluvium, Soil physical properties.
Identifiers: Oxygen diffusion rate.

The effect of improved soil physical conditions, as characterized by oxygen diffusion rate (ODR), on the growth of oats at the critical soil salinity level (ECe = 5.0 mmhos cm-1) is reported. In a coastal alluvial soil at critical salinity level, the yield of oats increased from 0.55 g/pot to 10.88 g/pot as ODR increased from 7.3 x 10 to the minus 8th power grams per cm squared per minute to 31.0 x 10 to the minus 8th power grams per cm squared per minute. The root elongation of the plant also appeared to be related to ODR. (Skogerboe-Colorado State)

EFFECT OF TEMPERATURE AND PLANT WATER STRESS ON PHOTOSYNTHESIS DIFFUSION RESISTANCE, AND LEAF WATER POTENTIAL IN SPRING WHEAT,
Agricultural Research Service, Mandan, N.Dak. Northern Great Plains Research Center.
A. B. Frank, J. F. Power, and W. O. Willis.
Agronomy Journal, Vol 65, No 5, p 777-780, September-October, 1973. 4 fig, 3 tab, 19 ref.

Descriptors: *Soil moisture, *Crop response, *Wheat, Stress, Soil-water-plant relationships, Droughts, Salinity, *Photosynthesis, *Temperature.

A study was conducted in growth chambers to determine the combined effects of temperature and soil water supply on the development of plant water stress and subsequent recovery in spring wheat. Measurements were made of leaf water potential, photosynthesis, and stomatal diffusion resistance on the fifth leaf at tillering and the flag leaf at heading, flowering, and grain-filling growth stages for plants grown at 10, 18, and 27C. Stomatal closure of stressed plants was affected by both leaf position and age. Closure occurred at -13, -13, and -15 bars leaf water potential at tillering and at -18, -17, and -26 bars at heading for 10, 18, and 27C, respectively. As the flag leaf matured, stomata closed at progressively lower leaf water potential. In nonstressed check plants, temperature greatly influenced leaf water potentials. (Skogerboe-Colorado State)

EFFECT OF ESTABLISHMENT METHOD, VARIETY, AND SEEDING RATE ON THE PRODUCTION AND QUALITY OF ALFALFA UNDER DRYLAND AND IRRIGATION,
South Dakota State Univ., Brookings. Dept. of Plant Science.
L. H. Hansen, and C. R. Krueger.
Agronomy Journal, Vol 65, No 5, p 755-759, September-October, 1973. 1 fig, 3 tab, 10 ref.

Descriptors: *Alfalfa, *Planting management, *Crop response, Management, Irrigation, Dry farming, *Crop production.

This study was designed to compare alternative establishment methods and determine the influence of alfalfa varieties and seeding rates on dry matter and crude protein production and herbage quality. The relationship between alfalfa plant density and root+crown weight and their effect on forage yield were evaluated. Pure stands of alfalfa were established by four methods: (1) no herbicide or companion crop (check); (2) a pre-plant herbicide, S-ethyl dipropylthiocarbamate (EPTC); (3) a companion crop of oats harvested for forage; and (4) a companion crop of oats harvested for grain. Three alfalfa varieties were evaluated: T3X-8 hybrid, 'Saranac,' and 'Vernal.' Four alfalfa seeding rates were compared: 4.5, 9.0, 13.5, and 17.9 kg/ha of pure-live-seed. Studies were conducted at three locations in South Dakota. Experiments at Gayville and Norbeck were under dryland conditions and at Brookings under irrigation. (Skogerboe-Colorado State)

EFFECT OF NARROW TRENCHING IN HARLINGEN CLAY SOIL ON PLANT GROWTH, ROOTING DEPTH, AND SALINITY,
Agricultural Research Service, Weslaco, Tex. Soil and Water Conservation Research Div.
M. D. Heilman, and C. L. Gonzalez.
Agronomy Journal, Vol 65, No 5, p 816-819, September-October, 1973. 5 fig, 4 tab, 12 ref.

Descriptors: *Soil texture, *Salinity, *Crop response, Cultivation, *Cotton, Root zone, Root distribution, *Clays.

Narrow, backfilled trenches (61 and 102 cm deep) were tested in a Harlingen clay soil as a management technique to increase rooting depth and volume of soil available to roots. Cotton was planted directly over the trenches each year for 3 years. Cotton yields were significantly increased by trenching during 1971 and 1972. Yields of 815, 995, 1163, and 1018 kg/ha were obtained during 1972 for check, 61-cm trench soil-backfilled, 61-cm trench, soil-vermiculite backfilled, and 102-cm trench soil-backfilled, respectively. Root penetration and distribution was increased from 60 cm for conventional tillage to 122 cm for 102-cm deep trenches. An average of 83% of roots for conventional tillage were in surface 30 cm as compared with 43% of 102-cm trench. Trenching increased water infiltration rates, decreased soil bulk density in trenches, and increased soil root volume available to plants. (Skogerboe-Colorado State)
W74-08078

SUGARBEET RESPONSE TO IRRIGATION AS MEASURED WITH GROWTH SENSORS,
Southwestern Great Plains Research Center, Bushland, Tex.
W. C. Johnson, and R. G. Davis.
Agronomy Journal, Vol 65, No 5, p 789-794, September-October, 1973. 7 fig, 5 ref.

Descriptors: *Soil moisture, *Crop response, *Sugar beets, Irrigation, Irrigation practices, Growth rates.

The continuous growth records of two typical irrigated sugarbeet roots were compared at Bushland, Texas, during a 48-day period, June 25 to August 11, 1970, in a record dry season when there was little interference from rainfall on the effect of irrigation on root growth. The roots received 10 cm of irrigation water on staggered dates so that the growth record of a root not being irrigated at a particular time might be used to interpret the growth response to irrigation of the second root. The soil was slowly permeable, requiring an average of about 3 days for free water to disappear after an irrigation. A slow-growth period of about 3 days in length occurred after each irrigation during which time the irrigated root grew more slowly than the unirrigated root. When moisture stress was not extreme at the time of irrigation, a temporary decrease in growth rate actually occurred after irrigation. (Skogerboe-Colorado State)

VARIATIONS IN POTASSIUM CONTENT OF ALFALFA GROWN ON PSEUDOGLEY SOIL DEPENDING ON MINERAL FERTILIZING, (IN SERBO-CREATION),
Zagreb Univ. (Yugoslavia). Zavod Opcu Proizvode Bilja.
A. Butorac.
Poljopr Znan Smotra. 27. p 59-68, 1971. (English summary).
Identifiers: *Alfalfa, Calcium, *Fertilization, *minerals, Nutrients, *Potassium, *Pseudogley soil, Soil moisture, Absorption.

The K content in alfalfa is primarily influenced by K fertilizing and by the quantities of K available in the soil. The uptake of K depends also on soil moisture, and accordingly, on climatic characteristics, hence the secondary occurrence of considerable aberrations in certain cuttings. K fertilizing, in view of its accumulation in alfalfa, should be applied in accordance with the plant needs and stability of production. An excessive concentration of K is possible which, due to its antagonism to Ca, may lower the nutritive value of alfalfa. The removal of K from the soil in alfalfa yields, especially in case of luxury consumption, is high.--Copyright 1973, Biological Abstracts, Inc.

'HILL-TOP IRRIGATION,' A NEW SYSTEM FOR EARLY SWEETPOTATO PLANTING, (IN SPANISH),
Universidad Nacional de Tucuman (Argentina). Facultad de Agronomia y Zootecnica.
F. Folquer, L. R. Roncedo, and E. R. Rossi.
Rev Agron Noroeste Argent. Vol 9, No 1, p 145-164. 1972. Illus. English summary.
Identifiers: *Irrigation practices, Soils, *Sweetpotato, *Crop production, *Argentina(Tucuman).

Water distribution occurred along a small furrow made on top of the ridges, and it is called top irrigation. Low water requirement, (80,000 l/ha/irrigation) was observed. This system prevented soil compaction of the ridges, in contrast with usual irrigation methods. High yields (52,000 kg/ha) were obtained in both trials. Early planting was possible, even in lower rainfall periods. This top irrigation system was applicable during the first 2 mo. of plant growth. The limit in the top irrigation period under the conditions of Tucuman (Argentina) coincided with the initiation of the rainy season.--Copyright 1973, Biological Abstracts, Inc.

STUDIES ON THE INFLUENCE OF IRRIGATION AND DIFFERENT DOSES OF N, P AND K ON THE FLOWERING BEHAVIOUR AND ABSORPTION OF NUTRIENT ELEMENTS IN MUSKMELON (CUCUMIS MELO L.),
Punjab Agricultural Univ., Ludhiana (India). Dept. of Horticulture.
N. S. Jassal, K. S. Nandpuri, and K. S. Randhawa.
J Res Punjab Agric Univ. Vol 9, No 2, p 242-247. 1972.
Identifiers: Absorption, Cucumis-Melo, Doses, *Irrigation, *Muskmelon, *Nitrogen, Nutrients, *Phosphorus, *Potassium, *Fertilization.

The treatments consisted of 2 irrigation intervals, i.e., 1 wk (I1) and 2 wk (I2) and the levels of fertilizers were N at 0, 55, 110 and 165, P and K each a 0 and 55 kg/ha. The highest number of flowers wa obtained with I2 and with the maximum dose of I at 165 kg/ha and the lowest with I1, with no N Treatments of N 165 and 110 produced the max imum percentage of female flowers. The applica tion of N 165 and P 55 significantly increased th total number of flowers as well as the percentag of female flowers and was followed by the applica tion of N 110 K 55. The interaction effects of P an K were not significant. The percentage of N i plant tissue varied from 1.51 (where no fertilize was added) to 2.93 where N, P and K were adde at the rates of 165, 55 and 55 kg/ha, respectively. DROUGHT HARDENING IN ONIONS: I. IN FLUENCE OF PRESOWING TREATMENTS ON VEGETATIVE BEHAVIOR AND YIELD, (I SPANISH),
Universidad Nacional de Cuyo, Medoz (Argentina). Instituto de Biologia Vegetal.
B. R. De Lis, J. Vega, and J. B. Cavagnaro.
Phyton Rev Int Bot Exp. Vol 301 No 1/2, p 77-88 1972, Illus. (English summary).
Identifiers: Allium-Cepa, Ammonium, Chlorides Chloroethyltrimethyl, *Drought re sistance(Plants), Growth, Leaf, *Onions *Presowing treatment, Vegetation, *Crop produc tion.

The effect of presowing treatments on the onio plant (Allium cepa L., cv. Valenciana Sintetic No. 1) related to drought hardening at the critica period of water need was studied. Treatment were: distilled water; boric acid, 200 ppm; CCC 2 chloroethyl trimethylammonium chloride 200 ppm; control. There is a critical period of wate requirement at the beginning of bulb formation and the presowing treatment with water effective ly induced drought hardening at such period Drought applied on the control and boric acid treatment caused a significant decrease (35%) i yield, with the CCC and water treatments were no affected, as compared with the control withou drought. Moreover, presowing treatment with water, when submitted to drought, yielded 50% more than the control with drought. It was the only treatment that fulfilled the 2 requirements for hardening: it yielded as much as the contro without drought, and it yielded significantly more than the control with drought. Growth of the plants showed that the immediate effect of wate stress was to decrease the number of leaves (recovered later), while the bulb diameter and fresh weight decreased afterwards. At harvest time the bulbs from plants subjected to drought had a lower fresh weight. Since the leaves that ap pear after the drought period are responsible for bulb growth, it was inferred that their ability to furnish their assimilates to the bulb was impaired. The presowing treatment with water produces on the leaves of the onion plant a qualitative change which counteracts the detrimental effect of drought on bulb growth. DROUGHT HARDENING IN ONIONS: II. ANALYSIS OF GROWTH, (IN SPANISH),
Universidad National de Cuyo, Mendoza (Argentia). Instituto de Biologia Vegetal.
J. Vega, B. R. De Lis, and J. B. Cavagnaro.
Phyton Rev Int Bot Exp. Vol 30, No 1/2, p 89-107. 1972, Illus. (English summary).
Identifiers: Allium-Cepa, Ammonium, Chloride, Chloroethyltrimethyl, *Drought re sistance(Plants), *Growth onion plants, Leaf, *Onions, Reduced, Stress, Water, Weight.

After water stress, the absolute dry weight of leaves and bulb of the onion plant (Allium cepa L.) decreased. During the drought period, RGR relative growth rate, RLwGR relative weight growth rate, NAR net assimilation rate and the number of

aves decreased significantly; but this effect dis-
ppeared later on. Leaf area was never affected by
rought; but the changes in SLA specific leaf area
owed, at the end of the drought period, that
aves contained less dry weight on a leaf area
asis. The increase in LAR leaf area ratio calcu-
ted for the same period indicated that the whole
ant had less dry weight on a leaf area basis. NAR
the bulb was reduced after the water stress. The
wer yield was accounted for by a decreased
owth of the photosynthetic system. Drought
oduced an irreversible damage on leaves which
evented them to finish their growth before the
lb's grand period of growth was initiated. The
ta of dry weight, leaf number, leaf area and
owth rate indices concerning the hardening
eatments showed that 8 wk after drought the
esowing treatment with CCC 2, chloroethyl
imethylammonium chloride showed the best
havior. At the preharvest period this was no
nger maintained. It was the presowing treatment
ith water which nullified the detrimental effects
drought on yield. (See also W74-08148)--Copy-

WATER RESOURCES OF LEHIGH COUNTY, PENNSYLVANIA,
Geological Survey, Harrisburg, Pa.
C. R. Wood, H. N. Flippo, Jr., J. B. Lescinsky, and J. L. Barker.
Pennsylvania Geological Survey, 4th Series, Water Resource Report 31, 1972. 263 p, 47 fig, 5 plate, 49 tab, 83 ref.

Descriptors: *Water resources, *Surface waters, *Groundwater, *Pennsylvania, Streamflow, Hydrogeology, Hydrologic data, Water yield, Water quality.
Identifiers: Lehigh County(Penn).

A study of Lehigh County, Pennsylvania, was made to determine how much water is available for man's use from streams and from the ground; the natural quality of this water and how man has affected its quality; how the relationships between streamflow and groundwater influence recreational use of the streams; and how flooding limits man's use of the land. Much of the county drains to the Lehigh River, both directly and by way of tributary streams. About 40% of the 58 million gallons of water used per day in Lehigh County in 1966 was surface water, and the remainder was groundwater. Pumpage of the Friedensville Mine and other activities of man have reduced the flow of Saucon Creek at Lanark. Most of the change in flow took place from 1955 through 1958. After 1958, the flow of Little Lehigh Creek near Allentown was 25% less than in the 1946-58 period. The frequent dryness above the confluence with Swabia Creek reflects an increase in channel seepage that was apparently caused by a change that took place within the aquifers of the Little Lehigh Creek basin in 1959. The cause of the change is unknown, but was probably due to increases in permeability in the carbonate rock aquifers underlying the basin resulting from the removal of debris from one or more major fractures. Most of the surface water used by industry in Lehigh County comes from the Lehigh River, and most of the surface water used for public supply comes from Little Lehigh Creek. With few exceptions, conventional treatment makes stream waters suitable for public supply and most industrial uses. Most groundwater occurs along joints, faults, and bedding planes. Most wells obtain water from several yielding zones. The number of yielding zones present in rocks decreases with depth. In the carbonate rocks, about 60 percent of the water-bearing zones in the upper 1,000 feet of rock occur within 350 feet of the land surface. Large quantities of ground water are available for industrial and public-supply use; at least 150 mgd could be pumped continuously from wells in Lehigh County. (Knapp-USGS)

Geological Survey, Washington, D.C.
M. W. Gaydos, J. E. Rogers, and R. P. Smith.
Available from GPO, Sup Doc, Washington, DC 20402 Price $3.15. Water -Supply Paper 1989, 1973. 74 p, 10 fig, 4 plate, 2 tab, 30 ref.

Descriptors: *Water resources, *Groundwater, *Surface waters, *Louisiana, Data collections, Hydrologic data, Water quality, Streamflow, Water supply.
Identifiers: *Little River basin(La).

The average flow of streams in the Little River basin of Louisiana is high, about 0.65 mgd per square mile, but many streams have little or no flow during parts of each year. Consequently, many streams are not dependable supply sources during the low-flow periods without storage. Streams in the southern part of the basin have sustained low flow and can be developed for municipal and small industrial supplies without storage. The Wilcox Group, the Sparta Sand, the Cockfield Formation, the Catahoula Sand, the Carnahan Bayou Member of the Fleming Formation, terrace deposits, and alluvial deposits contain freshwater in parts of the basin. Greatest development has been from the Sparta, which also has the greates potential for future development. Groundwater quality problems are local rather than basinwide. Flood damage in the basin is minor because the broad, flat flood plains are relatively undeveloped. (Knapp-USGS)

Descriptors: Methodology, *Stochastic processes, *Markov processes, Reservoir storage, *Model studies, *Optimization, *Mathematical models, *Reservoir operation, Evaluation, Inflow.
Identifiers: Poland, Moran model, Kaczmarek model.

A methodology is presented concerning utilization of stochastic storage models for determination of release control rules under reservoir operation

plans securing optimization of economic effects. These models allow for evaluation of the reservoir operation in case the operation plan under the form of the so-called storage volume transition probabilities matrix is already known. Such evaluation depends on the assumptions concerning the random properties of the reservoir inflow process. Moran's model is based on the assumption of the nonstationary cyclic random process with independent variables, while Kaczmarek's model is based on the assumption of the nonstationary cyclic lag-one Markov process. Investigations based on the empirical material recorded for the Polish rivers indicate that the process of mean monthly flows (reservoir inflows) comply with the assumptions made in the Kaczmarek's model. TRANSIT LOSSES AND TRAVEL TIMES FOR RESERVOIR RELEASES, UPPER ARKANSAS RIVER BASIN, COLORADO,
Geological Survey, Denver, Colo.
R. K. Livingston.
Colorado Water Resources Circular No 20, 1973. 39 p, 11 fig, 6 tab, 11 ref.

Descriptors: *Water loss, *Diverson losses, *Reservoir releases, Bank storage, Depression storage, Hydrograph analysis, Hydrographs, Evapotranspiration, Evaporation, *Colorado.
Identifiers: Transportation loss, *Arkansas River(Colo).

Factors influencing reservoir releases were analyzed for the upper reach of the Arkansas River in Colorado. The time of travel of releases from Twin Lakes Reservoir to Colorado Canal, a distance of 175 miles, ranges from 29 to 69 hours depending on the antecedent flow of the Arkansas River; travel time from Turquoise Lake is 4 1/2 hours more and travel time of releases from Clear Creek Reservoir is 1 1/2 hours less. At the Colorado Canal, the streamflow hydrographs resulting from upstream reservoir releases are modified by channel and bank storage, inadvertent diversions, and evapotranspiration. During an average reservoir release of about 450 cubic feet per second for about 12 days, the released water arriving at the Colorado Canal is reduced by about 7% due to bank storage, by about 8% due to inadvertent diversions, and by about 1% due to evaporation. All release water in channel storage arrives at the Colorado Canal headgate during the release recession soon enough to be diverted and does not cause a loss. Transpiration losses are assumed to be negligible. Total average transportation loss is 16%; it can vary from about 6% to 28% due to the antecedent river conditions, the amount and duration of the reservoir release, and the time of year the release occurs. Descriptors: *Brines, *Hydrogeology, *Desert Water supply, Water resources developmen Water yield, Mining.
Identifiers: *Chile(Rio Salado catchmen Atacama Desert.

The complex hydrogeology of brines from the origin in the andes to their emergence as springs the vicinity of El Salado, Chile, is described. T Rio Salado catchment is located in the southe Atacama Desert. The area is distinctly arid and groundwater reserves originating from loc recharge exist. To obtain water for a new copp ore processing plant, brines are being utilized. T long-term supply of brine will be adequate for t processing plant. A design for abstraction inco porating three filter drains with wooden pum housings was adopted to combat corrosion, incru tation and flood damage. (Knapp-USGS)

EARTHQUAKE DAMAGE COSTS IN TH DESIGN OF WATER RESOURCE SYSTEMS,
California Univ., Los Angeles. Dept. of Enginee ing Systems.
S. E. Jacobsen, M. Torabi, and P. P. Bansal.
Water Resources Research, Vol 10, No 2, p 17 182, April 1974. 2 fig, 7 tab, 8 ref.

Descriptors: Water distribution(Applied) *Earthquakes, *Damages, Costs, Evaluation Probability, *Planning, *Design, Optimization Methodology, Networks, Construction costs Faults(Geologic), Equations, Systems analysis Mathematical models, *California.
Identifiers: *Seismic regions, Design intensity *Cost minimization, Los Angeles(Calif.), San Fer nando Valley(Calif.), Sensitivity, Earthquake oc currences, Random variables, Seismic data.

A renewal theoretic cost model is developed fo evaluating expected future damage costs due t earthquakes for a segment of a water distributio system located in a large seismic region. Thes costs depend upon the intensity that the structur is designed to withstand. A probabilistic model fo the occurrences of earthquakes during a plannin

period in a region with several faults is used to obtain expected future damage costs as a function of design intensity. Damage cost, it is pointed out, depends upon what action is taken at the time of the damage. A numerical example using data obtained for the Los Angeles region is included to demonstrate the usefulness of the methodology; shown is how the least-cost design intensity for a structure at a given location can be easily calculated. The difficulties that arise in network systems problems are discussed. The analysis applies to individual links or arcs of a network. If the system problem is to design an entire water distribution network, subject to an overall budget constraint, then the sensitivity of costs to seismic parameters may greatly affect the optimal distribution of the budget to the various links of the system. Identifiers: *USSR.

In the work program of the Fourth Hydrologic Congress of the USSR considerable attention was given to problems relating to the study and evaluation of changes in hydrologic regime and water resources under the influence of man's economic activity. According to the character of this influence on hydrologic processes, the economic factors can be tentatively divided into 3 groups: (1) factors that operate in the channel network and that redistribute river runoff in time and area (reservoir construction and operation, large water withdrawals, diversions of flow, etc.); (2) factors that alter relations among water-balance items in watersheds (agricultural measures, agricultural afforestation measures, urbanization, drainage of waterlogged lands, etc.); and (3) a combination of factors which are responsible for both direct removal of water from channels and for transformation of water-balance (irrigation of arid lands). To consider the effects of the first group of factors on the hydrologic regime, it is necessary to have reliable and complete data on the volume of water withdrawals for economic needs and of the discharges of used water into the river network. Consideration of the remaining economic factors is more complex and requires detailed studies of fluctuations in climatic factors and of changes in water-balance and water-exchange items in the zone of aeration under natural and transformed water regimes. Problems of assessing changes in river runoff under influence of human economic activity are discussed in connection with problems relating to evaluation of the effects of irrigated agriculture and reservoir facilities on the country's water resources. According to calculations by water management agencies, approximately 90% of irretrievable water consumption in the country is presently expended on irrigation and evaporation from reservoirs. Journal of the Hydraulics Division, American Society of Civil Engineers, Vol 100, No HY5, Paper 10549, p 621-630, May 1974. 12 ref.

Descriptors: *Streamflow forecasting, *Runoff forecasting, Rainfall-runoff relationships, Mathematical models, Precipitation(Atmospheric), *River forecasting, Data processing, *Computer programs, *Model studies.
Identifiers: National Weather Service.

The National Weather Service River Forecast System methods and computer programs for efficient operational river forecasting are described. A computer program performs all steps to convert the basic precipitation data to areal means. A procedure and computer programs needed for calibrating the basic conceptual model to a large number of basins in a reasonable time are described. The basic conceptual model has wide applicability. The inclusion of a snow-pack model and additions to the channel-routing procedure planned for the near future will make the model applicable over nearly all of the United States. (Knapp-USGS)

AMELIORATIVE EFFECT OF FIELD SHELTERBELTS UNDER CONDITIONS IN THE URALS, (IN RUSSIAN),
L. S. Mochalkin.
Tr Ural Lesotekh Inst. 21. p 314-320, 1970.
Identifiers: *Cereal crops, Relative humidity, *Shelterbelts, Soil temperature, *USSR(Urals), Velocity, *Wind, Crop production.

The most effective protection proved to be the 2-5 fow field shelterbelts of open-permeable structure. The wind protective effect was manifest at a distance 25-30 times the height of the shelterbelt in the leeward side and 5 times the height in the windward side. Total reduction of wind velocity on the protected plot was 50-60%. On days with hot dry winds, air temperature in the inter-belt fields was lower than in open fields by 1-2 C. In fields with shelterbelts, the relative humidity of the air was higher by 4-5% on the average than in the open fields. The thickness of the snow cover in the Central Urals was 50-60 cm due to the protection by the shelterbelts; it was 12-30 cm in the open field. Soil humidity in inter-belt plots was, on the average, 3.5-4.1% higher than in the open fields. During the period of hot dry winds, soil temperature in fields with shelterbelt was lower by 1-1.5 deg., and during the days of cold winds it was higher by 1-5 deg. than in the open fields. In the southern part of the Urals in dry years, the additional yield of cereal crops in sheltered fields attains 710 kg/ha or 147.9%. Data are presented on the course of growth of the species in the shelterbelt. Recommendations are given for shelterbelt arrangement, taking into account the gradient of the plots, the soil types and other factors.--Copyright 1973, Biological Abstracts, Inc.

STUDIES OF RE-VEGETATION IN VEHICLE TRACKS IN SVALBARD. (IN NORWEGIAN),
O. Hjeljord.
Nor Polarinst Arbok. 1971. p 31-42, 1973. Illus. English summary.
Identifiers: Dryas, Erosion, *Grasses, Moss, *Norway(Svalbard), Soil, *Vegetation reestablishment, Vehicle tracks, *Soil moisture, Thawing.

A study was made of vegetation changes and erosion in vehicle tracks in Svalbard (Norway). Revegetation appeared to be particularly slow on dry soils. Fifty-yr-old tracks on Dryas heaths were still without significant plant growth. This is believed to be due to the delayed thawing and the increased soil moisture in the tracks. Tracks on wet land, however, appeared to regain their original vegetation rapidly, provided the tracks did not form deep trenches. Severe disturbance of the moss tundra of inland valleys caused the moss to be replaced by a pioneer community consisting of different species of grasses. Vehicle tracks on marine clay sediments are believed more likely to cause erosion than tracks on well-drained moraine ridges.--Copyright 1973, Biological Abstracts, Inc.

PLANNING A DOMESTIC GROUNDWATER SUPPLY SYSTEM,
Illinois State Water Survey, Urbana.
J. P. Gibb.

Survey Circular 116, 1973. 13 p, 4 fig, 8 ref, 2 append.

Descriptors: *Water wells, *Domestic water, *Illinois, *Groundwater, Water supply, Planning, Water yield, Water quality, Water pollution control, Water treatment, Potable water.

Basic information needed to plan and develop a domestic groundwater supply is presented. A logical step-by-step planning summary is outlined. Accepted and recommended methods for a prospective owner of a domestic well to determine his water requirements and to gather meaningful information for planning his supply are presented. Groundwater is used as the source for almost all individual farm and domestic water supply systems in Illinois. Approximately 88% of the state's public water supplies also use groundwater as a source of supply. Altogether, groundwater supplies serve about 3,700,000 persons in the state, or approximately 34% of the total population. (Knapp-USGS)

GEOLOGY AND WATER RESOURCES OF THE WHARTON TRACT AND THE MULLICA RIVER BASIN IN SOUTHERN NEW JERSEY,
Geological Survey, Trenton, N. J. Water Resources Div.
E. C. Rhodehamel.
New Jersey Division of Water Resources Special Report No 36, 1973. 58 p, 15 fig, 8 tab, 65 ref.

Descriptors: *Water resources, *Groundwater, *Surface waters, *Conjunctive use, *New Jersey, Sands, Hydrogeology, Water balance, Surface groundwater relationships.
Identifiers: *Mullica River(NJ), *Wharton Tract(NJ).

In order for the water resources of the Wharton Tract of New Jersey to be developed, the hydrology of the tract and the encompassing Mullica River basin were evaluated. The Wharton Tract is an area of 150 square miles located in the Mullica River basin in southern New Jersey's Pine Barrens region. The tract is a relatively flat, low-lying, generally sandy area containing shallowly incised streams. The larger streams are commonly bordered by swamps. The tract was pruchased by the State primarily as a water-supply preserve, and also for conservation and recreational purposes. Principal aquifers in the Wharton Tract and Mullica River basin are in the Kirkwood Formation of middle Miocene age, Cohansey Sand of Miocene, and Pliocene age, and in overlying hydraulically connected deposits of Quaternary age. Groundwater and surface water in the Mullica River basin are low in dissolved solids, generally less than 50 mg/liter. Iron concentrations are generally high, up to 49 mg/liter in groundwater and up to 7.1 mg/liter in the streams. The water is acidic. The Wharton Tract is well situated to support the growing water needs of nearby New Jersey communities. Maximum development of water can be achieved by conjunctive use of ground and surface water. During most of the year, some water would be withdrawn either directly from streams or from adjacent wells. During periods of low flow during summer or fall water would be pumped from wells farther from the streams. From analysis of flow-duration curves it is estimated that 70 mgd of water could be developed with minimal effect upon low flows in the half of the tract above the gaging stations on the Mullica and Batsto Rivers. The quantity available in the entire tract is greater, possibly in the order of 150 mgd. With augmentation of streamflow by pumping from groundwater, it is likely that considerably more water could be safely used on a perennial basis. (Knapp-USGS)

OPTIMUM DRILLING SITES FOR GROUNDWATER DEVELOPMENT ON THE EAST COAST OF LANAI ISLAND,
Hawaii Univ., Honolulu. Water Resources Research Center.
W. M. Adams, and R. D. Huber
Available from the National Technical Information Service as PB-232 155, $3.25 in paper copy, $1.45 in microfiche. Completion report, Technical report No 68, July 1973. 43 p, 9 fig, 3 tab, 11 ref. OWRR B-015-HI(7). 14-31-0001-3073.

Descriptors: *Sites, *Groundwater, Rainfall, Salinity, Temperature, Resistivity, Conductivity, Permeability, *Hawaii, *Drilling
Identifiers: Optimum sites, *Lanai Island(H.I.).

For a proposed reforestation of the canyon country of east Lanai, seedlings will be required. The seedlings could be grown in east Lanai preventing the stress of transplantation from a different environment, if an adequate source of high quality water were available. This study was designed to locate such a source; more specifically, to find optimal sites at which to drill for fresh water. Reconnaissance work in the field took place in July 1970. At 176 places along the eastern coastline, shallow observation wells were dug to the high-tide level during low tide. The temperature and salinity of the ground water there were measured. In most of the canyon gulches, electrical resistivity soundings of the Schlumberger configuration were made. Through analysis of the field data two sectors were identified on the eastern coast: the northern sector, from Federation Village to Lopa, and the southern sector, from Lopa to Naha. Evidence points to the southern sector as being the most promising region for drilling, and specific sites are suggested. However, while the southern sector is superior for the accumulation of ground water, its beach rock is more impermeable than that of the northern sector, hence the southern sector provides less favorable conditions for recharge of the water table. Thus the southern sector should be developed if a relatively small amount of high-quality ground water is desired from many holes closely spaced along a line--as for the irrigation of seedlings. Should a relatively larger amount of lower-quality ground water be preferred, exploitation of the northern sector would be appropriate.

Available from NTIS, Springfield, Va., as Rept No. UCRL-51484; $4.00 per copy, $1.45 microfiche. Report No. UCRL-51484, November 1973. 38 p, 29 fig, 2 tab, 3 ref.

Descriptors: *Natural gas, *Secondary recovery(Oil), *Nuclear explosions, *Well data, *Data collections, Geology, Strength, Yield strength, Properties, Measurement, Dispersion, Ground movement, Mass transfer, Seismic waves, Instrumentation.
Identifiers: *Spall data.

Project Rio Blanco was a joint government-industry experiment to stimulate a natural gas reservoir using nuclear explosives in a well bore. A major instrumentation program was undertaken for the Rio Blanco experiment using accelerometers and velocity gages buried at various depths below the ground surface and at various horizontal ranges from the emplacement well. The objective was to physically measure the depth and aerial extent of spall (tensile failure of the earth material). Data from each of the instrument stations are given, along with the appropriate integrated data for particle velocity and displacement, or just displacement. (Houser-ORNL)

MICROPOROSITY IN CARBONATE ROCKS,
Amoco Research Center, Tulsa, Okla.
E. D. Pittman.
American Association of Petroleum Geologists Bulletin, Vol 55, No 10, p 1873-1878, October 1971. 3 fig, 12 ref.

Descriptors: *Carbonate rocks, *Porosity, Pores, Pore water, Permeability.
Identifiers: *Micrite, *Microporosity, Aragonite, Calcite, Neomorphism.

Large pores in carbonate rocks hold and transmit fluids, whereas associated micropores may hold irreducible water; i.e., water not available for flow. Analysis of borehole logs of microporous carbonate rocks can result in misleadingly high calculated water saturations and possible bypassing of a potential oil or gas reservoir. Microporosity occurs in carbonate rocks that range from friable to well indurated. Intercrystalline micropores may be present in micrite and within ooids, pisolites, micrite intraclasts, pellets, and cryptocrystalline grains. Micropores in ancient rocks appear to result from (1) formation of micrite envelopes, (2) void space present after transition of aragonite to calcite, or (3) incipient weathering and dissolution. Aggrading neomorphism of micrite to microspar tends to destroy microporosity. (Staplin-NWWA)

Descriptors: *Conjunctive use, *Mathematical models, Dynamic programming, *Irrigation water, Groundwater, *Optimization, Water resources development, Reservoir operation, Costs, Canals.
Identifiers: *Pakistan(Indus River).

A mathematical model is presented as a tool for analysis and optimization of conjunctive use of surface water and groundwater resources of the Indus Basin in Pakistan. The size of the canal system, the surface reservoir, and the groundwater pumping facilities are calculated such that when the system is operated optimally, the capital, operation, and maintenance costs of meeting given irrigation water requirements are minimized. A mathematical model of the Marala Ravi link canal subsystem, which is uncoupled from other areas of the large, complex Indus Basin irrigation system, was developed. The mathematical programming problems is large scale and must be decomposed into subproblems and solved by dynamic programming. (Knapp-USGS)

Descriptors: *Surface runoff, *Urban runoff, *Urban hydrology, *Groundwater, *Runoff, *Evapotranspiration, Hydrologic budget, Hydrologic cycle, Hydrologic models, Computer models, Energy budget, Soil water, Water resources, Model studies, Watersheds(Basins), Small watersheds, Land use, Surface waters, On-site data collections, *Delaware.
Identifiers: New Castle County(Delaware), Wilmington(Delaware), Shellpot Creek(Delaware), Land use changes.

A model of surface runoff as a function of land surface characteristics in an urban residential area was developed from measured land surface characteristics, precipitation, and runoff data. Surface runoff from impervious surfaces feeding directly into drainage ways began after an initial extraction for wetting the surface of .03 inches (.08 inches after hot, sunny summer weather). Surface runoff from impervious surfaces draining onto lawns and gardens was counted as additional precipitation spread evenly over the vegetated surfaces. Surface runoff from vegetated surfaces was then estimated by the Soil Conservation Service's method for estimating storm runoff. The combined estimates for the different surface types corresponded closely with measured runoff (r=.996, s=.06 in., a=.01, b=1.04). The model was used to evaluated the effects of urbanization on other components of the hydrologic cycle by incorporation into a standard daily water budget run for Shellpot Creek Watershed, Wilmington, Delaware for 1954 to 1968. The application revealed a tripling of surface runoff, a one-half increase in total runoff, and a halving of both percolate to ground water and actual evapotranspiration as urbanized surface (residential use, 54 percent impervious surface) increased from 20 to 100 percent of the watershed area.

Identifiers: *Forests, *Hydrological studies, Minerals, Precipitation(Atmospheric), *Runoff, Publications.

Problems of variations of surface runoff in different forest growing zones on water-catchment basins are examined. The variations of the runoff depth as influenced by the forest cover percentage of water catchment basins, as well as the significance of clearcuttings for the runoff of atmospheric precipitation and the loss of mineral substances, are shown.--Copyright 1973, Biological Abstracts, Inc.

EFFECT OF THE STAND DENSITY OF WALNUT FORESTS ON SURFACE RUNOFF AND SOIL EROSION ON THE SPURS OF THE SOUTHWESTERN SLOPE OF THE DARVAZA RANGE, (IN RUSSIAN),
I. Dzhabarov.
Tr Tadzh Nauchno-Issled Inst Pochvoved. Vol 13, No 2, p 136-143. 1970.
Identifiers: *Erosion, *Forests(Stand density), Juglans-Regia, Range, Runoff, Slopes, Soils, USSR(Darvaza Range), *Walnut.

Ground soil conditions (soil texture and chemical composition), gradients, and degree of vegetation cover are described. In 1963, the surface runoff under stands of Juglans regia of 0.3 density was 30.4 m3/ha and the erosion of solid matter was 139 kg/ha. In walnut stands with a 0.6 density, there was almost no surface runoff (0.8 m3/ha), and no erosion was observed. On plots of natural herbaceous stands with a projection cover of 30%, surface runoff was 116.6m3/ha, erosion-121.5 kg/ha. In 1965 under stands with a 0.3 density, surface runoff was 16 m3/ha, erosion-34.1 kg/ha, and at a stand density of 0.6, surface runoff was 0.6 m3/ha and there was no erosion. Soil erosion on forestless areas is related to topographical features: grandients of 15-30 deg predominate on 71% of the territory investigated.--Copyright 1973, Biological Abstracts, Inc.

5A. Identification Of Pollutants

CARBON MEASUREMENTS IN WATER QUALITY MONITORING,
Minnesota Univ., Minneapolis. Dept. of Civil and Mineral Engineering.
W. J. Maier, and H. L. McConnell.
Journal Water Pollution Control Federation, V 46, No 4, p 623-633, April 1974. 3 fig, 5 tab, 25 re

Descriptors: *Organic matter, *Carbo *Biochemical oxygen demand, *Water quali Sampling, *Minnesota, Lakes, Rivers, Alkalini Instrumentation, *Monitoring.
Identifiers: Organic carbon

A commercially available instrument for the det mination of organic and inorganic carbon was u in a 1-year test program of water quality sampl in Minnesota. All natural waters contained s stantial concentrations of organic carbon, rang from 5 mg/liter in Lake Superior to 15 to 30 mg/ in the larger rivers. These concentrations creased in the downstream direction. Total orga carbon and biochemical oxygen demand were o weakly correlated, but total inorganic carbon w closely correlated with alkalinity. While presence of organic carbon may not in itself detrimental, it suggests the need for continuo surveillance and adequate treatment of water s plies. (Knapp-USGS)

QUALITY OF SURFACE WATER IN ILLINO 1966-1971,
Illinois State Water Survey, Urbana.
R. H. Harmeson, T. E. Larson, L. M. Henley, R A. Sinclair, and J. C. Neill.
Bulletin 56, 1973. 100 p, 2 fig, 8 tab.

Descriptors: *Water quality, *Surface wate *Illinois, Statistics, Water temperature, Turbidi Dissolved solids, Hardness(Water), Alkalini Nitrates, Manganese, Phosphates.

Surface water quality in 25 streams at 30 sampl locations in Illinois is summarized for a 5-y period from 1966 through 1971. Results of statis cal analyses are given with graphic summaries temperature, turbidity, total dissolved minera hardness, alkalinity, nitrate, and mangane Available data on phosphates are included in statistical analyses. Summaries of these data each sampling location, arranged alphabetically stream name, are accompanied by the tabulatio of mineral quality for the streams sampled, w available physical data. The analyses of wa quality present a representative picture of stre conditions during a particular sampling peri These data can serve as a base for comparison a evaluation of existing quality with manmade st dards that are often established arbitrarily or m be based on more or less ideal conditions. METHODS OF ANALYSIS,
Arbetsmedicinska Institutet, Stockholm (Swede Dept. of Chemistry.
G. Lindstedt, and S. Skerfving.
In: Mercury in the Environment, (Chemi Rubber Co. Press), p 3-13, 1972, 1 fig, 3 tab.

Descriptors: *Pollutant identification, *Mercu *Analytical techniques, *Measurement, Wa pollution, Air pollution, Colorimetry, Neutron tivation analysis, Spectrophotometry, Instrume tation, Evaluation, Toxicity, Organic compound Inorganic compounds.

An evaluation of some important methods used the analysis of mercury in air and in biologi material is presented. Air sampling methods a direct reading methods are used in determining t mercury vapor in the air of industrial facilit where it presents a potential health hazard. The sampling method using dithizone requires a 20 li

sample with a detection limit of 1 micro g/sample. Direct reading methods can detect about 2 micrograms/m3 if there is no interference from other vapors. Colorimetric analysis, atomic absorption analysis, neutron activation and the micrometric method are described and compared in their ability to detect total mercury in biological material. In a comparison, neutron activation, flameless atomic absorption and flame atomic absorption gave overall average detection levels close together but the flame atomic absorption method had much lower precision than the other two. From a toxicological point of view, most of the modern methods of analysis of total mercury meet the demand for a reasonable degree of reliability. For analysis of total mercury in blood, activation analysis and flameless atomic absorption are the methods of choice. Methods for separating organic from inorganic mercury in biological material are thin layer chromatography, isotope exchange and stannous chloride reduction. Specific methods for organic mercury analysis are presented. (See also W74-07680) (Jerome-Vanderbilt)

SOLVENT EXTRACTION OF SELENIUM (IV) WITH 2-THENOYLTRI-FLUOROACETONE,
Indian Inst. of Tech., Bombay. Dept. of Chemistry.
S. B. Akki, and S. M. Khopkar.
Separation Science, Vol 6, No 3, p 455-460, June 1971. 2 fig, 2 tab, 3 ref.

Descriptors: *Spectrophotometry, *Selenium, *Ions, *Separation techniques, *Solvent extractions, Analytical techniques, Metals, Chemical analysis, Evaluation, Measurements, Laboratory tests, Solvents, *Pollutant identification.

A simple, rapid method is presented of solvent extraction of selenium (IV) at trace concentrations, with 2-thenoyltrifluoroacetone-xylene (0.03M) at pH from 1.0 to 4.5. Selenium has been determined in the organic phase photometrically by complexation with 3, 3 -diaminobenzidine. The system conforms to Beer's law in the concentration range of 2.2-13.2 micrograms/ml of selenium, and is a stable complex. The chlorides of lithium, ammonium, and calcium (0.5-3.0M) were used as the salting-out agents and had no effect on the extraction. Selenium can be extracted and determined in one operation in the presence of several other elements with this method. (Jerome-Vanderbilt)

PAPER CHROMATOGRAPHIC AND ELECTROCHROMATOGRAPHIC SEPARATION OF EDTA COMPLEXES OF METAL IONS,
Z. H. Coll. of Engineering and Technology, Aligarh (India).
M. Qureshi, and J. P. Rawat.
Separation Science, Vol 6, No 3, p 451-454, June 1971. 2 tab, 6 ref.

Descriptors: *Chromatography, *Aqueous solutions, *Metals, *Ions, Analytical techniques, Chemical analysis, Inorganic compounds, Aluminum, Beryllium, Iron, Cobalt, Copper, Manganese, Zinc, Chelation, Laboratory tests, Testing procedures, Separation techniques, *Pollutant identification.
Identifiers: *EDTA complexes.

A study is described of the chromatographic separation of EDTA complexes of metal ions and of the effect of EDTA concentration on R(f) values. Complexes were prepared by reported methods and dissolved in deionized water. Various solvent systems were tried in order to study the separation of Al, Be, Fe, Co, Cu, Mn, and Zn in ways which would not break the complexes; results are presented. Also presented are results of paper electrophoresis which was also performed in four solvent systems. EDTA complexes were very stable and therefore difficult to detect. Neutral or alkaline media were used because EDTA complexes are not stable in acidic media. EDTA complexes are only soluble in water-like systems, hence nonpolar solvents can be used only in combination with water. From electrophoresis studies, it appears that Mn and Be can be separated from Al, Zn, Co, Cu, and Fe. (Jerome-Vanderbilt)

USGS COMPLETES NATIONWIDE RECONNAISSANCE OF METALS IN STREAMS.
Water and Sewage Works, Vol 118, No 6, p 174-175, June 1971, 2 tab.

Descriptors: *Heavy metals, *Surface waters, *Data collections, *Sampling, Lakes, Rivers, Streams, Surveys, Evaluation, Investigations, Measurement, Metals, Arsenic compounds, Cadmium, Chromium, Cobalt, Lead, Mercury, Zinc, Public health, Water pollution, Potable water.

A summary is presented of a U.S. Geological Survey report on the concentrations of arsenic, cadmium, chromium, cobalt, lead, mercury, and zinc in the nation's surface waters. More than 720 water samples were taken from urban and rural locations in all 50 states, Puerto Rico and the District of Columbia. The samples were collected during low streamflows, which would result in accentuated concentrations of the metals. Although small amounts of the metals were found to be widely distributed in streams and lakes, there was no widespread occurrence of amounts exceeding the current Public Health Service drinking water standards. A listing of 44 sites in 10 states where one or more of the metals exceeded the PHS drinking water standards is presented. Concentrations of dissolved mercury ranged up to 4 micrograms/liter. Only 2% of the samples exceeded the limit for arsenic; while 4% had levels above the limit for cadmium. Concentrations of lead were generally low, less than 2% of the samples contained detectable chromium, cobalt was found in 37% of the samples, and zinc was detected most commonly in ranges from 10 to 50 micrograms/liter. This study will be used along with further investigation to establish baseline data for these metals. (Jerome-Vanderbilt)

MERCURY ANALYSIS BY ATOMIC ABSORPTION SPECTROPHOTOMETRY,
Duval Corp., Tucson, Ariz.
F. M. Tindall.
Atomic Absorption Newsletter, Vol 6, No 5, p 104-105, September-October 1967. 2 tab, 2 ref.

Descriptors: *Mercury, *Analysis, *Analytical techniques, *Spectrophotometry, Absorption, Extraction, Sampling, Laboratory tests, Geochemistry, Heavy metals, *Pollutant identification.
Identifiers: *Atomic absorption spectrophotometry.

Samples of various types found in the mining industry are assayed for mercury. The element is extracted as the tetra-iodo-mercurate into ketone from an ammoniacal solution. The analysis was performed on an atomic absorption spectrophotometer using a wide slot burner and a low fuel flow rate. Reproducibility is quite good over a range common to mercury ores. With slight changes the method can be made to cover the geochemical range as well. (Oleskiewicz-Vanderbilt)

TRACE METALS IN ATMOSPHERIC PARTICULATES AND ATOMIC ABSORPTION SPECTROSCOPY,
Instrumentation Lab., Inc., Lexington, Mass.
J. Y. Hwang.
Analytical Chemistry, Vol 44, No 14, p 20A-27A, December 1972. 6 tab, 46 ref.

Descriptors: *Spectroscopy, *Trace elements, *Measurement, Evaluation, Chemistry, Analytical techniques, Atmosphere, *Air pollution, Sampling, Filters, Filtration, Laboratory tests, Digestion, *Pollutant identification.
Identifiers: *Atomic absorption spectroscopy.

Trace metal particulate matter in the atmosphere and the application of atomic absorption spectroscopy to detect its presence and concentration are discussed. Means of circumventing the difficulties encountered in this method of analysis are suggested. In obtaining samples, the organic membranes are the purest, but glass fiber filters are adequate, if the sample is gathered over about 24 hours. A low temperature ashing technique is recommended to avoid elemental loss. The sensitivities of various atomic absorption techniques are discussed and tables of their sensitivities are presented. Flameless techniques have excellent sensitivities at nano- and picogram levels, but may require pretreatment and pre-concentration. Methods of dealing with interferences are discussed. Atomic absorption speciroscopy is a useful tool which provides sensitivity, selectivity, simplicity and excellent reproducibility in comparison with other analytical techniques. (Jerome-Vanderbilt)

ANALYSIS OF TRACE METAL PARTICULATES IN ATMOSPHERIC SAMPLES USING X-RAY FLUORESCENCE,
Dayton Univ., Ohio.
T. R. Dittrich, and C. R. Cothern.
Journal of the Air Pollution Control Association, Vol 21, No 11, p 716-719, November 1971. 6 fig, 2 tab, 25 ref.

Descriptors: *Trace elements, *Metals, *Air pollution, Analysis, Sampling, Iron, Copper, Zinc, Lead, Cadmium, Titanium, Instrumentation, Absorption, Neutron activation analysis, *Pollutant identification.
Identifiers: *X-ray fluorescence, Atomic absorption spectroscopy, Selenium, Sensitivity, Accuracy, Air samples.

Trace metals collected on filter paper by a hi-volume air sampler for 24 hours were analyzed using the X-ray fluorescence method. A gamma ray exciting source (241Am) and a bremsstrahlung exciting source (147Pm) were both used to produce the X-rays, the latter being more efficient. For the samples collected in Dayton, several metals were detected, viz.: Ti, Fe, Cu, Zn, Pb, Cd, and Sn. Elements in the periodic table between Ti and Cs were seen to have a sensitivity limit of 0.5

micrograms/cu.m of air. (Oleszkiewicz-Vanderbilt)

THE DETERMINATION OF MERCURY IN AIR SAMPLES AND BIOLOGICAL MATERIALS,
Ottawa Occupational Health Div. (Ontario).
J. L. Monkman, P. A. Maffett, and T. F. Doherty.
Industrial Hygiene Quarterly, Vol 17, No 4, p 418-420, 1956. 4 fig, 5 ref.

Descriptors: *Mercury, *Analytical techniques, *Chemical analysis, *Sampling, *Organic matter, *Air pollution, Separation techniques, Instrumentation, Analysis, *Pollutant identification.
Identifiers: Biological samples, Sensitivity, Vapor detector.

A method is described for the cold digestion of urine with potassium permanganate and sulfuric acid, which eliminates many hours of work. The mercury is isolated by filtering the treated sample through a glass filter pad impregnated with cadmium sulfide. The pad, containing the mercury as the sulfide, is placed in a micro gas chamber connected to a G.E. Instantaneous Vapor Detector equipped with a recorder. The gas chamber is heated and compressed air passed through the system to carry the liberated vapor into the detector. The area under the curve traced by the recorder is proportional to the amount of mercury in the sample. The method as outlined allows the determination of 0.1 to 10 plus or minus 0.1 micrograms of mercury. Greater sensitivity may be achieved if desired. (Oleszkiewicz-Vanderbilt)
W74-07710

LEAD DETECTION IN LIVING PLANT TISSUE USING A NEW HISTOCHEMICAL METHOD,
California Univ., Los Angeles. School of Engineering and Applied Science.
R. A. B. Glater, and L. Hernandez, Jr.
Journal of the Air Pollution Control Association, Vol 22, No 6, p 463-467, June, 1972. 5 fig, 21 ref.

Descriptors: *Lead, *Plant tissues, Chemical analysis, Trees, Air pollution, Path of pollutants, Trace elements, Analytical techniques, Sampling, Separation techniques, Analysis, Cytological studies, Vegetation, *Pollutant identification.
Identifiers: *Histochemical methods, Automobile exhausts, Sensitivity.

A quick, simple method for identifying and distinguishing lead from other heavy metals in living plants has been developed using sodium rhodizonate (C6O6Na2) which forms a scarlet precipitate with lead at approximately pH 2.8. Hand sections of plant tissues are treated with rhodizonate reagent, buffered, and examined microscopically. Very little time and/or effort is required for this method. Those cells and tissues contaminated with lead turn scarlet--color intensity being directly related to concentration. Lead may be detected in quite low concentrations and, most importantly, may be observed in situ; its entry and movement through the plant can thus be followed. In an area of moderate traffic of Downey, California (Southeast Los Angeles), lead was found abundantly on leaves as well as on and in roots of garden-grown lettuce; origin of this lead is presumed to be car exhausts. (Oleszkiewicz-Vanderbilt)

DETERMINATION OF COPPER AND ZINC IN BIOLOGICAL MATERIAL,
Veterans Administration Hospital, Omaha, Nebr.
M. M. Parker, F. L. Humoller, and D. J. Mahler.
Clinical Chemistry, Vol 13, No 1, p 40-48, January 1967. 5 tab, 7 ref.

Descriptors: *Copper, *Zinc, *Spectrophotometry, Urine, Milk, Analytical techniques, Separation techniques, Analysis, Metals, Heavy metals, Chelation, Laboratory tests, Instrumentation, *Pollutant identification.
Identifiers: *Atomic absorption spectroscopy, *Biological samples.

Copper and zinc are readily determined in biological material by atomic absorption spectrophotometry. Two procedures are presented for the quantitative estimation of these metals in serum. One of these involves simple dilution and aspiration into the burner of the instrument. Suitably prepared standards must be used. The other method involves trichloroacetic acid preparation of the proteins prior to aspiration. With both methods satisfactory results in precision and recovery of added metals are obtained. Urinary copper determinations require chelation of the metal with ammonium pyrrolidino dithiocarbamate or some similar sequestering agent and concentration by extraction of the chelate into a suitable organic solvent. A similar procedure must be used in analyzing cow's milk for copper. Tissue analysis requires heating with boiling nitric acid and removal of the acid under reduced pressure prior to aspiration into the burner. It has been shown that procedural errors in such determinations are very much smaller than biological variation. (Oleszkiewicz-Vanderbilt)

TESTACEA (PROTOZOA: SARCODINA) AS INDICATORS OF WATER QUALITY IN WESTERN MONTANA,
Montana Univ., Missoula. Dept. of Zoology.
J. F. Tibbs.
Available from the National Technical Information Service as PB-232 118; $3.00 in paper copy, $1.45 in microfiche. Montana Water Resources Research Center, Bozeman, Completion Report No 49, January 1974. 7 p, 5 ref. OWRR A-038(1)MONT.

Descriptors: *Protozoa, Water quality, Water analysis, *Nutrients, *Montana, Lakes, Ponds, Sampling, Sediments, *Periphyton, *Pollutant identification.
Identifiers: *Testacea.

Water, sediment and periphyton samples were collected in a variety of aquatic habitats in western Montana, especially from a chain of 13 confluent lakes and ponds in the South Cold Creek Drainage of the Mission Mountains. Chemical and physical data were obtained at the site with the use of a portable test kit; associated dominant faunal and floral elements were noted; some water samples were returned for laboratory analysis, including sediment and periphyton samples. Nearly 40 species of testacea were identified. The study was successful in establishing equivalent and meaningful sampling procedures, but the data did not yield very meaningful information on the characteristics of the habitats represented. Future studies should involve more comprehensive and revised sampling techniques. Testacea do not appear to be very useful indicators for momentary water quality. Frustules of plants may be better indicators over many years, for the arenaceous shells of some of the Testacean species decompose in sediments. (Williams-Montana State)

A STUDY OF POLLUTANT DISCHARGES FROM REACTOR OPERATIONS UTILIZING ULTRACENTRIFUGATION TECHNIQUES,
Oak Ridge Gaseous Diffusion Plant, Tenn.
J. W. Amburgey, Jr.
Available from NTIS, Springfield, Va., as Rept No. K-1754; $4.00 per copy, $1.45 microfiche. Report No K-1754, August 1968. 36 p, 3 fig, 18 tab, 1 append.

Descriptors: *Nuclear powerplants, *Nuclear reactors, *Nuclear wastes, *Cooling water, Effluents, *Columbia River, Analytical techniques, Centrifugation, Radiochemical analysis, Radioisotopes, Limnology, Elements(Chemical), Suspended load, Chromium, Sulphur, Zinc, *Washington.
Identifiers: Hanford site(Wash), Elemental analysis.

Reactor cooling water samples from the Hanford Operation at Richland, Washington, have undergone particulate separations and study utilizing recently developed ultracentrifugation techniques. The suspended particles contained in these samples were separated into classified groups and then

subjected to a variety of analytical investigations including elemental and radiochemical analyses. The samples selected for study were taken in sets ranging from one to four samples per set. Six sets or a total of sixteen samples were collected and shipped to the Biophysical Limnology Laboratory at Oak Ridge for study. The analytical results from these investigations are summarized in a series of tables. The content of selected elements and the radioactivity for the more prominent radionuclides are shown as associated with either the particulate or the dissolved fractions contained in the original sample volume. A few of the radionuclide parent elements such as chromium, sulphur, and zinc were found almost entirely associated with the dissolved materials fraction. These results along with the other data showed that the suspended materials isolated from the various samples of reactor cooling water did not add significantly to the production of radionuclides and the radioactive pollution of the Columbia River at Hanford. (Houser-ORNL)

FRACTIONATION OF SUSPENDED AND COLLOIDAL PARTICLES IN NATURAL WATER,
Oak Ridge Gaseous Diffusion Plant, Tenn.
W. T. Lammers.
Available from NTIS, Springfield, Va., as Rept. No. K-1749; $4.00 per copy, $1.45 microfiche. Report No. K-1749, October 1968. 42 p, 9 fig, 90 ref.

Descriptors: *Analytical techniques, *Centrifugation, *Laboratories, *Research facilities, *Suspended load, Natural streams, Water pollution, Water pollution control, Chemical properties, Physical properties, Biological properties, Instrumentation, Mathematics.
Identifiers: *Natural waters.

Feasibility studies were conducted on the use of centrifugal techniques for isolating insoluble materials from samples of natural water. The isolated particulate fractions were then used in studies encompassing several areas of water pollution with particular emphasis on the characterization of different groups of isolated particles. These characterizations were confined to the physical, chemical, and biological properties of suspended and colloidal particles which influence their separation, concentration, and analysis. Systems and techniques were developed for separating these materials into relatively pure particulate groups and for making reliable analytical determinations. Particle characterization methods and the instruments, techniques, and calculations used in isolating the different particulate groups for study are described. (Houser-ORNL)

RADIOACTIVITY OF NEVADA HOT-SPRING SYSTEMS,
California Univ., Berkeley. Lawrence Berkeley Lab.
H. A. Wollenberg.
Available from NTIS, Springfield, Va., as Rept. No. LBL-2482; $4.00 per copy, $1.45 microfiche. Report No. LBL-2482, January 1974. 15 p, 5 fig, 3 tab, 12 ref.

Descriptors: *Radioactivity, *Measurement, *Assay, *Hot springs, *Nevada, Water pollution, Water pollution sources, Radium, Calcium, Calcium carbonate, Uranium, Flow.

Field gamma radiometry and laboratory gamma-ray spectrometry of waters and spring deposits were accomplished for some hot-spring systems in northern Nevada. Gamma-ray dose rates measured on-site range from 2 to 500 microrem/hr, and depend mainly on the amounts of the natural radioelements in the spring deposits. At several locations Rn-222, emanating from the water causes recognizable gamma-ray anomalies. High radioactivities, primarily from Ra-226, are associated with hot-spring systems dominated by CaCO3, while silica-dominated systems are relatively low in radioactivity. Gamma spectrometry disclosed the enrichment of Ra-226 with respect to its parent U in CaCO3-dominated systems. Ra-226 preferentially associates with Ca; therefore, where tufa and siliceous sinter are present in a deposit, the calcareous material is highest in radioactivity. Spring deposits at fast-flowing CaCO3-dominated systems are generally less radioactive than calcareous deposits at slower flowing springs. (Houser-ORNL)

FINAL ENVIRONMENTAL STATEMENT RELATED TO THE PROPOSED PERRY NUCLEAR POWER PLANT, UNITS 1 AND 2.
Directorate of Licensing (AEC), Washington, D.C.
Available from NTIS, Springfield, Va., as Rept. No. Docket 50440-61; $10.60 per copy, $1.45 microfiche. Report No Docket 50440-61 and 50441-61, April 1974. 394 p, 35 fig, 60 tab, 138 ref, 6 append.

Descriptors: *Lake Erie, *Nuclear powerplants, Effluents, Environment, Administrative agencies, *Comprehensive planning, *Sites, Geology, Investigations, Hydrology, Seismology, Climatology, Meteorology, Ecology, Radioactive wastes, Water pollution, Water pollution sources, Radioactive effects, Monitoring, Public health, Transportation, Beneficial use, Cost-benefit analysis, *Ohio.
Identifiers: *Environmental impact statements, *Boiling water reactors.

This final environmental statement was prepared in compliance with the National Environmental Policy Act and relates to the proposed construction of the Perry Nuclear Power Plant, Units 1 and 2. Environmental impacts are assessed and after consideration of alternatives an environmental benefit-cost summary was compiled. Environmental factors considered include climate, hydrology (surface water and ground water), ecology including aquatic life, cooling-water supply and discharge, cooling towers, cooling lakes, spray ponds, radioactive chemical and sanitary wastes, amount of dissolved oxygen and toxic chemicals in effluent water. The conclusion is to issue construction permits for the facility subject to the following conditions: (1) Determine the importance of the site as a spawning and nursery ground for fish; (2) adequate control of iodine-131; (3) if necessary, make changes in the cooling systems to meet the needs of items 1 and 2; (4) correct any adverse environmental impacts resulting from construction. IRON-55 AND RUTHENIUM-103 AND -106 IN THE BRACKISH-WATER CLAM RANGIA CUNEATA,
National Marine Fisheries Service, Beaufort, N.C.
D. A. Wolfe, and C. D. Jennings.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 783-790, (1971) 4 fig, 3 tab, 25 ref.

Descriptors: *Aquatic environment, *Radioactivity, *Radioisotopes, *Water pollution, *Clams, Water pollution sources, Nuclear explosions, Testing, Fallout, *North Carolina, Brackish water, Saline water, Iron, Ruthenium.
Identifiers: Trent River(N.C.), Neuse River(N.C.).

Rangia cuneata, an estuarine clam, was collected at 4- to 6-week intervals during 1965-1967 from several stations over a 40-mile length of the Trent and Neuse Rivers in eastern North Carolina. The soft tissues were dried, ashed, and analyzed for gamma-emitting radioisotopes, Fe-55, stable Fe, and other elements. Both Ru-103 and Ru-106 were more concentrated in clams collected from downstream stations at higher salinities than in clams from low-salinity water. A similar distribution was observed for Fe-55. Ruthenium-103 appeared in Rangia withing two weeks after the third and fifth Chinese nuclear tests, and its retention was resolved into two rate functions, with apparent effective half-lives of 40 days and 7 days. DETERMINATION OF THE FATE OF POLYNUCLEAR AROMATIC HYDROCARBONS IN NATURAL WATER SYSTEMS,
Illinois Univ., Urbana. Dept. of Civil Engineering.
P. R. McGinnes, and V. L. Snoeyink.
Available from the National Technical Information Service as PB-232 168, $3.75 in paper copy, $1.45 in microfiche. Illinois Water Resources Center, Urbana, Research Report No 80, March 1974. 60 p, 19 fig, 26 ref. OWRR A-045-ILL(1). 14-31-0001-3513.

Descriptors: *Pollutant identification, *Aromatic compounds, Gas chromatography, Trace elements, *Analytical techniques.
Identifiers: *Fate of pollutants, *Polynuclear aromatic hydrocarbons, *Photodecomposition, Trace organics, Carcinogens, Ultraviolet light, Benzpyrene, Benzanthracene.

The polynuclear aromatic hydrocarbons, or PAH, are of current concern as water pollutants and potential health hazards. The presence of PAH in natural water systems was evaluated and an analytical technique for specific PAH was developed. It was found that the PAH are not soluble in water but they either are present as particulate material or as material absorbed on solid surfaces in natural water systems. The photodecomposition of two PAH, 1,2 benzanthracene, or BA, and 3,4 benzpyrene, or BP, was examined. Both compounds decompose under ultraviolet light to form their quinones, which then further decompose. Both BP and BA decompose following first order kinetics in true solution in 20 percent acetone in water. Particulate BA also decompose following first order reaction kinetics, although particulate BP will decompose only to a depth of 0.2 micrometers before decomposition stops. This decomposition is relatively unaffected by water chemistry and will occur under solar radiation and in turbid waters.

DETERMINING A RECREATIONAL LAKE'S TOLERANCE FOR DEVELOPMENT AND USAGE,
New Hampshire Univ., Durham. Water Resources Research Center.
R. H. Frey, and R. V. Fabian, Jr.
Available from the National Technical Information Service as PB-232 246, $3.25 in paper copy, $1.45 in microfiche. Completion Report, January 1974. 22 p, 3 tab, 12 ref. OWRR A-032-NH(1). 14-31-0001-3829.

Descriptors: *Water quality, *Water pollution, *Lakes, *Limnology, Sampling, Surface waters, Aquatic algae, Light penetration, Deep-water habitats, Plankton, Anabaena, *New Hampshire, Cyanophyta, Recreational facilities, Management, Natural resources.
Identifiers: *Squam Lake(N.H.).

Information is needed with respect to the tolerable levels of development, chemical inputs, bacteria and organic materials that a lake basin can withstand before water quality is impaired, to provide the basis for regulations that will foster the maintenance of high lake water quality and natural surrounding. The current level of pollutants, or the water quality, must be determined and monitored. In 1972, a three-year project was undertaken to help solve the problems of Squam Lake, New Hampshire and provide an approach for coping with similar pressures on other recreational waters. During the first phase of this project (summer, 1972), data on the water quality of the lake were obtained with respect to light penetration, temperature, dissolved oxygen, total phosphates, nitrates and total coliform. The status of the lake was examined in terms of species diversity of plankton, using the Shannon-Weiner diversity index. During the second phase of this project (summer, 1973), sources of pollution and contamination were located by a systematic method of water analysis. As sources were located, this information was given to the respective town health officers who in turn continued the investigation to eliminate the sources of pollution. (Wakefield-New Hampshire)

SURVIVAL OF ENTERIC PATHOGENS AND INDICATOR ORGANISMS IN NATURAL WATERS,
Tennessee Univ., Knoxville. Dept. of Civil Engineering.
J. D. Womack, P. B. O'Connor, and P. Williams.
Available from the National Technical Information Service as PB-232 242, $3.75 in paper copy, $1.45 in microfiche. Tennessee Water Resources Research Center, Knoxville, Research Report No 25, November 1973. 46 p, 7 fig, 28 ref. OWRR A-014-TENN(2). 14-31-0001-3243.

Descriptors: *Salmonella, Bacteria, Microorganisms, Enteric bacteria, Pathogenic bacteria, *Tennessee, Pollutant identification, Coliforms, Cytological studies, Cultures, Bioindicators, Microbiology.
Identifiers: Ft. Loudoun Reservoir(Tenn).

This report deals with (1) various microbiological methods to positively quantify Salmonella, fecal coliforms and standard coliforms (2) confirmation studies of bacteria growing on Bismuth Sulfite Agar and (3) diffusion cell studies of the survival characteristics of Salmonella bacteria in Fort Loudoun Reservoir. The difficulties encountered in confirming the presence of pathogenic Salmonella in mixed cultures prevented accurate quantification. This was due to similar cultural characteristics of other enteric organisms. Alternative procedure employing diffusion cells excluded the interfering organisms and permitted useful measurements of environmental effects on pure cultures of pathogenic Salmonella.

COLIFORMS ARE AN INADEQUATE INDEX OF WATER QUALITY,
Canada Centre for Inland Waters, Burlington (Ontario).
B. J. Dutka.
Journal of Environmental Health, Vol 36, No 1, p 39-46, July/August, 1973. 2 fig, 6 tab, 31 ref.

Descriptors: Groundwater, *Water quality, *Coliforms, Aquatic life, Aquatic microorganisms, *Bacteria, *Enteric bacteria, Microbiology, *Pathogenic bacteria, Salmonella.
Identifiers: Shigella, Vibrio, Mycobacterium, Pasteurella, Leptospira.

Coliforms have been used as indicators of water quality for over 50 years. The presence of these organisms in water was assumed to indicate a potential health hazard because of their association in the intestine with a variety of pathogenic microorganisms: Salmonella, Shigella, Vibrio, Mycobacterium, Pasteurella, Leptospira and enteric viruses. However, research in the last ten years has shown that coliforms do not fulfill any of the following criteria for indicator organisms: be present and occur in much greater numbers than the pathogens concerned; not be able to proliferate to any greater extent than enteric pathogens in the aqueous environment; be more resistant to disinfectants and to the aqueous environment than the pathogens; yield characteristic and simple reactions enabling as far as possible an unambiguous identification of the group. Coliforms are reviewed with respect to the above criteria, and more practical indicators of water quality are suggested for use in the future. (Campbell-NWWA)

COLLECTION, DETECTION, IDENTIFICATION, AND QUANTITATION OF HUMAN EFFLUENTS,
Edgewood Arsenal, Aberdeen Proving Ground, Md.
R. I. Ellin, R. L. Farrand, F. W. Crouse, and N. B. Billups.
Available from NTIS, Springfield, Va., 22151, as AD-768 762. Price $3.00 printed copy; $1.45 microfiche. Biomedical Laboratory Technical Report EB-TR-73007 (EATER 4799), October 1973. 25 p, 8 fig, 3 tab, 8 ref.

Descriptors: *Pollutant identification, *Chemical analysis, *Chromatography, Gas chromatography, Mass spectrometry, *Domestic wastes.
Identifiers: Human wastes.

Over 135 compounds were identified in human wastes. Two to three times this number of compounds were observed in the sensitive gas chromatograph-mass spectrometer (GC-MS) analytical system, but could not be identified. A variety of organic structures are included among these effluents. In addition to alcohols and ketones, unsaturated, branched, cyclic and aromatic hydrocarbons, sulfhydryl and cyano and a variety of heterocyclic compounds were found. Porous polymer collectors can be used to collect effluents at room temperature, to absorb more effluents in a shorter time, can be connected in parallel, and can be cleaned and desorbed without using vacuum. (Knapp-USGS)

FOAM FRACTIONATION OF MERCURY(II) NITRO COMPLEXES,
National Lead Co., Hightstown, N.J.
M. W. Miller, and G. L. Sullivan.
Separation Science, Vol 6, No 4, p 553-558, August, 1971. 1 tab, 1 fig, 7 ref.

Descriptors: *Foam fractionation, *Ion exchange, *Distribution patterns, *Mercury, Analytical techniques, Separation techniques, Foam separation, Nitrogen compounds, Acids, Chemical reactions, Surfactants, Laboratory tests, Measurements, Evaluation, Cations.
Identifiers: Nitric acid.

The cationic surfactant hexadecyltrimethyl ammonium bromide (HDT) was used to determine the distribution factor for mercury(II) as a function of the normality of nitric acid. The application of ion exchange data to the removal of mercury(II) nitro complexes by foam fractionation is also reported. Results of tests indicated that the distribution factor of mercury(II) nitro complexes is strongly dependent on the HNO3 acid concentration, with the maximum occurring at approximately 0.1M nitric acid; HDT forms an ion pair with the Hg(NO3)3(-) complex and at 0.1M the fraction of mercury(II) ion in the Hg (NO3)3(-) form is presumably at a maximum. The magnitude of the stability constant has a greater effect on the value of the anion exchange volume distribution coefficient than on the foam fractionation distribution factor. The correct nitric acid concentration for removal of one or more metal ions in nitro complex form can be determined from the ion exchange volume distribution factor maxima reported by Ichikawa et a (1961). Foam fractionation is an effective method for removal of trace amounts of complexes which form soluble ion pairs with a surfactant. (Jerome-Vanderbilt)

SOME NOVEL COMPLEXES OF CHROMIUM(I),
Leeds, Univ (England). Dept. of Inorganic and Structural Chemistry.
P. Gans, and S. M. E. Hague.
Chemistry and Industry, No 24, p 978, December 16, 1972. 1 tab, 3 ref.

Descriptors: *Chromium, *Metals, *Pollutant identification, *Heavy metals, Laboratory tests, Analytical techniques, Infrared radiation, Oxidation
Identifiers: *Infrared spectroscopy.

It has been reported previously that the hexaarylisocyanide complexes of chromium(O) exhibit three infrared-active C-N stretching bands rather than the single band expected of an octahedral complex (Cotton, F.A. and Zingales, F., 1961). Now, it has been found that the band at highest frequency, ca 2 065/cm, is not present in the spectra of carefully purified samples, but bands at the appropriate frequencies appear when the solutions of the pure compounds are exposed to air. Compounds in which the band at ca 2065 cm is the most intense infrared band have subsequently been prepared by controlled oxidation of the chromium(O) compounds, and the preparation and properties of the phenyl isocyanide derivatives are described. Symmetry and activity of the C-N stretching vibrations are described, together with similar magnetic, conductivity and spectroscopic results obtained with other isocyanide compounds (Oleszkiewicz-Vanderbilt)

DETERMINATION OF MERCURY IN VEGETATION WITH DITHIZONE - A SINGLE EXTRACTION PROCEDURE,
Geological Survey, Denver, Colo.
F. N. Ward, and J. B. McHugh.
Professional Paper 501-D, Geological Survey Research, p D128-D130, 1964, 2 tab, 7 ref.

Descriptors: *Spectrophotometry, *Mercury, *Extraction, *Vegetation, Analysis, Chemical analysis, Analytical techniques, Instrumentation, Sampling, Testing, Methodology, Pollutant identification, Plants.

A spectrophotometric method for determining small amounts of mercury in vegetation is based on the reaction of mercury with dithizone after sample dissolution by wet ignition under reflex. Treatment of the sample solution with sulfur dioxide provides a reducing environment during the formation and extraction of the mercury dithizonate into n-hexane. Thus, a single extraction suffices to obviate side reactions, and double

extractions or reversion steps are unnecessary. The method is useful for determining as little as 0.4 ppm of mercury in dry vegetation, and this range is enough to evaluate the usefulness of the mercury content of vegetation is prospecting. (Oleszkiewicz-Vanderbilt)

GRADIENT ANALYSIS OF CARBON MONOXIDE AND METHANE IN POLLUTED AND OTHER NEARSHORE HABITATS,
Naval Postgraduate School, Monterey, Calif.
J. T. Welch.
Available from the National Technical Information Service as AD-76-4482, $6.25 in paper copy, $1.45 in microfiche. Thesis, March 1973. 84 p. 19 fig, 11 tab, 17 ref, 3 append.

Descriptors: *Analytical techniques, *Gases, *Methane, *Sea water, Gas chromatography, California, Tracers, Sewage effluents, Air-water interfaces, Computer programs.
Identifiers: *Carbon monoxide, Monterey Bay(Calif.).

Two concepts were tested in Monterey Bay, California. (1) That carbon monoxide production might be related to primary productivity and (2) since methane gas, reported as present in surface waters, is a product of anaerobic decomposition of organic matter, it might be useful as a pollution tracer from sewage outfalls. The highly sensitive methods of gas chromatography were used and are described. Results from an open ocean station and several nearshore stations show a possible correlation between carbon monoxide and primary productivity. Methane was shown to be present in the upper 100 m, with a maximum at about 50 m. At nearshore stations, concentrations of methane and carbon monoxide were both far above equilibrium and open ocean values. Methane concentrations were highest in the vicinity of sewage outfalls and the source of this gas may be the city water supply. Carbon monoxide concentrations may be dependent on the type of plant life in the surrounding waters. Transects showed that methane was an effective tracer for sewage disposal plant effluent and that kelp seemed to slow pollutant diffusion and mixing. Results indicate that, at least locally, the ocean is a source of carbon monoxide and methane in the atmosphere. (Jones-Wisconsin)

THEORY AND APPLICATION OF CONTINUOUS MONITORING FOR CHEMICAL RESEARCH IN NATURAL WATER SYSTEMS,
G. K. Rice, and L. P. Varga.
Available from the National Technical Information Service as ORD-4254-8, $3.25 in paper copy, $1.45 in microfiche. Atomic Energy Commission ORD-4254-8, October 1972. 24 p. 2 tab, 56 ref.

Descriptors: *Measurement, *Data collections, *Chemical properties, *Water quality, Mathematical studies, Biological properties, Kinetics, Aqueous solutions, Analytical techniques, Equipment, Automation, Monitoring.
Identifiers: Inorganic mass balance.

Natural water monitoring can be divided into two categories: pollution detection and basic research. Pollution monitoring measures parameters that can determine water quality while monitoring for basic research collects data useful for determining the composition and nature of a water system. Continuous monitoring requires that methods for measuring be instrumented and then automated to produce continuous data accurately for extended periods of time. Pollution monitors typically emphasize physical parameters because these are easiest to monitor. Some physical measurements are required for chemical research including water temperature and consideration that biological and chemical systems are non-separable. Biological processes are difficult to represent mathematically, and significant progress in this area has been made only recently. Regarding kinetic factors, whether or not an equilibrium model will adequately describe chemistry of natural waters depends on how closely steady state conditions are approached. Of all analytical methods, colorimetry and potentiometry are most commonly adapted for continuous monitoring in natural waters. In selecting methods for a specific analysis, their suitability for continuous monitoring under field conditions has to be evaluated. Methods, recording, data processing, and display are discussed. (Jones-Wisconsin)

INVESTIGATION OF RIVER WATER FOR THE PRESENCE OF ESCHERICHIA COLI AND ENTEROCOCCUS, (IN RUSSIAN),
Municipal Sanitary-Epidemiological Station, Leningrad (USSR).
A. G. Kapkova, L. I. Karaseva, and V. A. Avdeeva.
Gig Sanit. Vol 37, No 3, p 100-101. 1972.
Identifiers: *Enterococcus, *E. coli, *Alkalinity, *Polymyxin, *River waters, Antibiotics, Pollutant identification.

Determination of the presence of E. coli and enterococci in river water was carried out on an enrichment alkaline polymyxin medium. This medium has selectivity due to alkalinity (pH 9.6-10.2) and ability of the antibiotic polymyxin to suppress gram-negative flora, particularly E. coli. The confirming medium was 1 with methyl violet for final suppression of gram-negative microflora, except enterococci.--Copyright 1973, Biological Abstracts, Inc.

POLLUTION MONITORING IN LAKE CHAMPLAIN USING ERTS-1 IMAGERY,
Vermont Univ., Burlington. Remote Sensing Lab.
A. O. Lind, and E. B. Henson.
Available from the National Technical Information Service as N73-26347 $3.00 in paper copy, $1.45 in microfiche. Report June 1973. 7 p, 4 fig. NAS 5-21753.

Descriptors: *Pulp wastes, *Water pollution sources, *Monitoring, *Satellites(Artificial), Vermont, New York, Surveys, Spectrophotometry, Sedimentation, Judicial decisions.
Identifiers: *Lake Champlain(Vt.-N.Y.), ERTS-1 imagery, Pollution plume, Fort Ticonderoga(N.Y.).

The detection of a major pollution plume emanating from the International Paper Company's Fort Ticonderoga operation is described. A major plume was seen in the Earth Resources Technology Satellite (ERTS) coverage of October 10, and it was observed that the plume configuration agreed with earlier lake surveys. Position of the plume in the lake may be determined by superimposing MSS bands 4 and 6 or 7. The near-infrared band provides excellent shoreline definition and makes it possible to note the extent of the plume area. The usual high level of general turbidity in the water shows as a light tone in the image compared to the darker tone of the plume area which results from the suspended paper mill wastes producing an overall brownish coloration. The cumulative effect of these images will be to provide data to construct a model depicting the plume configuration in differing seasons and limnological conditions. This information can be combined with aircraft data taken under different circumstances. The documented plume data will be made available to the Vermont Attorney's Office for possible application in the ongoing resources action now in progress at U.S. Supreme Court level. (Jones-Wisconsin)

INVESTIGATIONS ON THE PROBLEM OF SOLUBILITY AND STABILITY OF STEROID OVULATION INHIBITORS IN WATER, WASTE WATER AND ACTIVATED SLUDGE, (IN GERMAN),
K. Norpoth, A. Nehrkorn, M. Kirchner, H. Holsen, and H. Teipel.
Zentralbl Bakteriol Parasitenkd Infektionskr Hyg Erste B Hyg Praev Med. Vol 156, No 6, p 500-511. 1973. Illus. English summary.
Identifiers: *Activated sludge, *Inhibitors, Oral contraceptives, *Solubility, Stability, *Steroid ovulation, Waste water, Chromatography, Pollutant identification.

The solubility steroid ovulation inhibitors was determined in double distilled water and in various waste water samples using quantitative fluorospectroscopic steroid identification by thin layer chromatography. Further experiments were carried out to determine how long the individual synthetic progestagens and estrogens persist in activated sludge. Of oral contracepatives commercially available, ethinylestradiol had a water solubility of 4.75 mg/l; for the other steroids, the values were between 0.2 and 2.0 mg/l. In the waste water tests the steroid solubility was sometimes insignificantly and sometimes markedly reduced. In no case was the difference more than 50%. In activated sludge, the estrogens (ethinylestradiol, mestranol) persisted intact over 5 days, while the progestagens were more than 50% disintegrated after 48 hr. Stable decomposition products of megestrol acetate, medroxyprogesterone acetate, norethisterone, chlormadinone acetate and norgestrel were still found after 5 days, but it was not possible to determine their biological activity. Ethinylestradiol, which is included as the estrogen component of almost all commercial preparations for oral contraception, is far more soluble in water than the other components of oral contraceptives and is probably excreted in greater quantities. The compound also persists in activated sludge for more than 1 week. Possible future dangers from the accumulation of synthetic steroid compounds in waste water are unpredictable.--Copyright 1973, Biological Abstracts, Inc.

DETERMINATION OF COUNTING EFFICIENCY BY 14C BY LIQUID SCINTILLATION IN PRIMARY PRODUCTION MEASUREMENTS IN A LAGOON ENVIRONMENT, (IN FRENCH),
Tunis Univ. (Tunisia). Laboratoire d'Oceanographie.
P. Crouzet.
Rev Int Oceanogr Med. 26, p 27-41. 1972, Illus. (English summary).
Identifiers: *Carbon-14 method, Environment, Lagoons, Measurements, *Primary production, *Scintillation method, *Cytological studies, Solubility, Pollutant identification.

Liquid scintillation is known to be the easiest way of counting 14C in primary productivity measurements. Direct application of this technique to lagoons poses the problem of counting efficiency determination for non-homogeneous samples. The experiments presented suggest a partial solubilization of cells by organic solvent. The channel ratio method should be used for the correct determination of counting efficiency.--Copyright 1973, Biological Abstract, Inc.

ANALYSIS OF LIQUID-WASTE INJECTION WELLS IN ILLINOIS BY MATHEMATICAL MODELS,
Illinois Univ., Urbana. Water Resources Center.
M. Heidari, K. Cartwright, and P. Saylor.
Available from the National Technical Information Service as PB-232 004, $4.75 in paper copy, $1.45 in microfiche. Research Report No 77, January 1974. 124 p, 34 fig, 4 tab, 48 ref. OWRR A-058-ILL(1). 14-31-0001-3813.

Descriptors: *Illinois, *Finite element analysis, *Equations, *Mathematical models, Flow, Dispersion, *Injection wells, Liquid wastes, Industrial wastes, Diffusion, Path of pollutants.
Identifiers: *Mass-transport equation, *Flow equation, Multi-layered systems, Adaptive-Chebyshev-factorization method.

Results are presented of a preliminary theoretical study of the fate of liquid industrial wastes injected into deep geologic formations. The Jones and Laughlin Corporation well was used as a model and the geology of the area was idealized into a 15-layered homogeneous and anisotropic mathematical model. The finite element method was tested and proved to be an effective mathematical tool in the solution of the equation of flow. The flow and pressure build-up show that the rocks are capable of receiving greater volumes of waste than are now being injected without endangering the integrity of the aquifer or the confining layer. The mass-transport equation for large and complex ground-water reservoir systems was investigated, and it was concluded that the dispersion and diffusion parts of the equation are relatively insignificant, and under extreme conditions the dispersed zone will not be more than a few feet wide. Therefore, it was concluded that a more practical approach to the problem would be the solution of a system with a moving interface boundary in which mass transport results mainly from convection. To overcome difficulties encountered with computer time and memory in the solution of the mass-transport equation for large complex systems, an iterative method is proposed for the solution of the equations, which substantially reduces these difficulties.

EFFECT OF DEICING CHEMICALS ON GROUND AND SURFACE WATER--(MODUS OPERANDI),
Geological Survey, Boston, Mass.
L. Toler.
Available from the National Technical Information Service, Springfield, Va 22151, PB-222 290, Price $3.00 printed copy; $1.45 microfiche. Research Project R-18-1, Interim Progress Report for Massachusetts Department of Public Works, December 1972. 31 p, 20 fig, 3 tab.

Descriptors: *Path of pollutants, *Deicers, *Massachusetts, Chlorides, Sodium, Salinity, Water pollution sources, Water pollution effects, Snow removal, Highways, Monitoring.

Transport of highway deicing chemicals by surface water and groundwater is related to a variety of geologic, hydrologic and highway maintenance conditions. A number of study sites in Massachusetts were selected for collection of data. Eight steamflow sites were instrumented to measure the surface runoff of deicing salt. At each of three groundwater sites, 14 or more wells were installed to monitor the movement of salt in the ground. Criteria, besides small drainage area, for selecting a site to monitor included that there be little interference from sources of salt other than highway deicing chemicals, that highways are located in the basin and that the amount of salt applied could be obtained and measured. NITROGEN TRANSFORMATIONS IN SOIL DURING LEACHING: I. THEORETICAL CONSIDERATIONS,
California Univ., Davis. Dept. of Water Science and Engineering.
C. Misra, D. R. Nielsen, and J. W. Biggar.
Soil Science Society of America Proceedings, Vol 38, No 2, p 289-293, March-April 1974. 12 ref.

Descriptors: *Nitrification, *Denitrification, *Leaching, *Unsaturated flow, Ammonia, Oxidation, Soil water movement, Diffusion, Path of pollutants, Equations, Reduction(Chemical).

Transport equations describing the movement and simultaneous oxidation of NH4 to NO3 and reduction of NO3 and N2 by microbial and chemical means were set up and solved both for leaching of a pulse and for a continuous application at the soil surface. Both ionic adsorption owing to cation exchange and microbiological transformations were considered and distinguished as reversible and irreversible processes, respectively. The possibilities of the model extended to a sequential transformation during transport of more than two nitrogen species have been examined. (See also W74-07620 and W74-07621) (Knapp-USGS)
W74-07619

NITROGEN TRANSFORMATION IN SOIL DURING LEACHING: II. STEADY STATE NITRIFICATION AND NITRATE REDUCTION,
California Univ., Davis. Dept. of Water Science and Engineering.
C. Misra, D. R. Nielsen, and J. W. Biggar.
Soil Science Society of America Proceedings, Vol 38, No 2, p 294-299, March-April 1974. 5 fig, 1 tab, 19 ref.

Descriptors: *Nitrification, *Denitrification, *Leaching, *Unsaturated flow, Ammonia, Oxidation, Soil water movement, Diffusion, Path of pollutants, Equations, Reduction(Chemical).

Nitrogen transformations were examined by means of a miscible displacement technique that permitted passage of air with different levels of oxygen through the soil. With the use of steady-state solutions of equations describing the convective transport of NH4 and NO3 ions in Columbia silt loam, first-order reaction rate constants k1 and k2 were ascertained for NH4-oxidation and NO3-reduction, respectively. Values of k1 were 10-fold greater than those of k2. At an oxygen level of 0.5% in the gaseous phase, nitrification was apparently inhibited. (See also W74-07619) (Knapp-USGS)
W74-07620

NITROGEN TRANSFORMATIONS IN SOIL DURING LEACHING: III. NITRATE REDUCTION IN SOIL COLUMNS,
California Univ., Davis. Dept. of Water Science and Engineering.
C. Misra, D. R. Nielsen, and J. W. Biggar.
Soil Science Society of America Proceedings, Vol 38, No 2, p 300-304, March-April 1974. 7 fig, 1 tab, 11 ref.

Descriptors: *Nitrification, *Denitrification, *Leaching, *Unsaturated flow, Ammonia, Oxidation, Soil water movement, Diffusion, Path of pollutants, Equations, Reduction(Chemical).

Nitrate reduction in water-unsaturated Columbia silt loam columns was examined at 19.5C and 34.5C with three levels of oxygen (0.5%, 5%, and 20%) in an aerating gas passing through the soil. Following a continuous application of NH4 solution, a pulse of a NO3 solution was leached through the columns. After the decay of the pulse, a continuous application of NO3 solution allowed mathematical analysis leading to ascertaining NO3 reduction rate coefficients. The temperature dependence of these constants as a function of oxygen composition and the need for microbial population and activity analysis are discussed. (See also W74-07619) (Knapp-USGS)

Soil Science Society of America Proceedings, Vol 38, No 2, p 283-289, March-April 1974. 9 fig, 17 ref.

Descriptors: *Nitrification, *Denitrification, *Leaching, *Unsaturated flow, Ammonia, Oxidation, Soil water movement, Diffusion, Path of pollutants, Equations, Reduction(Chemical).

Simultaneous nitrification, denitrification, and N movement were investigated in a soil column during continuous unsaturated leaching. During a continuous application of NH4Cl solution, analyses were made of the soil solution with soil depth and time for N as NH4, NO2 and NO3; and of the soil atmosphere for O2, CO2, N2O, and N2. The use of N-15 permitted direct measurement and quantification of nitrification and denitrification, as well as the transport of N in the liquid and gaseous phases. Solutions to the appropriate equations using measured reaction rate coefficients, pore-water velocities, and diffusion coefficients adequately described the steady state NH4 and NO3 concentration distribution in the soil profile. Equations were also used to stoichiometrically account for the various interacting species in the N transformations. (Knapp-USGS)

BIODEGRADATION OF NITRILOTRIACETATE (NTA) IN SOILS,
Michigan State Univ., East Lansing. Dept. of Crop and Soil Sciences.
J. M. Tiedje, and B. B. Mason.
Soil Science Society of America Proceedings, Vol 38, No 2, p 278-283, March-April 1974. 3 fig, 5 tab, 17 ref.

Descriptors: *Nitrilotriacetic acid, *Biodegradation, *Path of pollutants, Chelation, Carbon radioisotopes, Detergents, Sewage disposal, Sludge, Activated sludge, Sewage treatment, Soil disposal fields, Tracers.
Identifiers: *Land disposal(Wastes).

Nitrilotriacetate (NTA) was biodegraded in a variety of soils; the process was measured by total CO2 and CO2 production from C-14-carboxyl-NTA. Production of CO2 and C-14 followed similar patterns and suggested complete degradation of NTA; C-14 production was used routinely to assay NTA dissimilation. At 40 ppm of NTA in soils receiving sewage effluent and in muck soils, maximum rates of degradation were 8 to 10 ppm/day while in mineral surface soils, they ranged from 0.5 to 6 ppm/day; the rates in subsoils were always less than for the surface soils from the same site. Degradation rates did not correlate with pH, drainage, texture, or plant cover. Rates of degradation increased from 2 to 64 ppm/day as NTA concentration was increased from 10 to 600 ppm. C-14 production from NTA did not occur anaerobically and was severely limited under microaerophilic conditions. NTA was degraded at 24 and 12.5C; it was also degraded at 2C if previously acclimatized at 12.5C. Iminodiacetate was a possible intermediate in NTA degradation while N-methyliminodiacetate was not. (Knapp-USGS)

A KINETIC STUDY OF AMMONIUM AND NITRITE OXIDATION IN A SOIL FIELD PLOT,
California Univ., Berkeley. Dept. of Soils and Plant Nutrition.
M. S. Ardakani, R. K. Schulz, and A. D. McLaren.
Soil Science Society of America Proceedings, Vol 38, No 2, p 273-277, March-April 1974. 6 fig, 1 tab, 13 ref. NSF RANN GI-34733XI.

Descriptors: *Oxidation, *Ammonia, *Nitrates, Soils, Nitrification, Denitrification, Soil microorganisms, Adsorption, Biodegradation.
Identifiers: Nitrobacter, Nitrosomonas.

Disappearance of NH4 from percolating solution in a field test was attributed to both oxidation and to adsorption by the soil. Once a steady state was established and exchangeable NH4 was equilibrated with NH4 in soil solution, oxidation alone accounted for disappearance of NH4 in the top 2.5 cm of the soil. Concentration profiles of NO2 and NO3 may be described by a modified Michaelis-Menten equation. Rate constants for oxidation of NO2 and NH4 are 0.0006 and 0.0025, respectively. These rates are in good agreement with the values found under controlled laboratory conditions. Growth and distribution in soil of Nitrobacter and Nitrosomonas were followed by weekly estimates of their numbers at different depths. Nitrobacter reached a maximum population of about 1 million per cc of soil but declined to a stable density of about 100,000 organisms per cc. Nitrobacter approached a steady level of about 10,000 organisms per cc. Both organisms showed higher densities near the soil surface where the concentrations of substrates were always highest. ADSORPTION OF FENURON AND MONURON (SUBSTITUTED UREAS) BY TWO MONTMORILLONITE CLAYS,
Louvain Univ. (Belgium). Dept. of Soil Science.
R. Van Bladel, and A. Moreale.
Soil Science Society of America Proceedings, Vol 38, No 2, p 244-249, March-April 1974. 5 fig, 4 tab, 27 ref.

Descriptors: *Adsorption, *Herbicides, *Clay minerals, Bentonite, *Montmorillonite, Urea pesticides, Thermodynamics, Monuron, *Path of pollutants, Chemical degradation.
Identifiers: *Fenuron.

The effect of the type of clay mineral, exchangeable cation, temperature, and electrolyte concentration on the adsorption of two substituted ureas was investigated. Adsorption was greater on a bentonite than on a Camp Berteau montmorillonite because the lattice charge in the bentonite originates from tetrahedral and octahedral layers, whereas in the montmorillonite the charge originates only from octahedral layers. The adsorption increased with the polarizing power of the exchangeable cation. Normal adsorption isotherms were exothermic but when the temperature effect on solubility was accounted for, the adsorption reaction tended to be more and more temperature independent as the electronegativity of the exchangeable cation increased. Thermodynamic data suggest that the favorable contribution to the adsorption energy arises mainly from enthalpy changes. The effect of salt concentration was almost negligible up to 1.0N and for a given electrolyte good agreement was obtained between the heat of solution of the herbicide and its adsorption. (Knapp-USGS)
W74-07627

THE SURFACE CATALYZED HYDROLYSIS OF PARATHION ON KAOLINITE,
Agricultural Research Organization, Bet-Dagan(Israel). Inst. of Soils and Water.
S. Saltzman, B. Yaron, and U. Mingelgrin.
Soil Science Society of America Proceedings, Vol 38, No 2, p 231-234, March-April 1974. 5 fig, 13 ref.

Descriptors: *Kaolinite, *Catalysts, *Hydrolysis, *Organophosphorus pesticides, Pesticide residues, Pesticide kinetics, Chemical degradation.
Identifiers: *Parathion.

The decomposition of parathion on various monoionic kaolinites proceeds via the hydrolysis of the phosphate ester to p-nitrophenol and diethyl thiophosphate. The kaolinites catalyze the hydrolysis. The nature of the exchangeable cation greatly affects the rate of hydrolysis. Ca-kaolinite is the most active in inducing the degradation of parathion, the hydrolysis being twice as fast as in a water solution at pH 8.5 at the same temperature. The presence of a large excess of water decreases the catalytic effect of the kaolinite. The mechanism of the hydrolysis is via adsorption of the parathion upon the exchangeable cation or its hydration shell. The temperature dependence of the process is consistent with this proposed mechanism. The significant catalytic activity of kaolinites and its dependence on the exchangeable cation is important to the degradation of parathion in soil and may be utilized in the formulation of parathion for various purposes. ESTIMATION OF IMPERVIOUSNESS AND SPECIFIC CURB LENGTH FOR FORECASTING STORMWATER QUALITY AND QUANTITY,
Metropolitan Washington Council of Governments, Washington, D.C. Dept. of Health and Environmental Protection.
P. H. Graham, L. S. Costello, and H. J. Mallon.
Water Pollution Control Federation, Vol 46, No 4, p 717-725, April 1974. 5 fig, 4 tab, 14 ref.

Descriptors: *Mathematical models, *Urban hydrology, *Storm runoff, *Permeability, *Water quality, Infiltration, Storm water, Urban runoff, Biochemical oxygen demand, Cities, Water pollution sources, Urban drainage.
Identifiers: Imperviousness.

A method is given for estimating the imperviousness and specific curb length (curb length per unit area) of a watershed for input into a stormwater model. A sensitivity analysis was used to establish the importance of these parameters on the quantity and quality of stormwater runoff. Methods are presented to obtain specific curb length and imperviousness values from color infrared imagery. The functional relationships with household, population, and employment densities are reported. With the ability to infer imperviousness and specific curb length from demographic data commonly projected by planners, it is now convenient for the environmental engineer to make estimates of future urban runoff volume per storm and BOD washoff per storm in expanding urban areas. USE OF FLUORESCENT DYE TRACERS IN MOBILE BAY,
Food and Drug Administration, Dauphin Island, Ala. Gulf Coast Technical Services Unit.
A. H. Story, R. M. McPhearson, Jr., and J. L. Gaines.
Journal Water Pollution Control Federation, Vol 46, No 4, p 657-665, April 1974. 4 fig, 1 tab, 19 ref.

Descriptors: *Path of pollutants, *Bays, *Estuaries, Tracers, *Dye releases, Tides, Currents(Water), *Alabama, Fluorescent dye, Tracking techniques.
Identifiers: *Mobile Bay(Ala).

Surveys of shellfish growing areas in Mobile Bay included a study of the effects of tides and streamflows on pollutants. Fluorescent dyes were used to trace movement of water masses. The approximate minimum time for pollutants to travel from the Mobile River (Source of pollutants) to the south end of the bay where the oyster reefs are situated was determined. Dye was introduced at high tide and at flood stage in the river and was followed until it reached the oyster reefs. The minimum time for water to pass through the bay was calculated to be 56 hr. (Knapp-USGS)

CHESTER RIVER STUDY, VOLUMES I, II, AND III.
Chester River Study Joint Investigation by State of Maryland Department of Natural Resources and Westinghouse Electric Corporation, November 1972 (Vols 1, 38p, and II, 251p) and July 1973 (Vol III, 107p).

Descriptors: *Polychlorinated biphenyls, *Water pollution sources, *Water pollution effects, *Path of pollutants, *Maryland, Rivers, Erosion, Chesapeake Bay, Estuaries, Pesticides, Sedimentation, Trace elements, Shellfish.
Identifiers: *Chester River(Md).

Shellfish and finfish from the Chester River, Maryland, are presently safe for human consumption with respect to concentrations of hard chlorinated hydrocarbon type insecticides and polychlorinated biphenyls (PCB's). The insecticides, DDT, DDD, DDE, chlordane, and PCB's (primarily Aroclor 1242) were found routinely in biological samples and sediment samples from the Chester River, but at levels far below those considered hazardous to humans. Most of the measured chlorinated hydrocarbon pollutants are entering the Chester River from the upper Bay rather than from the river drainage area itself. Both trace metals and the insecticides and PCB's are carried on the surfaces of sediments, there being an inverse relationship between the amount of these materials and the mean grain-size of the sediments. Shoreline erosion is extensive in the lower Chester River. Significant amounts of shore erosion are caused by water seepage and runoff from the landward side. Volume I is an overview of the entire study, presenting in a condensed form the scope and major findings. Volume II contains the discipline-oriented reports upon which the contents of Volume I are based. Volume II is organized into eight sections. Section 1 gives a description of the Chester River region; section 2 covers the investigations of pesticides and PCB's; section 3 takes up the trace metals investigated during the Chester River Study; section 4 discusses the biological investigations; section 5 covers the geological investigations; section 6 presents the findings of the meteorological and hydrological investigations; and section 7 covers the data management techniques. Section 8 discusses instrumentation and equipment. Volume III contains the data for the discipline-oriented reports. (See W74-07654 thru W74-07660) (Knapp-USGS)

BIOCHEMICAL INVESTIGATIONS,
T. O. Munson.
In: Chester River Study, Volume II; Joint Investigation by State of Maryland Department of Natural Resources and Westinghouse Electric Corporation, p 15-45, November 1972. 19 fig, 10 tab, 12 ref.

Descriptors: *Polychlorinated biphenyls, *Water pollution sources, *Water pollution effects, *Path of pollutants, *Maryland, Rivers, Erosion, Chesapeake Bay, Estuaries, Pesticides, Sedimentation, Trace elements, Shellfish.
Identifiers: *Chester River(Md).

The sediments and biota of the Chester River, Maryland, were analyzed for chlorinated hydrocarbons on a seasonal basis and found to contain DDT (DDD and DDE), chlordane and PCB's (mostly of the Aroclor 1242 variety). None of the compounds found in the biota occurred at levels high enough to be considered potentially hazardous to human health. The chlorinated hydrocarbons appeared to be entering the Chester River from the Bay rather than coming from sources within the Chester River watershed. Toxicity experiments indicated that the shellfish readily accumulated chlordane to high levels from very low concentrations in the water. Even though the observed levels in Chester River shellfish presented no hazard to human health, the levels may be high enough to adversely affect the animals themselves. In addition, the toxicity data provided an understanding of the chlordane uptake mechanisms for soft-shelled clams and oysters which may yield useful resource management tools. TRACE METALS INVESTIGATIONS,
Westinghouse Electric Corp., Pittsburgh, Pa.
H. D. Palmer.
In: Chester River Study, Volume II; Joint Investigation by State of Maryland Department of Natural Resources and Westinghouse Electric Corporation, p 47-59, November 1972. 2 fig, 6 tab, 23 ref.

Descriptors: *Trace elements, *Estuaries, *Maryland, Bottom sediments, Zinc, Lead, Cadmium, Copper, Chromium, Iron, Heavy metals, Path of pollutants, Water pollution sources, Chesapeake Bay.
Identifiers: *Chester River(Md).

Bottom sediment samples from the Chester River Estuary, Maryland, were analyzed to determine concentration levels of six metallic ions (Zn, Pb, Cd, Cu, Cr, and Fe). High concentrations of these metals were found at the mouth of the river and in the upper tributary portions of the Chester River. Low values for these metals were found in the middle reaches of the river upstream from the mouth but downstream from the major tributary net. A strong negative correlation exists between trace metal concentrations and the mean grain size of sediments, but only weak correlations are found between trace metals and the clay mineralogy of sediments. Concentrations of zinc are higher than those reported for other similar estuaries in the Chesapeake Bay region, but all trace metal concentrations are below levels of environmental concern. Dredging of the fine-grained materials in the main channel of the river, however, could be hazardous to the environment, since it would place large amounts of these materials back in suspension. BIOLOGICAL INVESTIGATIONS,
J. M. Forns.
In: Chester River Study, Volume II; Joint Investigation by State of Maryland Department of Natural Resources and Westinghouse Electric Corporation, p 61-73, November 1972. 5 fig, 6 tab, 10 ref.

Descriptors: *Plankton, *Estuaries, *Maryland, Chesapeake Bay, Sampling, Water pollution effects, Chlorinated hydrocarbon pesticides.
Identifiers: *Chester River(Md).

A preliminary investigation of the zooplanktonic community was undertaken as part of the study of the distribution and movements of chlorinated hydrocarbons through the aquatic environment of the Chester River System, Maryland. The chlorinated hydrocarbon concentrations in any one of the plankton samples could not have exceeded 0.286 ppm. Four planktonic groups were present plus a great deal of organic detrital matter. The overwhelmingly dominant organism in the planktonic community during the time of year investigated (October 1972) was the copepod Acartia tonsa. Comparisons of all tows at the three stations did not indicate any significant differences in the vertical distribution of plankters from surface to bottom or changes in community structure from the mouth of the river to the farthest station upstream. However, a slight increase in the numbers of Acartia copedodite stages was observed at the station closest to the Bay while nauplii seemed more abundant at the upstream station. Generally, the relative percent composition of the different organisms in the 20 collections examined were quite similar to those observed in other northeastern estuaries such as Long Island Sound, Raritan Bay and Delaware Bay. GEOLOGICAL INVESTIGATIONS,
Westinghouse Electric Corp., Pittsburgh, Pa.
H. D. Palmer.
In: Chester River Study, Volume II; Joint Investigation by State of Maryland Department of Natural Resources and Westinghouse Electric Corporation, p 75-137, November 1972. 47 fig, 5 tab, 99 ref.

Descriptors: *Estuaries, *Sedimentation, *Maryland, Sediment transport, Provenance, Geology, Mineralogy, Stratified flow, Sediment load, Suspended load, Bed load, Erosion, Bank erosion, Stream erosion.
Identifiers: *Chester River(Md).

The Chester River, Maryland, is similar to many rivers entering Chesapeake Bay in that extensive portions of its lower reaches are now drowned by the geologically recent rise in sea level. It is, therefore, capable of receiving sediments from the Bay as well as furnishing them. Sediments accumulating in the Chester River estuary are derived from shoreline erosion, from the adjacent Bay, and from the tributary net of the drainage basin. In the lower reaches of the river, Bay and shoreline sediment sources predominate, but in upstream areas, the primary sources are shoreline erosion and from the tributaries. Sedimentation is occurring in two clastic wedges prograding to the south. The upstream wedge is accumulating materials reworked from the extensive blanket deposits formed by the Upland terrace sands, silts and clays, while the downstream wedge, lying at the mouth of the river, is being built by an influx of Bay sediments supplemented by local shoreline erosion. A series of thalweg basins lie between the two wedges, and low sedimentation rates in them indicate a bypassing mechanism is partially responsible for maintaining these features. Two- and occassionally three-layer flows were measured. Net transport into the river from the Bay prevails in the lower layer, and clay mineralogy of both bottom and suspended sediment indicates that the fine fractions originating outside the river are being deposited at least 22 miles upstream from the mouth. W74-07657

METEOROLOGICAL AND HYDROLOGICAL INVESTIGATIONS,
K. T. S. Tzou.
In: Chester River Study, Volume II: Joint Investigation by State of Maryland Department of Natural Resources and Westinghouse Electric Corporation, p 139-211, November 1972. 45 fig, 11 tab, 24 ref.

Descriptors: *Meteorology, *Hydrology, *Estuaries, *Maryland, Currents(Water), Winds, Sediment transport, Path of pollutants, Chlorinated hydrocarbon pesticides, Streamflow, Discharge(Water), Precipitation(Atmospheric), Hydrographs.
Identifiers: *Chester River(Md).

Meteorological and hydrological investigations were undertaken to gain an understanding of possible transport mechanisms for chlorinated hydrocarbons (pesticides and PCB's) in the Chester River system of Maryland. Field measurements included air temperature, precipitation, wind speed and direction, streamflow, tides, current speed and direction, water temperature, salinity (conductivity), dissolved oxygen and pH. Water movements in the upper Bay are largely responsible for the transport of these materials. The coupling of meteorological and hydrological processes are also important in the final distribution of sediments carrying the chlorinated hydrocarbons. Prevailing winds in the Chester River area are from west to northwest in the spring, fall and winter and from the southwest during the summer. Hence, pesticide residues from the western shore of the Bay can be carried directly by winds and reach the study area through aerial fallout. Attachment of chlorinated hydrocarbons to particulate matter is the most important transport mechanism, particularly in the movement of fine sediments carrying the chlorinated hydrocarbons from the Bay to the River. About 28 grams of PCB's, 3 grams of total DDT and 1 gram of chlordane were moving into the Chester River from the Bay each day during the early spring freshet period, and only a small fraction of these compounds were returned to the Bay in late spring. Most of the chlorinated hydrocarbons found in the Chester River sediments originate in Chesapeake Bay. Meteorological conditions and their strong coupling with the hydrological regime have contributed to serious shore erosion in various portions of the River. Tropical storm 'Agnes' demonstrated in a dramatic fashion how strongly these factors are interlocked. Extreme low salinities as a result of this storm caused losses of shellfish, particularly the soft-shelled clam, while record annual high water levels were recorded at several points in the river. DATA MANAGEMENT,
R. W. Onstenk.
In: Chester River Study, Volume II; Joint Investigation by State of Maryland Department of Natural Resources and Westinghouse Electric Corporation, p 213-235, November 1972. 14 fig, 6 tab, 2 ref.

Descriptors: *Data processing, *Data storage and retrieval, Meteorological data, Hydrologic data, Estuaries, Maryland, Water pollution, Water quality.
Identifiers: *Chester River(Md).

The nature of the Chester River study required the collection, storage and analysis of more than 30 million data. Wind speed and direction, tide, currents, and various physical and chemical observations regarding temperature, conductivity, dissolved oxygen and pH were fundamental measurements which required analysis. Field data from a variety of sensors employing magnetic tape, paper tape, hand entries on log sheets, and card decks and tapes from participating agencies all required registration to a common time base prior to their storage in a master data file. Details of data handling and problems encountered in the management of large quantities of diverse information are presented. (See also W74-07653) (Knapp-USGS)

EQUIPMENT AND INSTRUMENTATION,
A. G. Haury.
In: Chester River Study, Volume II; Joint Investigation by State of Maryland Department of Natural Resources and Westinghouse Electric Corporation, p 237-251, November 1972. 15 fig, 12 tab.

Descriptors: *Estuaries, *Maryland, *Data collections, *Instrumentation, Streamflow, Currents(Water), Rain gages, Meteorological data, Hydrologic data, Sampling, Sediments.

Instrumentation and complementary equipment required in support of the 12-month study of the Chester River, Maryland, are described. Performance of the various devices is discussed, with a description of problems, calibration techniques, and installation schemes employed for hydrological and meteorological sensors. Major problems encountered during the study included vandalism and severe biological fouling during summer months when the rise in water temperature prompted growth of algae and slime on submerged instruments. THE CHEMICAL/PHYSICAL AND MICROBIOLOGICAL CHARACTERISTICS OF TYPICAL BATH AND LAUNDRY WASTE WATERS,
National Aeronautics and Space Administration, Langley Station, Va. Langley Research Center.
W. D. Hypes, C. E. Batten, and J. R. Wilkins.
Available from NTIS, Springfield, Va 22151 NASA TN D-7566 Price $3.00 printed copy; $1.45 microfiche. Technical Note D-7566, March 1974. 29 p, 4 fig, 8 tab, 6 ref.

Descriptors: *Water reuse, *Domestic water, Water quality, Coliforms, Turbidity, Water chemistry, Waste water(Pollution), Water pollution effects.
Identifiers: Bath water, Laundry water.

The chemical, physical, and microbiological characteristics of typical bath and laundry waste waters were studied. Data are presented for bath waste water and laundry waste water collected separately and for bath and laundry waste water collected together during a 12-day test in which the untreated waste waters were reused for toilet flush water. The characteristics of combined bath and laundry waste waters showing the most significant changes from a tap water were ammonia, color, methylene blue active substance (MBAS), phosphates, sodium, sulfates, total organic carbon, total solids, and turbidity. The mean total number of microorganisms detected from the combined bath and laundry waste waters ranged from 1 to 10 million cells/ml and the mean number of possible coliforms ranged from 100,000 to 1 million cells/ml. Total microorganism and coliform counts stabilized at levels of 1 million and 100,000 cells/ml, respectively. An accumulation of particulates and an objectionable odor were detected in the tankage use during the 12-day reuse of the untreated waste waters. The combined bath and laundry waste waters from a family of four provided enough water for 91 percent of the toilet flushing of the same family. (Knapp-USGS)

QUALITY OF SURFACE WATERS IN THE COLORADO RIVER BASIN, TEXAS, 1966-72 WATER YEARS,
Geological Survey, Austin, Tex.
J. Rawson, M. L. Maderak, and L. S. Hughes.
Open-file report, February 1974. 81 p, 8 fig, 7 tab, 11 ref.

Descriptors: *Water quality, *Texas, *Rivers, Path of pollutants, Salinity, Saline water, Water pollution sources.
Identifiers: *Colorado River basin(Tex).

The discharge-weighted average concentrations of dissolved solids in flow from the San Saba, Llano, and Pedernales Rivers of Texas during the 1966-72 water years were less that 250 mg/liter dissolved solids, 50 mg/liter chloride, and 50 mg/liter sulfate. Saline-water inflow seriously degraded the quality of water in the Colorado River upstream from Colorado City and in most of the principal tributaries upstream from San Saba. The discharge-weighted average concentration of dissolved solids was about 1,110 mg/liter in flow of the Colorado River at Colorado City. Inflow of water from Pecan Bayou, San Saba River, Llano River, Pedernales River, and several smaller tributaries caused a progressive reduction in the concentrations of dissolved constituents in the Colorado River downstream from the areas of saline inflow. The discharge-weighted average concentrations for flow in the lower reach of the Colorado River between Austin and Wharton were less than 300 mg/liter dissolved solids. Diversion of saltwater upstream from Colorado City has reduced the salinity of the water available for storage in E. V. Spence Reservoir. Inflow of organic wastes caused some localized degradation in the quality of water in tributaries but caused no serious impairment in the quality of water in the main stem between San Saba and Wharton. The discharge of wastes containing minor elements or the use of pesticides in the areas studied has not resulted in serious impairment of the quality of the water. (Knapp-USGS)

TRANSPORT AND TRANSFORMATION OF MERCURY IN NATURE AND POSSIBLE ROUTES OF EXPOSURE,
Rochester Univ., N.Y. Dept. of Pharmacology and Toxicology.
J. Vostal.
In: Mercury in the Environment, (Chemical Rubber Co. Press), p 15-27, 1972, 1 tab.

Descriptors: *Path of pollutants, *Mercury, *Transfer, *Inorganic compounds, *Organic compounds, Water pollution, Air pollution, Geology, Industrial wastes, Chemical reactions, Biochemistry, Evaporation, Solubility, Food chains.

The sources of mercury and its transport in the air and aquatic environments and through food chains are discussed. Mercury occurs in nature to the extent of 50 to 80 ppb of the earth's content. It enters the geochemical cycle in the form of metallic mercury vapors and volatile or soluble mercury compounds. The physicochemical properties of newly formed compounds may contribute considerably to the release of mercury into the biosphere, since their high volatility and solubility make the transport of mercury into the environment easy. The natural content of mercury in surface waters depends of the accessibility of mercury, time of contact, and conditions of the water. Most of the mercury produced annually is eventually released to the environment through industrial and agricultural routes. All components of the biosphere contain at least minimal traces of mercury and constitute potential sources of exposure for all living organisms. Levels of mercury in the atmosphere and hydrosphere and routes of mercury passage through aquatic and terrestrial food chains are considered. Fish have been found to be the most important source of methylmercury in human food, however relatively high levels may occur in foods other than fish. (See also W74-07680) (Jerome-Vanderbilt)

In: Mercury in the Environment, (Chemical Rubber Co. Press), p 29-91, 1972, 2 fig, 8 tab.

Descriptors: *Mercury, *Metabolism, *Absorption, *Transfer, Water pollution, Air pollution, *Path of pollutants, Environmental effects, Human physiology, Human pathology, Animal physiology, Animal pathology, Biochemistry, Organic compounds, Inorganic compounds, Respiration, Laboratory tests, Evaluation, Reviews.

Mercury and its organic and inorganic compounds are considered in regard to their absorption into the human or animal body, their biotransformation and transport, their distribution in body tissue, their retention and excretion, and the indices of exposure to and retention of them. Absorption of mercury into the body is discussed in regard to respiratory intake, gastrointestinal uptake, skin absorption, and placental transfer, for elemental mercury, inorganic mercury in general and alkylmercury, aryl mercury, alkoxylkalkyl mercury and other organic mercury compounds. Oxidation of mercury is its major biotransformation. Elemental mercury is generally transported by the erythrocytes and penetrates biological membranes easily. Mercury compounds are concentrated mainly in the kidney, liver and brain tissue. The biological half-life of inorganic mercury in humans is 30 to 60 days, and for alkylmercury compounds it appears to be longer. The rate of elimination of organic mercury compounds depends upon the rate of degradation into inorganic mercury. The most reliable index of exposure to and retention of mercury in the nervous system is the level of mercury in the blood. (See also W74-07680) (Jerome-Vanderbilt)

METALS FOCUS SHIFTS TO CADMIUM,
H. M. Miller.
Environmental Science and Technology, Vol 5, No 9, p 754-755, Sept. 1971. 1 fig, 1 tab.

Descriptors: *Metals, *Cadmium, *Human disease, *Research priorities, Pollutants, Air pollution, Water pollution, Environmental effects, Toxicity, Investigations, Path of pollutants, Absorption, Distribution, Water pollution sources.

A link between cadmium and osteomalacia has led to concern over the amount of this metal in the environment. Cadmium has an extermely long biological half-life and, although rare in the earth's crust, it does not degrade in the environment. This metal has been linked to serious liver and kidney damage, pulmonary disease and death, in addition to brittleness of bones. The Environmental Protection Agency commissioned several studies to determine the cadmium threat to health, and results seem to show that it is not as great as w
mercury contamination. Although nearly 4.6 m
lion pounds were emitted into the atmosphere
1969 alone, the levels in ambient air are not seen
significant. Only about 5% of ingested cadmium
retained by the body while up to 40% of inhal
cadmium is retained. Most cadmium in the e
vironment results from metallurgical processing
incineration of plastic products. (Jerome-Va
derbilt)

AERIAL POLLUTION AND THE RAP EVOLUTION OF COPPER TOLERANCE,
Liverpool Univ. (England). Dept. of Botany.
L. Wu, and A. D. Bradshaw.
Nature, Vol 238, No 5360, p 167-169, July 21, 197
3 fig, 1 tab, 10 ref.

Descriptors: *Industrial wastes, *Soil contamin
tion, *Copper, *Plant growth, Biology, Biochemi
try, Metabolism, Growth rates, Pollution, Fallou
Toxins, Soil analysis, Heavy metals, Zinc, Lea
Inhibitors, Plant physiology.

Although airborne metals have been shown to
toxic to plants when they contaminate soil, it w
noted that Agrostis stolonifera and Agrostis tenu
growth covered contaminated soil after ten yea
or more. This study investigated the rapid evol
tion of copper tolerance in these species. Seed
from plants in areas of copper contamination we
taken and their growth was compared with that
seeds from uncontaminated soil, and seeds fro
soil which was contaminated with zinc and lea
when they were all grown in soil from a copp
refining area which contained 10,260 ppm coppe
The seeds from plants in areas of no copper co
tamination grew very poorly, and most of th
seedlings died, while seeds from copper co
taminated areas grew normally. Metal toleranc
seems to be selective, but, selection for coppe
tolerance appears to occur easily. (Jerome-Va
derbilt)

HYDROGEOLOGIC INVESTIGATION OF A SANITARY LANDFILL IN STRATIFIED GLA CIAL DRIFT,
Connecticut Univ., Storrs. Inst. of Wate
Resources.
T. L. Holzer.
Available from the National Technical Informa
tion Service as PB-232 154, $3.00 in paper copy
$1.45 in microfiche. Completion Report, 1973. 1
p, 7 fig, 1 tab. OWRR A-038-CONN(1). 14-31
0001-3207.

Descriptors: *Landfills, *Glacial drift
*Groundwater movement, *Water pollutio
sources, Hydrogeology, *Connecticut, Path o
pollutants, Water table, Ions, *Chlorides, Dis
solved solids.

The impact on quality of ground water beneath
municipal sanitary landfill in fine-grained
rhythmically-bedded glacial drift in eastern Con
necticut was investigated over a sixteen-month
period. Two wells drilled through the landfill
yielded water samples of natural quality. Chemical
analyses of ground water for selected dissolved in
organic constituents (total Fe, Ca++, Mg++
Na+, K+, HCO3-, SO4=, and Cl-) indicate sig
nificant contamination of shallow ground wate
only in the immediate vicinity of the landfill. The
distribution of these constituents is in general
agreement with predictions based on the map of
the water table. Anomalous, but low, concentra
tions of Cl- were detected, approximately 2,100
feet from the landfill in the direction of ground
water flow. This distance agrees with estimated
rates of horizontal migration, 70-100 feet per year,
and the age of the landfill, 30 years. However, pol
lution by road salting or septic tanks also may be
the source of the Cl-. Concentrations of leachate
in shallow ground water beneath the landfill corre-

te with seasonal fluctuations of the water table, ith high concentrations corresponding to periods hen the water table is above the base of the land- ll.

HE TRANSPORT OF RADIOISOTOPES BY INE PARTICULATE MATTER IN AQUIFERS,
eorgia Inst. of Tech., Atlanta. Environmental esources Center.
B. F. Champlin.
vailable from the National Technical Informa- on Service as PB-232 179, $5.50 in paper copy, 1.45 in microfiche. Report No WRC-1169, ecember 1969, 187 p, 27 fig, 8 tab, 97 ref. OWRR -002-GA(5). 14-01-0001-1629.

escriptors: *Radioisotopes, *Water pollution ources, *Aquifers, Fallout, *Radioactive wastes, oil physical properties, Soil chemistry, Bound ater, Adsorption, Clay minerals, *Path of pollu- nts.
dentifiers: Particle retention, *Van der Waals rces.

nformation on the long-term movement of adioactive fission products and other pollutants om waste pits, fallout, and underground nuclear xplosions is persued through theoretical and ex- erimental investigations of the various henomena that pertain to ion transport or reten- on by soils. The theoretical section explores the nteractions between solids in water that result rom thermal forces, electrostatic charges, and an der Waals forces. The particle range con- idered is that of the large colloid to the finest silt. pecial attention is given to sources of energy suf- icient to cause breakage of adsorption bonds, ad- itive bonding, and the relationshp between uspended particles and the granules making up he aquifer. The experimental section explores actors which influence either retention of adioactivity by the sand bed or transport of the ctivity through such a bed by micro-particles. Correlation between the phenomena observed ex- erimentally and those predicted in the theoretical ection shows Casimir's correction to the theoreti- al van der Waals interactions to account for najor changes in the particle retention ability of a and bed. Control of the movement of radioactivi- y through porous soils lies first with the nature of he particles, second with the cation and anion concentrations of the suspending solutions, and hird with pore size distribution of the aquifer. CHARACTERIZATION OF SUSPENDED SEDIMENTS IN WATER FROM SELECTED WATERSHEDS AS RELATED TO CONTROL PROCESSES, NUTRIENT CONTENTS, AND LAKE EUTROPHICATION,
Washington State Univ., Pullman. Dept. of Agronomy and Soils.
B. L. Carlile, B. L. McNeal, J. A. Kittrick, L. C. Johnson, and H. H. Cheng.
Available from the National Technical Information Service as PB-232 176, $4.00 in paper copy, $1.45 in microfiche. Completion Report, March 1974. 92 p, 30 tab, 52 ref. OWRR A-052-WASH(1). 14-31-0001-3548.

Descriptors: *Suspended solids, *Sediments, *Nitrogen, Phosphorus, Flocculents, Adsorption, Creek Muds, *Return flows, Erosion, Turbidity, Settling ponds, *Nutrients, Eutrophication, Water pollution control, *Washington, Irrigation, *Path of pollutants.

Laboratory and field investigations characterized suspended sediments from watersheds of varied hydrologic, soil and land use characteristics. Agricultural activities in the dryland wheat region of eastern Washington contributed large amounts of sediments and dissolved nitrogen during heavy runoff periods, whereas urban activities provided substantial nitrogen and phosphorus during the remaining months. Chemical 'fingerprints' suggested that most suspended solids originated from actively-eroding agricultural fields, rather than from channel erosion. In excess of 90 per cent of the orthophosphate exposed to sediments was adsorbed, with adsorption following the Freundlich isotherm and being essentially non temperature-dependent. Chemical analyses of creek muds above and below two sewage treatment plants substantiated the existence of interactions between muds and effluents. In irrigated portions of the Yakima Valley, furrow irrigation management had a significant effect on sediment and nutrient contents or irrigation return flows, with sediment concentrations substantially higher than permitted by proposed water quality standards. Preliminary field assessment was provided of sediment removal by settling ponds, and preliminary laboratory studies demonstrated the superiority of cationic flocculents. Nutrient contents of sediments from better-managed fields were higher in several cases, due to higher soil fertility levels. Correlation between suspended solids and turbidity were acceptable at loads between 20 and 300 mg/l, providing that data were grouped by location and season. Re-analysis of stored water samples demonstrated that equilibrium had existed initially between adsorbed and dissolved orthophosphate and ammonium nitrogen.

CONTRIBUTION TO WATER POLLUTION FROM AGRICULTURAL AND URBAN SOURCES IN THE COACHELLA VALLEY,
California Univ., Riverside. Dept. of Soil Science and Agricultural Engineering.
J. J. Oertli, and G. R. Bradford.
California Agriculture, Vol 27, No 7, p 4-6, July, 1973.

Descriptors: *California, *On-site data collections, Water pollution sources, *Urban runoff, *Agricultural runoff, Chemical properties, Effluents, Nutrients, Nitrogen, Investigations, Phosphorus, Salinity, *Surface runoff, Subsurface waters, Drainage water, *Water quality control.
Identifiers: *Coachella Valley(Calif).

To obtain quantitative data on the contributions of agricultural and urban sources to water pollution, an investigation was initiated in the Coachella Valley on the chemical composition of drainage water from cropped fields under various agricultural managements and the effluents from the Indio sewage treatment plant. Research emphasis was on those nutrients suspected of playing a major role in eutrophication. Of the ten sampling station study fields, three were in citrus, two in grapes, one in dates, one in carrots, one in asparagus, and two in corn. Surface runoff and subsurface drainage of a large feedyard were also sampled. Results indicate that the drainage water from corn, carrots, and asparagus fields contains the largest amounts of nitrates and that the most significant contributor to phosphates in the White Water River is the Indio sewage treatment plant. With respect to total salinity, the water quality was best from the sewage effluent and surface runoff from the feedyard. (Sandoski-Franklin)

TRITIUM DISTRIBUTION IN THE NUCLEAR INDUSTRY - THE REQUIREMENTS FOR CONTROL STRATEGIES,
Allied Chemical Corp., Idaho Falls, Idaho. Idaho Chemical Programs Operations Office.
B. C. Musgrave.
Available from NTIS, Springfield, Va., as Rept. No. ICP-1041; $4.00 per copy, $1.45 microfiche. Report No ICP-1041, January 1974. 23 p, 4 fig, 3 tab, 8 ref. AEC AT(10-1)-13755-22-1.

Descriptors: *Tritium, *Hydrogen, *Nuclear powerplants, *Air pollution, *Water pollution, *Water pollution sources, Radioisotopes, Control, Regulation, Safety, Evaluation, Assessment, Effluents, Waste storage, Waste disposal.
Identifiers: *Fuel reprocessing.

Tritium which is produced from ternary fission in nuclear reactors will be diluted and dispersed throughout the aqueous streams in the fuel reprocessing plants. The ranges of tritium concentrations expected in the reprocessing plant streams for different reactor types are examined. The requirements for tritium control through recycle and isotope separation are described. An

economic study of these methods of control shows the costs are quite high. (Houser-ORNL)

URANIUM-234,
Atomizdat, Moscow (USSR).
V. V. Cherdyntsev.
John Wiley and Sons, Inc., New York, N.Y., 1971; 239 p, 43 fig, 77 tab, 1 biblio. $19.50. Translation of URAN-234, Atomizdat, Moskva, 1969, by Israel Program for Scientific Translations, Ltd. 1971.

Descriptors: *Uranium, *Radioisotopes, *Natural resources, *Data collections, *Geochemistry, Nuclear energy, Radiation, Nuclear powerplants, Nuclear wastes, Water pollution, Oceans, Soils geology, Archeology, Radioactive dating, History, Quaternary period.

This book is a logical and systematic account of the experimental data available on uranium-234 in nature. The intention is not merely to review the experimental data in a systematic manner, but also to draw the attention of the experts in the various disciplines to the wide scope of application of U-234, which is an important and useful radioactive indicator, the atoms of which have been tagged by nature itself. Even now, U-234 is becoming one of the tools of modern nuclear geochemistry. Consideration is given to both the needs of specialists who will find that the experimental data contained in the tables are as complete and as up-to-date as feasible, and those readers interested in science in general and of workers in various historical and exact sciences: geologists, physicists, oceanologists, vulcanologists, archeologists, soil scientists, etc. For the sake of the less specialized readers, technical terms with which they may not be familiar are avoided, and to deal with physical problems in elementary physical terms, with geological problems in elementary geological terms, etc. Nevertheless, it is the purpose not merely to present facts but the totality of the ideas comprised in the subject of this book, without any simplification. (Houser-ORNL)

ENVIRONMENTAL STATEMENT RELATED TO CONSTRUCTION AND OPERATION OF BARNWELL NUCLEAR FUEL PLANT.
Directorate of Licensing, Fuels and Materials (AEC), Washington, D.C.
Available from NTIS, Springfield, Va., as Rept. No. Docket 50332-37; $7.60 per copy, $1.45 microfiche. Report No Docket 50332-37, January 1974. 279 p, 12 fig, 29 tab, 3 append.

Descriptors: Fuels, *Nuclear powerplants, Effluents, Environment, Administrative agencies, *Comprehensive planning, *Sites, Geology, Investigations, Hydrology, Seismology, Climatology, Meteorology, Ecology, Radioactive wastes, Water pollution, Water pollution sources, Radioactive effects, Monitoring, Public health, Transportation, Beneficial use, Cost-benefit analysis, Krypton, Tritium, Iodine, *South Carolina.
Identifiers: *Fuel reprocessing plant, *Environmental impact statements.

This environmental statement was prepared in compliance with the National Environmental Policy Act and relates to the proposed continuation of construction permit of the Barnwell Nuclear Fuel Plant. The plant is located in Barnwell County, South Carolina, and will recover unused uranium and plutonium from irradiated nuclear fuels. Environmental impacts are assessed and after consideration of alternatives an environmental benefit cost summary was compiled. The conclusion is to continue the construction permit subject to specified environmental monitoring programs and recommendations for a course of action to alleviate any harmful effects or evidence of irreversible damage due to operation of the plant. IODINE-129 LEVELS IN MILK AND WATER NEAR A NUCLEAR FUEL REPROCESSING PLANT,
New York State Dept. of Health, Albany. Radiological Sciences Lab.
J. C. Daly, S. Goodyear, C. J. Paperiello, and J. M. Matuszek.
Health Physics, Vol 26, No 4, p 333-342, April 1974. 4 tab, 16 ref.

Descriptors: *Nuclear powerplants, Fuels, Effluents, Radioactivity, Iodine, *Milk, *Water pollution, Food chains, Water pollution sources, Measurement, Assay, Public health, Environment, Streams, *New York.
Identifiers: *Fuel reprocessing plant, Buttermilk Creek(N.Y.).

Detection of substantial I-129 concentration in animal thyroids collected in the environs of a nuclear fuel reprocessing plant in West Valley, New York, signified a general buildup of I-129 in the environment surrounding the plant. Concern for a possible public health problem led to the development of a program to establish I-129 levels in milk and water in cooperation with the New York State Department of Environmental Conservation. Surveillance for I-129 in milk was begun in September 1971. In a 12-month period the I-129 levels in 95 milk samples from farms surrounding the nuclear fuel reprocessing plant ranged from nondetectable (less than 0.3 pCi/1.) to 2 pCi/1. In addition, 111 water samples collected between June 1971 and July 1972 from streams draining the plant site were analyzed for I-129. Samples from Buttermilk Creek, which is on the plant site, showed I-129 concentrations up to 7.7 pCi/l. The impact of I-129 in the environment surrounding the plant is evaluated. Estimates of dose commitment are provided and are compared, for adults, to radiation protection guides. Recommendations are offered to reduce the potential public health hazard, principally by limiting the release of I-129 levels to the biosphere. (Houser-ORNL)

TRACE-ELEMENT INTERACTIONS BETWEEN RIVER WATER AND SEAWATER,
Puerto Rico Nuclear Center, Mayaguez.
W. O. Forster, D. A. Wolfe, F. G. Lowman, and R. McClin.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 807-815, (1971) 12 fig, 2 tab, 13 ref.

Descriptors: Rivers, Saline waters, *Trace elements, Tracers, *Radioactivity, Cobalt, Zinc, Iron, Manganese, Silver, Tin, Lead, Europium, *Radioisotopes, Mixing, Diffusion, Dispersion, Sediments, Absorption, Biota, Ion exchange, *Puerto Rico.
Identifiers: *Anasco River(P.R.).

The partitioning of several high-specific-activity radionuclides added to Anasco River water was studied as they mixed with various amounts of seawater. The distribution of selected biologically important radionuclides, Co-60, Zn-65, Fe-59, and Mn-54, was examined in their fractionation between the sediment, water, and biota, as well as the distribution for those which represented both soluble and insoluble trace elements, that is, Ag-110, Sn-113, Sb-125, and Eu-155. An effort was made to distinguise between the changes in distribution of these radionuclides due to biota by using replicate tracers with antibiotic added. In order to evaluate the intermediate-term chemical interactions of ions in seawater and river water, sediment-free water was used in selected experiments. The biogeochemical aspects of the above river water radionuclides in their mixing with seawater are discussed. (See also W74-07799) (Houser-ORNL)

ERROR ANALYSIS OF ECOLOGICAL MODELS,
Oak Ridge National Lab., Tenn.
R. V. O'Neill.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 898-908, (1971) 4 fig, 4 tab, 11 ref.

Descriptors: *Systems analysis, *Simulation analysis, *Ecology, *Ecosystems, *Forecasting, Kinetics, Radioactivity, Model studies, Monte Carlo method, Mathematics, Statistical methods, Measurement.

Systems analysis techniques are valuable in the analysis of radionuclide kinetics in ecosystems. However, the art of systems modeling is relatively new to ecology, and few guides are available for constructing ecological models. As a result, untested hypotheses are sometimes involved in model development. For example, it may be difficult to predetermine optimal model complexity, that is, the number of state variables or compartments to be included in a model for acceptable accuracy. It could be argued that a more complicated model can account more accurately for complexities in the real system. While this argument appears correct intuitively, additional factors need to be considered. The hypothesis that greater complexity leads to greater accurary was tested by analyzing the total uncertainty accompanying a model prediction. In general, systematic bias, resulting from abstracting the system into a few variables, is inversely related to complexity. However, there is a concomitant increase in uncertainity due to measurement effors on individual model parameters. As more parameters are added to the model, they must be quantified in field and laboratory experiments which are never error free. If these measurement errors are promulgated through a simulation, they contribute to uncertainty in model predictions. By applying Monte Carlo simulation techniques, it was possible to account explicitly for each component of the total uncertainty. Particular attention was paid to the balance between systematic bias and measurement errors. This analysis indicates that the gain in precision from increasing model complexity is not as consistent an outcome as might be expected. Results appear valid for a wide range of modeling applications. (See also W74-07799) (Houser-ORNL)
W74-07811

MATHEMATICAL MODEL OF TRITIATED AND STABLE WATER MOVEMENT IN AN OLD-FIELD ECOSYSTEM,
Puerto Rico Univ., Mayaguez. Dept. of Nuclear Engineering.
D. S. Sasscer, C. F. Jordan, and J. R. Kline.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee, p 915-923, (1971) 8 fig, 7 ref.

Descriptors: Water pollution, Soil contamination, *Tritium, *Model studies, Soil water, Cultivated lands, Simulation, Measurement, On site data collections, Equations, *Mathematical studies, Ecosystem,oil-water-plant relationships, Evapotranspiration, Diffusion, Percolation, Rainfall intensity, *Oil fields.
Identifiers: *Tritiated water.

Water and tritium movement in an old-field ecosystem was simulated by means of a kinetic equation model utilizing data obtained from field measurements of stable and/or tritiated water. The ecosystem was assumed to consist of 49 layers of 1-cm-thick soil and one plant compartment. The water content of the soil and plants was described by a system of 50 simultaneous, first-order, linear, differential equations with discontinuous, variable coefficients. The coefficients were assumed to be functions of the evapotranspiration, Soil-water diffusion, gravity flow of soil water, and the previous 48-hr history of rainfall. A solution for the water content in each compartment as a function of time was arrived at by obtaining successive solutions of the system of differential equations for arbitrarily small periods of time during which the coefficients were assumed to be constant. A pulse of tritium deposited on or near the surface in the spring of the year is predicted to move downward in the soil to a depth of approximately 30 cm and remain there throughout the summer. Rainfall and transpiration rates were found to have a greater effect on water concentration in the soil than diffusion. The predictions made by the model are validated by Jordan et al. by comparison to experimentally determined data. (See also W74-07799) (See W74-05198) (Houser-ORNL)

MODELS OF MATTER FLOW IN A SOUTHERN MIXED HARDWOOD FOREST IN FLORIDA: PRELIMINARY RESULTS,
Florida Univ., Gainesville. Dept. of Botany.
A. E. Lugo, S. C. Snedaker, and J. F. Gamble.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 929-935, (1971) 7 fig, 2 tab, 18 ref.

Descriptors: *Model studies, *Coniferous forests, Flow system, *Flow measurements, Groundwater movement, *Florida, Mineralogy, Cycles, Cycling nutrients, Cesium, Water pollution, Path of pollutant, Human population, Food chain, Public health, Seasonal, Ecosystems.

The southern mixed hardwood forest is the most diverse forest ecosystem in north central Florida, with a reported 36 tree species per thousand individuals. Although the floristic composition and climax-successional status are adequately known, little information is available on the flows and storages of energy and matter. This work is part of a larger study to trace the peculiar movement of Cs-137 into the food chains leading to man in Florida. This objective is being approached by computer modeling and simulation of the energy and matter dynamics. A qualitative model for the mineral cycles of the southern mixed hardwood forest is presented for ten elements within the major storage compartments (leaves, wood, roots, litter, and mineral soil), precipitation throughfall, and 18-month records of litter fall and accumulation. Seasonal pulsing is quantitatively described with respect to its relationship to ecosystem function. Preliminary results indicate a steady-state system with closed mineral cycling. The implications of steady systems, relative to Cs-137 movement, in Florida are discussed. (See also W74-07799) (Houser-ORNL)

In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tenn. p 936-944, (1971) 4 fig, 13 ref.

Descriptors: *Radioisotopes, Distribution, Sediments, Surface waters, *Sediment distribution, Sediment transport, Sedimentation rates, *Diffusion, Absorption, Stratification, Ion exchange, *Tritium, *Great Lakes.

Patterns of distinct peak events in input of radionuclides into sediment may be easily obliterated by diffusion taking place in the interstitial waters of sediments. Rates of sedimentation derived from the positions of diffusion-broadened peaks in sediment may give values exaggerated by factors of 2-3. Diffusion-sedimentation scale distances (D/U) in lake and oceanic sediments are in general appreciably greater than diffusion decay scale distances; consequently, on the time scale of man-produced radionuclides, the rates of sedimentation do not significantly control the amount of radionuclides accumulating in the sediments by diffusion and uptake from overlying water. In a stratified sediment the chemical and physical characteristics of the thin layer near the sediment-water interface strongly control the amount of radionuclide accumulating in the sediment. Exchange and/or adsorption on solid particles in the sediment greatly affect the amount of radionuclide stored in sediment at steady state; for tritium in the Great Lakes, the amount stored in interstitial water without uptake by solids would be only 1-6% of the amount in lake water. For metal radionuclides characterized by strong uptake by solids, the amount stored in sediment may be 10-100 times greater than the amount in lake water at steady state. ECONOMIC EVALUATION OF THE EFFECT OF SELECTED CROP PRACTICES ON NONAGRICULTURAL USES OF WATER,
Illinois Univ., Urbana. Dept. of Agricultural Economics.
H. Onishi, A. S. Narayanan, T. Takayama, and E. R. Swanson.
Available from the National Technical Information Service as PB-232 161, $3.75 in paper copy, $1.45 in microfiche. Illinois Water Resources Center, Urbana, Research Report No 79, March 1974. 58 p, 3 tab, 5 fig, 4 append. OWRR B-049-ILL(5). 14-31-0001-3272.

Descriptors: *Water pollution sources, Evaluation, Water quality, Sedimentation, Linear programming, Nitrates, Income, Crops, Illinois, Watersheds(Basins), Path of pollutants.
Identifiers: *Economic analysis, Nitrate contamination, Crop practices, Farm income.

Cropping systems may have an unfavorable influence on the quality of nearby surface water. Linear programming methods were used to assess the impact of improvements in certain water quali-

ty characteristics on economically optimal crop systems. Thus, the effect of crop practices on water quality is analyzed indirectly by assuming that farmers would alter their cropping practices in the most economical way in order to conform to various water-quality constraints. A 1,200-acre watershed was used to illustrate the procedure. Sediment entering the reservoir was treated as a variable constraint on maximization of farm income. Requiring successively lower amounts of sediment to enter the reservoir caused farm income to decrease at an increasing rate. The analysis was enlarged to include a constraint on nitrate in the leachate below the root zone. This phase of the analysis also included a charge for removing at least some of the sediment entering the reservoir. As the nitrate limit on the leachate was lowered, farm income decreased at an increasing rate. The requirement of removal of the sediment by itself had little or no effect on the nitrate concentration in the leachate. Extensions of the procedure for use in other situations are suggested.

FACTORS CONTROLLING THE DYNAMICS OF NON-IONIC SYNTHETIC ORGANIC CHEMICALS IN AQUATIC ENVIRONMENTS,
Purdue Univ., Lafayette, Indiana, Dept. of Forestry and Conservation.
J. L. Hamelink, and R. C. Waybrant.
Available from the National Technical Information Service as PB-232 267, $4.00 in paper copy, $1.45 in microfiche. Indiana Water Resources Research Center, West Lafayette, Technical Report No 44, December 1973, 68 p, 10 fig, 11 tab, 5 ref, 2 append. OWRR A-017-IND(3).

Descriptors: *Pesticide kinetics, *Distribution patterns, *Persistence, *Pesticide removal, *Organic pesticides, *DDE, Adsorption, Food chain, Lakes, Bottom sediments, Epilimnion, Quarries.
Identifiers: Non-ionic synthetic organic compounds, Flooded quarries, *Lindane, Toxaphene.

The distribution and persistence of DDE and lindane added to the epilimnion of a thermally stratified, ultra-oligotrophic flooded limestone quarry were studied. The quarry was treated with a single sub-lethal dose of each compound at a concentration of 200 pptr in the epilimnion or 50 pptr based on the entire water mass. An adjacent quarry was used as a control. Water, bottom sediments, limestone rock slabs, zooplankton, and fish were periodically analyzed. Dissolved oxygen and temperature profiles were also monitored. Results indicated that persistence of the pesticides may be primarily controlled by adsorption onto suspended particles. DDE was lost from the water approximately 15 times as fast as lindane. DDE was biologically magnified to a greater extent than lindane, and the DDE accumulated and retained by the invertebrates was closely correlated with the DDE concentration in the water. An equilibrium with lindane between fish and water was reached about 12 times faster than that with DDE. The results include the development of a simple two-compartment partition model that may be useful in predicting the distribution and persistence of a variety of non-ionic synthetic organic compounds.
W74-07831

THE DISPERSION OF CONTINUOUSLY INJECTED EFFLUENTS IN OPEN CHANNELS,
Louisiana State Univ., Baton Rouge. Water Resources Research Inst.
D. P. Harrison, and A. H. Wehe.
Available from the National Technical Information Service as PB-232 229, $3.75 in paper copy, $1.45 in microfiche. Completion Report, February 1973. 52 p, 3 fig, 6 ref. OWRR A-024-LA(1).

Descriptors: Effluents, Hydraulic models, Mathematical models, Open channel flow, *Model studies, *Dispersion, *Injection, *Computer models, Simulation analysis, Path of pollutants.
Identifiers: Froude model.

The primary objective has been to determine the feasibility of using physical models to describe the dispersion of continuously injected effluents in open channels. The approach to the problem has been along two lines: (1) examining scale-up relationships applicable to this model to determine factors limiting a realistic scale-up, and (2) constructing a computerized description of simple open channels to test the importance of the limiting factors and to aid in planning future experimental work. Concentration similitude cannot normally be obtained in an undistorted Froude model. By distorting the Froude model in accordance with the requirements of the most important of the two dispersion coefficients, vertical and lateral, one can establish concentration similitude at a short distance downstream from the injection point. This procedure has been verified with a computer model for uniform flow in straight rectangular channels with vertical and lateral dispersion. This computer model should be useful in designing models to study dispersion in open channels.
W74-07833

PROCESS CONTROL MODEL FOR OXYGEN REGENERATION OF POLLUTED RIVERS, PHASES IV AND V, AND SPACIALLY AND TEMPORALLY DISTRIBUTED DISCHARGE OF EFFLUENTS IN ESTUARIES,
Rutgers The State Univ., New Brunswick, N.J. Dept. of Chemical and Biochemical Engineers.
B. Davidson.
Available from the National Technical Information Service as PB-232 226, $3.00 in paper copy, $1.45 in microfiche. New Jersey Water Resources Research Institute, New Brunswick, Completion Report, January 1974, 11 p, 7 ref. OWRR B-045-NJ(1), B-049-NJ(1), A-036-NJ(1).

Descriptors: *Systems analysis, *Mathematical models, *Estuaries, *Dissolved oxygen, Biochemical oxygen demand, Thermal pollution, *New Jersey, Model studies, Simulation analysis, Water pollution control.
Identifiers: *Estuarial dispersion, *Delaware Estuary(N.J.), *Oxygen regeneration.

An intra-tidal-time deterministic, one-dimensional, non-isothermal, multi-state-variable, water quality model for the Upper Delaware River Estuary System between Trenton and Wilmington was developed, verified, and applied to several simulated systems analysis problems. The unique features of the proposed model are associated with its time and space scales, which are of the order of 30 minutes and 1 mile, respectively, and its simultaneous-state equation format, which included an ad hoc tidal velocity equation and conservation balances on dissolved oxygen, BOD, and thermal energy. Numerical routines using central differences for the space derivatives in combination with a forth-order, Runge-Kutta expression for the time derivatives provided stable and accurate results for the integration of the system equations. The capability of the proposed model was demonstrated by comparing the stationary-state, tidal-averaged simulated results with corresponding field data. Parameter sensitivity analysis and simulated shock-loading studies were made in addition to obtaining stationary-state results associated with simulated treatment plant regionalization plans.

A STOCHASTIC MODEL FOR THE JAMES,
Virginia Polytechnic Inst. and State Univ., Blacksburg. Water Resources Research Center.
H. E. Bard, and R. G. Krutchkoff.
Completion Report, August 1973. 84 p, 17 ref. OWRR A-048-VA(1).

Descriptors: *Computer models, *Statistical models, *Virginia, Sewage, Carbon, Carbon dioxide, Phosphates, Nitrates, Nitrogen, Bacteria, Algae, Model studies.
Identifiers: *Sensitivity study, *James River estuary(Va.), Organic carbon.

Modeling the James River Estuary with the Schofield model was the major goal of the project. The model was set up for a 60 mile stretch of the estuary beginning at Richmond. Sensitivity studies involving rate constants, fresh water flow rate, sewage input, and water temperature were made and the results of these studies were analyzed. The average oxygen deficit concentration is insensitive to random water temperature, moderately sensitive to the sewage input rates investigated, and highly sensitive to changes in the organic carbon utilization rate constant. Organic carbon and carbon dioxide are insensitive to temperature and only moderately sensitive to change in the organic carbon rate constant. Ortho-phosphate concentration is insensitive to changes of the phosphate utilization rate constant and ortho-phosphate, organic carbon, and organic nitrogen are insensitive to a difference in the fresh water flow as great as 40%. Finally, nitrate + nitrite concentration, bacteria growth, and algae growth are insensitive to a reduction of the nitrogen waste from the point sources.

RECONNAISSANCE OF THE WATER RESOURCES IN THE VICINITY OF PROPOSED DEEP-WELL INJECTION SITES IN SOUTHEAST DADE COUNTY, FLORIDA,
Geological Survey, Tallahassee, Fla.
J. E. Earle, and F. W. Meyer.
Open-file report 73031, 1973. 20 p, 5 fig, 1 tab, 2 ref.

Descriptors: *Waste disposal wells, *Injection wells, *Florida, Waste water disposal, Sewage disposal, Saline water intrusion.
Identifiers: *Dade County(Fla).

Deep-well injection was selected by the Dade County, Florida Water and Sewer Authority as a means of disposing treated waste water in southeast Dade County. Preliminary plans call for the construction of a county-owned sanitary

sewage treatment plant and several 3,000-foot deep injection wells. A reconnaissance was made in the vicinity of the proposed well sites to determine the chloride content of surface water and groundwater to formulate plans for the safe disposal of saltwater produced during drilling and testing of the injection wells. Most of the area is underlain by the Biscayne aquifer that contains salty water. Chloride in surface-water samples ranged from 15 to 14,600 mg/liter, and in groundwater samples from 26 to 11,500 mg/liter. Deep injection wells at the locations proposed are not expected to affect the fresh groundwater supply. The sites are all coastward from the inland extent of the salt front. (Knapp-USGS)

BIG EDDIES AND MIXING PROCESSES IN THE GREAT LAKES,
Waterloo Univ. (Ontario).
G. T. Csanady.
Available from Sup Doc, GPO, Washington, D.C. 20402, price $0.50; from NTIS Springfield, Va. 22151, as PB-228 094, $1.45 microfiche. Environmental Protection Agency Ecological Research Series EPA-660/3-73-011, September 1973. 13 p.

Descriptors: *Eddies, *Mixing, *Path of pollutants, *Great Lakes, Lake Huron, Water circulation, Currents(Water), Diffusion, Diffusivity, Dispersion, Dye releases, Turbulence, Mathematical models.
Identifiers: Langmuir circulation, Coastal jets.

Physical factors involved in the disposal of effluents in the Great Lakes were studied on Lake Huron in the summer seasons of 1967 and 1968. Some direct measurements of lake turbulence intensity were obtained. The structure of large eddies was studied. Some information was obtained on the interrelationship of short internal waves and turbulence. The turbulence intensity level is proportional to effective diffusivity. Coastal flow processes are of importance in pollution problems because of the observed coastal entrapment of pollutants discharged near shore. Theoretical models of the coastal boundary layer led to the discovery of coastal jets. (Knapp-USGS)

BACTERIOLOGICAL WATER QUALITY DATA, BEACH AREAS, GATINEAU PARK LAKES, NATIONAL CAPITAL COMMISSION, 1973,
Environmental Protection Service, Ottawa (Ontario).
A. D. Tennant, J. A. P. Bastien, R. Toxopeus, J. P. Hayes, and M. Beauchamp.
Surveillance Report EPS-5-WP-74-1 (Water Pollution Control Directorate), February 1974. 45 p, 7 fig, 10 tab, 5 ref.

Descriptors: *Monitoring, *Water quality, *Beaches, *Canada, Water pollution, Bacteria, Coliforms, Bioindicators, Swimming, Recreation.
Identifiers: *Ottawa River(Canada).

Seven Canadian National Capital Commission beaches in Gatineau Park, and Camp Pontiac Beach on the Ottawa River, were monitored bacteriologically during the summer of 1973. A total of 878 water samples from 46 nearshore beach sampling points were subjected to standard membrane filtration density-estimate tests for coliforms, fecal coliforms and fecal streptococci. No significant pollution sources were found, and median bacterial count data for all beach areas easily met all water quality objectives for recreational waters. There has been no degradation of the excellent bacterial water quality which has prevailed in these popular recreational areas since studies began in 1970. (Knapp-USGS)

GROUND-WATER QUALITY MODELS: WHAT THEY CAN AND CANNOT DO,
Water Resources Engineers, Inc., Walnut Creek, Calif.
D. E. Evenson, G. T. Orlob, and T. C. Lyons.
Ground Water, Vol 12, No 2, p 97-101, March-April 1974. 10 ref.

Descriptors: *Water quality, *Groundwater, *Mathematical models, Reviews, Simulation analysis, Data collections, Model studies.
Identifiers: *Water quality models.

The development and application of mathematical models to simulate water quality behavior in groundwater basins is reviewed. In the last few years, models have been developed to simulate conservative and some nonconservative constituents under both saturated and unsaturated soil conditions. In addition, models have been found to provide additional information for calibration of quantity models, to identify major data gaps and deficiencies, to be useful in the design of data collection programs and in the interpretation of collected data, to be valuable to watershed planners and managers through evaluation of alternative regulatory policies, physical facilities and management operational plans, and to point out where future research efforts are needed. GEOHYDROLOGY OF THE BURIED TRIASSIC BASIN AT THE SAVANNAH RIVER PLANT,
DuPont de Nemours(E.I) and Co., Aiken, S.C. Savannah River Lab.
I. W. Marine.
Ground Water, Vol 12, No 2, p 84-95, March-April 1974. 9 fig, 4 tab, 32 ref. AEC contract AT(072)-1.

Descriptors: *Hydrogeology, *Groundwater basins, *Georgia, *Radioactive wastes, *Underground waste disposal, Water levels, Hydrologic data, Underground storage, Safety, Groundwater movement, *South Carolina.
Identifiers: *Savannah River Plant(So.Car.-Geo).

At the Savannah River Plant near Aiken, South Carolina, high-level radioactive wastes are stored in concrete and steel tanks buried just beneath the surface of the ground. One concept for the terminal containment of this waste is to store it in excavated chambers within the bedrock, which is covered by about 1000 feet of Coastal Plain sediments. A buried Triassic basin that might have potential for waste storage was discovered beneath the southern third of the plant site. Seismic surveys, gravity and magnetic surveys, and the drilling of several exploratory wells indicate that the Triassic basin is about 30 miles long, 6 or more miles wide, and perhaps 5300 feet thick. The rock is predominantly mudstone of very low permeability with a few lenses of poorly sorted gritty sand. The water yield of all the exploratory wells is extremely low, and water-transmitting fractures are virtually nonexistent. In two wells within the basin, heads above land surface have been measured that cannot be explained by connection with a recharge area. Possible explanations are: tectonic compression, temperature increase, and osmotic membrane phenomena. (Knapp-USGS)
W74-07934

METHODS AND PRACTICES FOR CONTROLLING WATER POLLUTION FROM AGRICULTURAL NONPOINT SOURCES.
Available from Sup Doc, GPO, Washington, D.C. 20402, price $1.10. Environmental Protection Agency Office of Water Program Operations Publications EPA-430/9-73-015, October 1973. 83 p, 18 fig, 34 ref.

Descriptors: *Water pollution control, *Farm wastes, *Sedimentation, *Nutrients, Erosion control, Pesticides, Fertilizers, Wind erosion, Soil conservation, Farm management.

Potential nonpoint agricultural sources of surface and groundwater pollution include sediment, pesticides, fertilizer, and plant and animal wastes and residue from cropland, grazing areas, and farm woodlots. Sound management practices are the key to achieving acceptable water quality. Proper land use and agricultural management practices will keep soil, plant nutrients, and organic matter on the land, rather than allow them to become part of the waterborne pollutant load. Erosion may be reduced by means of conservation tillage, terraces, diversions, stripcropping, contouring, grassed waterways, and crop rotations, and by more efficient range, pasture, and woodlot management. Reducing nutrient losses from agricultural operations can be accomplished by three general approaches: (1) determining the proper amount, time, and method of plant nutrient applications to ensure efficient use by plants, (2) adopting approved cultural practices, including tillage and crop rotations, and (3) reducing soil and water runoff. There are several approaches to reduce the quantity of pesticides entering surface water and groundwater. These include: controlling erosion and minimizing wine drift; reducing the quantity of pesticides used, and using biodegradable rather than persistent pesticides. Appropriate animal and land management practices should be followed. These include: (1) spreading acceptable rates of manure uniformly on land; (2) applying feedlot runoff effluent on land as recommended for specific site conditions; (3) maintaining an adequate land-to-livestock ratio on pastures; and (4) locating feeders and waterers a reasonable distance from streams and watercourses. (Knapp-USGS)
W74-07941

PROCESSES, PROCEDURES, AND METHODS TO CONTROL POLLUTION RESULTING FROM ALL CONSTRUCTION ACTIVITY.
Hittman Associates, Inc., Columbia, Md.
Available from Sup Doc, GPO, Washington, D.C. 20402, price $2.30. Environmental Protection Agency, Office of Air and Water Programs Report EPA 430/9-73-007, October 1973. 234 p, 62 fig, 1 tab, 37 ref.

Descriptors: *Water pollution control, *Sediment control, *Construction, Soil stabilization, Storm runoff, Urbanization, Erosion control.
Identifiers: Water pollution control act.

Methods for controlling sediment, stormwater, and pollutants other than sediment which result from construction activities are described. Processes examined include site planning, preliminary site evaluation and design, use of planning tools, and structural and vegetative design. Methods examined include on-site erosion, sediment, and stormwater management control structures as well as soil stabilization practices useful for achieving control of sediment, stormwater ru-

noff, and other pollutants resulting from construction activities. Stormwater management practices are discussed in detail. Water pollution resulting from sediment and other pollutants generated from construction activities can be prevented by the timely application of structural and soil stabilization measures presently available. ICELANDIC GEOTHERMAL ACTIVITY AND THE MERCURY OF THE GREENLAND ICECAP,
Hawaii Univ., Honolulu. Dept. of Microbiology.
B. Z. Siegel, S. M. Siegel, and F. Thorarinsson.
Nature, Vol 24, No 5391, p 526, February 23, 1973. 1 fig, 10 ref.

Descriptors: *Mercury, *Geothermal studies, *Icebergs, Heavy metals, Air pollution, Water pollution, Sampling, Distribution patterns, Analytical techniques, Environmental effects, Sea water, Oceans.
Identifiers: *Geothermal energy, *Greenland.

Following the demonstration of high levels of atmospheric mercury in Hawaiian thermal areas (see W73-05396), similar aerometric studies were conducted at a number of sites in Iceland during June and July 1972. Field air sampling procedures and analyses by flameless atomic absorption were carried out. Although atmospheric mercury levels vary greatly according to site, samples from several widely separated locations yielded Hg concentrations well above the range commonly cited for unpolluted air, 0.001-0.010 micrograms/cu m. The general reliability of field measurements is indicated by samples taken at the Krysuvik thermal area where duplicate analyses on each of four separate sample traps yielded a mean value of 11.3 micrograms/cu m and a standard error of only plus or minus 1.8 micrograms/cu m. TISSUE SULFHYDRYL GROUPS IN SELENIUM-DEFICIENT RATS AND LAMBS,
Oregon State Univ., Corvallis. Dept. of Agricultural Chemistry.
M. A. Broderius, P. D. Whanger, and P. H. Weswig.
Journal of Nutrition, Vol 103, p 336-341, 1973. 1 fig, 4 tab, 17 ref.

Descriptors: *Metals, *Nutrients, *Diets, *Animals, Trace elements, Foods, Animal pathology, Metabolism, Laboratory tests.
Identifiers: *Selenium, Selenium deficiency, Tissue, Sulfhydryl groups, Animal tests.

The effects of selenium deficiency on tissue sulfhydryl compounds in rats and lambs were investigated. No significant differences were found in any sulfhydryl fraction in liver, heart or kidney of normal and selenium-deficient (WMD) lambs. A significant decrease of total and protein sulfhydryl groups was found in muscle of WMD lambs compared to normals while a significant increase in nonprotein sulfhydryl and reduced glutathione was found in WMD lamb muscle. No increase in disulfide bonds was found in the muscle of deficient lambs to account for the decrease in sulfhydryls, suggesting they were not being oxidized to disulfides. Livers from selenium-deficient rats had a significantly higher content of total and nonprotein sulfhydryl compared to selenium-supplemented rats. The opposite trend was observed for the protein sulfhydryl groups. The results suggest the involvement of selenium in the metabolism of sulfhydryl compounds. (Oleszkiewicz-Vanderbilt)

HARBOR POLLUTION FROM LARGE SHIPS,
Naval Undersea Center, San Diego, Calif. Dept. of Fleet Engineering.
G. L. Donohue, and J. W. Hoyt.
Available from the National Technical Information Service as AD-769 476 $2.75 in paper copy, $1.45 in microfiche. NUC TP 368, October 1973. 13 fig, 2 tab, 9 ref. SF 53554002, Task 17225.

Descriptors: *Harbors, *Dispersion, *Ships, *Sewage disposal, Water pollution, Diffusion, Bays, Estuaries, Rhodamine, Turbulence, Coliforms, Eddies, Mathematical studies.
Identifiers: Navy ships, San Clemente Island (Calif.)

Data were developed to ascertain the magnitude of sewage pollution arising from Navy ships anchored in or moving through a small harbor, with particular reference to amphibious training exercises in which large numbers of personnel may be brought to nearshore areas. A number of releases of dyed sewage were made in Wilson Cove Harbor, California at rates corresponding to those at which sewage would be discharged by amphibious task forces of from 500 to 10,000 men. The movement of the sewage was traced by photography, bacterial counts, dye, and BOD measurements in the surrounding water and on the shoreline. The sewage was taken from the San Clemente Island sewage outfall, sampled for BOD, then 19,000 liters were dyed with Rhodamine WT and stirred for homogeneity. The sewage was released from both sides of a barge, and flow rates were estimated by catch-and-weigh techniques. Sewage was found to diffuse more slowly in a small harbor than would be expected from open-ocean data. Navy ships carrying significant numbers of men can operate in small harbors for certain times and distances from the shore without danger of pollution if the operational chart included is used as guidance. Gig Sanit. Vol 37, No 10, p 94-95. 1972.
Identifiers: Bacteriological studies, *Black Sea, Coatings, *Gastrointestinal diseases, Ships, Water quality, *Potable water, Human diseases, *Storage tanks.

Laboratory investigations of the physicochemical and bacteriological composition of drinking water during cruises on 6 ships in the Black Sea showed that the water quality depends on many respects on the composition of the inside coating of the tanks for storing fresh water. The most common coatings on the ships were cement, cement-latex, paints and lacquers. Measures were taken to improve the water quality and the incidence of gastrointestinal diseases among sailors dropped by about 50%.--Copyright 1973, Biological Abstracts, Inc.

INFILTRATION AND LANDFILL BEHAVIOR,
Waterloo Univ. (Ontario).
F. A. Rovers, and G. J. Farquhar.
Journal of the Environmental Engineering Division, American Society of Civil Engineers, Vol 99, No EE5, p 671-690, October, 1973. 7 fig, 8 tab, 33 ref.

Descriptors: *Environmental engineering, *Landfills, Sanitary engineering, *Infiltration, Leaching, Absorption, Evaporation, Gases, Methane, Temperature, Thawing.

The effects of infiltration on sanitary landfill leachate and gas production were examined under both field and laboratory conditions. Maximum field leachate production occurred during spring thaw. Production was greatly reduced during the summer. Moisture absorption prior to leachate flow ranged from 10.0 cm/m to 14.2 cm/m of compacted refuse. The leachate produced was strong. As an indication, concentrations of COD, calcium, chloride and ammonia nitrogen exceeded 40,000 mg/1, 2,500 mg/1, 1,200 mg/1, and 600 mg/1, respectively. Decomposition proceeded anaerobically with the production of methane and carbon dioxide. Periods of rapid moisture influx were accompanied by increased leachate strength, reduced pH, and decreased methane production thus allowing the accumulation of organic acids and subsequent reductions in pH. The interference appeared to have arisen from an increase in oxidation-reduction potential. (Skogerboe-Colorado State)

RECOVERY, RESIDUAL EFFECTS, AND FATE OF NITROGEN FERTILIZER SOURCES IN A SEMIARID REGION,
Agricultural Research Service, Mandan, N. Dak. Northern Great Plains Research Center.
J. F. Power, J. Alessi, G. A. Reichman, and D. L. Grunes.
Agronomy Journal, Vol 65, No 5, p 765-768, September-October, 1973. 2 fig, 3 tab, 13 ref.

Descriptors: *Nutrient removal, *Leaching, *Nitrogen, *Fertilizers, Nitrates, Crop response, Water pollution sources, *Path of pollutants.
Identifiers: *Fate of pollutants.

In a field experiment four fertilizer N sources were applied to separate areas of corn and bromegrass for four years. From the fifth through seventh years, the two areas were uniformly seeded to barley without additional N fertilization, until residual effects were no longer significant. Sources of N used were ammonium sulfate, ammonium nitrate, calcium nitrate, and urea, applied at either 55 or 110 kg/ha to Parshall fine sandy loam. Recovery of fertilizer N in corn plant tops was greatest for ammonium nitrate. Over 35% of the calcium nitrate and urea applied at 110 kg/ha of N to corn was leached below the root zone. Leaching of fertilizer N applied to bromegrass was insignificant. Except for urea, fertilizer N recovery by bromegrass from the other N sources was nearly equal and usually higher at 55 kg/ha. Residual growth responses were smaller from N applied to bromegrass that to corn. (Skogerboe-Colorado State)

QUALITY OF DRAINAGE WATER FROM A HEAVY-TEXTURED SOIL,
Ohio State Univ., Columbus. Dept. of Agricultural Engineering.
G. O. Schwab, E. O. McLean, A. C. Waldron, R. K. White, and D. W. Michener.
Transactions of the ASAE (American Society of Agricultural Engineers), Vol 16, No 6, p 1104-1107, November-December, 1973. 2 fig, 3 tab, 11 ref.

Descriptors: *Water pollution sources, *Runoff, *Leaching, Nutrient removal, Agricultural chemicals, Erosion, Nitrogen, Phosphorus, *Drainage.
Identifiers: *Toledo clay soils.

Sediment, dissolved solids, nine chemical elements or ions, five pesticides, electrical conductivity, pH, and BOD in tile drainage effluent and in surface runoff were measured from one-half acre plots on Toledo silty clay soil near Sandusky, Ohio, for a 3-year period, 1969-1971. Measurements were taken from both conventional tilled and no-tilled plots in continuous corn. Irrigation water was applied each year to simulate heavy rainfall. Recommended fertilizer amounts were applied, but pesticide kinds and amounts were greater than normally required for insect or weed control. Rainfall was above average in 1969 and 1970, and below average in 1971. Sediment losses from the tile and surface drainage water were several times greater for conventional tillage than for no tillage. (Skogerboe-Colorado State)
W74-08088

FLOOD AND SEEPAGE WATER SAMPLING TECHNIQUES IN RICE FIELDS UNDER DIFFERENT WATER MANAGEMENT PRACTICES,
California Univ., Davis. Dept. of Water Science and Engineering.
K. K. Tanji, J. W. Biggar, M. Mehran, and D. W. Henderson.
Soil Science Society of America Proceedings, Vol 37, No 3, p 483-485, May-June, 1973. 3 fig, 1 tab.

Descriptors: *Water pollution sources, *Nutrient removal, Leaching, Water sampling, *Rice, *Flooding, *Seepage.

Sampling equipment enables collection of flood and seepage waters to determine persistence and transport of chemicals applied in flooded rice culture. This system gives a capability of the evaluating the effects of different chemical application methods (water-applied, soil-incorporated) and water management systems (static, flow-through, and recycled). SEASONAL CHANGES IN WATER QUALITY AND PRIMARY PRODUCTIVITY IN DOE VALLEY LAKE,
Kentucky Univ., Lexington. Water Resources Research Inst.
E. J. Bacon, and S. E. Neff.
Available from the National Technical Information Service as PB-232 003, $4.50 in paper copy, $1.45 in microfiche. Research Report No 72, March 1974. 107 p, 32 fig, 17 tab, 85 ref. OWRR A-039-KY(1). 14-31-0001-3517 and 14-31-0001-3817.

Descriptors: Ecology, *Water quality, Environmental effects, Planning, *Kentucky, *Primary productivity, Pre-impoundment, Aquatic habitats, *Seasonaol, Chlorophyll, Standing crops, *Lake stages, Hypolimnion, Lake morphometry, Anaerobic conditions, Phytoplankton.
Identifiers: Oxygen depletion, Monomictic lakes, Dimictic lakes.

Primary productivity and water quality were studied in Doe Valley Lake, a 147-hectare impoundment on Doe Run, a spring-fed stream in Meade County, Kentucky, from 13 June 1969 to 31 July 1972. Doe Valley Lake is monomictic during most winter seasons, but it is dimictic during more severe winters because of its morphometry and location on the borderline climatic region for dimictic lakes (37 degree N latiitude). Oxygen depletion in the hypolimnion is severe, and anaerobic conditions usually prevail by late June. A hypolimnetic areal deficit of 0.038 mg/sq cm/day was calculated. Super-saturation of oxygen in the epilimnion was common, and metalimnetic maxima exceeded 150 percent saturation in spring and early summer. Primary productivity ranged from 44 to 1,192 mgC/sq m/day and annual rates at Stations I and III were 277 and 255 gC/sq m/yr, respectively. Productivity fluctuated considerably at Station I as a result of turbidity, but average daily rates and chlorophyll levels were higher than at Station III. Periodic flooding drastically lowered productivity and phytoplankton standing crops. Negative or low correlations were found between productivity and turbidity, pH, alkalinity, nitrates, and phosphates. The relationship between productivity and standing crop of phytoplankton varied throughout the year but positive correlations were observed on an annual basis. Chlorophyll alpha levels correlated fairly well with net phytoplankton. Except during summer, nannoplankton contributed more than 50 percent of the total carbon assimilation. (Grieves-Kentucky)

EFFECTS OF CRUDE OIL AND SOME OF ITS COMPONENTS ON YOUNG COHO AND SOCKEYE SALMON,
Alaska Univ., College. Dept. of Biological Sciences.
J. E. Morrow.
Copy Available from GPO Sup Doc as EP1.23:660/3-73-018, $0.85; microfiche from NTIS as PB-232 094 $1.45. Environmental Protection Agency, Ecological Research Series Report EPA-660/3-73-018, January 1974. 37 p, 20 tab, 10 ref. EPA Project R 801039 (formerly 16100FWQ).

Descriptors: *Oil pollution, *Alaska, *Sockeye salmon, *Organic compounds, Oil wastes, *Toxicity, Aromatic compounds, Lethal limit, *Mortality, Fish, Water pollution effects.
Identifiers: *Crude oil, *Coho salmon, Aliphatic hydrocarbons, Aromatic hydrocarbons, Monovalent blood ions, Cell membranes(Fish).

Young coho and sockeye salmon, acclimated to 30 o/oo salinity, were exposed in various ways to different amounts of crude oil from the Prudhoe Bay field. Oil poured on the surface of the water in 95 liter (25 gallon) aquaria produced significant mortalities when the oil concentration was 500 ppm or greater. Fish dipped into a crude oil film, or with a drop of oil placed directly on each gill, showed no significant mortalities. The same was true of fish force-fed crude oil at 1 g per 100 g body weight. Oil that had been exposed to air for 30 days produced no significant mortalities. Among oil components tested for toxicity on coho salmon, aliphatic compounds were not lethal. Mono-cyclic aromatics were generally toxic, the degree of toxicity increasing with the degree of unsaturation. It is suggested that the toxicity of these substances is brought about through alteration of cell membrane permeability, especially in the gills. This results in a rapid increase of mono-valent ions in the blood and probably also interferes with CO2-HCO3 regulation. (EPA)

MERCURY IN THE ENVIRONMENT, AN EPIDEMIOLOGICAL AND TOXICOLOGICAL APPRAISAL.

Descriptors: *Mercury, *Environmental effects, *Analytical techniques, *Public health, Air pollution, *Water pollution, Transportation, Chemical analysis, Chemical reactions, Biochemistry, Organic compounds, Inorganic compounds, *Toxicity, Bioindicators, Metabolism, Bioassay, Genetics, Animal pathology, Laboratory tests, Measurement, Evaluation, *Reviews, *Bibliographies.

A comprehensive discussion is presented concerning mercury in the environment and its possible effects on human health. Chapters are included on: methods of analysis; the transport and transformation of mercury in nature; the metabolism of mercury compounds; organic mercury compounds; normal levels of mercury in humans; the genetic effects of mercury compounds and a general discussion and conclusion. A great many studies on all aspects of mercury transport and its effects are reported, but the general conclusion is that still more investigation is needed. SYMPTOMS AND SIGNS OF INTOXICATION,
National Swedish Food Administration, Stockholm. Dept. of Nutrition and Food Hygiene.
S. Skerfving, and J. Vostal.
In: Mercury in the Environment, (Chemical Rubber Co. Press), p 93-107, 1972, 2 tab.

Descriptors: *Mercury, *Toxicity, *Human pathology, *Organic compounds, *Inorganic compounds, Water pollution, Air pollution, Poisons, Metabolism, Respiration, Inhibitors, Investigations.

The effects of acute and chronic poisoning from organic and inorganic mercury compounds and individual variability in tolerance of trace amounts of these compounds are discussed. Acute intoxication by inorganic mercury can result in bronchial irritation or diffuse interstitial pneumonitis from vapor inhalation, and local necrotic changes in the gastrointestinal tract, circulatory collapse or acute renal failure from salts ingestion. Early chronic poisoning by inorganic mercury is characterized by anorexia, loss of weight and minor symptomatology of the central nervous system. Later phases are characterized by tremor, psychic disturbances and personality changes. Idiosyncratic reactions are many and various. Prenatal intoxication from short chain alkylmercury compounds may result in severe mental and motor symptoms. Postnatal poisoning with such organic mercury compounds may give rise to such sensory disturbances as ataxia, concentric constriction of visual fields and hearing loss. In some cases gastrointestinal and pulmonary symptoms have been reported. Phenyl and methyl mercury poisonings result in kidney damage and neurological symptoms. 'NORMAL' CONCENTRATIONS OF MERCURY IN HUMAN TISSUE AND URINE,
National Swedish Food Administration, Stockholm. Dept. of Nutrition and Food Hygiene.
S. Skerfving.
In: Mercury in the Environment, (Chemical Rubber Co. Press), p 109-112, 1972, 5 tab.

Descriptors: *Mercury, *Human physiology, *Laboratory tests, *Distribution, Water pollution effects, Air pollution, Metals, Toxicity, Human pathology, Biochemistry, Urine, Measurement, Evaluation.
Identifiers: Blood, Human tissue.

In order to assess the extent of mercury intoxication, a 'normal' level of mercury in the human body must be established. Data concerning persons reported not to have been subjected to any special kind of mercury exposure are presented. Levels of mercury in blood cells, hair, and urine, are of the greatest interest, but concentrations in other tissues and organs are considered also. Analyses of 814 whole blood samples from 15 different countries were performed in one laboratory using an atomic absorption method. Seventy-seven percent of all the samples had concentrations below 5 ng/ml, 85% below 10 ng/ml, and 95% below 30 ng/ml. It was proposed that about 30 ng/ml should be regarded as the upper limit for 'normal' conditions. In several studies of total mercury concentration in hair the mean concentrations were found to range from 1.7 micrograms/g to 7.0 micrograms/g. In analyses of 1.107 urine samples, 79% had levels below 0.5 micrograms/l, 86% below 5.0 micrograms/l, and 95% below 20 micrograms/l. Brain, liver and kidney tissue were also investigated. (See also W74-07680) (Jerome-Vanderbilt)
W74-07685

INORGANIC MERCURY-RELATION BETWEEN EXPOSURE AND EFFECTS,
Karolinska Institutet, Stockholm (Sweden). Dept. of Environmental Hygiene.
L. Friberg, and G. F. Nordberg.
In: Mercury in the Environment, (Chemical Rubber Co. Press), p 113-139, 1972, 10 fig, 12 tab.

Descriptors: *Air pollution, *Mercury, *Inorganic compounds, *Toxicity, *Water pollution effects, Metals, Environmental effects, Human pathology, Animal pathology, Human physiology, Animal physiology, Biochemistry, Metabolism, Urine, Laboratory tests, Measurement evaluation.

Dose-response relationships found in chronic exposure to inorganic mercury and some data relating to acute exposure are considered for humans and other animals. Urine, blood and air levels were correlated with symptoms of mercury poisoning. It was found that no significant symptoms resulted from exposure to mercury below the level of 0.1 mg/cu m of air. The relations of mercury in blood and in urine are discussed in terms of exposure level. Russian studies on micromercurialism indicate there may be some correlation between exposure to very small amounts of mercury and an asthenic-vegetative syndrome and other disorders. In tests using laboratory animals it was found that injected mercury can give rise to poisoning at 5 mg/cu m levels. When exposure is by inhalation of mercury vapor, acute effects occur in the lung, brain, kidney and colon. Concetnrations of 10 mg/cu m may be fatal within one or a few days. In studies of rabbits subjected to concentrations of 0.01 to 0.03 mg Hg/cu m for several months, definite changes in functions of several organs and biochemistry were noted. Changes in conditioned reflexes have been reported even at concentrations in the air of 0.002 to 0.005 mg Hg/cu m. (See also W74-07680) (Jerome-Vanderbilt)
W74-07686

ORGANIC MERCURY COMPOUNDS-RELATION BETWEEN EXPOSURE AND EFFECTS,
National Swedish Food Administration, Stockholm. Dept. of Nutrition and Food Hygiene.
S. Skerfving.
In: Mercury in the Environment, (Chemical Rubber Co. Press), p 141-168, 1972, 6 fig, 7 tab.

Descriptors: *Mercury, *Toxicity, *Water pollution effects, Air pollution, Food chains, Metals, *Organic compounds, Environmental effects, Human pathology, Animal pathology, Bioindicators, Bioassay, Investigations, Growth stages, Metabolism, Laboratory tests, Evaluation, Data collections.
Identifiers: Prenatal, Postnatal, Nervous system.

The effects of human and animal prenatal and postnatal exposure to organic mercury compounds are discussed. Poisoning observed in children of mothers exposed to methyl and ethyl mercury compounds indicates the transplacental capabilities of these compounds. Neurological damage was much more severe in children than in mothers. Some mothers who had concentrations of 100 micrograms Hg/g of hair gave birth to healthy children. No information was available for Hg concentrations in hair or blood of mothers of poisoned children at the time of delivery. Feeding pregnant animals organic mercury compounds resulted in reduced litter size and/or weight, fetal death, resorption, neonatal death, morphological lesions and damage to the central nervous system. Quantitative information on the neurological effects of methylmercury and mono and di- ethyl mercury is scarce. Low exposures have been reported as poisonous while large doses have sometimes not resulted in damage. Oral toxicity of phenylmercury compounds was found to be rather low. There is some evidence of mercury absorption through skin from phenyl mercury compounds. Inhalation of phenylmercury compounds has been known to cause poisoning after a rather short period of exposure. (See also W74-07680) (Jerome-Vanderbilt)
W74-07687

GENETIC EFFECTS,
Stockholm Univ. (Sweden). Environmental Toxicology Group.
C. Ramel.
In: Mercury in the Environment, (Chemical Rubber Co. Press), p 169-181, 1972, 3 fig, 9 tab.

Descriptors: *Mercury, *Cytological studies, *Biochemistry, *Chromosomes, *Genetics, Metals, Environmental effects, Toxicity, Animal physiology, Plant physiology, Metabolism.
Identifiers: *Cell division, Sub-lethal effects.

The genetic activity of mercury compounds is discussed with primary consideration given to effects on cell division, radiomimetic effects and effects on meiosis. All mercury compounds studied cause c-mitosis, an inactivation of the spindle fiber mechanism at cell division, similar to the effect of colchicine. Increased dosage of mercury results in a gradual series of transitions between normal and c-mitotic division, giving more variable chromosome numbers. Mercaptans act as inhibitors against the c-mitotic action of organomercury compounds. Organic mercury compounds also act directly upon the genetic material. Chromosome breakage resulting from these compounds is independent of c-mitotis. Cytological observations revealed that methyl mercury induced inactivation of the spindle fibers during meiosis, resulting in chromosomal effects corresponding to those induced at mitosis. The fact that mercurials act on basic genetic systems justifies the assumption of the same effect in different organisms as long as the compound reaches the target molecules. (See also W74-07680) (Jerome-Vanderbilt)
W74-07688

GENERAL DISCUSSION AND CONCLUSIONS-NEED FOR FURTHER RESEARCH,
Karolinska Institute, Stockholm (Sweden). Dept. of Environmental Hygiene.
L. Friberg, and J. Vostal.
In: Mercury in the Environment, (Chemical Rubber Co. Press), p 183-186, 1972.

Descriptors: *Mercury, *Environmental effects, *Toxicity, *Research priorities, Air pollution, Water pollution, Metals, Metabolism, Reproduction, Growth rates, Biochemistry, Animal pathology, Organic compounds, Inorganic compounds, Genetics, Analysis, Laboratory tests, Evaluation, Projects.

The increasing amounts of mercury and mercury compounds in the environment can constitute a serious health problem. Of the different types of mercury, alkylmercury compounds must be considered the primary hazard. Monomethylmercury and monoethylmercury are highly toxic, giving rise to severe damage to the central nervous system. Organic mercury compounds are highly active genetically. Differences in toxicity of mercury compounds can be explained in terms of metabolism. Methylmercury and ethylmercury have considerable stability in the body, while other forms are transformed into mercuric mercury. The distribution of mercury in the body is affected by biotransformation. Dose-response relationships are not known for most exposure situations. The concentration of mercury in hair in relation to mercury in blood in man is about 300:1, corresponding to about 60 micrograms/g hair as a critical concentration. Increased research is needed on dose-response relationships with particular attention to subclinical effects. (See also W74-07680) (Jerome-Vanderbilt)
W74-07689

LIVER ZINC IN CARCINOMA,
Whittington Hospital, London (England). Dept. of Chemical Pathology.
E. B. Wright, and T. L. Dormandy.
Nature, Vol 237, No 5351, p 166, May 19, 1972, 2 tab, 16 ref.

Descriptors: *Cytological studies, *Disease resistance, *Zinc, Biochemistry, Pathology, Diseases, Microbiology, Heavy metals, Analytical techniques, Bioindicators, Spectroscopy.
Identifiers: *Carcinoma.

The relationship of zinc to malignant disease was investigated through the examination of samples of liver tissue from 50 necropsies, using atomic-absorption spectroscopy, microscopic examination, and wet weight/ash ratio. The samples came from fatty livers, normal livers, apparently uninvaded livers from organs containing secondary malignant deposits, and livers from patients with malignant disease but no obvious liver secondaries, and they were compared on parts per million zinc content. The carcinomatous deposits themselves had a low zinc concentration, while in organs harboring such deposits an abnormally high zinc concentration was found. The high concentrations of zinc in unaffected liver tissue of subjects with carcinoma is suggested to be a defense reaction to invasion by malignant cells. The accumulation of zinc could be useful in the interpretation of liver biopsy material. (Jerome-Vanderbilt)

THE DISTRIBUTION OF LEAD IN HUMAN DECIDUOUS TEETH,
Harvard Medical School, Boston, Mass.
K. G. Carroll, H. Needleman, O. C. Tuncay, and I. M. Shapiro.
Experientia, Vol 28, No 4, p 434-435, 1972. 1 fig, 4 ref. PHS DE 02623.

Descriptors: *Lead, *Human pathology, *Distribution, *Toxicity, Human diseases, Toxins, Heavy metals, Metals, Pathology, Environmental effects, Air pollution, Public health.
Identifiers: *Human teeth, Teeth, Poisoning, Lead pollution.

Lead absorbed into the body by various routes is stored in teeth and bone. Substantial increases in the lead content of deciduous teeth of children dying of lead poisoning have been demonstrated. Asymptomatic children from areas where lead poisoning is frequent have significantly higher lead levels in shed deciduous teeth than controls from areas in which lead poisoning is unknown. This suggests that the deciduous tooth may provide a means of identifying lead ingestion long after the ingestion has stopped. This preliminary report describes the use of the electron probe in the study of the distribution of lead in human dental tissues, and verifies some of the existing hypotheses. (Oleszkiewicz-Vanderbilt)

POLYACRYLAMIDE GEL DISC ELECTROPHORESIS OF RAT BILE AFTER INTRAVENOUS ADMINISTRATION OF 52 MNC12, 64CUC12, 203HGC12 AND 210 PB(N03)2,
Institute of Industrial Hygiene and Occupational Diseases, Prague (Czechoslovakia).
M. Cikrt, and M. Tichy.
Experientia, Vol 28, No 8, p 383-384, 1972. 1 fig, 17 ref.

Descriptors: *Metabolism, *Heavy metals, *Proteins, *Rodents, Biochemistry, Copper, Manganese, Lead, Mercury, Physiology, Chemical properties, Chemical reactions, Semipermeable membranes, Laboratory tests, Analytical techniques.
Identifiers: Rat liver bile.

The reactions of copper, manganese, lead and mercury with liver bile are used in an attempt to explain why copper and manganese are excreted rapidly while lead and mercury are retained. The investigation focuses on the fact that in biological systems quite a number of proteins are known to bind metals. Using polyacrylamide gel disc electrophoresis, the protein spectrum of rat bile was compared with the location of 210Pb, 52Mn, 64Cu, and 203Hg on the electrophoreogram. With mercury, the radioactivity existed predominantly in the prestacking gel zone containing high-molecular bile specific protein. In the cases of both Mn (++) and Cu (++) the radioactivity appeared mostly in the region of the pigment zone. The maximum amount of Pb (++) was found in the post-albumin zone. The more rapid excretion of Mn (++) and Cu (++) into the bile could be explained by formation of relatively small complexes of these metals which may penetrate through membranes more rapidly than complexes of Hg (++) and Pb (++) which are predominantly bound to proteins of greater molecular weight. (Jerome-Vanderbilt)
W74-07694

THE ENVIRONMENTAL CONTEXT,
Connecticut Univ., Storrs.
T. F. Malone.
EOS Transactions American Geophysical Union, Vol 52, No 7, p 508-512, July 1971, 1 fig.

Descriptors: *Environmental control, *Water pollution, *Air pollution, *Land use, *Legislation, Pesticides, Pesticide toxicity, Eutrophication, Heavy metals, Trace elements, Oil, Natural resources, Environmental effects.

There are basically three problems of the human environment: (1) Pollution of air, water and land; (2) Land use and misuse; and (3) Exploitation of natural resources. Several examples of threats to the environment are presented: (1) increasing concentrations of chlorinated hydrocarbons; (2) accumulation of toxic heavy metals; (3) increase of carbon dioxide in the air; (4) particle load in the air; (5) 2 million tons of oil released to the ocean annually; (6) biostimulation of lakes; (7) population displacement; and (8) finite character of the world's natural resources and their uneven utilization. A discussion of indispensable international action is included. (Oleszkiewicz-Vanderbilt)

METALS FOCUS SHIFTS TO CADMIUM,
For primary bibliographic entry see Field 5B.
W74-07697

THE INFLUENCE OF TEMPERATURE AND SALINITY ON THE TOXICITY OF CADMIUM TO THE FIDDLER CRAB, UCA PUGILATOR,
South Carolina Univ., Columbia Belle W. Baruch Coastal Research Inst.
J. O'Hara.
Fishery Bulletin; Vol 71, No 1, p 149-153, 1973, 2 fig, 1 tab, 12 ref.

Descriptors: *Cadmium, *Temperature, *Salinity, *Crabs, *Toxicity, Lethal limit, Environmental effects, Water pollution effects, Heavy metals, Thermal pollution, Marine animals, Animal pathology, Bioassay, Animal diseases, Pathology.
Identifiers: *Fiddler crabs, Accumulation.

The concentrations of cadmium lethal to the fiddler crab, Uca pugilator, were determined for various environmental regimes of temperature and salinity. Mortality was greatest in high temperatures and low salinities when tested for 240 hr. The concentration fatal to 50% of the organisms in 240 hours was 2.9 ppm Cd (++). Concentrations of cadmium determined by use of radioactive cadmium were greatest in green gland followed by gill, hepatopancreas, and muscle. No differences appeared between results from males and from females. The rapid accumulation of cadmium from the surrounding water results in considerable tissue destruction in the first 24 hours. (Oleszkiewicz-Vanderbilt)

THE LD(50) VALUE OF TETRAETHYL LEAD,
Colorado State Univ., Fort Collins. Dept. of Zoology.
T. Schroeder, D. D. Avery, and H. A. Cross.
Experientia, Vol 28, No 4, p 425-426, 1972. 8 ref. GI-4.

Descriptors: *Lead, *Toxicity, *Bioassay, *Laboratory animals, *Lethal limit, Toxins, Heavy metals, Metals, Environmental effects, Animal pathology, Pathology.
Identifiers: *Tetraethyl lead, Lead pollution, Clinical studies.

Toxicity studies on laboratory animals treated with tetraethyl lead are described. The mortalities which resulted were 1 of 4 at 10.0 mg/kg, 0 of 4 at 13.0, 4 of 4 at 16.9 and 4 of 4 at 21.97. The mortality data were then matched to Weil's tables. All animals displayed neurological signs of the initial phase beginning the second day. Violent movement and aggression represented the second stage. Convulsions and death in stage three occurred around the sixth day with progressive stages occurring faster in animals receiving higher doses. The LD(50) and its confidence interval can thus be estimated as 14.18 (12.62 to 15.93) mg/kg. See also W74-07701) (Oleszkiewicz-Vanderbilt)
W74-07700

TETRAETHYL LEAD DOSE RESPONSE CURVE FOR MORTALITY IN LABORATORY RATS,
Colorado State Univ., Fort Collins. Dept. of Zoology.
T. Schroeder, D. D. Avery, and H. A. Cross.
Experientia, Vol 28, No 8, p 923-924, 1972. 1 fig, 1 tab, 2 ref.

Descriptors: *Lead, *Toxicity, *Bioassay, *Laboratory animals, Toxins, Heavy metals, Metals, Environmental effects, Lethal limit, Animal pathology, Pathology.
Identifiers: *Mortality, Tetraethyl lead, Lead pollution, Clinical studies.

This step in the research follows previously described work on finding the LD(50) value of tetraethyl lead, and represents an assessment of the dose response curve for single dose, oral administration for a standard 14 day period. As in the previous research, 3 stages in the progress of the toxicity were noted: Stage 1: lethargy; Stage II: aggression and thrashing, and Stage III: convulsions and, in higher dosages, death. An interesting phenomenon observed in the third stage of the disease was that 14 of the animals exhibited self-cannibalization of the feet and tail. The LD(50) value (11.50-13.16 mg/kg) was found to be lower than previously believed. (See also W74-07700) (Oleszkiewicz-Vanderbilt)

Journal of Nutrition, Vol 102, No 5, p 653-660, 1972. 2 fig, 5 tab, 19 ref.

Descriptors: *Birds, *Rodents, *Zinc, *Diets, *Absorption, Biochemistry, Physiology, Laboratory tests, Metabolism, Measurements, Evaluation, Growth rates, Nutrients, Protein, Carbohydrates.

Growth response of chicks and rats was used to evaluate the biological availability of zinc in selected cereal grains and animal products. Two sources of protein, soybean and casein-gelatin, were used in the basal low zinc diets and graded levels of ZnCO3 were added to establish the standard response curve. Thus, the availability values are based on the assumption that 100% of the zinc in ZnCO3 is available. A plot of weight gain during a 4-week period versus the logarithm of zinc added gave a straight line relationship over the range of 3 to 12 ppm. The 5 to 10 ppm range was used to evaluate the supplements which were added to the basal diets in lieu of carbohydrate. The minimum zinc requirement for chicks and rats fed the soybean diets was 19 ppm and for chicks fed the casein-gelatin diet it was 12 ppm. Chick and rat assays obtained biological availability for a number of food substances. In general the zinc in plant seeds was less available than that in animal products, and rats utilized the zinc in plant seeds less well than chicks. (Jerome-Vanderbilt)

EFFECT OF ASCORBIC ACID ON CADMIUM TOXICITY IN THE YOUNG COTURNIX,
Food and Drug Administration, Washington, D.C. Div. of Nutrition.
M. R. S. Fox, B. E. Fry, Jr., B. F. Harland, M. E. Schertel, and C. E. Weeks.
Journal of Nutrition, Vol 101, No 10, p 1295-1306, 1971. 6 tab, 33 ref.

Descriptors: *Metabolism, *Cadmium, *Absorption, *Game birds, *Toxicity, Biochemistry, Physiology, Nutrients, Diets, Laboratory tests, Deficient elements, Bioassay, Evaluation, Heavy metals, Zinc, Iron, Copper, Chromium, Cobalt, Inhibitors, Molybdenum, Birds.
Identifiers: *Ascorbic acid, *Quail.

To evaluate the effects of dietary supplements in altering the toxicity of dietary cadmium, day-old coturnix (Japanese quail) were fed 75 mg Cd/kg of an adequate purified diet for 2- or 4-week periods. Cadmium produced moderate growth retardation, severe anemia, decreased ash content of the tibia, and deviations from the normal concentrations of zinc, iron, cadmium, copper, and calcium in one or more of the cells or tissues assayed (erythrocyte, liver, kidney, and tibia). Dietary supplements of zinc, iron (III), copper, and L-cystein-HCl and injected ascorbic acid produced slight to moderate protection against cadmium-induced anemia, whereas iron (II), ascorbic acid, and D-isoascorbic acid had marked effects in preventing the anemia, growth retardation, poor bone mineralization, and perturbations in elemental concentrations of tissues. Chromium, cobalt, selenium, nickel, molybdenum, and pteroylglutamic acid had no effects. Initiation of ascorbic acid feeding at 2 weeks was beneficial to birds fed cadmium throughout the 4-week experiment. Under the conditions of these experiments, cadmium produced a functional iron deficiency and less clear-cut effects on zinc functions. It appears that a primary effect of cadmium was to prevent absorption of dietary iron (III). (Jerome-Vanderbilt)
W74-07707

INFLUENCE OF DIETARY AND INJECTED SELENIUM ON WHOLE-BODY RETENTION, ROUTE OF EXCRETION, AND TISSUE RETENTION OF 75SEO3 (--) IN THE RAT,
Army Medical Research and Nutrition Lab., Denver, Colo.
R. F. Burk, D. G. Brown, R. J. Seely, and C. C. Scaief, III.
Journal of Nutrition, Vol 102, No 8, p 1049-1056, 1972. 5 fig, 2 tab, 12 ref.

Descriptors: *Rodents, *Metabolism, *Distribution, *Selenium, *Retention, Biochemistry, Physiology, Laboratory tests, Measurement, Evaluation, Heavy metals, Analytical techniques, Diets, Nutrients, Bioassay.

Rats which had been fed a Torula yeast diet with selenium supplements of from 0 (basal) to 1 ppm for 35 days were injected with a tracer dose of 75SeO3 (--). Similar animals, all fed the basal diet, received carrier selenium in the injection at three levels (20, 50, and 200 micrograms). Whole-body counting was performed at frequent intervals; urine and fecal 75Se were determined for 10 days; and the animals were killed 35 days after injection and tissue retention was determined. Increase of either dietary or carrier selenium decreased whole-body retention of the 75Se in all cases and increased its urinary excretion except in the animals given 200 micrograms of carrier in which volatilization apparently occurred. Fecal excretion was about the same for all groups. Testis, brain, spleen, kidney, small intestine, eye, and thymus contained the greatest percentage of the whole-body 75Se when the basal diet was fed. This decreased as dietary selenium was increased. Skeletal muscle and blood showed the opposite pattern. The liver had the smallest percentage of whole-body 75Se in animals fed the basal diet. Supplementation with 0.10 ppm Se almost quadrupled it, but subsequent increases caused it to drop again. (Jerome-Vanderbilt)

SENSITIVITY OF VERTEBRATE EMBRYOS TO HEAVY METALS AS A CRITERION OF WATER QUALITY-PHASE I,
Kentucky Univ., Lexington. Water Resources Research Inst.
W. J. Birge, J. J. Just, A. Westerman, and A. D. Rose.
Available from the National Technical Information Service as PB-232 075; $3.25 in paper copy, $1.45 in microfiche. Research Report No 71, 1974. 33 p, 5 tab, 6 fig, 53 ref, 1 plate. OWRR B-028-KY(1). 14-31-0001-3890.

Descriptors: Water quality control, *Heavy metals, Bioindicators, Fish, *Embryonic growth stage, Mercury, Cadmium, Lead, Toxicity, Water quality standards, Lethal limit, Mortality, Trout, Channel catfish, Water pollution effects, Criteria, Amphibians, Metallic poisoning, Methyl mercury, Goldfish, Avian embryos.

Avian, amphibian and fish embryos were given continuous treatment with inorganic mercury, methyl mercury, cadmium and lead, to determine the sensitivity of embryogenesis to metallic poisoning. All metals produced substantial degrees of lethality and/or gross anatomical anomalies at 10 ppb or less. Treatment with inorganic mercury at 10 ppb produced 100% kill of frog embryos. Chick and rainbow trout embryos suffered 10-20% lethality when exposed to 1 ppb of either inorganic or methyl mercury. Lead and cadmium at 1 ppb produced 24-32% lethality in chick embryos. No significant differences were observed in the embryopathic effects of inorganic or methyl mercury.

Concerning toxic effects of mercury, cadmium and lead, the 'embryonic stage' appears to constitute the critical 'sensitive link' in the vertebrate life cycle. The reproductive potential of vertebrate populations may be severely restricted (e.g., embryonic mortality) by such pollutants at trace levels which may not prove hazardous to adult animals, and environmental standards based on tolerance levels for adults may not provide adequate protection for sensitive developmental stages. Mercurial sensitivity of the goldfish, channel catfish and trout embryos increased in respective order, correlating with differences in egg size and hatching time of these species. A 50-fold difference in threshold levels was observed between goldfish and more sensitive trout embryos. This positive correlation suggests that fish with larger eggs and/or longer periods of embryological development are more susceptible targets of mercurial poisoning. (Grieves-Kentucky)

ENVIRONMENTAL CONTROL OF NITROGEN FIXATION IN LAKES, I. IN SITU NITROGEN FIXATION BY FREE LIVING BLUE-GREEN ALGAE, AND II. NITROGEN FIXATION BY THE DUCKWEED-ALGAL ASSOCIATION,
Michigan State Univ., East Lansing. Dept. of Crop and Soil Sciences.
J. M. Tiedje, T. P. Duong, and M. Cichowski.
Available from the National Technical Information Service as PB-232 085; $3.25 in paper copy, $1.45 in microfiche. Michigan Institute of Water Research, East Lansing, Completion Report, (March 1974). 35 p, 12 fig, 7 tab, 44 ref. OWRR A-046-MICH(1). 14-31-0001-3222.

Descriptors: *Michigan, *Cyanophyta, *Eutrophication, *Nitrogen fixation, Algae, Anabaena, Nostoc.
Identifiers: *Wintergreen Lake(Mich), *Acetylene reduction, Duckweeds, Algal growth, Gloeotrichia, Lemma, Spirodela, Aphanizomenon.

In situ acetylene reduction studies in hypereutrophic Wintergreen Lake showed that nitrogen fixation occurred from early July until mid-August and was correlated with the presence of heterocyst-bearing blue-green algae. Aphanizomenon was the dominant nitrogen fixing organism in 1970 while Anabaena was dominant in 1971; the Anabaena bloom resulted in 10 times more fixation than the Aphanizomenon bloom. Significant acetylene reduction was limited to the euphotic zone (0-3 m). Acetylene reduction at night was significant and for Aphanizomenon was greater than during the day. For the Anabaena bloom, maximum fixation occurred at 1 and 2 meter depths and was inhibited at the surface by high light intensities. Inorganic nitrogen was not detectable in the lake waters during the bloom period. The estimated nitrogen addition to the lake by fixation was 21 kg NH3/ha for the 1971 bloom. The duckweeds Lemna and Spirodela were found to have a commensalistic relationship with blue-green algae that resulted in significant nitrogen fixation. Acetylene reduction by this association was widespread as it occurred in 27 of 30 sample sites over 3 years (1971-1973). Quantities of nitrogen fixed averaged 4 to 7 kg/ha per season but could range up to 10 times higher when Lemna trisulca was the dominant host plant. The associated heterocyst-bearing algae were Nostoc, Gloeotrichia and Anabaena. They were found either in reproductive pockets or attached to the lower mesophyll. Plant excreted nutrients, an attachment surface and shading appeared to favor the algal colonization of this niche. The quantities of nitrogen fixed could represent major sources of nitrogen particularly for shallow and/or intermittent bodies of water.

AN INVESTIGATION OF THE WATER QUALITY AND PRODUCTIVITY OF POLSON BAY, FLATHEAD LAKE, MONTANA,
Montana Univ., Missoula. Dept. of Zoology.
A. R. Gaufin.
Available from the National Technical Information Service as PB-232 119; $3.00 in paper copy, $1.45 in microfiche. Montana Water Resources Research Center, Bozeman, Completion Report No. 48, (1974). 14 p. OWRR A-043 MONT(1).

Descriptors: *Phytoplankton, *Zooplankton, *Lakes, *Thermal stratification, *Carbon radioisotopes, *Montana, Water quality, Biomass, *Primary productivity, Nutrients, Pollutant identification.
Identifiers: *Flathead Lake(Mont).

Zooplankton and phytoplankton collections were taken in Polson Bay at the lower end of Flathead Lake, Montana, and a biomass estimate obtained. Exchange of nutrients with bottom sediments was measured, particulate matter in the water was analyzed for carbon and ash-free dry weight, and the gross primary productivity of Flathead Lake was measured by means of the carbon 14 method. Thermal stratification occurred at only a few locations in Flathead Lake. Nutrients and dissolved solids, although normally at low concentrations, were usually sufficient to support the growth of phytoplankton. Most components increased in concentration during the summer months. Coliform were almost non-existent in Polson Bay. (Williams-Montana)

SURVIVAL OF INTESTINAL BACTERIA IN OLIGOTROPHIC WATERS,
Washington State Univ., Pullman. Dept. of Civil and Environmental Engineering.
D. L. Johnstone, and A. M. Kubinski.
Available from the National Technical Information Service as PB-232 156, $3.25 in paper copy, $1.45 in microfiche. State of Washington Water Research Center, Pullman, Completion Report No 14, July 1973. 29 p, 11 fig, 4 tab, 26 ref. OWRR A-048-WASH(1). 14-31-0001-3848.

Descriptors: *Protozoa, *Periphyton, *Oligotrophy, *Bacteria, *Coliforms, *Streptococcus, Aquatic plants, *Washington, Physicochemical properties, Water pollution effects.
Identifiers: Predator-prey relationships, Indigenous bacterial flora.

Direct predator-prey relationships involving a few species of ciliated and flagellated protozoans from the periphyton of oligotrophic waters appear to be the major mechanism in such environments responsible for removal of fecal bacteria. Other factors, such as the indigenous bacterial flora and the physicochemical properties of these waters, are relegated to a more indirect role. The lengthy lag period (4-5 days) required for initial predatory responses indicates the delicate nature of high-quality waters and the need for strict sanitary guidelines to ensure their future safety and quality. The sanitary quality of oligotrophic waters can best be determined by the enumeration of fecal streptococci in conjunction with fecal coliforms.

STUDIES ON SOUTHEASTERN AQUATIC INSECTS,
Georgia Univ., Athens. Dept. of Entomology.
J. B. Wallace.
Available from the National Technical Information Service as PB-232 183, $9.75 in paper copy, $1.45 in microfiche. Environmental Protection Agency, Report EPA 660/3-73-016, May 1974. 131 p, 15 fig, 20 tab, 87 ref. EPA Project 18050 DFQ.

Descriptors: *Aquatic insects, *Systematics, Ecology, Caddisflies, Insects, Distribution, Water quality, Insecticides, Insect resistance, Nutrients, Feeding rates, *Southeast U.S., *Dieldrin, *Stoneflies, Standing crops, Biomass, Appalachian mountain region, Chlorinated hydrocarbon pesticides, Pesticide residues, Water pollution effects.
Identifiers: *Trichoptera, *Savannah River basin, Hydropsychidae.

This report is concerned with taxonomic studies of adult and immature Trichoptera in the southeast and several aspects of the ecology and distribution of southeastern aquatic insects. The distribution of the family Hydropsychidae in the Savannah River basin in relation to water quality parameters was studied. The effects of prolonged exposure to a chlorinated hydrocarbon insecticide, dieldrin, and its effect on aquatic insect populations and residue levels are discussed. The feeding habits and feeding rates of an herbivorous stonefly were studied as well as the effect of such feeding on water quality--such as increased leaching from leaves as a result of insect feeding. In conjunction with the preceding laboratory experiments, an extensive study was carried out on the benthic fauna of four small streams of various plant cover types (Hardwood, Coppice Hardwood, White Pine and Pasture) in the southern Appalachians. The pine stream had lowest diversity and standing crop biomass, whereas the coppice had greatest standing crop biomass. Wholebody and standing crop of calcium, potassium and magnesium were also studied in the above streams. (EPA)

ACCUMULATION PHENOMENON WHICH TAKES PLACE IN A MUSSEL (MYTILUS GALLOPROVINCIALIS LMK) GROWN IN AN ARTIFICIALLY POLLUTED ENVIRONMENT, VERIFICATION OF A SIMPLIFIED MODEL OF THE DYNAMIC EQUILIBRIUM OF METAL RIPARTITION BETWEEN MUSSELS AND SEAWATER, NOTE II-POLLUTION FROM COPPER, (FENOMENO DI ACCUMULO NEL MITILO (MYTILUS GALLOPROVINCIA-LIS LMK) STABULATO IN AMBIENTE ARTIFICIALMENTE INQUINATO. VERIFICA DI UN MODELLO SEMPLIFICATO PER L'EQUILIBR IO DINAMICO DI RIPARTIZIONE DEL METALLI FRA MITILO E ACQUA MARINA, NOTA II: INQUINAMENTO DA RAME),
L. Majori, and F. Petronio.
L'Igiene Moderna, Vol 66, No 1, p 64-78, January-February, 1973. 7 fig, 3 tab, 31 ref, (English summary).

Descriptors: Investigations, Evaluation, Metals, *Water pollution sources, *Mussels, *Bioindicators, Model studies, *Copper, Heavy metals.
Identifiers: *Bioaccumulation.

Research consisting of the evaluation of the potential damage due to pollution by metals using as the biological indicator, mussels, and its capability to act as a local pollution warning-signal, is explained. Such evaluations are quantified by the use of a dynamic kinetic model of the metal division between mussel and water. Results of experimental research show mussel ability to accumulate copper in polluted waters thus confirming aforementioned research purposes. (Sandoski-Franklin)

RESULTS OF RED TIDE FORMATION IN TOKYO BAY,
Tokyo Univ. (Japan). Faculty of Science.
T. Tsuji, H. Seki, and A. Hattori.
Journal Water Pollution Control Federation, Vol 46, No 1, p 165-172, January 1974. 6 fig, 2 tab, 9 ref.

Descriptors: *Eutrophication, Investigations, Coasts, Hypolimnion, *Phytoplankton, *Red tide, Oxygen requirements, *Degradation(Decomposition), Bays, *Aerobic conditions, *Stratification.
Identifiers: *Japan(Tokyo Bay).

The status of eutrophication in Tokyo Bay was investigated from August 1971 to May 1972 with special attention given to the formation of a microaerobic zone. This zone appeared in the bottom layer in the region of a gyre of the coastal water in the inner part of the bay, after the occurrence of the red tide caused by phytoplankton. On the basis of measured oxygen consumption rates, it is suggested that the multiple crops of phytoplankton in a red tide are transported downward to the bottom layer before their easily decomposable fraction has been decomposed in the upper layers. (Sandoski-Franklin)

SEASONAL AND SPATIAL CHANGES IN PRIMARY PRODUCTION AND NUTRIENTS IN LAKE MICHIGAN,
Wisconsin Univ., Milwaukee. Center for Great Lakes Studies.
D. C. Rousar.
Water, Air, and Soil Pollution, Vol 2, No 4, p 497-514, December 1973. 17 fig, 1 tab, 31 ref.

Descriptors: *Primary productivity, *Sampling, Wisconsin, Michigan, *Nutrients, Phytoplankton, Seasonal, Plant physiology, Physical properties, Chemical properties, Conductivity, Phosphorus, Silica, *Lake Michigan, Temperature, Hydrogen ion concentration, Nitrates, *Eutrophication, Plant growth.
Identifiers: Carbon uptake, Plant pigments, Phenolphthalein alkalinity.

Samples were collected from a railroad ferry between Wisconsin and Michigan over a period of 17 months to determine the spatial and temporal distribution of primary production and several physical and chemical variables. Conductivity, silica, total phosphorus, soluble reactive phosphorus, plant pigments, and carbon uptake exhibited inshore-offshore differences, and all but silica were highest at the Wisconsin inshore station, thus suggesting nutrient enrichment of Lake Michigan by Milwaukee. Temperature, pH, phenolphthalein alkalinity, nitrate, silica, plant pigments, and C uptake showed varying degrees of seasonal change. A bimodal seasonal abundance of phytoplankton was revealed. (Sandoski-Franklin)

A NOTE CONCERNING THE ENVIRONMENTAL ACCEPTABILITY OF NITRILOTRIACETIC ACID (NTA): THE EFFECT OF NTA ON THE GROWTH OF GYMNODINIUM BREVE,
University of South Florida, Tampa. Dept. of Chemistry.
M. T. Doig, and D. F. Martin.
Environmental Letters, Vol 6, No 1, p 31-36, 1974. 1 tab, 12 ref.

Descriptors: *Nitrilotriacetic acid, *Gymnodinium, *Analytical techniques, Domestic wastes, *Eutrophication, Toxicity, *Growth rates.
Identifiers: Lag time, Growth constant, Mean generation time, Maximum cell count.

The effect of NTA on the growth of Gymnodinium breve was determined by a modification of the flask test. The response of G. breve to enrichment of natural waters with NTA alone or NTA in the presence of domestic waste materials was evaluated in terms of the following four growth parameters: lag time, growth constant, mean generation time, and maximum cell count. NTA was not toxic to G. breve at concentrations up to 10 ppm and no biostimulatory effects were noted. (Sandoski-Franklin)
W74-07775

THE USE OF ALGAL ASSAYS FOR DETERMINING THE EFFECT OF IRON AND PHOSPHORUS COMPOUNDS ON THE GROWTH OF VARIOUS ALGAL SPECIES,
Wahnbachtalsperrenverband, Siegburg (West Germany).
J. Clasen, and H. Bernhardt.
Water Research, Vol 8, No 1, p 31-44, 1974. 16 fig, 7 tab, 58 ref.

Descriptors: *Eutrophication, *Bioassays, *Algae, Water samples, Testing, Fertility, Filtration, *Iron, *Phosphorus, Growth rates, *Algal control, *Productivity.
Identifiers: Algal growth.

Algal assays were performed with unialgal cultures to determine the productivity of the water samples tested. The productivity of the water samples rich in turbid materials and algae was higher in heat sterilized samples than those prepared by filtration. There is a clear correlation between the productivity of unfiltered sterilized water samples and their iron and total phosphorus content. Assays proved that the large decrease in productivity is due chiefly to the removal of phosphorus compounds and the removal of iron and other unknown substances. There are indications that the amount of iron required for growth, as compared with that of phosphorus, varies greatly depending on the individual algal species. The significance of the algal assay and the results relating to measures for limiting eutrophication using phosphorus removal plants are discussed. (Sandoski-Franklin)

INORGANIC NITROGEN REMOVAL IN A COMBINED TERTIARY TREATMENT-MARINE AQUACULTURE SYSTEM - II. ALGAL BIOASSAYS,
Woods Hole Oceanographic Institution, Mass.
J. C. Goldman, K. R. Tenore, and H. I. Stanley.
Water Research, Vol 8, No 1, p 55-59, 1974. 3 fig, 2 tab, 9 ref.

Descriptors: *Waste water treatment, *Bioassays, Sampling, *Tertiary treatment, Discharge(Water), *Nitrogen, *Algal control, Waste water(Pollution), Coasts.
Identifiers: Algal growth, *Combined treatment.

Algal bioassays, conducted on samples from various components of the combined tertiary treatment-marine aquaculture process, demonstrated that nitrogen removal is necessary to prevent increasing the algal growth potential of coastal marine waters receiving wastewater discharges. When nitrogen was removed from secondarily treated domestic wastewater, the wastewater in varying dilutions with seawater could not support more algal growth than the seawater alone. By adding nitrogen back to the treated wastewater the algal growth potential was increased to that of the untreated wastewater. This was demonstrated by assaying samples containing both artificially added nitrogen and nitrogen regenerated by oysters. Assays of the effluent from the seaweed system showed that the removal of regenerated nitrogen reduced the algal growth potential to that of natural seawater. (Sandoski-Franklin)

EXPERIMENTAL STUDY OF THE HAZARD DUE TO CHLORINATED QUINONES AND THEIR SAFETY LEVELS IN WATER BODIES (IN RUSSIAN),
Institut Gigieny Truda i Profzabolevanii, Ufa (USSR).
V. G. Murzakaev, and Z. V. Latypova.
Gig Sanit, Vol 37, No 5, p 15-19, 1972, Illus, English summary.
Identifiers: *Chloranil, *Chlorinated hydrocarbons, *Organoleptic properties, *Quinones, Safety, Potable water, Lethal limit, Toxicity index, Public health, Water pollution effects.

A study was done on the hazard due to certain chlorinated quinones and their safety levels in water bodies. The introduction into a water body of tetrachlorhydroquinone (TCHC) had a noxious effect responsible for deterioration of the organoleptic properties of the water. In a water body intended for human drinking and recreation the content of chloranil is permissible within the level of 0.05 mg/l and that of TCHC within the level of 0.5 mg/l. Their sanitary toxicological effects may serve as index of their noxious action.--Copyright 1973, Biological Abstracts, Inc

ENVIRONMENTAL EFFECTS OF THE CONSTRUCTION AND OPERATION OF A GASEOUS DIFFUSION PLANT.
Goodyear Atomic Corp., Portsmouth, Ohio.
Available from NTIS, Springfield, Va., as Rept No. ORO-725; $4.00 per copy, $1.45 microfiche. Report No ORO-725, July 1973. 33 p, 5 fig, 7 tab, 8 ref.

Descriptors: *Nuclear energy, *Energy conversion, *Radioactivity, *Environmental effects, Effluents, Water pollution, *Ohio River, Uranium, Biology, Balance of nature, Ecology, Pollutants, Measurement, Assay, Assessment, Safety, Evaluation, Public health, Operations, Regulation.
Identifiers: *Gaseous diffusion plant, Portsmouth(Ohio).

Described are the impacts upon the environment resulting from construction, start-up, and operation of a gaseous diffusion plant. Some of the impacts are typical regardless of location of the plant. Others are atypical and depend upon location; those are presented, by way of example, as they occur at the Portsmouth Gaseous Diffusion Plant. The various environmental contaminants that may be produced in the operating plant are described. The concentrations of those contaminants are stated; and the adverse biological effects of pertinent contaminants are elucidated. The environmental impact of the plant varies somewhat according to U-235 concentrations. However, commercial plants are not expected to enrich U-235 in concentrations greater than 4%; for this reason, environmental effects due to Portsmouth operations within that range are emphasized. The study revealed that present discharges from the plants generally have no detrimental effects upon the environment. (Houser-ORNL)

PLUTONIUM IN NORTH ATLANTIC OCEAN ORGANISMS; ECOLOGICAL RELATIONSHIPS,
Woods Hole Oceanographic Institution, Mass.
V. E. Noshkin, V. T. Bowen, K. M. Wong, and J. C. Burke.
In: CONF-710501 - Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971. Oak Ridge, Tennessee, p 681-688, (1971). 1 fig, 2 tab, 20 ref.

Descriptors: *Atlantic Ocean, *Plutonium, *Radioisotopes, *Aquatic life, *Ecology, Aquatic environment, *Assay, Analytical techniques, Radiochemical analysis, Fallout, Absorption, Diets, Nutrients, Toxicity, Sediments, Trophic level, Balance of nature, Ecosystems.

A series of North Atlantic Ocean organisms have been analyzed, by radiochemistry and alpha spectrometry, for fallout plutonium-239, -240, and -238. Organisms from the near-shore environment have been selected to show the effects on plutonium uptake of variations in feeding habits, association with sediment or with absorptive surfaces, and of trophic level. In general, plutonium concentrations are higher in organisms feeding on sediment or on surfaces than in those drawing largely on the water itself. There is some evidence that plutonium concentrations are higher in organisms of higher trophic levels. (See also W74-07799) (Houser-ORNL)
W74-07800

DISTRIBUTION OF ZN, FE, MN, AND SR IN MARINE FISHES OF DIFFERENT FEEDING HABITS,
Puerto Rico Nuclear Center, Mayaguez.
R. Y. Ting.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 709-720, (1971) 4 fig, 5 tab, 16 ref.

Descriptors: *Radioisotopes, *Zinc, *Iron, *Manganese, *Strontium, *Fish diets, Foods, Absorption, Sediments, Gulfs, *Puerto Rico, Speciation, Diatoms, Detritus, Algae, Biology, Biological membranes, Bioindicators.
Identifiers: Dietary habit, *Gulf of Panama, Body organ.

The levels of Zn, Fe, Mn, and Sr concentrations in the muscle, viscera, skin, scales, and bone of seven species of fish with four different feeding habits were determined by means of atomic absorption spectrophotometry. Samples were taken from the Gulf of Panama and Puerto Rican waters and included herbivores and carnivores of three distinctly different feeding habits. These were herbivorous, mullet (Mugil curema Valenciennes); plankton feeders, Pacific thread herring (Opisthonema libertate Gunther) and Atlantic thread herring (Opisthonema oglinum LaSueur); benthic carnivorerous, sea trout (Cynoscion reticulatus Jordan and Evermann) and sand perch (Diplectrum euryplectrum Jordan and Evermann); pelagic carnivores, yellowfin tuna (Thunnus albacares Bonnaterre) and skipjack tuna (Euthynnus pelamis Linnaeus). There were no significant differences in the levels of Zn, Fe, Mn, and Sr concentrations in the muscle, viscera, skin, scales, and bone in the seven species of fish composed of four different feeding habits, except that the levels of Fe in the viscera were significantly different. The viscera of the herbivores, mullets, contained a significantly higher amount of Fe than the carnivores. This probably was due to the sediments ingested with diatoms, detritus, and algal matter when mullets are feeding from the bottom. The levels of the elemental concentrations in all body parts often varied to significant degrees between species within the same feeding habits. (See also W74-07799) (Houser-ORNL)
W74-07801

RADIOECOLOGY OF THE PLAICE (PLEURONECTES PLATESSA L) IN THE NORTHEAST IRISH SEA,
Ministry of Agriculture, Fisheries, and Food, Lowestoft (England). Fisheries Radiobiological Lab.
R. J. Pentreath, D. S. Woodhead, and D. F. Jefferies.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 731-737, (1971) 5 fig, 5 tab, 15 ref.

Descriptors: Effluents, *Nuclear powerplants, Cesium, Fish, Absorption, Foods, Fish diets, Biology, Bioindicators, Model studies, Ruthenium, Cerium, Zirconium, Niobium, Silts, Soils, Sediments, *Radioecology.
Identifiers: *Windscale plant, *Irish Sea, *Plaice.

Of the radionuclides discharged from the UKAEA fuel processing plant at Windscale only Cs-134 and Cs-137 are accumulated to any extent in the flesh of the plaice (Pleuronectes platessa L.). A study of the roles of food and water uptake of Cs-137 by I-group fish, which remain inshore throughout the summer, showed that approximately 50% is derived from each. The relationship between dietary changes and the contribution of food to the Cs-137 body burden has been examined by monthly sampling of the gut contents of the plaice and the benthic fauna of the Windscale area. The internal radiation dose rates to the gonads of I-group plaice from the Cs-137 body burden and other radionuclides present in the gut have been calculated using a simple model. As a large proportion of the Windscale radioactive waste, particularly Ru-106, Ce-144, and Zr-95/Nb-95, is reconcentrated on the seabed silt, demersal fish may receive an external radiation dose which is significantly greater than natural background. In situ measurements of such external dose rates received by larger plaice have been made with lithium fluoride dosimeters, and the results largely substantiate calculations based on seabed radioactivity levels. CONCENTRATIONS OF MANGANESE, IRON, AND ZINC IN JUVENILES OF FIVE ESTUARINE-DEPENDENT FISHES,
National Marine Fisheries Service, Beaufort, N.C.
F. A. Cross, and J. H. Brooks.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 769-775, (1971) 7 fig, 2 tab, 22 ref.

Descriptors: *Estuarine fisheries, Assay, Measurement, *Manganese, *Iron, *Zinc, Fish, Speciation, Juvenile fish, Path of pollutants, Radioisotopes, Cycles, *North Carolina.
Identifiers: *Newport River(N.C).

Concentrations of Mn, Fe, and Zn were measured in five species of fish collected from estuarine waters in the vicinity of Beaufort, North Carolina. Concentrations of Mn, Fe, and Zn varied significantly with weight in Atlantic menhaden and Atlantic croaker, and concentrations of Fe and Zn varied significantly with weight in bay anchovy. With the exception of Mn in menhaden, concentrations of trace metals decreased as weight increased. Significant differences among five species (spot, Atlantic croaker, pinfish, bay anchovy, and Atlantic menhaden) were observed for concentrations of Fe and Zn. Concentrations of Mn, however, were very similar among these five species. (See also W74-07799) (Houser-ORNL)

TRACE ELEMENTS IN MARINE SHRIMP,
Stanford Univ., Pacific Grove, Calif. Hopkins Marine Station.
G. A. Knauer, R. C. Harriss, and W. A. Glooschenko.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 836-839, (1971) 3 fig, 12 ref.

Descriptors: *Shrimp, *Gulf of Mexico, *Water pollution effects, *Radioisotopes, *Absorption, *Food chains, Measurement, Public health, Bioassay, Biology, Habitats, Water pollution sources, Membranes, Manganese, Iron, Zinc, Copper, Magnesium.

The concentrations of manganese, iron, zinc, copper, and magnesium in the exoskeleton, whole body, and abdominal muscles of adult penaeid shrimp were determined. The concentration of the five elements in the exoskeleton samples exhibited extremely wide variability. The freshly shed exoskeleton concentrated significantly higher amounts of all the elements studied, with the exception of copper, than did the newly molted whole-body samples. The concentrations of the five elements in the abdominal muscle samples were in general less than those concentrations found in the exoskeleton or whole-body samples. The calcium carbonate fraction of the exoskeleton is an important carrier for all of the elements investigated except copper. No correlation of shrimp size with element concentration was observed. BIOLOGICAL HALF-LIVES FOR ZINC AND MERCURY IN THE PACIFIC OYSTER, CRASSOSTREA GIGAS,
Washington Univ., Seattle. Coll. of Fisheries.
A. H. Seymour, and V. A. Nelson.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 849-856, (1971) 5 fig, 2 tab, 3 ref.

Descriptors: *Oysters, *Pacific Ocean, *Radioisotopes, *Zinc, *Mercury, *Absorption, Degradation, Biology, Biodegradation, Ion exchange, Cytological studies, Ecology, Food chains, Public health.
Identifiers: *Biological half-life, Effective half-life, Physical half-life.

The biological half-life for zinc was calculated from the rate of loss of Zn-65 by individual oysters. After direct uptake of Zn-65 as ZnC12 in a laboratory aquarium, the marked oysters were returned to their natural habitat and at monthly intervals between January 1969 and March 1971 were returned to the laboratory for Zn-65 measurement. Following the first month after uptake, the rates of Zn-65 loss were essentially exponential for two periods, late summer-early fall and the remainder of the year. The average biological half-life values for these periods were 300 and 850 days respectively. The biological half-life for an oyster that lost Zn-65 at a constant rate for the entire experiment was 910 days. The loss of Hg-203 by the oyster was more rapid than the loss of Zn-65. The biological half-life values increased from 5 days to 44 days during the course of the 19-week experiment. For a longer experiment, a longer biological half-life would be expected. Reliable estimates of biological half-life can be calculated from data obtained from long-term experiments with radionuclides unless the values for effective half-life and physical half-life are similar. W74-07807

ACCUMULATION OF CALCIUM-45 IN DEVELOPING COHO SALMON EGGS AND FRY REARED IN VARYING CONCENTRATIONS OF STABLE CALCIUM,
Washington Univ., Seattle. Coll. of Fisheries.
P. R. Olson.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee, p 866-874, (1971) 7 fig, 2 tab, 22 ref.

Descriptors: *Salmon, *Radioecology, *Calcium, *Cytological studies, *Embryonic growth stages, Absorption, Measurement, Incubation, Fertilization, Fish management, *Fish eggs.

Coho salmon eggs were fertilized and reared in Ca-45 solutions that contained varying amounts of stable calcium, ranging from 6 to 76 mg/liter. As evidenced in one of two egg lots, the eggs in calcium concentrations above 6 ppm showed a significant improvement in fertility. Eggs reared in 76 ppm calcium hatched a day earlier than those reared in calcium concentrations of 16 and 36 ppm, which in turn hatched a day earlier than the egg lots reared in 6 ppm calcium. The stable calcium accumulated during the rearing period, 80 days, was similar in all lots regardless of the concentration of calcium. The amount of Ca-45 accumulated was inversely proportional to the concentration of stable calcium. A significant amount of Ca-45 entered the egg during the water-hardening process, but only a slight amount was taken up during the 57 days to hatching. In the two-week period after hatching, there was at least a tenfold increase in the uptake of Ca-45, which was associated with ossification. (See also W74-07799) (Houser-ORNL)
W74-07808

A SYSTEMS ANALYSIS METHODOLOGY FOR PREDICTING DOSE TO MAN FROM A RADIOACTIVELY CONTAMINATED TERRESTRIAL ENVIRONMENT,
Oak Ridge National Lab., Tenn.
R. S. Booth, S. V. Kaye, and P. S. Rohwer.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee, p 877-893, (1971) 5 fig, 3 tab, 14 ref.

Descriptors: *Radioactivity, *Path of pollutants, *Radioisotopes, *Systems analysis, Computers, Food chains, Human population, Public health, Forecasting, Environment, Habitats, Fallout, Ecology, Air pollution, Water pollution, Soil contamination, Transfer.

A systems analysis methodology has been developed to predict intakes by man, estimate dose commitments, and identify 'critical' exposure pathways resulting from radioactivity releases to a terrestrial environment. A mathematical model was constructed simulating selected terrestrial pathways by which fallout radioactivity can be transferred ultimately to man. This model is intended for preliminary predictions of radionuclide intakes by man through consumption of milk, beef, and plant parts contaminated directly by fallout as well as by uptake from the soil. Differential equations were written describing the radionuclide transfers, and the parameters required to impement these equations were derived. In verification tests, model predictions of Cs-137 concentrations in environmental compartments agreed within a factor of 2 with experimental data. More extensive verification studies involving other radionuclides are needed. The intake rates and total intakes of seven sample radionuclides were predicted for a 'reference' man based on a hypothetical fallout of pCi/cm-2 of each radionuclide. These predicted intakes were used as input to an internal dosimetry model which calculated dose commitments for each radionuclide and pathway. The results of these calculations are discussed in relation to individual radionuclide contributions to dose commitment. This generalized food-chain model is sufficiently versatile that it can be applied to many terrestrial environments and to all radionuclides. This first version of the model is expected to undergo future refinements. (See also W74-07799) (Houser-ORNL)

EFFECTS OF IONIZING RADIATION ON PROCESSES INFLUENCING TOLERANCE OF TREE SEEDLINGS,
Oak Ridge National Lab., Tenn.
W. F. Harris, and J. P. Witherspoon.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tenn. p 961-971, (1971) 2 fig, 5 tab, 35 ref.

Descriptors: *Radiation, *Radioactivity effects, *Radioecology, Seeds, *Trees, *Germination, Plant morphology, *Dormancy, Viability, Photosynthesis, Foliar, Root development, Carbohydrates, Transpiration, Water demand, Water supply.
Identifiers: Yellow poplar, Silver maple.

Effects of acute doses (up to 500 rads) of fast neutrons on dormant seedlings of yellow poplar and silver maple, which were grown posturradiation in light environments of 100, 50, and 25% of full sunlight, indicated specific mechanisms which would reduce seedling tolerance to normal environmental stresses, thus increasing apparent radiosensivities of higher plants as predicted from nuclear parameters. Morphological and physiological responses were monitored periodically. Morphological response varied considerably along a gradient of reduced light, except for bud mortality. Physiological responses were dependent on structural modifications. hotosynthetic capacity of irradiated seedlings was modified by (1) reduced rates of photosynthesis per unit area, (2) early senescence of foliage of irradiated seedlings, and (3) annual variation in recovery of leaf area development. As a consequence of reduced photosynthate accumulation, root production was decreased, occurrence of root production was delayed, and concentration of storage carbohydrates was reduced. Transpiration rates of excised, aberrant yellow poplar foliage were 1.6 times greater than those of normal foliage. Previously observed increases in drought susceptibility of radiation-damaged plants are postulated to result from increased water requirement of tissue and decreased capacity to supply water because of altered leaf histology and resultant imbalance of leaf area-root biomass ratios following radiation damage to developing buds and leaves. W74-07815

RADIATION EFFECTS ON SERUM PROTEINS, HEMATOCRITS, ELECTROPHORETIC PATTERNS AND PROTEIN COMPONENTS IN THE BLUEGILL (LEPOMIS MACROCHIRUS),
Oak Ridge National Lab., Tenn.
G. U. Ulrikson.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 1100-1105, (1971) 2 fig, 3 tab, 23 ref.

Descriptors: *Radioactivity, *Radioactivity effects, *Fish, Fish toxins, Radioecology, Biology, Biological degradation, *Sunfishes, Research and development.
Identifiers: *Radiation exposure, Dose, Blood.

Gel electrophoresis was used in conjunction with a spectrophotometric protein analysis to study the effects of radiation on the concentration of serum protein fractions in bluegill (Lepomis macrochirus). Four groups of 40 bluegills each were acclimated in aquaria at 20C for 30 days. Three groups were then exposed to 1000, 2000, and 3000 R, respectively, at 167 R/min. Blood samples were taken from each test group at intervals of 2 hr, 24 hr, and then every 48 hr thereafter. A severe decrease (approx. 50%) occurred in the beta globulins, alpha globulins,and albumins within 2 to 24 hr after exposure. After the initial decrease, hemoconcentration occurred. SENSITIVITY OF CARP (CYPRINUS CARPIO) EMBRYOS TO ACUTE GAMMA RADIATION,
Oak Ridge National Lab., Tenn.
M. L. Frank.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 1106-1112, (1971) 3 fig, 10 ref.

Descriptors: *Carp, *Fish eggs, Hatching, Radioactivity, *Radiation, *Gamma rays, *Reproduction, *Propagation(Biological), *Radioactivity effects, Larval growth stage.
Identifiers: Organogenesis, Radiosensitivity.

Cyprinus carpio Linnaeus eggs were exposed to acute gamma radiation (500 to 16,000 rads) at different stages of development to observe the effects of radiation on development and hatchability. Except for an increase in radiosensitivity during late cleavage, radiosensitivity decreased as development increased; however, the rate of change was not constant throughout development. Stages in order of decreasing radiosensitivity were: zygote, late cleavage, early cleavage, and post-organogenesis. Differences in radiosensitivity were related to the physiological state of cells at the time of irradiation. During early cleavage when cell division was synchronous, radiosensitivity was probably influenced by the stage of mitosis at the time of irradiation. Hatchability of eggs irradiated after organogenesis was not affected by any of the experimental doses. The typical development of carp eggs from the zygote to larval stage is shown in a series of photomicrographs. (See also W74-07799) (Houser-ORNL)

EFFECT OF RADIATION, SALINITY AND TEMPERATURE ON THE IONIC REGULATION OF THE BLUE CRAB, CALLINECTES SAPIDUS,
National Marine Fisheries Service, Beaufort, N.C. Center for Estuarine and Menhaden Research.
D. W. Engel, E. M. Davis, J. W. Angelovic, and D. E. Smith.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 1113-1118, (1971) 5 fig, 12 ref.

Descriptors: *Crabs, *Radiation, *Radioactivity effects, *Salinity, *Water temperature, *Ions, Animal physiology, Environmental effects, Amino acids, Sodium, Potassium, Chlorine, Magnesium.
Identifiers: Blue crabs.

The interaction of ionizing radiation with environmental factors affects the survival of aquatic organisms, due to physiological responses which are not clearly understood. Although studies have been made on the effects of interacting environmental factors on survival, physiological response studies have been neglected. Experiments were designed to define how radiation-salinity-temperature interactions affect the ionic regulation of a euryhaline, poikilothermic crustacean, the blue crab, Callinectes sapidus. Immature blue crabs were exposed to an acute radiation dose of 10,000 rds at various combinations of three temperatures (12, 20, and 28 C) and two salinities (5 and 35 p.p.t). At predetermined times after irradiation hemolymph samples were collected from the crabs and analyzed for Na(plus), K(plus), Cl(Minus), and Mg(2plus) and total free amino acids. Salinity and temperature significantly affected the ionic composition and free amino acid level of the hemolymph, with the highest levels found at the highest salinity. Temperature, however, affected the magnitude of the response and was virtually independent of salinity. Radiation interacted with these two variables to cause alteration in ionic regulation with time after irradiation. Thus the degree of radiation damage to ionic regulation in the blue crab was influenced by the crabs' environment before and after irradiation. (See also W74-07799) (Houser-ORNL)
W74-07818

THERMOLUMINESCENT DOSIMETRY OF AQUATIR ORGANISMS,
Battelle-Pacific Northwest Lab., Richland, Wash., Ecosystems Dept.
D. G. Watson, and W. L. Templeton.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 1125-1130, (1971) 1 fig, 2 tab, 11 ref.

Descriptors: *Aquatic life, Aquatic environment, *Columbia River, Fish, Benthos, Water pollution sources, Nuclear powerplants, Effluents, Plutonium, Measurement, Assay, Assessment, Suspended solids, Aqueous solutions, *Radioisotopes.
Identifiers: *Radiophosphorus, Body burden, *Thermoluminescent dosimetry.

Lithium fluoride thermoluminescent dosimeters were employed to estimate the radiation exposure to Columbia River organisms downstream from the effluent outfalls of the Hanford plutonoum-producing reactors. Highest dose measurements were made in the river benthos. Observed dose was inversely related to distance downstream from the effluent outfalls. Radionuclides in suspension or solution in the river water contributed significantly to the total radiation exposure to both fish and benthic organisms. The dose to fish homogenate and intact fish kept frozen during dosimeter exposure was generally inversely related to fish size. This relationship did not hold for the major gamma-emitting nuclides contained in the fish carcass, but appeared to be associated with the body burden of radiophosphorus. (See also W74-07799) (Houser-ORNL)
W74-07819

CHROMOSOME ABERRATIONS IN CHIRONOMUS RIPARIUS DEVELOPING IN DIFFERENT CONCENTRATIONS OF TRITIATED WATER,
Oak Ridge, National Lab., Tenn.
B. G. Blaylock.
In: Conf-710501-Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 1169-1173, (1971) 2 fig, 1 tab, 15 ref.

Descriptors: Environment, Bloodworms, *Tritium, Water pollution sources, Nuclear explosions, Nuclear powerplants, Effluents, Radiation, Radioactivity effects, Biological degradation, Larval growth stage, Chromosomes, Aquatic animals, *Diptera.
Identifiers: *Tritiated water, *Chromosomal aberrations, *Chironomus riparius.

Since most tritium released to the environment eventually becomes tritiated water, there is a need for data on the biological effects of tritium acquired by organisms from environmental tritiated water. The salivary gland chromosomes of Chironomus riparius which had developed in different concentrations of tritiated water were examined for chromosome aberrations. The concentration of tritium ranged from 0.01 to 500 micro-Ci/ml. The concentrations of tritium in the larvae were determined and dose calculations were made for each concentration. Chromosome aberrations were observed in larvae which had developed in concentrations of 125, 250, and 500 micro Ci/ml of tritiated water; however, no aberrations were detected at concentrations of 0.1 micro-ci/ml or lower. A response curve developed to relate the frequency of chromosome aberrations to the concentration of tritiated water in which they developed was similar to a two-hit dose response for chromosome aberration produced by x or gamma radiation. (See also W74-07799) (Houser-ORNL)
W74-07820

EFFECTS OF CHROME RADIATION EXPOSURE ON MOSQUITOES (DIPTERA: CULICIDAE). 1. EFFECTS OF REARING IN SR-90 + Y-90 SOLUTIONS,
Atomic Energy of Canada Ltd., Pinawa (Manitoba). Whiteshell Nuclear Research Establishment.
J. E. Guthrie, and R. A. Brust.
In: CONF-710501 - Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee, p 1174-1178, (1971) 3 tab, 14 ref.

Descriptors: *Radioactivity, *Water pollution effects, *Radioactivity effects, *Mosquitoes, Larvae, Aquatic insects, Public health, Breeding, Reproduction, Biology, Insect eggs, Growth stages, Strontium, Yttrium, Insect control, *Diptera.
Identifiers: *Culicidae.

Larvae of Aedes aegypti and A. atropalpus were reared in various concentrations of Sr-90 + Y-90 ranging from 0.1 to 20 microcuries/ml. All these concentrations produced some effects. In many individuals the testes and ovaries of the adults were atrophied. In others, the production of viable sperm and their transfer to the spermathecae were affected, and the oocytes did not mature. Females that received viable sperm laid non-viable eggs. Irradiated females retained their mating competitiveness did not take any blood-meals. Thus, their release with sterile males might increase the effectiveness of the sterile-male technique for mosquito control. (See also W74-07799) (Houser-ORNL)
W74-07821

EFFECTS OF GAMMA IRRADIATION ON THE REPRODUCTIVE PERFORMANCE OF ARTERMIA AS DETERMINED BY INDIVIDUAL PAIR MATINGS,
Division of Biology and Medicine (AEC), Washington, D.C.
R. L. Holton, C. L. Osterberg, and W. O. Forster.
In: CONF-710501 - Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 1191-1197, (1973), 3 fig, 1 tab, 18 ref.

Descriptors: *Radioactivity, *Cobalt, *Radioactivity effects, *Marine animals, *Brine shrimp, *Reproduction, Breeding, Water pollution, Environment, Growth stages, Broods, Food chains, Public health.
Identifiers: Doses.

The brine shrimp, Artemia, was used as an experimental organism to study the effects of Co-60 gamma irradiation on the reproductive performance of an animal species. The total reproductive ability of the brine shrimp was fractionated into various components, and the effect of irradiation on each of these components was then determined by studies of reproductive behavior in individual pair matings. In this study the components identified were the number of broods produced per pair, the number of nauplii voided per brood, the survival of nauplii to sexual maturity, the number of mature adults produced per brood, and finally the number of mature adults produced per pair. All component parameters of total reproductive performance were shown to be affected by irradiation within the range of doses used in this experiment. However, the number of broods per pari was shown to be the factor most sensitive to irradiation, with effects noted at doses of 900 rads and above. (See also W74-07799) (Houser-ORNL)
W74-07822

EFFECTS OF GAMMA IRRADIATION ON THE MAINTENANCE OF POPULATION SIZE IN THE BRINE SHRIMP, ARTEMIA,
Division of Biology and Medicine (AEC), Washington, D.C.
R. L. Holton, C. L. Osterberg, and W. O. Forster.
In: CONF-710501 - Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 1198-1205, (1971), 6 fig, 2 tab, 5 ref.

Descriptors: *Radioactivity, *Cobalt, *Radioactivity effects, *Brine shrimp, Marine animals, Environment, Water pollution, Growth

stages, Reproduction, Broods, Zinc, Phosphorus, Analytical techniques, Breeding, Mortality, Food chains, Public health, Fish population.
Identifiers: Doses.

Population cultures of the brine shrimp, Artermia, were irradiated with acute doses of gamma irradiation from a Co-60 source. The subsequent reproductive performance and size of the cultures were studied for a period of 20 weeks. It was demonstrated that the population cultures may be maintained with only a small part of the reproductive potential exhibited in the pair matings. Therefore, the results of pair matings must necessarily be used to assess the amount that the reproductive potential of Artemia is decreased due to various doses of irradiation. Population cultures at all doses were shown to have the same sized populations at the end of 20 weeks. However, the populations irradiated at higher doses had not recovered to their full reproductive potential at the end of this time. (See also W74-07799) (Houser-ORNL)

STRUCTURE AND FUNCTION OF HARDWOOD LITTER AND SOIL SUBSYSTEMS AFTER CHRONIC GAMMA IRRADIATION, I. MESOFAUNA, NITROGEN, AND TOTAL SOIL RESPIRATION,
Georgia Univ., Athens. Dept. of Zoology.
D. C. Coleman, and G. T. Cowley.
In: CONF-710501 - Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 1222-1228, (1971), 6 fig, 4 tab, 33 ref.

Descriptors: Soil structure, *Radioactivity, *Cesium, *Radioactivity effects, *Hardwood, *Litter, *Soil contamination, Systems analysis, Hydrologic, Systems, Soil water, Soil temperature, Soil moisture, Subsoil, Soil water movement, Respiration, Carbon cycle, Research and development, Research facilities, *Nitrogen.

Several enclosures of hardwood litter-soil received dosages of gamma radiation ranging from 3600 to 4 kR. Some plots had reduced microflora and -fauna, others were low in fauna only, and the least dosed had not significant changes in numbers. Only the most heavily irradiated enclosure was significantly below the controls in CO2 output, indicating that microflora are more important contributors to overall CO2 output than are mesofauna. Temperature was a more important factor than soil moisture in governing soil respiration. A wide spectrum of radiation tolerances in the forest flood community is reported. Bacteria are the most resistant fungi resistant up to about 1 megarad and the small artropods much less resistant. (See also W74-07799) (Houser-ORNL)
W74-07824

STRUCTURE AND FUNCTION OF HARDWOOD LITTER AND SOIL SUBSYSTEMS AFTER CHRONIC GAMMA IRRADIATION. II. MICROFUNGI,
South Carolina Univ., Columbia. Dept. of Biology.
G. T. Cowley, J. W. Martin, and D. C. Coleman.
In: CONF-710501 - Proceedings of the Third National Symposium on Radioecology, May 10-12, 1971, Oak Ridge, Tennessee. p 1229-1236, (1971), 2 fig, 11 tab, 15 ref.

Descriptors: *Radioactivity, *Cesium, *Radioactivity effects, *Microorganisms, *Fungi, *Rain forests, Savannah River, Soil, Litter, Population, Plant population, Environmental effects, Reproduction, Mortality, Plant pigments, Speciation.
Identifiers: Doses.

The microfungal populations in six experimental and two control plots were studied before and after irradiation for 113 days with a 9200-ci Cs-137 source. Experimental plots received cumulative doses ranging from 5 million to 4 thousand rads. The number of detectable propagules was reduced sharply in the three plots receiving the highest dosages. Recovery was slow, since reduced populations in the soil were still in evidence 13 months after termination of irradiation. Species composition of soil and litter populations was also seriously altered. Before irradiation, population in all plots were predictably similar. However, immediately after irradiation, an abnormally high percentage of both soil and litter species isolated from the most heavily irradiated sites was darkly pigmented, and populations displayed little similarity to those in control and lightly irradiated sites. Some lightly pigmented or nonpigmented species soon became reestablished. However, similarities between heavily irradiated plots and nonirradiated plots remained low and had not returned to preirradiation levels in the soil by 13 months after irradiation. Apparent recovery of litter populations was more rapid than for soil populations in regard to both number of detectable propagules and species composition. (See also W74-07799) (Houser-ORNL)

THE FATE AND EFFECTS OF PESTICIDES IN THE AQUATIC ENVIRONMENT OF THE FLATHEAD LAKE DRAINAGE AREA,
Montana Univ., Missoula. Dept. of Zoology.
A. R. Gaufin.
Available from the National Technical Information Service as PB-232 252, $3.25 in paper copy, $1.45 in microfiche. Completion Report, Montana Water Resources Research Center, Bozeman, Report No 47, January 1974, 45 p. OWRR A-040-MONT(1).

Descriptors: *Pesticide residues, Water quality, Waterfowl, Lakes, *DDT, *Montana, Sampling, Water pollution effects, Birds, Gas chromatography, Pollutant identification.
Identifiers: *Flathead Lake(Mont), *Osprey, *Tordon.

A one-year preliminary sampling of pesticide practices on the Flathead Indian Reservation was conducted, with later work concentrating on the effects of DDT on osprey survival and nesting on Flathead Lake, Montana. The first year's sampling program indicated that major surface, underground and culinary waters were contaminated with Tordon and probably other pesticides and/or herbicides. The phenomenon was believed responsible for the catastrophic decline of the populations of many predatory birds, with evidence that it might also be responsible for the decline of the Flathead Lake osprey population. The later work provided additional confirmation of the osprey population decline and delineated possible reasons. Reduction in food resources did not, however, appear to be significant, nor was there evidence of the decline in population being a result of human interference. There was considerable evidence that pesticides in the water of Flathead Lake were responsible for the decline in bird population. (Williams-Montana State)

Available from the National Technical Information Service as PB-232 269 $3.75 in paper copy, $1.45 in microfiche. Virginia Water Resources Research Center, Blacksburg, Bulletin 26 December 1973. 66 p, 20 fig, 6 tab, 47 ref. OWRR A-054-KAN(1).

Descriptors: *Benthos, Acid streams, *Invertebrates, *Virginia, *Floods, Water pollution effects, Mollusks, Acids, Powerplants
Identifiers: *Benthic recovery, Clinch River(Va), *Hazardous materials, Sulfuric acid.

The aquatic environment of the Clinch River in southwestern Virginia has been acutely stressed by two spills of hazardous materials. In 1967, fluid from a fly-ash retaining pond caused extensive damage to the biota. In 1970, a spill of sulfuric acid had a similar, though more restricted, effect. Both spills came from a power plant at Carbo, Va. In addition to the acute pollutional stress from the two spills, the environment has been stressed chronically by the day-to-day operations of the power plant. Moreover, periodic flooding has had a deleterious effect on the biota. The benthic macroinvertebrate community was surveyed in 1969, 1970, and 1971 to assess the effects of the two spills and secondarily to determine the effects of flooding. Numbers of organisms, density, diversity, and cluster analysis of presence-absence data were all used. Results showed that except for the molluscs, the benthic macroinvertebrate community had virtually recovered from the 1967 spill by the summer of 1969. In the reach of the stream immediately downstream from the power plant, recovery was not complete, probably due to chronic stress from the power plant. The 1970 survey revealed the impact of the spill of acid and showed that by the end of the summer recovery was nearly complete, again with the exception of the molluscs. Flooding in the spring before the 1971 survey disrupted the fauna and had a homogenizing effect, in that previously sparsely inhabited stations became richer in species, probably due to increased stream drift with high water.

REDUCTION OF LEAD ABSORPTION FROM THE INTESTINE IN NEWBORN RATS,
Yugoslav Academy of Sciences and Arts, Zagreb. Inst. for Medical Research.
K. Kostial, I. Simonovic, and M. Pisonic.
Environmental Research, Vol 4, p 360-363, 1971. 2 tab, 13 ref.

Descriptors: *Lead, *Retention, *Rodents, *Diets, Biochemistry, Pollutants, Animal physiology, Nutrients, Metabolism, Bioassay, Laboratory tests, Data collections, Measurements, Calcium, Phosphates, Organic compounds, Radioisotopes.
Identifiers: Alginate.

The effects of calcium, phosphate and alginate additives to milk on lead absorption from the intestines were investigated in 5-7 day-old rats. The animals were artificially fed over a period of 8 hours with cow's milk and with milk with calcium chloride, potassium dehydrogen phosphate and alginate additives to which tracer amounts of lead-203 were added. They were returned to their mothers and after 90 hours were sacrificed. Lead-203 was determined for the whole body before and after removal of the intestinal tract and also for the liver and the kidney. The retention of lead-203 in the body and organs was greatest in the group of animals fed cow's milk with only lead added. Retention was 1.4 times lower in animals fed with calcium and phosphate milk additives and approximately 2.5 times lower in animals with calcium, phosphate, and alginate additives. (Oleszkiewicz-Vanderbilt)

ENDOGENOUS ZINC EXCRETION AND 65ZINC METABOLISM IN HOLSTEIN CALVES FED INTERMEDIATE TO HIGH BUT NONTOXIC ZINC LEVELS IN PRACTICAL DIETS,
Georgia Univ., Athens. Dept. of Dairy Science.
W. J. Miller, E. S. Wells, R. P. Gentry, and M. W. Neathery.
Journal of Nutrition, Vol 101, No 12. p 1673-1682, 1971. 2 fig, 5 tab, 18 ref.

Descriptors: *Metabolism, *Zinc, *Distribution, Biochemistry, Physiology, Nutrients, Retention, Measurment, Laboratory tests, Radiochemical analysis, Bioassay, Diets, Cattle.

Zinc and 65Zn metabolism, from a single intravenous dose (given 7 days after diets were initiated) were studied in Holstein bull calves fed a practical diet containing 38 ppm zinc or the same diet with 200 or 600 ppm supplemental zinc (zinc oxide). The supplemental zinc increased endogenous fecal 65Zn excretion by 30% with 200 ppm added zinc having as much influence as 600 ppm. The supplemental zinc has a very variable effect on 65Zn distribution in different tissues 14 days after dosing. With some tissues including testicle, rumen wall and abomasum (fundic) each increase in dietary zinc reduced 65Zn content. In muscle, dietary zinc level had no effect on 65Zn concentration. Adding 200 ppm zinc to the diet increased 65Zn and stable zinc in pancreas, liver and kidney; however, a further increase to 638 ppm caused very large increases in these tissues indicating a breakdown in homeostatic control for both injected and absorbed zinc. With the 638 ppm diet smaller increases in 65Zn occurred in bone and small intestine. Serum 65Zn increased with the high zinc diet. Except for muscle, where there was no change, specific activity in every tissue studied decreased with each increase in dietary zinc. (Jerome-Vanderbilt)

ANTAGONISTIC EFFECT OF ARGININE ON ZINC METABOLISM IN CHICKS,
Ralston-Purina Co., St. Louis, Mo.
B. W. Coleman, E. M. Reimann, R. H. Grummer, M. L. Sunde, and W. G. Hoekstra.
Journal of Nutrition, Vol 101, No 12, p 1695-1702, 1971. 4 tab, 19 ref.

Descriptors: *Deficient elements, *Zinc, *Poultry, *Animal pathology, Biochemistry, Physiology, Nutrients, Diets, Metabolism, Growth rates, Environmental effects, Birds, Bioassay, Distribution, Laboratory tests.
Identifiers: *Arginine.

Experiments using dried egg white, isolated soybean protein or casein as the dietary protein source were conducted to study the effect of various levels of dietary arginine on zinc deficiency in chicks. Addition of high levels of arginine to each of these protein sources, limiting in zinc, greatly increased the incidence and severity of leg abnormalities and tended to lower body weights of chicks. Arginine added to low zinc egg white- or soybean protein-based diets increased feather abnormalities. With a casein-based diet, it was possible to either eliminate or render very severe the leg abnormalities caused by zinc deficiency simply by feeding a low or high amount, respectively, of supplemental arginine. Supplemental zinc completely prevented the adverse effect of excess arginine. The leg abnormalities were also alleviated by histidine and histamine. Increasing the dietary level of arginine resulted in marked decreases in tibia and feather zinc concentrations but did not significantly affect liver zinc concentration. It was suggested that arginine is the previously postulated 'complicating factor' of zinc-deficient soybean protein diets, since arginine can account for the differences in zinc deficiency signs which occur among chicks fed the different amino acid sources. (Jerome-Vanderbilt)

HYDROBIOCHEMICAL EFFECTS OF SPRAYING WASTE-TREATMENT EFFLUENT IN ST. PETERSBURG, FLORIDA,
Geological Survey, Tallahassee, Fla.
R. N. Cherry, D. P. Brown, J. K. Stamer, and C. Z. Goetz.
Open-file report, 1973. 21 p, 2 fig, 4 tab.

Descriptors: *Waste water disposal, *Water reuse, *Florida, *Sprinkler irrigation, Sprays, Denitrification, Nitrification, Infiltration, Artificial recharge.
Identifiers: *Land disposal(Wastes), St. Petersburg(Fla).

A spray-irrigation system was tested for wastewater reclamation and reuse in St. Petersburg, Florida. Tests were made of the effectiveness of the soil, bacteria, and vegetation in removing nitrogen and phosphorus from the waste water. Water samples from wells and the lake at the test site were collected and analyzed before and after irrigation using sewage effluent. The total N content of the applied effluent decreased by the time water infiltrated to the 5- and 10-foot depths. At depths of 15 feet and greater, total N content was low compared to the applied effluent. Changes in the concentrations of nitrogen species occurred as the applied effluent infiltrated the soil. The dominant form of nitrogen in the applied effluent was NH4-N. At the 5-foot depth, the dominant nitrogen form was NO3-N. The change from NH4-N to NO3-N can be attributed to the action of nitrifying bacteria. Total PO4 content decreased in samples from the 10-foot depth compared to both the effluent and water from the 5-foot depth. The decrease was not a function of dilution by groundwater. (Knapp-USGS)

A PRELIMINARY CHECK-LIST OF THE MARINE ALGAE OF THE MOSS LANDING JETTY: AN ANNOTATED FLORISTIC COMPILATION,
Moss Landing Marine Labs., Calif.
J. B. Jensen, and S. J. Tanner.
Available from the National Technical Information Service as COM-73-11646, $3.50 in paper copy, $1.45 in microfiche. Technical Publication 73-7, May 1973. 4 plates, 9 ref. SGP2-94.

Descriptors: *Marine algae, *Baseline studies, *Systematics, *Aquatic plants, Distribution, Phaeophyta, Chlorophyta, Rhodophyta, Habitats, Speciation.
Identifiers: *Moss Landing(Calif.).

Base line studies of marine algae at the Moss Landing, California jetty provide a list of algal species present, along with notations but do not represent a compilation of ecological data. The purpose was to describe the basic flora upon which ecological analyses can be begun. The notes supplement presently available information and are therefore uniquely applied to plants growing on the jetty. A synopsis is given of the relative abundance and location of all the species detected. Plants conspicuously, or unusually absent from the jetty are listed; these are species commonly found that would generally be expected to occur at such a location. Species expected to be discovered growing on the jetty in the future, and a set of keys to all the species detected thus far are included. Several specific locations on the jetty have become defined both by their physical description and by their floristics, i.e., the water-sand-jetty community comprised of rocks partially and completely buried by sand, the sand spit locality, and the harbor end of the jetty. (Jones-Wisconsin)

PROGRESS IN ECOLOGICAL RESEARCH AT EDGEWOOD ARSENAL, MARYLAND: FISCAL YEARS 1971 AND 1972,
Edgewood Arsenal, Aberdeen Proving Ground, Md. Biomedical Lab.
F. P. Ward.
Available from the National Technical Information Service as AD-761 028, $2.75 in paper copy, $1.45 in microfiche. Special Publication EASP 1100-13, April 1973. 19 p. 18 ref. 1W662710AD6302.

Descriptors: *Chemical warfare, *Ecology, *Maryland, *Testing, Monitoring, Toxicity, Tracers, Environmental effects, Birds, Amphibians, Mammals, Food chains, Fish, Chesapeake Bay, Invertebrates, Zooplankton, Reptiles, Aquatic plants, Physicochemical properties.
Identifiers: *Edgewood Arsenal(Md.).

An ecological study of Carroll Island test area was initiated to establish procedures whereby toxic (or nontoxic) effects caused by the testing of chemical agents by the Edgewood Arsenal are continuously monitored and made known. Research was channeled into laboratory tests to determine toxicities of agents and stimulants to plants, algae, and aquatic organisms and into continuous field studies on the area to measure the environmental impact of the total agent testing program. Several comparative surveys in song and game bird populations were conducted; distribution and abundance of reptiles and amphibians, and thirteen mammalian species have been identified. Fish taken from the Gunpowder River and identified comprise 40 species. Invertebrates on and around Carroll Island were studied in detail. Based on the abundance and diversity of zooplankton, the viability of aquatic and surrounding terrestrial vegetation, the unique co-occurrence of two species of diaptomids, and normal seasonal events in life histories of two species of fairy shrimp, the Carroll Island pond showed no evidence of deleterious effects of chemical agents. Physicochemical parameters, toxicities to aquatic plants and to fish were measured and fish kills and other incidents investigated. The studies indicated that no measurable acute ecological damage has resulted from the tests. (Jones-Wisconsin)

THE EFFECTS OF CRUDE OIL POLLUTION ON THE BEHAVIOR OF MARINE INVERTEBRATES,
City of Hope National Medical Center, Duarte, Calif.
J. S. Kittredge.
Available from the National Technical Information Service as AD-762 047. Office of Naval Research, Arlington, Va., Final Report June 1973. 12 p. 1 tab, 6 ref. N00014-71-C-0103.

Descriptors: *Oil pollution, *Animal behavior, *Marine animals, Invertebrates, Psychological aspects, Solubility, Crabs, Insect repellents.
Identifiers: *Aromatic hydrocarbons, Chemoreception, Feeding inhibition.

Effect of crude oil pollution on behavior of marine invertebrates was investigated. Since almost all marine invertebrates depend on chemoreception as their prime receptor of environmental information, effects of oil pollution on two aspects of this reception were examined. Although petroleum products are considered to be insoluble in sea water many fractions do have a limited solubility. Methods were devised for examining the effects of this soluble fraction on chemoreception. Utilizing the Lined Shore crab, Pathygrapsus crassipes, two bioassays were devised, one for the 'specialist' receptors and one for the 'generalist' receptors. Initial studies revealed that the water soluble extract of crude oils completely inhibited both the 'specialist' and the 'generalist' chemoreceptors. These observations suggest that the sublethal effects of water soluble components of petroleum products may alter species survival by inhibiting reproduction and growth. Both of these elements, because of the major role of chemoreception in the marine environment, are sensitive to low levels of aromatic hydrocarbon pollution. Supplemental research on natural 'cryptic odors' used to 'blind' the chemoreceptors of predators suggests development of synthetic 'cryptic odors' that could inhibit the settlement of fouling organisms or, in the terrestrial environment, as insect repellents. A PREDICTION OF CHANGES IN THE THERMAL CYCLE OF A STRATIFIED LAKE USED TO COOL A 1000 MW POWER PLANT,
Cornell Univ., Ithaca, N.Y. Dept. of Thermal Engineering.
F. K. Moore, and J. F. Mackenzie.
Publication No 32, presented at Water Resources and Marine Sciences Conference, January 1971, Cornell Univ., Ithaca, N.Y. 23 p. 9 fig, 9 ref.

Descriptors: *Mathematical models, *Water temperature, *Stratification, *Cooling water, Mixing, Thermocline, Diffusion, Hypolimnion, Thermal pollution, Lakes, Nuclear powerplants.
Identifiers: Cayuga Lake(N.Y.).

A model is computed showing the effects of nuclear powerplant cooling water pumped across the thermocline of a deep, stratified lake. A one-dimensional or lake-averaged representation is adopted on the basis that horizontal diffusion is so rapid that only vertical temperature gradients need be considered. Basically, the lake and therefore the representational model, can be considered to be a one-dimensional thermal oscillator responding to an oscillatory heat input to its surface. The equations for the model are simply the heat balances for the separate layers involved. The simple model is proposed for the estimation of changes in the temperature cycle due to thermal discharge from one or more 1000 MW power plants. The mixing process is modeled by semi-empirical stratification criteria and a single summer diffusion coefficient. The power plant is considered to increase heat input and to enhance the lake's mixing process during the summer by the withdrawal and return of lake water. Calculations are made for various numbers of power plants and heat dilution ratios. Heat and mixing enhancement are shown to have comparable effects on the onset and termination of stratification, summer maximum, and winter minimum temperatures of a typical lake. (Jones-Wisconsin)

ENVIRONMENTAL FACTORS OF LEUKEMIA MORBIDITY, (IN POLISH),
K. Janicki.
Patol Pol. Vol 23, No 1, p 29-48. 1972. (English summary).
Identifiers: Carcinogenesis, Cattle, Environmental effects, Herbicides, *Human diseases, Insecticides, *Leukemia morbidity, *Poland Cracow region, Pollution, Poultry, Seed dressings, Water supply, *Potable water, *Public health.

A retrospective analysis of leukemia morbidity and 25 environmental factors connected with demographic data, health service, agricultural chemicals, water supply and breeding of some domestic animals in 18 units of the Cracow region from 1961-1968 is reported. A statistical analysis of rectilinear and multiple correlations between leukemia morbidity and intensity of the environmental factors was made. A significant (at the 1% confidence level) positive rectilinear correlation was demonstrated between leukemia morbidity in rural environments and consumption of seed dressings, percentages of the population supplied with water from wells or local waterlines, intensity of cultivation of cattle and poultry and indexes of the size of herds. A significant positive rectilinear correlation was also found between morbidity of acute leukemias in different administration units of the region and indexes of consumption of chemical herbicides and insecticides used for spraying. A negative rectilinear correlation significant at the 1% confidence level was found between indexes of leukemia morbidity in the rural environment and population density per 1 km squared, numbers of physicians per 100,000 population and percentages of the population supplied with water for drinking and domestic purposes from collective water reservoirs. The first of these correlations was rejected as being due to inhomogeneous population density. The second and third correlations were attributed to a favorable indirect influence of sanitary supervision, a larger number of physicians and better sanitary state of water supplies compared with water from wells or other open, uncontrolled sources.--Copyright 1973, Biological Abstracts, Inc.

DISTRIBUTION OF PHOSPHORUS, SILICA, CHLOROPHYLL A, AND CONDUCTIVITY IN LAKE MICHIGAN AND GREEN BAY,
Wisconsin Univ., Milwaukee. Center for Great Lakes Studies.
D. C. Rousar, and A. M. Beeton.
Transactions of Wisconsin Academy of Science, Arts and Letters, Vol LXI, p 117-140, 1973. 10 fig, 4 tab, 25 ref.

Descriptors: *Phosphorus, *Silica, *Chlorophyll, *Conductivity, *Lake Michigan, Standing crops, Phytoplankton, Wisconsin, Michigan, Illinois, Indiana, Eutrophication, Spatial distribution.
Identifiers: *Green Bay(Wis.), Phaeopigments.

Spatial distribution of total phosphorus, silica, chlorophyll-a, and conductivity were determined by sampling 17 stations in central Lake Michigan and 21 stations in southern Green Bay at various depths. Results were compared with previous data to see if nutrient enrichment had occurred. Lake Michigan water averaged 10.4 micrograms phosphorus/1 as total phosphorus, 1.0 mg silicate/1 as soluble reactive silica, 3.0 micrograms chlorophyll-a/1 as total chlorphyll, and 256.1 micromhos/cm as specific conductance. Green Bay values were 87.8 micrograms phosphorus/1, 0.9 mg silicate/1, 32.9 micrograms chlorophyll-a/1, and 257.7 micromhos/cm as specific conductance. Surface concentrations of phosphorus, chlorophyll, and conductivity varied little in the lake but decreased along a 10 mile transect extending from the mouth of Fox River to a bay station. Silica, uniformly distributed in the bay, showed some inshore-offshore differences in the lake. At most Green Bay stations, vertical differences in parameters tested were minor. In Lake Michigan, conductivity and phosphorus were relatively constant with depth. Silica increased with depth except at one station; chlorophyll was highest at the 30 m depth of 13 of 17 stations. (Jones-Wisconsin)

ECOLOGY OF THE EULITTORAL ZONE O LAKES,
Warsaw Univ (Poland) Lab of Hydrobiology.
E. Pieczynska
Ekologia Polska, Vol 20, No 44, p 637-732. 29 fi 10 tab, 136 ref.

Descriptors: *Littoral, *Ecology, *Lake *Shores, *Shallow water, Organic matte Degradation(Decomposition), Hydrology Physicochemical properties, Primary productiv ty, Light intensity, Thermal properties, Hydro raphy, Sediments, Biological communities, O ygen, Nutrients.
Identifiers: *Eulittoral zone, Masurian Lak land(Poland).

Environmental conditions and biologic processes in the eulittoral--the intermediate zo between lake and surrounding land--of 36 Masu an lakes (eutrophic, mesotrophic, and dystrophi in Poland were analyzed. Characteristics of t hydrological and physicochemical condition regularity of occurrence of plant and animal co munities, production and decompositi processes, and the role of the eulittoral zone in t functioning of lake ecosystems were studie Three sources of organic matter were disti guished: matter produced in the eulittoral by t producer community living in this habitat, acc mulated matter of lake origin (produced elsewhe in the lake and accumulated in the eulittoral due wave action), and accumulated matter of terrest al origin. The eulittoral is characterized by specif biological processes and its role in the lak ecosystem differs from other zones. It is an e tremely differentiated habitat, a typical ecoton in which terrestrial and aquatic organisms a found and also specific organisms. An observe phenomenon is described as the 'edge effect;' it characterized by periodically great prima production rates and is an accumulating 'store' various kinds of matter of terrestrial and aquat origin. Environmental conditions and biologic processes are, to a considerable extent, affecte by water level fluctuations. (Jones-Wisconsin)

PLANKTON PRODUCTION AND WATE QUALITY IN SPANISH RESERVOIRS. FIRS REPORT ON A RESEARCH PROJECT,
Centro de Estudios Hidrograficos, Madrid (Spain
R. Margalef, D. Planas, J. Armengol, J. Toja, and A. Guiset.
Prepared for 21st Congress of International Co mission on Large Dams, June 11-15, 1973, Madri Spain. 46 p, 19 fig, 4 tab.

Descriptors: *Plankton, *Productivity, *Wat quality, *Reservoirs, Nitrogen, Phosphorus, S ica, Diatoms, Bacteria, Eutrophication, Manag ment, Limnology, Phytoplankton, Zooplankto Alkalinity, Indicators, Crustaceans, Trophic lev Distribution, Rotifers.
Identifiers: *Spain, Arcodiaptomus ibericus.

A survey was started of water characteristics Spanish reservoirs and the ecological effects plankton production and composition. The a was to define the impact of the whole ecosyste on the quality of stored water and describe ba characteristics of the dammed rivers or artific lakes. Broadly, Spain consists of tertiary basi limited by sierras of mesozoic limestones; lar areas in the west and especially northwest, as w as some outcrops in the axis of the main mounta ranges are of siliceous materials, paleozoic or i trusive. Nitrogen and phosphorus are usually co sidered limiting factors for primary productio silica may be limiting for diatom growth. So preliminary bacterial counts are summarize More than 50% of the studied reservoirs can considered as eutrophic with a larger proportion the smaller reservoirs in such a conditio

Euthrophy parallels the age of artificial lakes. When several reservoirs are linked in a chain, careful management can lead to an improvement of the water quality. Arcodiaptomus ibericus (Crustacea Copepoda) hitherto undescribed is now common in reservoirs although not found in natural environments; it is described and illustrated. (Jones-Wisconsin)
W74-08005

OXYGEN DEPLETION MODEL FOR CAYUGA LAKE,
California Univ., Berkeley. Dept. of Civil and Environmental Engineering.
J. D. Newbold, and J. A. Liggett.
Journal of the Environmental Engineering Division American Society of Civil Engineers, Vol 100, No EE1, p 41-59, February 1974. 9 fig, 4 tab, 35 ref. NSF Grant GK-23992.

Descriptors: *Oxygen sag, *Mathematical models, Dissolved oxygen, Hypolimnion, Stratification, Eutrophication, Anaerobic conditions, Productivity, Organic matter, Water temperature, Lake morphology, Respiration, Diffusion, New York.
Identifiers: Cayuga Lake(N.Y.).

Depletion of dissolved oxygen from hypolimnia of stratified lakes is both an integral and serious aspect of eutrophication. While it has been established that the degree of deoxygenation is related to productivity, questions remain regarding the specific processes by which the depletion occurs and the quantitative relationships among the thermal structure of a lake, its biological activity, and the resultant oxygen regime. These parameters are related through the use of a mathematical model of Cayuga Lake, New York from which a clearer explanation of the physical and biological processes of oxygen depletion are derived. The limitations of a one-dimensional model are evident and the inclusion of horizontal transport would conform better to reality. However, knowledge of the biological process is the real limiting factor. The model, and others of similar nature, can indicate what the critical parameters might be. In the lowest parts of the lake the benthic demand, still largely unknown, appears to dominate; in the upper parts benthic demand (depending on lake configuration), respiration, and decay all play important parts and interact with diffusion. Obviously an accurate determination of benthic demand would contribute greatly to the construction of a reliable model. (Jones-Wisconsin)

SOURCES, SINKS, AND METHODS OF ANALYSIS OF ORGANIC NITROGEN COMPOUNDS IN FRESH WATER SYSTEMS,
J. A. Kelly.
Available from the National Technical Information Service as ORO-4254-10 $3.75 in paper copy, $1.45 in microfiche. Atomic Energy Commission Report (undated). 28 p, 4 fig, 2 tab, 46 ref.

Descriptors: *Sinks, *Analytical techniques, *Nitrogen compounds, *Organic compounds, Freshwater, Water pollution sources, Industrial wastes, Municipal wastes, Runoff, Metabolism, Agriculture, Nitrogen fixation, Nitrification, Nitrates, Ammonia, Euthrophication, Distillation, Colorimetry, Freezing, Ion exchange, Spectrophotometry, Chromatography, Oklahoma, Odor, Measurement.
Identifiers: Deamination, Lysis, Kjeldahl method, Ultraviolet combustion, Titrimetry, Liquid-liquid extraction, Lake Carl Blackwell (Okla.)

'Basic' trace organics in natural systems are reviewed in order to delineate the significance of their sources, sinks and analytical methods. A major objective of the study is the eutrophication process in Lake Carl Blackwell, Oklahoma, organic nitrogen sources, and its dynamics. Sources include industrial and domestic wastes, natural runoff, and metabolic products of aquatic life and microbial action. A great proportion of organic nitrogen compounds are caught up in a cycle of biological assimilation, decomposition, and inorganic processes in the economy of the ecosystem. Depending upon the efficiency of the community, certain quantities of these and other compounds will be lost. Methods of analysis used for total organic nitrogen are Kjeldahl, ultraviolet combustion, distillation and titrimetry, and colorimetry. In identifying organic nitrogen compounds, concentration is determined by carbon adsorption, liquid-liquid extraction, freezing-out, distillation, and ion exchange. Determination methods are spectrophotometric analysis (visual range, ultraviolet range, infrared) and gas-liquid, paper and thin-layer, and liquid-liquid chromotographic analysis. Basic ecological principles and concepts are illustrated. Some colorimetric methods for the determination of non-aromatic organic nitrogen compounds are tabulated. Characteristics of organic pollution and odors are classified by chemical types. (Jones-Wisconsin)
W74-08008

THE PHOTOSENSITIZING ACTION OF CARCINOGENS. I. THE ACTION OF 2-NAPHTHYLAMINE ON ESCHERICHIA COLI K-12 AND PARAMECIUM CAUDATUM,
Auburn Univ., Ala. Dept. of Chemistry.
S. P. Ellis, R. C. Smith, and W. C. Neely.
Candian Journal of Microbiology, Vol 20, No 2, p 125-129, 1974, 2 fig, 25 ref. OWRR A-017-ALA(4).

Descriptors: *Photoactivation, *Ciliates, Organic compounds, *E. coli, Photysynthesis, Light.
Identifiers: *Photosensitizing, 2-Naphthylamine, *Paramecium caudatum, *Carcinogens.

Cultures of Paramecium caudatum incubated with .0000007 M 2-naphthylamine were rapidly killed when exposed to light of 366 nm. Cultures not exposed to the amine were unaffected by the light; cultures kept in the dark were unaffected by the amine. Escherichia coli K-12 populations were markedly reduced after irradiation of suspensions in water containing .0003 M 2-naphythylamine with light simulating natural sunlight in intensity and wavelength distribution. Suspensions of E. coli in deionized water were unaffected by the light and E. coli suspended in solutions of the amine but kept in the dark were also unaffected. Since 2-naphthylamine is a known water pollutant these results may be of ecological importance.
W74-08095

A SCANNING ELECTRON MICROSCOPIC STUDY OF SECONDARY LAMELLAE AND CHLORIDE CELLS OF RAINBOW TROUT (SALMO GAIRDNERI),
Michigan State Univ., East Lansing. Dept. of Physiology.
K. R. Olson, and P. O. Fromm.
Z. Zellforsch, Vol 143 p 439-449, 1973. 12 fig, 18 ref. OWRR A-064-MICH(2). 14-31-0001-3822.

Descriptors: Chlorides, *Rainbow trout, Analytical techniques, *Electron microscopy.
Identifiers: Scanning electron microscope, *Chloride cells, Gills, *Lamellae, Ultrastructure.

Scanning electron micrographs of gill tissue from rainbow trout fixed with 50% glutaraldehyde revealed the presence of microridges on surfaces of epithelial cells of the secondary lamellae. These microridges vary in length from 1 to 7 microns, with a mean height of 0.75 microns. Calculations show that they increase the total lamellar epithelial surface area approximately 2.5 fold. Mucus secreting cells are present on the body of the filament and on secondary lamellae. Chloride cells are located primarily in the interlamellae filamental epithelium and on the basal area of lamellae. Extensions of the chloride cell epithelium are microvillous in nature and their height is only slightly greater than that of the microridges of typical lamellar epithelial cells. A reduction in number of complete absence of microvilli on chloride cells appeared to be related to degenerative changes in these cells observed in transmission electron micrographs. Non secretory interlamellae filamental epithelial cells have microridges of very attenuated lengths.

TOXICITY OF AN ALGAL COMPLEX ON FRESHWATER FAUNA: 2. ACTION ON LYMNAEA SPP. (IN FRENCH).
Ecole Nationale Veterinaire de Lyon (France). Laboratoire de Recherches de la Chaire of Parasitologie.
J. Gevrey, S. Michel, and J. Euzeby.
Bull Soc Sci Vet Med Comp Lyon. Vol 74, No 2, p 191-194, 1972. English summary.
Identifiers: *Algal, *Fauna(Freshwater), Lymnaea-auricularia, *Lymnaea-spp, Lymnaea-truncatula, Microcystis, Pseudanaboena, *Toxicity, Water pollution effects.

The algal Cyanophyceae complex Microcystis Farlowiana + Pseudanaboena Franquetii was tested in laboratory against L. auricularia and L. truncatula. Algae were used after being heated, frozen and thawed, dessicated, pulverized or disintegrated by an ultrasonic apparatus. Only lysed cells are toxic; and within 48 h, they kill the snails after paralyzing them. The toxic factor is thermoresistant (100C) and water soluble.--Copyright 1973, Biological Abstracts, Inc. LIMNOLOGICAL OBSERVATIONS ON THE 'NATIONAL WATERSPORTBAAN GEORGES

NACHEZ' AT GHENT IN 1968, 1969, 1970 AND 1971,
Rijksfaculteit der Landbouwwetenschappen, Ghent (Belgium).
J. De Maeseneer.
Meded Fac Landbouwwet Rijksuniv Gent. Vol 37 No 1, p 289-313, 1972. Illus.
Identifiers: *Belgium(Ghent), Biological studies, Chemical studies, Fish, *Limnological studies, *Mortality(Fish), Physical studies, Water pollution effects.

Various physical, chemical and biological aspects of the 'Nationale Watersportbaan Georges Nachez' at Ghent (Belgium) were studied. This stagnant water has beta-mesosaprobic characteristics. The chemistry and biology of the water was influenced by the extensive fish-mortality that occurred on Dec. 17, 1969.--Copyright 1973, Biological Abstracts, Inc.

INVESTIGATIONS ON THE OCCURRENCE OF PHENOL-DECOMPOSING MICROORGANISMS IN WATERS AND SEDIMENTS. (IN GERMAN),
Kiel Univ. (West Germany). Institut fuer Meereskunde.
R. Iturriaga, and G. Rheinheimer.
Kiel Meeresforsch. Vol 28, No 2, p 213-218, 1972. Illus. English summary.
Identifiers: Baltic Sea, *Decomposing organic matter, *Micro organisms, *Phenols, Polluted waters, Rivers, Season, Sediments, Temperature, *West Germany.

In the Baltic and the North Sea, as well as in the small Schwentine river, experiments were made on the presence of microorganisms which decompose phenol. For this purpose, a method of determining the phenol-degradation capacity of water and sediment samples was worked out. Phenol-oxidizing microorganisms were present in polluted waters in the summer as well as in the winter. Microbial decomposition of phenol takes place mainly during the warm season at water temperatures above 10C. At the outer end of the Kiel-fjord (West Germany) the capacity to degrade phenol increased in the spring and summer with the temperature of the water. In the open Baltic and North Sea, phenol-decomposers were found only in some sediment samples, not, however, in the water.--Copyright 1973, Biological Abstracts, Inc.

PRIMARY PRODUCTION AND RESPIRATION OF THE PHYTOPLANKTON OF THE RIVERS THAMES AND KENNET AT READING,
Warsaw Univ. (Poland). Dept. of Hydrobiology.
A. Kowalczewski, and T. J. Lack.
Freshwater Biol. Vol 1, No 2, p 197-212. 1972. Illus.
Identifiers: Chlorophyll, Light, Pheo pigments, *Phytoplankton, *Primary production, *Respiration, Rivers, Seasonality, Solar radiation, Dark bottle technique, *United Kingdom(Thames-Kennet Rivers).

During the period April 1967-April 1968 the phytoplankton production and respiration of the River Thames and its tributary, the River Kennet(England), were measured at approximately 2-wk intervals using the light and dark bottle technique. Concentrations of chlorophyll and pheopigment were determined weekly. On 14 occasions, sets of light and dark bottles were rotated in a specially designed apparatus, and production and respiration values obtained were 1.38 plus or minus 0.31 times higher than in stationary bottles at identical depths over the same period. There are little horizontal, vertical or diurnal variation in chlorophyll concentration. Peaks of chlorophyll were found in spring, summer and autumn in the Thames (max. 219 mg/m3) but there was very little variation in the Kennet (max. 38.2 mg/m3). Pheopigment concentration was low in both rivers for most of the period, although the Kennet this represented on average 50% of the pigments present. In the Thames, a peak of pheopigments (133.5 mg/m3) was associated with the autumnal bloom and represented 61% of the total pigments. No pheopigments were detected during the spring bloom. The average concentration of suspended organic matter was identical in both rivers but in the Thames over 25% was due to phytoplankton and in the Kennet almost 95% was non-algal. In the Thames, net oxygen production reached a peak in May and was negative from Nov. to Feb. In the Kennet, maximum production also occurred in May but was negative from the middle of May until the following March. The average annual net production was 1250 and -78 g O2/m2 in the Thames and Kennet respectively. Respiration rates showed similar fluctuations, 4.59 g O2/m2/day in spring in the Thames to 0.09 g O2/m2/day in Nov. The Kennet was almost always lower (1.05-0.34 g O2/m2/day). The average annual respiration was almost 3 times higher in the Thames than in the Kennet (641-228 g O2/m2). Various factors which might influence production are discussed.--Copyright 1973, Biological Abstracts, Inc.

INVESTIGATIONS ON THE OCCURRENCE AND DECOMPOSITION OF FATS AND FATTY ACIDS IN LAKES, (IN GERMAN),
Biochemisches Institut Umweltcarciogene, Ahrensburg (West Germany).
J. Poltz.
Arch Hydrobiol Supplement B. Vol 40, No 4, p 315-399. 1972, Illus. (English summary).
Identifiers: *Bacteria, *Decomposition(Organic matter), *Fats, *Fatty acids, Lakes, Phytoplankton, Zooplankton, Lake sediments.

The main proportion of particulate organic matter, lipids, fatty acids, and triglycerides in lakes derives from the phyto -and zooplankton. A part of those substances in the seston, and especially in the sediments, originates in bacteria. The most rapid decomposition takes place in the epilimnion, in the hypolimnion and in the sediments it is much slower. The main decomposition and alterations in the sediments are found in the surface layer of the sediments according to the distribution of bacteria.--Copyright 1973, Biological Abstracts, Inc.

SEASONAL CHANGES OF BENTHOS ALGAE OF THE HIGHER PART OF VORSKLA RIVER, (IN RUSSIAN),
Leningrad State Univ. (USSR).
A. S. Shaaban.
Vestn Leningr Univ Ser Biol. Vol 27, No 3, p 63-67. 1972, Illus. (English summary).
Identifiers: *Algae Bacillariophyta *Benthos Chlorophyta, Cyanophyta, Euglenophyta Rivers Saprobity, *Seasonal *USSR(Vorskla River) Water pollution effects

Benthos algae of Vorskla river, USSR, were studied in the Belgorod region at 3 points in the course of 6 mo from April to Sept 1969 and 1970. From 6 divisions of algae, 267 taxa were identified. Benthos algae of the river have a diatom character during the periods of collection. The quantity of Chlorophyta, Euglenophyta, Cyanophyta and Bacillariophyta increases with the increase of water temperature. Each of dominants taxa of different divisions of algae has maximum growth at the different seasonal periods of the year. It can be shown also that phytobenthos at sampling points 1 and 2 by systematical composition and dominant taxa are similar, but at point 3 systematical composition was less varied and the number of separate species especially by Cyanophyta and Euglenophyta rather lower. This difference is probably due to the fact that at point 3 the river is deeper and the saprobity of the water is lower.--Copyright 1973, Biological Abstracts, Inc.

ENVIRONMENTAL STRESS IN THE PASTURE SCARAB SERICESTHIS NIGROLINEATA BOISD.: MORTALITY IN LARVAE CAUSED BY HIGH TEMPERATURE,
Commonwealth Scientific and Industrial Research Organization, Armidale (Australia). Pastoral Research Lab.
R. L. Davidson, J. R. Wiseman, and V. J. Wolfe.
J Appl Ecol. Vol 9, No 3, p 783-797. 1972, Illus.
Identifiers: Environmental stress, *Larvae mortality, *Scarab(Pasture), *Sericesthis Nigrolineata, *Thermal stress, *Thermal pollution

First- and 2nd-instar larvae of S. nigrolineata (Scarabaeidae; Coleoptera) were exposed for short periods to temperatures between 30-45C, to define empirically the effects of duration, number of exposures and recovery periods on mortality. The data are needed to collate field microclimate measurements to predict larval survival in the field. At moderate soil moistures the longest exposure to 30C (192 hr) was harmless and the shortest exposure to 40C (45 min) was lethal. Above 30C, the effect of temperature for any one duration of exposure was exponential. At any one temperature the relationship between duration of exposure and mortality appeared to be linear, but the gradients between the 2.5C temperature intervals were too steep to be clearly defined. Repeated exposures to sublethal temperatures caused a slightly lower percentage mortality than at the previous exposure to the same temperature. When the interval between repeated exposures was extended from 1 day to 2 or 4 days the mortality was slightly less than that after the same number of exposures on consectuvie days, but the difference was not statistically significant over all temperatures. All these exposures to temperature stress were in soil with moisture contents above wilting point. No temperature X moisture interaction occurred. W74-08146

ENVIRONMENTAL STRESS IN THE PASTURE SCARAB SERICESTHIS NIGROLINEATA BOISD.: II. EFFECTS OF SOIL MOISTURE

AND TEMPERATURE ON SURVIVAL OF FIRSTINSTAR LARVAE,
Commonwealth Scientific and Industrial Research Organization, Armidale (Australia). Pastoral Research Lab.
R. L. Davidson, J. R. Wiseman, and V. J. Wolfe.
J Appl Ecol. Vol 9, No 3, p 799-806. 1972, Illus.
Identifiers: Environmental stress, Instar larvae, Molting, *Scarab(Pasture), *Sericesthis-Nigrolineata, Survival, *Soil moisture, *Soil temperature.

First-instar larvae of S. nigrolineata were exposed, for various periods of up to 8 days, to a range of soil moistures equivalent to pF 1-5.8 at temperatures from 16-45C. Maximum survival occurred at pF 2.7-4.2, equivalent to soil moistures of 5-10% in silt and 6-12% in loam. In drier soil, water loss was rapid, and most larvae died in one day. Increasing temperature in the range 16-30C caused a greater mortality in dry soil. In soils moister than pF of 2.7 there was a significant increase in mortality after 2 and 4 days exposure, but the causes of death could not be identified. After all treatments the larvae were maintained under optimum conditions until after ecdysis. No residual effect of temperature or moisture stress was apparent from a comparison of survival data before and after molting. (See also W74-08146)--Copyright 1973, Biological Abstracts, Inc.

5D. Waste Treatment Processes

IRRIGATION OF CITRUS WITH CITRUS WASTE WATER,
Florida Univ., Lake Alfred. Inst. of Food and Agricultural Sciences.
R. C. J. Koo.
Available from the National Technical Information Service as PB-232 046, $4.00 in paper copy, $1.45 in microfiche. Florida Water Resources Research Center, Gainesville, Publication No 28, March 1974. 73 p, 7 fig, 17 tab, 28 ref, 4 append. OWRR A-016-FLA(1). 14-31-0001-3209, 14-31-0001-3509, and 14-31-0001-3809.

Descriptors: *Irrigation, *Waste water disposal, Plant growth, Soil moisture, Leachate, *Citrus, Return flow, *Florida, *Water reuse, Soil profiles, Path of pollutants, Waste water treatment.

Several citrus scion-rootstock combinations were grown in greenhouses for 3 years and irrigated with treated waste water from 2 citrus processing plants in central Florida. No harmful effects were observed from the use of treated citrus waste water. Supplemental fertilization was necessary to sustain the trees because treated citrus waste water was low in nutrients. Observations of young and mature citrus trees irrigated with untreated citrus waste water under field conditions indicated that it is feasible to grow citrus with citrus waste water. Both quantity and quality of the waste should be considered in the design and management of irrigation systems for disposal of waste water. Soil in the citrus grove served as a filtering system to waste water. A marked reduction in the BOD, COD, and N contents were found as the waste water percolated through the soil profile. The results were similar to that obtained by biological treatment of citrus waste water by aeration. Fruit juice quality was not affected by irrigating with citrus waste water. Soil analysis showed little change from samples collected before and after citrus processing seasons. Leaf analysis showed absorption of N, K, and Na in trees irrigated with citrus waste water. The potential practical applications of the data are discussed. (Morgan-Florida)

USING SEWAGE EFFLUENT AND LIQUID DIGESTED SLUDGE TO ESTABLISH GRASSES AND LEGUMES ON BITUMINOUS STRIP-MINE SPOILS,
Pennsylvania State Univ., University Park. School of Forest Resources.
W. E. Sopper, L. T. Kardos, and B. R. Edgerton.
Available from the National Technical Information Service as PB-232 069, $5.00 in paper copy, $1.45 in microfiche. Pennsylvania Institute for Research on Land and Water Resources, University Park, Research Project Technical Completion Report, March 1974. 153 p, 19 fig, 58 tab, 43 ref. OWRR B-047-PA(3). 14-31-0001-3639.

Descriptors: *Strip mine wastes, Sewage, Effluents, Sludge, Lysimeters, Grasses, Legumes, Metals, Acidity, Nitrogen, Leachate, *Sewage disposal, Spoil banks, *Vegetation establishment, Liquid wastes, *Water reuse, *Sludge treatment.

Six large lysimeters were filled with strip-mine spoil material. The spoil was then seeded with 8 grass and 8 legume species and then treated with sewage effluent and liquid digested sludge at the following treatment rates: control (no treatment), one-inch effluent plus one-inch sludge combination (1E + 1S), and two-inch effluent plus two-inch sludge combination (2E + 2S). The spoil was irrigated weekly during the period May 24 to September 21, 1972. The results indicated that treatment ameliorated the harsh site conditions and greatly facilitated establishment of the grasses and legumes. The grasses did much better than the legumes in both dry matter production and percent areal cover of the spoil. Weeping lovegrass and Blackwell switchgrass gave the best growth response of the grasses with 11,067 and 4,689 pounds of dry matter per acre, respectively, with the 2E + 2S treatment. Bristly black locust gave the best growth of the legumes with 1812 pounds per acre averaged over both treatment rates. Weeping lovegrass, Blackwell switchgrass, Reed canarygrass and deertongue gave the best percentage cover of the spoil with 100, 100, 100 and 96 percent areal cover respectively on the 2E + 2S treatment. Ladino clover (99), bristly black locust (90), Iroquois alfalfa (90), sericea lespedeza (90), and sweet clover (90) also gave good cover on the 2E + 2S treatment. Highest concentrations of metals and lowest concentrations of nitrogen were found in leachate from the control spoil. Leachate from spoil receiving the 2E + 2S treatment had the lowest concentrations of metals and acidity, and the highest concentrations of nitrogen, more favorable for grass and legume establishment.

PRICING OF INDUSTRIAL WASTEWATER TREATMENT SERVICE,
Connecticut Univ., Storrs. Dept. of Agricultural Economics.
R. L. Leonard.
Available from the National Technical Information Service as PB-232 185, $6.75 in paper copy, $1.45 in microfiche. Connecticut Institute of Water Resources, Storrs, Report No 20, November 1973, 64 p, 8 tab, 38 ref, 4 append. OWRR B-006-CONN(1). 14-31-0001-3266.

Descriptors: *Pricing, *Industrial water, *Computer models, *Waste water treatment, Municipal wastes, Biochemical oxygen demand, Chemical oxygen demand, Capital costs, Operating costs, Maintenance costs, Marginal costs, Mathematical models, Simulation analysis, Activated sludge, *Treatment facilities, *Pollution taxes(Charges).
Identifiers: Waste water management, Effluent charges, Pricing parameters, Contaminants, Loading rates.

A component pricing method was developed for allocating actual treatment costs in proportion to the marginal cost for industry's volume and each priced contaminant. The component pricing system can be applied to capital cost as well as operating and maintenance cost. Charges are usually in the form of surcharges based on the weight of selected contaminants in excess of specified concentrations. A charge for volume and for the entire weight of each priced contaminant is

recommended. The selection of pricing parameters depends on the treatment process and wastewater characteristics. Biochemical oxygen demand (BOD) and suspended solids despite limitation are the major current and classical cost determinants for conventional primary and secondary treatment and have been the most common pricing parameters. More comprehensive measures of pollutional content are needed for allocating the cost of more advanced treatment processes to account for dispersed and difficult to degrade materials that can enter the aquatic environment. Cost data and computer models developed for preliminary design of water pollution control facilities can be used in estimating component marginal costs. A management model was derived from a design model. The operation of an existing treatment plant was simulated, and estimates of treatment were encouraging, but additional comparison of simulation results with operating plants is recommended. (Heltgott-Connecticut)

ACTIVATED SILICA IN WASTEWATER COAGULATION,
Michigan Univ., Ann Arbor. Environmental and Water Resources Engineering.
W. J. Weber, Jr., and L. H. Ketchum, Jr.
Available from the National Technical Information Service as PB-232 454, $11.50 in paper copy, $1.45 in microfiche. Environmental Protection Agency, Athens, Georgia, Report EPA-670/2-74-047, June 1974. 146 p, 52 fig, 6 tab, 81 ref. EPA Grant 17030 DUW.

Descriptors: *Waste water treatment, *Coagulation, *Silica, Lime, *Alkalinity, Phosphates, Calcium, Sewage treatment, Storm water.
Identifiers: *Activated silica, *Lime treatment, Low alkalinity waste waters, *Chemical treatment.

The role of activated silica in coagulation of wastewaters with lime was examined. Laboratory studies were conducted on synthetic wastewaters to simulate certain wastewater characteristics and verification studies were conducted on samples of natural waters and wastewaters. For high alkalinity wastewaters activated silica provides no substantial benefit; reasons for the loss of effectiveness are discussed. For low alkalinity wastewaters however, significant (3 to 10-fold) reduction in lime requirement is possible; the addition necessary to accomplish this lime reduction is small, 2 to 4 mg/l as SiO2. In low alkalinity wastewaters high in phosphate concentration (approximately 7 mg/l as PO4) coagulation is accomplished with low lime addition only; multinuclear silica is as effective and in most cases more effective than activated silica. Activated silica-lime coagulation carries no risk of adding foreign materials to the treated water in the event of chemical carry-over; and it adds no anionic salts to the treated water, only hydroxide is added which may be neutralized by acids if the resulting pH is too high. This treatment scheme is proposed for low alkalinity wastewaters; it may provide a convenient method of treating storm and combined sewer discharges which are commonly low in alkalinity. (EPA)
W74-07738

ADSORPTION FROM AQUEOUS SOLUTION,
Michigan Univ., Ann Arbor. Environmental and Water Resources Engineering.
W. J. Weber, Jr., and P. J. Usinowics.
Available from the National Technical Information Service as PB-232 453, $15.00 in paper copy, $1.45 in microfiche. Environmental Protection Agency, Cincinnati, Ohio, Report EPA-670/2-74-012, June 1974. 236 p, 130 ref, 4 append. EPA Project 17020 EPF.

Descriptors: *Waste water treatment, *Mathematical models, *Activated carbon, *Kinetics, *Adsorption, *Forecasting, Model studies, Chemical oxygen demand, Mixing.

A model based on material balance concepts and second-order reaction kinetics is presented for prediction of the performance of expanded-bed adsorption systems for treatment of complex mixtures of dissolved organic materials in aqueous solution. The model utilizes system parameters measured or calculated from bench-scale batch experiments, correlative techniques, and hydrodynamic considerations. The major focal point of these investigations is the description of the mixtures as composite solutes by using an overall concentration parameter (chemical oxygen demand, COD) and mathematical treatment of the mixtures as single-solute systems for prediction of continuous flow adsorber breakthrough profiles. (EPA)

OXYGENATION OF AQUEOUS BODIES USING LIQUID OXYGEN-LOXINATION,
Midwest Research Inst., Kansas City, Mo.
T. D. Bath, W. Garner, and A. E. Vandegrift.
Available from the National Technical Information Service as PB-232 455 $6.00 in paper copy, $1.45 in microfiche. Environmental Protection Agency, Report EPA-670/2-74-048, June 1974. 52 p, 14 fig, 8 tab, 50 ref. Project EPA 17050 EEY 14-12-168.

Descriptors: *Oxygenation, *Waste water treatment, *Aeration, *Aerobic treatment, Environmental engineering, Oxygen demand, Oxygen requirements, Pollution abatement, Waste assimilative capacity, *Water pollution control.
Identifiers: *Liquid oxygen, Loxination, Mass transport coefficient, Sorption efficiency.

An experimental system was designed, constructed, and tested for the introduction of oxygen in the liquid state (LOX) into a body of water at 7 to 30C. The sorption of LOX, both by static water columns and by flowing water columns, was examined. Sorption efficiency and mass-transfer coefficients were calculated. Under experimental conditions investigated, these coeffiecients did not appear significantly different from those observed for gaseous oxygen. Water temperature, initial dissolved-oxygen concentration, and shear at the point of oxygen injection were less significant in affecting the mass-transfer coefficients than was gross water turbulence. The mass-transfer coefficients correlated with the corresponding Reynolds number. (EPA)
W74-07741

BOD, SOLIDS AND NUTRIENT REMOVAL BY FOAM FLOTATION,
San Jose Dept. Public Works, Calif.
E. R. Becker.
Available from the National Technical Information Service as PB-232 184 $7.00 in paper copy, $1.45 in microfiche. Environmental Protection Agency, Cincinnati, Ohio, Report EPA-670/2-73-096, June 1974. 71p, 20 fig, 10 tab, 11 ref. EPA Grant WPRD 30-01-67.

Descriptors: *Sewage treatment, *Biochemical oxygen demand, *Nutrient removal, *Flotation, *Waste water treatment, *Suspended solids, Effluents, Water pollution(Treatment), Phosphorus, Costs, Treatment facilities.
Identifiers: *Foam flotation.

The results of a field demonstration project to investigate the removal of BOD, suspended solids and nutrients from a secondary effluent flowstream by the foam flotation process are presented. Two major tasks were accomplished: (1) operation of and the accumulation of data from a 0-10 gpm foam flotation pilot plant using secondary effluent from the San Jose-Santa Clara Water Pollution Control Plant, and (2) economic evaluation of the foam flotation process. It was found that efficient phosphorus and suspended solids removals and an improved effluent saturated with oxygen could be effected by the foam flotation process. Based on a 10 MGD plant, the projected costs for the foam flotation process were shown to be 5.76 cents/1000 gallons for chemicals and power. (EPA)

TREATMENT METHODS FOR HEAVY METAL-CONTAINING LIQUID WASTE (IN JAPANESE),
T. Ishihara.
PPM, Vol 5, No 2 p 26-33, February, 1974. 10 fig, 1 tab, 13 ref.

Descriptors: *Waste water treatment, Reduction(Chemical), Oxidation, *Biological treatment, Adsorption, Flotation, Neutralization, Liquid wastes, *Heavy metals, *Waste treatment.
Identifiers: Sulfurization.

Neutralization, sulfurization, reduction, oxidation, biological treatment, ion flotation, and adsorption are discussed with respect to heavy metal-containing liquid wastes. The neutralization method, in which metal ions in solution are settled and form hydroxides, is the most widely used for recovering heavy metals. Other methods are usually applied in combination with the neutralization method either as pretreatment (biological, oxidation, or reduction), or post-treatment (adsorption or sulfurization) methods. (Sanduski-Franklin)

THE TREATMENT OF WASTE WATER FROM INDUSTRIES AND COMMERCE IN PUBLIC PURIFICATION PLANTS (IN GERMAN),
Kantonales Amt fuer Gewasserschutz, Sankt Gallen (Switzerland).
R. Ott.
Industrieabwaesser, p 8-11, 1973. 6 ref.

Descriptors: *Waste water treatment, *Treatment facilities, *Activated sludge, Domestic wastes, *Industrial wastes, *Feasibility studies, Efficiencies, *Water purification.
Identifiers: *Joint treatment.

Most domestic wastewater can be treated in public purification plants without problems and in these mechanical-biological plants a balance can be maintained which is disturbed only by the entry of industrial wastewater. Thus industrial wastewater must be analyzed and its effect on the purification process studied prior to its discharge to an existing facility if feasible. If the facility is inadequate, the wastewater goes to a regional purification plant. For joint treatment of industrial and domestic wastewater, certain procedures and requirements, detailed herein, must be followed. (Sanduski-Franklin)

THE SNODLAND-IGHTHAM REGIONAL DRAINAGE SCHEME: DESIGN AND OPERATION,
R. W. Kellock.
Water Pollution Control, Vol 72, No 8, p 658-665, 1973. 7 tab.

Descriptors: *Sewage treatment, *Treatment facilities, Pumping plants, Flow measurement, Equipment, Sludge treatment, *Operation and Maintenance, *Data collections, Performance, *Waste water treatment.
Identifiers: Facilities extension, *United Kingdom(Snodland-Crouch).

As a result of investigations since the late 1950's, extension to the treatment works at the Snodland and Crouch areas has been undertaken. There are six pumping stations and six ejector stations conveying sewage a maximum of 16 km. All stations are of a standard design, fitted with dataphonic equipment, and maintained by one crew of two men. Sewage treatment is examined together with equipment employed at the facilities. Sludge treatment and operational procedures are examined. (Sandoski-Franklin)

A SIMPLE METHOD FOR RETENTION BASIN DESIGN,
Oakland County Drain Commissioner's Office, Pontiac, Mich.
G. Yrjanainen, and A. W. Warren.
Water and Sewage Works, Vol 120, No 12, p 35, 41-42, December, 1973.

Descriptors: *Storm runoff, Retention, *Design criteria, *Mathematical studies, Outlets, *Storage requirements, *Treatment facilities.
Identifiers: *Retention basins.

Due to the development of land for agrarian, residential, commercial, or industrial use, the temporary storage of storm runoff in an onsite retention basin has become essential because of inadequate outlets for the increased storm runoff created. Because of ever increasing construction costs and the infeasibility of installing large-diameter storm drains, the concept of ultimate design or improvement of collector storm water system water systems is impractical. Thus, retention basins that meter or restrict flow, are adequate alternatives. Design methods, mathematical derivation for an orifice outlet, derivation for a constant rate outlet, and the retention basin design criteria are given. (Sanduski-Franklin)

AUTOMATION OF THE CONTROL AND OPERATION OF WATER POLLUTION CONTROL WORKS,
Norwich Sewage Treatment Works (England).
P. Cotton.
Water Pollution Control, Vol 72, No 8, p 635-657, 1973. 25 ref.

Descriptors: *Automation, Equipment, *Water pollution control, Data collections, Operation and maintenance, *Computers, Computer programs, Control systems, Filtration, Sedimentation, Equipment, Activated sludge, Sludge treatment, Sludge disposal, *Sewage treatment, Biological treatment.
Identifiers: *United Kingdom.

The development of automation for water pollution control does not appear to have matched that in many other industries due mainly to the following factors: inadequacy in fundamental process design knowledge; lack of investment and hence development in process-control equipment; lack of coordination between plant designers and plant operators; relatively wide range of flow rates coupled with the rapid changes in character and strength of crude sewage; and, methods of financing both capital and running expenses of sewage treatment. Existing and potential systems of automation of individual process units are discussed with respect to their coordination in providing a greater degree of automatic operation. The function and expected advantages of the computer-controlled system at Norwich, England is described. (Sanduski-Franklin)
W74-07758

REDEVELOPMENT OF HAVEN SEWAGE-TREATMENT WORKS, COLCHESTER,
R. Suriyadasa.
Water Pollution Control, Vol 72, No 8, p 693-704, 1973. 6 tab, 1 ref.

Descriptors: *Sewage treatment, *Treatment facilities, Equipment, Pumping plants, Storage tanks, *Storm runoff, Sedimentation, Biological treatment, Activated sludge, Tertiary treatment, Sludge treatment, Sludge disposal, Powerplants, *Control systems, *Costs, Waste water treatment.
Identifiers: Facilities extension, *United Kingdom(Colchester).

Redevelopment of the Haven sewage treatment works, constructed in 1884, was initiated in 1901, completed in November 1970, and stressed mainly extensions to the main drainage system and sewage treatment works. Described are the low-level pump house, sewage treatment, sludge treatment and disposal, power generation, central control, aesthetics, and costs. (Sanduski-Franklin)

LIME STABILIZATION OF PRIMARY SLUDGES,
National Environmental Research Center, Cincinnati, Ohio.
J. B. Farrell, J. E. Smith, Jr., S. W. Hathaway, and R. B. Dean.
Journal Water Pollution Control Federation, Vol 46, No 1, p 113-122, January, 1974. 3 fig, 9 tab, 15 ref.

Descriptors: *Sludge treatment, *Treatment facilities, *Pilot plants, Investigations, Iron, *Lime, Pathogenic bacteria, Aluminum, Filtration, Hydrogen ion concentration, Odor, *Waste water treatment, Water pollution control, Effluents, *Ohio.
Identifiers: *Chemical treatment.

Preliminary studies conducted on sludges supplied by the Lebanon, Ohio wastewater treatment facility's pilot plant operation indicated that costs of lime treatment would be low, pathogens and odor greatly reduced, and filterability improved. These findings led to lime treatment of sludge on a plant scale during alum and iron addition experiments. The following results are reported: lower sludge solids are obtained when alum and iron are added to the primary clarifier; the addition of lime to alum and iron chemical-primary sludges increases the vacuum filter yields to reasonable rates; lime addition does not make the sludges chemically stable; and the pH eventually falls and surviving bacteria may return if conditions are favorable, yet lime treatment of sludge raising it to a pH of 11.5 reduces bacterial hazard to a negligible value. (Sanduski-Franklin)

MAJOR WASTEWATER TREATMENT PLANT TO BE UPGRADED,
Malcolm Pirnie, Inc., White Plains, N.Y.
J. H. Foster.
Public Works, Vol 104, No 12, p 47-50, December 1973. 2 fig, 3 tab.

Descriptors: *Waste water treatment, *Sewage treatment, *Treatment facilities, Economic efficiency, *Construction costs, Nitrification, Laboratory tests, Phosphorus, *Design criteria, Sedimentation, Activated sludge, Filtration, Disinfection.
Identifiers: *Cleveland(Ohio), Phosphorus removal.

Cleveland, Ohio's Southerly Treatment Plant, in meeting the most cost effective solution, is an example of designing to meet high effluent quality standards where major financial investments were required to modify facilities that have been outmoded according to present regulations. As a prelude to finalizing design concepts and selection of unit treatment processes, prototype and bench scale studies were made to determine process parameters for nitrification and phosphorus removal. Based on these studies and evaluation of data on current and future conditions, a treatment system was selected consisting of primary sedimentation, a two-stage activated sludge process, and effluent polishing by filtration and disinfection. The basic design criteria for the expanded facilities now under design are tabulated. Construction of facilities is planned to start during 1974 at an estimated cost of approximately $160 million. (Sandoski-Franklin)

CARTMEN DEVISES TECHNIQUE FOR DISPOSING OF 3.5 MILLION GALLONS OF LIQUID DISCARDS ANNUALLY.
Solid Waste Management, Vol 17, No 1, p 12-13, 24, 80, 105, January 1974.

Descriptors: *Waste treatment, *Liquid wastes, *Waste disposal, *Canada, *Incineration, Equipment, Treatment facilities, Storage tanks, Screens, Gages, Measurement, Instrumentation, Sewage.

In order to accommodate the disposal of the vast quantities of liquid and sludge wastes generated by an excess of 6500 containerized commercial and industrial accounts in Canada's Ontario Province, the Superior Sanitation Services, Ltd. installed a modified Garver-Davis incinerator at its plant. Not long after the plant opened, difficulties became evident in the hauling, burning, and handling aspects of the enterprise. As a result of experimentation, watertight modular containers have been constructed and equipped with various systems of pipes, valves, and sieves designed for screening out the foreign solid objects as the unit is either filled or emptied. To compensate for the differences in Btu properties of the various kinds of refuse handled, to reduce the incidence of necessity for supplemental support fuel, and to maintain the more-evenly burning mixture in the combustion chamber, the storage tanks have been equipped with control gages and metering valves for blending appropriate proportions of each type of liquid. EXPERIMENTAL STUDY OF THE PROTECTIVE ABILITY OF WATER-TREATMENT PLANTS WITH RESPECT TO SOME SUBSTANCES OF CAPROLACTAM PRODUCTION (IN RUSSIAN),
Nauchno-Issledovatelskii Institut Gigieny, Moscow (USSR).
K. O. Lastochkina.

Gig Sanit, Vol 37, No 11, p 109-110, 1972.
Identifiers: *Caprolactam production, *Chlorination, Cyclohexanol, Hexanones, Production, Treatment facilities, *Water treatment, *Waste water treatment.

Treatment of water with a coagulant (aluminum sulfate) and subsequent filtration through a sand filter reduces the content of deleterious substances of caprolactam production. Caprolactam is resistant to the action of Cl. Cyclohexanol, cyclohexanone and its oxime probably react with Cl, which lowers their content in water; the formation of Cl derivatives is possible.--Copyright 1973, Biological Abstracts, Inc.

NEW SLUDGE PROCESSING PLANT OF THE BEESTON AND STAPLEFORD URBAN DISTRICT COUNCIL.
Water and Water Engineering, Vol 77, No 931, p 341-343, September 1973.

Descriptors: *Waste water treatment, *Sludge treatment, *Dewatering, Treatment facilities, *Chemicals, Mixing, Separation techniques, Filtration, Equipment, Construction costs.
Identifiers: *United Kingdom(Beeston-Stapleford).

After completing investigations involving pilot plants, long-term analytical work, and negotiations with industrialists, it has been recommended that the installation of a mechanical dewatering plant be undertaken and that provision be made for the tankering of sludge to this central location. In the case of the Beeston installation, a system of chemical conditioning followed by filter pressing was recommended. The chemicals are mixed with the sludge to promote easier separation of water from solid matter. The filter pressing involves straining water under pressure through a fine fabric to leave a cake on the fabric. (Sandoski-Franklin)

SOLID FORMS FOR SAVANNAH RIVER PLANT HIGH-LEVEL WASTE,
Du Pont de Nemours (E.I.) and Co., Aiken, S.C. Savannah River Plant.
R. M. Wallace, H. L. Hull, and R. F. Bradley.
Available from NTIS, Springfield, Va., as Rept. No. DP-1335, $4.00 per copy, $1.45 microfiche. Report No DP-1335, December 1973. 38 p, 6 tab, 35 ref, append.

Descriptors: *Radioactive waste disposal, *South Carolina, *Waste storage, *Concretes, *Concrete construction, Waste treatment, Degradation(Decomposition), Safety hazards, Evaluation, Assessment, Chemical analysis, Leaching, Leakage, Toxicity, Asphalt, Cements, Corrosion.
Identifiers: *Retrievable surface storage, Shielding.

One option for long-term management of Savannah River Plant high-activity waste is solidification and storage in a retrievable surface facility to be located on the plantsite. This study was made to evaluate candidate solid waste forms and solidification processes, and to determine their applicability to engineered storage of Savannah River Plant waste. The study included: (1) characteristics of the present tank-stored waste, (2) criteria for acceptable long-term waste storage forms, (3) properties of potentially useful solid forms and the associated processes, and (4) evaluation of the potential product forms for Savannah River Plant waste. A summary of the properties of the various solid waste forms and the evaluation of each are given. (Houser-ORNL)

CHEMICAL ENGINEERING DIVISION, WASTE MANAGEMENT PROGRAMS, QUARTERLY REPORT, JULY-SEPTEMBER 1973,
Argonne National Lab., Ill. Chemical Engineering Div.
M. J. Steindler, N. M. Levitz, L. E. Trevorrow, T. J. Gering, and B. J. Kullen.
Available from NTIS, Springfield, Va., as Rept. No. ANL-8061; $4.00 per copy, $1.45 microfiche. Report No ANL-8061, January 1974. 28 p, 3 fig, 9 tab, 32 ref.

Descriptors: *Radioactive waste disposal, *Waste water treatment, *Waste water disposal, *Water chemistry, Research and development, Hydrogen, *Tritium, Water pollution, Treatment, Water purification, Transportation, Safety, Nuclear physics, Toxicity, Hazards, Public health, Plutonium, Assay, Assessment, Evaluation, Economic evaluation, Waste storage, *Illinois.
Identifiers: *Waste management, Fuel reprocessing.

Quarterly progress is presented on three programs at Argonne National Laboratory for the Division of Waste Management and Transportation of the USAEC. To assess methods for consolidation of fuel-cladding hulls, work to date has been directed toward identifying and evaluating methods for the safe management and consolidation of waste Zircaloy hulls from the chop-leach reprocessing of spent fuel. In a program to identify methods for decontaminating metallic materials and equipment that have been used with plutonium, published decontamination procedures are being reviewed and evaluated. A third program is directed toward evaluation of proposed methods for the storage of tritium and noble-gas fission products. Studies have been directed toward a brief evaluation of the practicability of concentrating the tritium in fuel-reprocessing aqueous waste streams by converting the water to oxygen plus a tritium-hydrogen mixture and subsequently passing this mixture through palladium membranes. The results of a limited cost study showed that the power required to move the large volumes of hydrogen through the membranes is, in itself, prohibitively expensive. (Houser-ORNL)

THE TECHNOLOGY OF TRITIUM FIXATION AND STORAGE,
Battelle-Pacific Northwest Labs., Richland, Wash.
L. L. Burger, and J. L. Ryan.
Available from NTIS, Springfield, Va., as Rept. No. BNWL-1807; $4.00 per copy, $1.45 microfiche. Report No BNWL-1807, January 1974. 36 p, 1 fig, 54 ref.

Descriptors: *Tritium, *Waste storage, *Fuels, *Nuclear wastes, Effluents, Water pollution, Water pollution sources, Atmosphere, Soil contamination, Economic study, Clays, Portland cements, Census, Projections, Forecasting.
Identifiers: *Fixation, *Fuel cycle.

The technology of fixation of tritium in a solid form was examined. The principal emphasis was on the storage in solid form of tritium waste from the nuclear fuel cycle with the aim of preventing its significant entry into the biosphere. The basic chemical and technical aspects of known and potential fixation methods and the applicability of these methods to specific sources or types of tritiated waste with some estimate of economics are given. These fixation methods are compared briefly with some other tritium disposal methods. Recommendations for further studies are made. Clays, Portland cement, and hydrides all appear to have merit, depending on the nature (principally degree of dilution) of the tritium waste. (Houser-ORNL)

COAGULANT RECOVERY AND REUSE IN WATER RECLAMATION SYSTEMS,
Virginia Polytechnic Inst. and State Univ. Blacksburg.
P. H. King, and B. H. H. Chen.
Available from the National Technical Information Service as PB-232 257 $4.00 in paper copy $1.45 in microfiche. Completion Report, (1973), 1[illegible] p, 10 fig, 1 tab. OWRR A-040-VA(1).

Descriptors: *Water Reuse, *Waste water treatment, *Coagulation, Sludge treatment, Capital costs, Operating costs.
Identifiers: *Alum recovery, Coagulant reuse, Chemical treatment.

A laboratory investigation was conducted to determine the optimum procedure for economical recovery of hydrolyzed metallic coagulants used in chemical treatment of water and wastewater. Attention was primarily focused on alum. Experiments were aimed at determining the extent of possible coagulant recovery, the best means of separating and dewatering the remaining solids and the effectiveness of the recovered coagulant during reuse. An economic analysis was conducted to estimate the capital cost of the process and the savings in chemical cost in operation. A computerized method was developed for determining the breakeven point in terms of treatment plant capacity.

THE REMOVAL OF SOLUBLE MERCURY FROM WASTE WATER BY COMPLEXING TECHNIQUES,
Virginia Polytechnic Inst. and State Univ. Blacksburg. Dept. of Chemical Engineering.
D. L. Michelsen.
Available from the National Technical Information Service as PB232 256 $7.50 in paper copy $1.45 in microfiche. Completion report, (1973), 8[illegible] p. OWRR A-044-VA(2).

Descriptors: *Mercury, *Heavy metals, *Ion exchange, *Waste water treatment.
Identifiers: Mercury removal, *Tannery hair.

Milk proteins, xanthates, modified rubber products, and keratin in various forms can be used for the removal of ionic mercury from water systems. In particular anionic and cationic ion exchange products made from ground tire cord rubber compete very favorably with classical ion exchange resins with regard to capacity, and rate

of pick-up. Cow and pig hair selectively remove ionic mercury and the performance with tannery hair based on equilibrium capacity, rate of removal and pressure drop was as good as classical ion exchange resins. Regenerative studies of ionic mercury from tannery hair with HCl and NaCl were successful, and a number of scale-up studies including economics were completed to illustrate how tannery hair might be used for the treatment of waste streams containing ionic mercury. The results were very encouraging.

MINE DRAINAGE POLLUTION CONTROL VIA REVERSE OSMOSIS,
National Environmental Research Center, Rives, W.V.
R. C. Wilmoth, and R. D. Hill.
Mining Engineering, Vol 25, No 3, p 45-47, March, 1973. 2 fig, 3 tab, 7 ref.

Descriptors: Waste water treatment, *Reverse osmosis, *Mine water, *Mine drainage, *Pollution abatement, Mine wastes, Iron, Manganese, Calcium sulfate, Acid mine water, Neutralization, Membrane processes.
Identifiers: *Neutrolysis, Spiral wound membrane, Tubular membrane, Hollow fine fiber membrane.

Reverse osmosis can be successfully applied to most mine discharge waters. Product quality is directly dependent on concentrations on the brine side of the membrane. Iron and manganese are the most critical constituents of mine drainage waters in treatment to potable standards. Two major causes of membrane fouling are iron and calcium sulfate. Fouling of the membrane surface is held to a minimum by maintaining a brine flow to product flow of 10:1. Design of the complete reverse osmosis system must begin with a definition of the quality of product desired. Post-treatment is necessary for potable water. The 'neutrolysis' process involves neutralizing the brine with lime and returning the neutralized supernatant to the feed of the reverse osmosis unit. The feed had a pH of 4.9 and precipitation of iron was avoided. Up to 99% of the water applied to the unit was recovered as useable water. The neutralized sludge was pumped into abandoned underground mines. Periodic blowdowns to remove manganese is required. Current estimates of cost per thousand gallons of product vary between $0.35 and $1.50, depending on the plant size, water quality, disposal technique, and other factors. (Gray-NWWA)

SUN OIL DEVELOPS WATER REUSE PROGRAM,
Sun Oil Co., Toledo, Ohio.
E. F. Mohler, Jr., and L. T. Clere.
The Oil and Gas Journal, Vol 71, No 37, p 111-116, September 10, 1973. 1 fig, 8 tab.

Descriptors: *Reclaimed water, *Water reuse, *Waste water treatment, Biodegradation, Biochemical oxygen demand, Phenols, Water quality, Water conservation, Sulfur compounds, Biological treatment, Cooling towers, Cooling water, Filters, Chemical oxygen demand.
Identifiers: *API Waste water separator, BOD-TOC ratio, COD-TOC ratio, Refinery effluent water, *Waste reuse.

The water reuse program developed at Sun Oil Company's Toledo refinery has reduced water consumption to about 28 gallons of water per barrel of crude oil refined, as compared to the national average of about 200 gallons of water. A flow sheet shows the waste-water reuse and biooxidation flow. Ballast water from tankers is treated in the same system. The initial step in the process involves removal of sulfur compounds. Induced draft cooling towers are used to effect biooxidation of over 99.9% of the phenolic compounds in the water. Total organic removal performance exceeds 90%. Corrosion rate is monitored and long-term rate on steel is 1.5 mils per year. There is no evidence of increased deterioration of redwood in the cooling towers since reuse of water began. Final treatment of the refinery effluent is by filtration through sand filters. (Campbell-NWWA)

SMELTER GASES YIELD MERCURY,
Outokumpu Oy, Helsinki (Finland).
J. Kangas, E. Nyholm, and J. Rastas.
Chemical Engineering, Vol 78, No 20, p 55-57, September 6, 1971. 2 fig, 3 ref.

Descriptors: *Mercury, *Air pollution, *Separation techniques, *Heavy metals, Zinc, Iron, Industrial wastes, Industrial production, Recycling, Food chains.
Identifiers: *Smelters, Selenium, Finland, Gas purification.

A process has been developed at Outokumpu Oy in Helsinki, Finland, that allows for recovery of mercury during treatment of SO2-rich gases from smelter or roasting operations, before the gas is sent to sulfuric acid production. Mercury is recovered in metallic form; selenium-bearing residue is recovered as well. Mercury-containing gases coming from the electrostatic precipitators at the temperature of 350 C go to the sulfatizing unit. There the gases contact a counter-current flow of strong sulfuric acid. Mercury and selenium are scrubbed from the gas by the acid. The metals are then separated in the clarifiers. The precipitate is washed with water, thus only insoluble metals form the residue. The residue is then passed through a filter press for further purification yielding up to 50% Hg and 10% Se. Separation of the two metals occurs in a 650-700 kiln, where Hg vaporizes to be later condensed at 99.99% or better purity. (Oleszkiewicz-Vanderbilt)

ODORS EMITTED FROM RAW AND DIGESTED SEWAGE SLUDGE,
Saint Louis Metropolitan Sewer District, Mo.
B. A. Rains, M. J. DePrimo, and I. L. Groseclose.
Copy Available from GPO Sup Doc as EP1.23:670/2-73.098, $1.15; microfiche from NTIS as PB-232 369, $1.45. Environmental Protection Agency, Technology Series, Report EPA-670/2-73-098, December 1973. 68 p, 19 fig, 13 tab, 23 ref. EPA Project 11010EZQ. Grant WPD 23-01-68, Program Element 1BB033.

Descriptors: *Waste water treatment, Gas chromatography, Odor, *Sewage sludge, *Pollutant identification, *Sludge treatment, Pollution abatement.
Identifiers: *Odor control, Malodors, Odor abatement.

Odors emitted during thickening of raw and secondary sludge have been responsible for adverse criticism at many sewage treatment plants. This study was undertaken to identify typical odor causing substances and evaluate selected conventional methods for controlling or eliminating these substances. A styrofoam dome covering a sludge thickener was utilized to control atmospheric conditions and concentrate odors. Field collected vapor samples were analyzed using gas chromatography techniques. Analyses using both polar and nonpolar column material indicated that the major odor causing compounds were mercaptans and amines. Other compounds which were minor contributors to odor were aldehydes, alcohols, and organic acids. Odor control methods selected for study included air dilution, activated carbon adsorption, and chlorine oxidation. Air dilution using cyclic operation of an exhaust fan was an effective means of odor control when outside atmospheric conditions were conducive to odor dissipation. Passing vapors through activated carbon filters was not completely effective in odor control since a detectable residual odor remained. A 1.5 mg/l solution of chlorine was effective in removing all odors from vapor samples bubbled through the solution. (EPA)

OPTIMAL TIMING AND SIZING OF A CONJUNCTIVE URBAN WATER SUPPLY AND WASTE WATER SYSTEM WITH NONLINEAR PROGRAMMING,
Loyola Univ., Los Angeles, Calif.
M. E. Mulvihill, and J. A. Dracup.
Water Resources Research, Vol 10, No 2, p 170-175, April 1974. 6 fig, 1 tab, 16 ref.

Descriptors: Water resources development, *Water supply, Waste water(Pollution), *Water sources, Water treatment, *Waste water treatment, *Recycling, Reclaimed water, Optimization, Timing, Water quantity, Water quality, Effluents, Standards, Constraints, Water users, Capital costs, Decision making, Operating costs, Economies of scale, Planning, Systems analysis, Mathematical models, Water pollution control, *California.
Identifiers: *Nonlinear programming, *Los Angeles(Calif.), *Conjunctive operation, *Cost minimization, Capacity expansion, Urban areas.

A mathematical model of a conjunctively-operated urban water supply and wastewater system is formulated and applied to the city of Los Angeles. The objectives are to: (1) minimize the cost of supplying water from several sources, including the

provision for recycling reclaimed water; and (2) determine the capacity expansion schedule (timing and sizing) of the water and wastewater treatment processes. The water sources vary in quality, quantity and cost. Constraints on both water quantity and quality are included. The model consists of the minimization of a concave objective function subject to linear constraints. Capital and operation and maintenance costs exhibit economies of scale. A multilevel solution technique is developed to determine the minimum cost alternative for a selected planning horizon. The optimal blending of water sources and the optimal capacity expansion of treatment processes are determined such that user quality and quantity requirements are satisfied and effluent standards are met at minimum cost. The model is flexible in that it can be expanded to include additional water quality constituents, advanced wastewater treatment processes, and variations in water quality standards. The improvement over previous studies is that this model combines the water and wastewater subsystems, the major link being the reuse of reclaimed water. This model provides information for decision makers in planning future urban water resources development. (Bell-Cornell)

PROCESS AND APPARATUS FOR THE PURIFICATION OF A NATURAL BODY OF WATER,
W. Whipple, Jr.
U.S. Patent No. 3,755,142, 10 p, 39 fig, 4 ref; Official Gazette of the United States Patent Office, Vol 913, No 4, p 1249, August 28, 1973.

Descriptors: *Patents, *Water purification, *Oxygenation, Pollution abatement, *Water treatment, *Waste water treatment, Water quality control, Water pollution control, Boats, Supersaturation.

Water is agitated by means of the propeller of a moving boat disposed in such a relation with the oxygen diffuser as to disperse the oxygenated water. The oxygenated water is further agitated by the wake of the propeller so as to cause the supersaturated water to be dispersed throughout and mixed with the surrounding mass of untreated water to thereby oxidate the pollutants in the water. On board, the oxygen supply tank, and the heat exchanger as well as the diffuser are arranged so that it will not be necessary to equip the towboat in any way with the necessary oxygenation apparatus. The oxygen which has been volatilized by the heat exchanger is directed through a conduit and into the diffuser so that gaseous oxygen may be emitted in the wake of the propellers and the highly oxygenated water in the vicinity of the diffusers may be agitated by the turbulent flow caused by the propellers and dispersed throughout the surrounding water. (Sinha - OEIS)
W74-08019

PIVOTABLE FLUID DIVERTER FOR RECIRULATION SYSTEM,
Oldham (Robert R.), Inc., Sidney, Ohio. (Assignee)
R. R. Oldham, and J. H. Wooddell.
U. S. Patent No 3,789,986, 5 p, 4 fig, 2 ref; Official Gazette of the United States Patent Office, Vol 919, No 1, p 159, February 5, 1974.

Descriptors: *Waste water treatment, *Patents, *Sewage treatment, *Water purification, Pollution abatement, Water pollution control, Water quality control, Equipment, Effluents, Liquid wastes, *Separation techniques.

The pivotable fluid diverter is rigidly connected to a float device on the surface of the liquid collected in the reservoir where sewage treatment takes place in its final stage. A submersible pump within the liquid recirculates liquid by spraying it through a foraminous header disposed above the liquid level. When the liquid level in the reservoir falls below a predetermined liquid level, the diverter returns sprayed fluid to the reservoir. When the liquid level rises above the predetermined liquid lever, the diverter diverts fluid into the outlet pipe and continues to do so until the predetermined liquid level is restored. (Sinha-OEIS)
W74-08021

APPARATUS FOR AERATING WATER,
R. W. Conway.
U. S. Patent No 3,790,140, 6 p, 4 fig, 10 ref; Official Gazette of the United States Patent Office, Vol 919, No 1, p 198-199, February 5, 1974.

Descriptors: *Patents, *Aeration, *Oxygenation, Waste water treatment, Water treatment, *Pollution abatement, Water quality control, *Water pollution control, Equipment, Water purification.
Identifiers: *Venturi device.

Water flowing in a stream is aerated under the influence of a natural pressure head by providing a venturi device through which the water flows as a result of the natural pressure head. The venturi device has a restricting portion through which the water flows to draw air from the atmosphere into the stream of water. As the water flows through the restricting portion, the velocity of the water increases while the pressure of the water decreases. By connecting the restricting portion to the atmosphere through the conduit, the decreased pressure of the water flowing through the restricting portion draws air from the atmosphere into the stream. This air is entrained by the water and flows with the water through the venturi so that it is constantly dissolved in the water. The venturi includes upper and lower gate members for restricting the flow of water. One of the gate members is movable with respect to the other. A foraminous air diffuser is positioned between the upper and lower gate memebers. A screen is positioned downstream of the upper gate for retarding movement of the air bubble produced to the water surface. (Sinha-OEIS)

PROCESS FOR TREATING WATER CONTAMINATED WITH HEXAVALENT CHROMIUM,
G. J. Nieuwenhuls.
U. S. Patent No 3,791,520, 3 p, 1 fig, 4 ref; Official Gazette of the United States Patent Office, Vol 919, No 2, p 551, February 12, 1974.

Descriptors: *Patents, Pollution abatement, Water pollution control, *Chromium, *Waste water treatment, *Metals, Water quality control, Lead, Ion exchange, Effluents.
Identifiers: *Metal plating industry, Lead chromate.

Waste water from plating industries is passed either on a continuous or batch basis, upward through a vessel containing one or more trays holding a water insoluble lead compound in conjunction with a particular carrier matrix which prevents channeling and packing of the bed. The lead compound reacts with the chromium in the waste water to form insoluble lead chromate. The lead chromate is caught on a filter which can be removed through the top of the vessel. Since lead chromate is a pigment in the paint industry, there is no disposal problem. The effluent leaving the vessel may contain a very small amount of lead ion. This residual lead may be removed by running the effluent through an ion exchange column containing a cation exchange resin such as Dowex 50-W in the hydrogen form. (Sinha-OEIS)
W74-08024

APPARATUS AND METHOD FOR TREATING WASTE LIQUID,
Hydro-Clear Corp., Avon Lake, Ohio.
D. S. Ross.
U. S. Patent No 3,792,773, 8 p, 7 fig, 10 ref. Official Gazette of the United States Patent Office, Vol 919, No 3, p 867, February 19, 1974

Descriptors: *Patents, *Waste water treatment, Pollution abatement, *Sewage treatment, *Filtration, Water pollution control, Water quality control, *Flocculation, *Coagulation, Effluents, Equipment.

Waste effluent from a sewage treatment plant is treated by using a filter unit having a backwash arrangement. The backwash liquid is subjected to flocculation, coagulation and settlement to produce a supernatant, which is introduced directly into the inlet of the filter without returning the backwash liquid to the sewage treatment plant. The solids in the backwash liquid are concentrated and removed without being reintroduced into the sewage treatment plant. (Sinha-OEIS)
W74-08026

SUBMERGED TURBINE AERATOR,
Westinghouse Electric Crop., Pittsburgh, Pa.
F. J. Sisk, and C. F. Garland.
U. S. Patent No 3,792,840, 3 p, 4 fig, 15 ref; Official Gazette of the United States Patent Office, Vol 919, No 3, p 885, February 19, 1974.

Descriptors: *Patents, *Aeration, *Water treatment, *Waste water treatment, Pollution abatement, Water pollution control, Water quality control, Mass transfer, Equipment, Rotors.
Identifiers: Turbine rotors.

Processes and apparatus are described for enhancing the mass transfer of oxygen from a sparged air system into a liquid medium by use of submerged turbine rotors. Mass transfer driving force is maximized by the provision of a rotor with vanes only on the upper surface of the rotor platform and having vane tips suitably displaced by the edge of the platform or shroud. Air is sparged from a ring onto the shroud at approximately the intersection of the shroud with a conical fairing projecting downward. The conical fairing serves to preserve the uniform azimuthal air distribution created by the sparge ring. The displacement of the vane tips from the shroud edge permits separation of the liquid vortex stream from the vanes before air flow is encountered and thus prohibits air induction into an attached vortex and thus onto the vane trailing face. Air is delivered uniformly off the shroud underside into the underside of the radial liquid jet which is driven by the vanes on the shroud upper side. The air is dispersed by the shear flow which it encounters and is driven radially outward while rising in discrete bubbles through the liquid jet. By the time the air has freed itself from the jet entrainment and is capable of creating an upwelling flow due to its percolation head, it has been radially dispersed. The result is a ring of air insufflated liquid in upwelling flow at a large radial distance from the rotor. The air contacting time with the water is thus maximized for a given rotor power. (Sinha-OEIS)
W74-08027

WASTEWATER TREATMENT USING ELECTROLYSIS WITH ACTIVATED CARBON CATHODE,
M. Kawahata, and K. R. Price.
U. S. Price No 3,793,173, 4 p, 2 fig, 4 ref; Official Gazette of the United States Patent Office, Vol 919, No 3, p 961, February 19, 1974.

Descriptors: *Patents, *Waste water treatment, *Electrolysis, *Activated carbon, Water quality control, Water pollution control, Pollution abatement, *Electrodes, Hydrogen peroxide, Cathodes, Anodes, Electrochemistry, Effluents.
Identifiers: Organic carbon.

Use is made of the cathodic reduction of oxygen to form hydrogen peroxide which reacts with organic contaminants in waste water. A hollow porous ac-

tivated carbon cathode is the means by which oxygen-containing flow is introduced into a system wherein wastewater passes between the cathode and anode surfaces. When a current is passed through the wastewater, oxygen is reduced at the cathode and is converted to hydrogen peroxide in the presence of activated carbon. (Sinha-OEIS)
W74-08028

METHOD OF TREATING WASTE WATER CONTAINING LIGNINSULFONATE,
Mitsui Mining and Smelting Co. Ltd., Tokyo (Japan). (Assignee)
M. Ichiki, and M. Ishii.
U. S. Patent No 3,793,174, 3 p, 1 tab, 5 ref; Official Gazette of the United States Patent Office, Vol 919, No 3, p 961, February 19, 1974.

Descriptors: *Patents, *Waste water treatment, Pollution abatement, Water pollution control, Water quality control, Pulp and paper industry, *Pulp wastes, Flotation, Lignins, Electrolysis, *Flocculation, Anodes, Electrodes.
Identifiers: *Ligninsulfonate.

Electrolysis is used in treating waste water containing ligninsulfonate. The ligninsulfonate is the electrolyte, the anode should consist of iron. As electrolysis proceeds, the ligninsulfonic acid ion loses its charge at or in the vicinity of the anode. The ligninsulfonate is rendered insoluble to form flocs. A matter of importance is to minimize the ferrous ions dissolved in the electrolyte. This is achieved by blowing sufficient air into the electrolytic cell to change divalent ions to trivalent ion. This air-blowing process serves to prevent the cake from adhering to the inside wall of the electrolytic cell and the floc absorbs enough air so it can float. (Sinha-OEIS)
W74-08029

ELECTROLYTIC FLOTATION APPARATUS,
Simon-Hartley Ltd., Straffordshire (England). (Assignee)
E. P. Austin, G. D. Kemp, F. A. F. M. Tonelli, and I. Marshall.
U. S. Patent No 3,793,178, 3 p, 3 fig, 6 ref; Official Gazette of the United States Patent Office, Vol 919, No 3, p 962, February 19, 1974.

Descriptors: *Patents, *Waste water treatment, Water quality control, Water pollution control, Pollution abatement, *Electrolysis, *Flotation, *Bubbles, Electrodes.
Identifiers: Gas bubbles.

Gas bubbles generated during electrolysis cause suspended materials to be floated to the surface of the tank. Scraper blades are arranged with their lower edges dipping into the surface of the contents of the tank. They are adapted to be driven longitudinally. The liquid to be treated is introduced into the tank by flow through at least one elongated tube of conducting material which defines a cathode with respect to an anode mounted within the tube and which extends substantially over the length thereof. (Sinha-OEIS)

MECHANICAL-BIOLOGICAL WASTE WATER PURIFICATION PLANT,
H. Schnyder.
U. S. Patent No 3,794,176, 4 p, 5 fig, 7 ref; Official Gazette of the United States Patent Office, Vol 919, No 4, p 1217, February 26, 1974.

Descriptors: *Patents, *Waste water treatment, Pollution abatement, Water quality control, Water pollution control, Water treatment, *Sludge digestion, *Activated sludge, Equipment, *Biological treatment.

A pre-clarifying basin is arranged inside the upper part of a tank. The lower part of the tank defines a sludge digestion zone. The upper part of the tank defines a buffer zone open at the botton and limited laterally by the wall of the tank and side walls of the pre-clarifying basin. A post-clarigying plant has a clarification basin linked with the activated sludge zone and provided with a floating weir connected by a flexible or jointed discharge pipe to a clarified water outlet located some distance below the upper end of the post-clarifying basin. Sludge transferred by vacuum from the post-clarifying plant to the pre-clarifying plant is removed from the sludge digestion zone of the latter by a suitable pump. (Sinha-OEIS)
W74-08032

WASTEWATER TREATMENT,
Envirotech Corp., Salt Lake City, Utah. (Assignee)
M. M. Zuckerman, and A. H. Molof.
U. S. Patent No 3,794,581, 6 p, 4 fig, 4 tab, 2 ref; Official Gazette of the United States Patent Office, Vol 919, No 4, p 1314, February 26, 1974.

Descriptors: *Patents, *Waste water treatment, *Biological treatment, Pollution abatement, Water quality control, Water pollution control, *Hydrolysis, *Adsorption, Activated carbon, Industrial wastes, Effluents.

A system is provided for the treatment of raw wastewater which includes a soluble organic component with a high proportion of a poorly sorbable low molecular weight material. The system includes, in order, biological treatment, hydrolysis, and sorption. During biological treatment, one portion of the low molecular weight material is respired while another portion is converted into a high molecular weight material. After biological treatment, the wastewater is hydrolyzed to convert a substantial portion of the high molecular weight material into low molecular weight material having improved sorbability as determined by percentage adsorption on activated carbon. (Sinha-OEIS)
W74-08034

INDUSTRIAL WASTE PROCESSING APPARATUS,
N. E. Wood.
U. S. Patent No 3,795,316, 4 p, 3 fig, 3 ref; Official Gazette of the United States Patent Office, Vol 920, No 1, p 96, March 5, 1974.

Descriptors: *Patents, *Waste treatment, *Industrial wastes, *Waste water treatment, Pollution abatement, Water quality control, Water pollution control, Equipment.

Industrial waste handling apparatus has side by side elongate tanks, one a waste receiving and settling tank, and the other a suspended waste filtration tank, with cross flow below liquid level from the one tank to the other. Each of the tanks has an inclinded end portion extending upward to a discharge placed above the liquid level. A solid apron conveyor is placed in the settling tank extending along near the bottom and the inclined end portion to the discharge. A strainer grid is placed above the bottom of the other tank providing a sump for liquid withdrawal. A drag line conveyor with scraper bars moves over the grid and up the incline and a submerged weir in the settling tank over the cross flow prevents buoyant material from escape to the filtration tank. The apron conveyor skims surface oil and removes heavy waste. Liquid velocity from the receiving end of the settling tank to the cross flow opening is equal to the speed of the apron conveyor. (Sinha-OEIS)
W74-08035

SYSTEM FOR REVERSED OSMOSIS,
Industriele Onderneming Wavin, N.V., Zwolle (Netherlands). (Assignee)
C. Van Zon.
U. S. Patent No 3,795,317, 3 p, 5 fig, 5 ref; Official Gazette of the United States Patent Office, Vol 920, No 1, p 96, March 5, 1974.

Descriptors: *Patents, *Reverse osmosis, *Membranes, Water treatment, *Water purification, Water quality control, Equipment, *Separation techniques, Waste water treatment.

A device for purifying water by reversed osmosis is provided which comprises an auxiliary supporting plastic tube which has on its inner side a layer of resilient fibrous or fabric-like material on which is disposed a membrane. The auxiliary supporting plastic tube is supported on its outer side by a main supporting tube which, at least on its inner side, has discharge channels extending in the longitudinal direction. Due to the use of an auxiliary supporting plastic tube provided with a fibrous or fabric-like material on which is placed a membrane, the thin, easily damaged membranes are protected in transit by the auxiliary supporting plastic tube provided on the outer side. The use of plastic for the auxiliary supporting tubes offers the great advantage that with a very cheap material the membranes can be conveyed without the necessity for pretreatment of the membranes at the location where the inverted osmosis treatment is to be carried out. The device comprises additional main supporting tubes provided with wall apertures, which are enclosed within a closed cylindrical space delimited by plastic closing plates at the two ends, while through apertures in these closing plates the plastic supporting tubes protrude in a perfectly sealing way with respect to the outer side. (Sinha-OEIS)
W74-08037

STORAGE AND DISPENSING APPARATUS FOR A REVERSE OSMOSIS WATER PURIFICATION SYSTEM,
Desalination Systems, Inc., Escondido, Calif. (Assignee)
D. T. Bray.
U. S. Patent No 3,794,172, 4 p, 2 fig, 5 ref; Official Gazette of the United States Patent Office, Vol 919, No 4, p 1216, February 26, 1974.

Descriptors: *Patents, *Waste water treatment, *Water purification, *Reverse osmosis, Water quality control, Water pollution control, Equipment.

The water storage and dispensing apparatus comprises a closed, pressure resistant container into which purified water from a reverse osmosis water purification unit is delivered and temporarily stored normally under pressure slightly above atmospheric. The pressure in the storage container is maintained by means of releasing a restricted flow of liquid from such container, such as a pressure relief valve or a restricted passageway. Dispensing means for the purified water in the storage container are connected to a dispensing valve. Also connected to the storage container is a supply of impure water, the feed water supplied to the reverse osmosis system. Introduction of this impure water is controlled by a pressure responsive valve which is normally maintained closed by the pressure of the purified water in the storage container through a connection with the purified water supply to the dispensing valve. Opening the dispensing valve causes a reduction of pressure in its purified water supply connection thus opening the pressure responsive valve and allowing introduction of impure water under evaluated pressure into the storage container. This pressurizes the purified water in the storage container so that purified water is supplied on demand at elevated pressure to the piping supplying the dispensing valve. (See also W74-08040) (Sinha-OEIS)
W74-08039

VALVE FOR REVERSE OSMOSIS PURIFICATION AND STORAGE SYSTEM,
Desalination Systems, Inc., Escondido, Calif. (Assignee)
D. T. Bray.
U. S. Patent No 3,794,173, 4 p, 4 fig, 1 ref; Official Gazette of the United States Patent Office, Vol 919, No 4, p 1216, February 26, 1974.

Descriptors: *Patents, *Reverse osmosis, *Waste water treatment, *Water purification, Water quality control, Water pollution control, Equipment.

A valve for a water purification system operating by reverse osmosis combines the functions of a pressure control for the blowdown or brine from the reverse osmosis module, and of a pressure control for a purified water container. The valve also acts as a responsive valve to allow elevated pressure impure water to flow into the purified water container to elevate the pressure of purified water supplied to a dispensing valve when the dispensing valve is opened. (See also W74-08039) (Sinha-OEIS)
W74-08040

REVERSE OSMOSIS-NEUTRALIZATION PROCESS FOR TREATING MINERAL CONTAMINATED WATERS,
Environmental Protection Agency, Washington, D.C. (assignee)
R. D. Hill, R. C. Wilmoth, and R. B. Scott.
U.S. Patent No. 3,795,609, 6 p, 1 fig, 6 tab, 11 ref; Official Gazette of the United States Patent Office, Vol 920, No 1, p 165, March 5, 1974.

Descriptors: *Patents, Water purification, *Waste water treatment, *Reverse osmosis, *Acid mine water, Water quality control, Pollution abatement, *Demineralization, Filtration, *Neutralization, Minerals, Disinfection, Effluents.
Identifiers: Ferrous ion oxidation, pH adjustment.

The method involves reverse osmosis treatment of mineral contaminated water to concentrate the dissolved minerals into a small fraction of the feed stream and concomitantly to separate out at least 50% of the water content of the feed stream as a purified water product stream capable of being safely discharged into the adjoining surface waters. In the instance of acid mine drainage, chemical treatment may be with inexpensive neutralizing agents such as lime, limestone or sodium carbonate. A typical pre-treatment for acid mine drainage is oxidation of ferrous ion, by ozonation, chlorination, or biological processes. Suspended solids may be removed by passage through a filter system. (Sinha-OEIS)

MATHEMATICAL MODEL FOR POST AERATION,
Environmental Protection Agency, Cincinnati, Ohio. Advanced Waste Treatment Research Lab.
R. Smith, R. G. Eilers, and E. D. Hall.
Available from NTIS, Springfield, Va. 22151, as PB-222 031, Price $3.75 printed copy; $1.45 microfiche. Environmental Protection Agency, National Environmental Research Center, Report EPA-670/2-73-044, July 1973. 39 p, 6 fig, 2 tab, 7 ref, append. EPA Program Element 1B2043.

Descriptors: *Aeration, *Waste water treatment, *Mathematical models, Costs, Computer programs, Sewage treatment, Activated sludge, *Cost comparisons.
Identifiers: *Post aeration techniques.

Design and cost estimating relationships are given for post aeration after the activated sludge process. Mechanical aerators in completely mixed rectangular basins, air diffusers mounted in the outlet channel for the plant, and air diffusers mounted in rectangular completely mixed concrete basins are considered. The costs of all three types of post aeration are given for 1-, 3-, 10-, 30-, and 100-mgd plants. The cost of the complete plant is compared with the cost of post aeration. (Knapp-USGS)
W74-08045

DESIGN AND SIMULATION OF EQUALIZATION BASINS,
Environmental Protection Agency, Cincinnati, Ohio. Office of Research and Development.
R. Smith, R. G. Eilers, and E. D. Hall.
Available from NTIS, Springfield, Va. 22151, as PB-222 000, Price $4.50 printed copy; $1.45 microfiche. Environmental Protection Agency, National Environment Research Center, Report EPA-670/2-73-046, July 1973. 51 p, 5 fig, 6 tab, 12 ref, 4 append.

Descriptors: *Sewage treatment, Water level fluctuations, *Equalizing reservoirs, *Waste water treatment, Costs, *Aeration, Oxygen demand, Mathematical models, Design, Computer models, Simulation analysis, *Construction costs.
Identifiers: *Equalization basins.

Relationships for sizing equalization basins for smoothing the diurnal variation of dry weather flow into municipal wastewater treatment plants are given. The construction costs for rectangular concrete basins equipped with diffused air and for plastic lined earthen basins equipped with mechanical aerators are estimated. A time dependent digital computer model was developed for simulating biological activity and the consumption of oxygen in equalization basins in which the water level varies diurnally. (Knapp-USGS)

NITROGEN REMOVAL BY SOIL MECHANISMS,
Agricultural Research Service, Phoenix, Ariz. Water Conservation Lab.
J. C. Lance.
Journal Water Pollution Control Federation, Vol 44, No 7, p 1352-1361, July, 1972. 3 fig, 32 ref.

Descriptors: *Nutrient removal, *Nitrogen, Leaching, *Dentrification, Sewage treatment, Solid wastes, *Waste water treatment, Soil mechanics.

Nitrogen may be removed from a soil system in gaseous form by volatilization of ammonia or by denitrification. The amount of ammonia volatilized in a land disposal system is small, but large amounts of nitrogen could be removed during travel through a long stream or channel to the disposal area. Denitrification is perhaps the most desirable removal process because large amounts of nitrogen can be removed and transferred to the atmosphere as nitrogen gas. The nitrogen is thus completely removed from the system without causing air pollution. Additional research will be needed to determine whether denitrification can be sustained in a groundwater recharge system without prior oxidation of ammonium and/or additional sources of carbon. LEACHATE TREATMENT BY COAGULATION AND PRECIPITATION,
Camp, Dresser, and McKee, Boston, Mass.
R. J. Thornton, and F. C. Blanc.
Journal of the Environmental Engineering Division, American Society of Civil Engineers, Vol 99, No EE4, p 535-544, August, 1973. 2 fig, 5 tab, 9 ref.

Descriptors: *Landfills, *Sanitary engineering, *Leaching, Water quality, *Chemical precipitation, Environmental engineering, *Coagulation, Solid wastes, Waste water treatment.
Identifiers: *Chemical treatment

When sanitary landfills are constructed with provisions for collection and treatment of leachates, chemical treatment may be one of the treatment processes employed. Research was conducted to determine the ability of chemical treatment to remove suspended solids, biochemical oxygen demand, chemical oxygen demand, iron, calcium, and magnesium from leachate. Chemical treatment studies were conducted in the laboratory using alum, lime, and ferric chloride. Preliminary results indicate that lime precipitation was most effective. Additional studies revealed that suspended solids, color, and some multivalent cations can be effectively removed from raw leachate using lime. However, significant removals of soluble biochemical oxygen demand were not observed and extremely high lime concentrations in the 300 mg/l 600 mg/l range were required to obtain a relatively clear supernatant resulting in relatively large amounts of sludge. WATER TREATMENT MUD DECANTING TANK,
J. V. T. Pool.
U.S. Patent No. 3,795,314, 3 p, 3 fig, 4 ref; Official Gazette of the United States Patent Office, Vol 920, No 1, p 95, March 5, 1974.

Descriptors: *Patents, *Mud, *Water treatment, *Water quality control, Lime, Equipment.
Identifiers: *Decantation.

The mud decanting tank for water cold treatment with lime consists of a cylindrical tank having a tapered bottom. There is a concentric pipe housing a central vertical shaft driving a stirrer and a coaxial remover driven by means of a suitable prime mover. Manifolds or overflows are located at a determined level for drawing out the processed water. A second eccentric inner pipe also has a central vertical shaft that drives a stirrer and remover. The distribution of the inner piping provides a continuous recycling of the muds and chemicals. The muds are drawn out by suction from the bottom of the tank. (Sinha-OEIS)

GROUNDWATER POLLUTION FEATURES OF FEDERAL AND STATE SATUTES AND REGULATIONS,
Geraghty and Miller, Port Washington, N.Y.
F. van der Leeden.
Available from the National Technical Information Service as PB-232 116, $4.00 in paper copy, $1.45 in microfiche. Environmental Protection Agency, Monitoring Series, Report No EPA-600/4-73-001a, July 1973, 88 p, 7 fig, 10 tab, 31 ref. EPA Contract 68-01-0759.

Descriptors: *Groundwater, *Water pollution control, *Legislation, *Regulation, State jurisdiction, Federal jurisdiction, Water law, Interstate Commissions, Water needs, Recharge wells, Underground waste disposal, Water permits, Water quality, Waste water disposal, Waste disposal, Waste dumps, Landfills, Solid wastes, Sanitary engineering, Sealants, Monitoring, Aquifer management, Management.

Regulations and requirements are summarized of major public agencies with respect to groundwater pollution. A selective review was made of existing and pending legislation and regulations of Federal, State, and county governments and their agencies. Material was obtained both from central compilations and by direct contact with public agencies. State water laws, water-pollution laws, water-well regulations, and solid-waste regulations were examined; also, Federal laws dealing with pollution of Federal facilities, protecting against radiation and pesticides, and guidelines for waste-water

treatment and solid-waste disposal facilities. Laws and regulations related to groundwater pollution vary widely as to objectives, scope, coverage, detail, and effectiveness. State water laws tend to deal primarily with protection of surface-water resources. Only 13 States were found to have water laws dealing in detail with measures to protect groundwater against pollution. However, numerous other laws and regulations affect groundwater pollution. A more extensive review of policies, rules, regulations, and procedures, with an evaluation of their effectiveness in controlling groundwater pollution, is recommended. (See also W74-07615) (EPA)

ACTIVE RESEARCH TASKS REPORT--FISCAL YEAR 1973.
National Environmental Research Center, Cincinnati, Ohio.
Available from NTIS, Springfield, Va. 22151 as PB-223 567; Price $6.50 printed copy; $1.45 microfiche. 1973, 367 p.

Descriptors: *Water pollution control, *Research and development, Laboratories, Research facilities, Projects, Grants.
Identifiers: *Environmental protection agency.

Information is presented about the research programs conducted and supported by the National Environmental Research Center, Environmental Protection Agency, Cincinnati, during Fiscal Year 1973. The report is organized according to major research program elements, subdivided according to the Center's research objective achievement plans, and each research objective achievement plan is further subdivided into individual research tasks (or projects). The major theme of the Center's research activity is the development of technology and processes for the control of pollutants that degrade the air, water, and land environments. Programs that directly reflect this major theme include: the development of advanced methods for the treatment and control of municipal wastewater streams, in conjunction with the control of pollution resulting from storm and combined sewer overflows; the development of solutions to various specialized water pollution control problems such as oil and hazardous material spills, watercraft wastes, industrial wastes, mine drainage, and recreational wastes; the development or improvement of contaminant removal processes for the purification of the Nation's water supplies and recreational waters; the development of processes for environmentally acceptable treatment of toxic and hazardous solid waste materials; the development of resource recovery systems for the management of municipal and industrial solid waste; and the development of improved methods for the processing and disposal of these solid wastes. Complementary research programs are: the development, refinement and promulgation of improved analytical methods for the measurement and determination of water quality; and the quantification and analysis of radioactive discharges. FEDERAL LAWS AND REGULATIONS,
S. S. Ross.
Chemical Engineering/Deskbook Issue, Vol 79, No 10, p 9-12, May 8, 1972. 1 tab.

Descriptors: *Legislation, *Regulation, *Federal Water Pollution Control Act, *Water Quality Act, Air pollution, Water pollution, Public health, Taxes, Environmental effects, Economics, Law enforcement, Toxicity, Wastewater treatment.
Identifiers: *National Environmental Policy Act(NEPA), Refuse act, Environmental protection agency.

Current water pollution legislation is presented, including 1976 'best practicable' control technology as outlined by the Water Quality Act of 1965, 1970, 'best available' control technology, citizen suits, Refuse Act, National Environmental Policy Act, dredging and drilling and interim enforcement. Current EPA policy on Air Act enforcement is outlined, followed by a discussion of the Toxic Substances Control Act of 1972 and the proposed ocean dumping law, as well the impact of Safety and Health Act, pollution taxes and Noise Control Act on environmental policy. REGIONAL WATER AUTHORITIES: ORGANIZATIONAL PATTERNS-PURPOSE OR PROFESSIONAL,
G. Nunn, and R. Hattersley.
Water Pollution Control, Vol 72, No 8, p 675-692, 1973. 3 fig, 7 ref.

Descriptors: Administration, *Water Management(Applied), *Regional development, *Sewage districts, *Planning, *Organizations, Water districts, Regulation, Legislation, Water quality control.
Identifiers: *United Kingdom.

Since 1967 the need to establish single purpose regional authorities for administration of sewage purification services has been evidenced, affirmed and reaffirmed. Considerable attention is given to the ultimate form the reorganization will take, stressing organizational patterns rather than detailed structures. The work of the regional water authorities is discussed function by function, the provisional pattern immediately after reorganization has been considered, and alternatives put forward based on professional grouping. The resultant recommendation is a functional pattern which should ensure that the regional water authorities are largely made up of interdisciplinary groups making their careers in departments having a clear functional purpose. SOCIAL AND ECONOMIC FACTORS IN THE ADOPTION BY INDUSTRY OF WATER POLLUTION CONTROL MEASURES IN MINNESOTA,
Minnesota Univ., St. Paul. Inst. of Agriculture.
R. E. Rickson.
Available from the National Technical Information Service as PB-232 230, $4.00 in paper copy, $1.45 in microfiche. Minnesota Water Resources Research Center, St. Paul, Bulletin 67. February 1974. 67 p, 14 tab, 48 ref. OWRR B-047-MINN(2). 14-31-0001-3294.

Descriptors: *Water pollution control, *Social aspects, *Industrial wastes, *Waste disposal, *Minnesota, Regulation, Legal aspects, Model studies, Attitudes, Organizations, Water policy.

This study is an attempt to further understand the process by which industrial organizations change the way they dispose of waste. Substantively, the relationship of organizational characteristics to rates of change in waste procedures is of interest. A general model of change is envisioned. The two major forces creating change in industrial organizations are the internal pressures within the organization that result from such factors as the complexity of its division of labor and production technology, and the kinds of pressure the organization faces as the result of powerful and aggressive regulatory agencies and other groups. Finally, the nature of dependence the firm has upon water affects change. Overall, executives prefer that State and Federal governments establish policy while local governments enforce such policy. It is clearly in the interest of local business to have city and county officials be responsible for enforcement as business should be able to influence the judgement of these officials more so than representatives of state and Federal bureaus. Companies want regulatory policy to be consistent over time. Since policy developed at the local level can be overturned by State and Federal agencies, company preference for State and, especially, Federal control in policy-formation is logically understandable. Companies will work so that their viewpoints will be represented in policy-formation about water systems, sewer systems, tax rates and long-range planning about community water resources. GROUNDWATER ISSUE MERITS MORE FEDERAL PROTECTION, GROUNDWATER POLLUTION AND CONSERVATION,
C. K. Lewicke.
Environmental Science and Technology, Vol 6, No 3, p 213-215, March, 1972.

Descriptors: *Groundwater, *Wells, Artificial recharge, Waste injection wells, Pollution, Legislation, Government.
Identifiers: *Water Pollution Control Act.

A general description is provided of the origin, transport, storage, and importance of groundwater. The dependency of much of the country, especially rural areas, on their groundwater resources is emphasized. Artificial recharge is discussed. The contamination of groundwater by surface and subsurface disposal of wastes is examined, and concern for protection of this resource is urged. Federal and state regulation policies are examined. PROCESSES, PROCEDURES, AND METHODS TO CONTROL POLLUTION FROM MINING ACTIVITIES.
Skelly and Loy, Harrisburg, Pa.
Available from Sup Doc, GPO, Washington, D.C. 20402 Price $3.40. Environmental Protection Agency Publication 430/9-73-011, October 1973. 390 p, 215 ref. Contract 68-01-1830.

Descriptors: *Water pollution control, *Mine wastes, *Mine water, Coal mine wastes, Strip mine wastes, Acid mine water, Chemical wastes, Water pollution sources.

Pollution control technology applicable to mining activities (including new, currently operating, and abandoned surface and underground mines) is described. Information is provided on techniques of at-source water pollution control applicable to the mining industry. The manual is divided into three major components: (1) surface mining; (2) underground mining; and (3) treatment. The sections describing the various control methods are numbered sequentially through each major component to facilitate use of the manual. Pollution control techniques are described, evaluated, limitations and/or usefulness described, cost data for each technique detailed, where appropriate or possible, and special problems defined. PETROLEUM SYSTEMS RELIABILITY ANALYSIS, A PROGRAM FOR PREVENTION OF OIL SPILLS USING AN ENGINEERING APPROACH TO A STUDY OF OFFSHORE AND ONSHORE CRUDE OIL PETROLEUM SYSTEMS, VOLUME II - APPENDICES,
J. E. Ritchie, Jr., F. J. Allen, Jr., R. M. Feltes, R. Q. Foote, and W. A. Shortt.
Available from GPO Sup Doc as EP1.23/2:73-280b, $6.90; microfiche from NTIS as PB-232 343, $1.45. Environmental Protection Agency, Report EPA-R2-73-280b, August 1973. 433 p. EPA 15080 HOC. 68-01-0121.

Descriptors: Oil spills, *Oil pollution, Drill holes, *Water quality standards, Data collection, *Well data, *Pollution abatement, Water pollution control.
Identifiers: *Oil spill records.

The analysis examined in detail the causes of polluting spills from selected petroleum systems (onshore and offshore crude oil drilling, production, and gathering/distribution systems). The study included the compilation of data from Federal, State and industrial spill reports, a field survey of the various types of facilities, and an analysis of spill-causing failures. EPA prevention regulations presently under consideration envision the preparation of prevention plans (called Spill Prevention, Control and Countermeasure Plans, or SPCC Plans) by facilities to prevent discharges of oil. This analysis should be invaluable in preparing and evaluating these plans. The results will indicate operating procedures and equipment which are still prone, and failures which can be anticipated and, in many cases, prevented. The application of preventive maintenance, operating procedures and, equipment which have been used effectively by the industry to successfully combat failures are discussed. Volume II contains eleven appendices that provide the detailed information upon which the findings are based. (See also W74-02947)(EPA)

CARBONATE BONDING OF TACONITE TAILINGS,
Applied Technology Corp., Pittsburgh, Pa.
P. J. LaRosa, K. A. Ricciardella, and R. J. McGarvey.
Copy Available from GPO Sup Doc as EP1.23:670/2-74-001, $1.00; microfiche from NTIS as PB-232 370, $1.45. Environmental Protection Agency, Technology Series Report EPA-670/2-74-001, January, 1974. 53 p, 22 fig, 12 tab. EPA Program Element 1BB040. 68-01-0195.

Descriptors: *Carbonates, *Bonding, *Road construction, Pollution abatement, Aggregates.
Identifiers: *Carbonate bonding, *Taconite tailings, Brickmaking.

Carbonate bonding consists of mixing and compacting a suitable material with water and lime hydrate, and then reacting it with a carbon dioxide-rich gas to form a coherent structure bonded by a matrix of calcite crystals. Carbonate bonding of mining refuse can minimize the pollution associated with refuse stockpiling and disposal. A laboratory study has indicated that taconite tailings can be carbonate bonded to form an effective road paving or brick-making material. In general, the compressive strength of carbonate bonded taconite tailings increased with increasing lime hydrate content, reaction time, and carbon dioxide concentration in the reaction gas. Air and water permeability, freeze-thaw resistance, and flexural strength of carbonate bonded taconite tailings were found to be comparable to concrete. Scaleup of the laboratory studies to demonstrate paving applications in small plots was hampered by a failure to obtain sufficient compaction. The results, however, did confirm the laboratory study findings. Possible applications of the carbonate bonding process utilizing taconite tailings are road building, formation of aggregate, and brickmaking. An approximate cost comparison suggests that the road construction application is an economical alternative to conventional road building materials and techniques. (EPA)

INDUSTRIAL LIQUID WASTE SURVEYS: TRAINING MANUAL.
Environmental Protection Agency, Cincinnati, Ohio. Water Quality Office
Available from the National Technical Information Service as PB-224 155, $4.75 in paper copy, $1.45 in microfiche. January 1973. 170 p, 37 fig, 23 tab, 116 ref.

Descriptors: *Industrial wastes, *Surveys, *Liquid wastes, *Training, Methodology, Industrial water, Water pollution sources, Water utilization, Thermal pollution, Water temperature, Water pollution effects, Fish, Fish reproduction, Data collections, Effects, Water sampling, Analytical techniques, Waste identification, Chemical analysis, Bioassay, Hydrogen ion concentration, Acidity, Alkalinity, Electrical conductance, Chemical oxygen demand, Suspended solids, Flow measurement, Fluorometry, Tracers, Documentation, Judicial decisions, Laboratory tests, Monitoring.
Identifiers: *In-plant surveys.

The ability to detect potential or actual waste sources expedites all phases of industrial waste surveys, especially selection of sampling points. This ability is largely related to individual familiarity with industrial uses of water. Industry uses water for cooling and a number of process applications including reactant, reaction medium, solvent, cleaning or washing, rinsing, washing of equipment, quenching, scrubbing of gases, and as a transporting, processing, or heat transfer medium. This training manual is designed to facilitate the planning and conduct of in-plant industrial waste surveys and is divided into five outlines including industrial water use, sources of liquid wastes, and effects of different pollutants on aquatic life; survey planning, which discusses the factors to be considered in planning and the conduct of an in-plant survey; analytical procedures outline the physical and chemical properties and bioassay techniques; survey methods in which procedures for sampling and measuring flows are outlined; survey evaluation and reporting survey results, and pertinent features concerning court proceedings dealing with water quality evidence. MULTI-UNIT APPARATUS FOR COLLECTING OIL FROM THE SURFACE OF A BODY OF WATER,
W. H. Daniel.
U.S. Patent No. 3,784,013, 4 p, 8 fig, 1 ref; Official Gazette of the United States Patent Office, Vol 918, No 2, p 680, January 8, 1974.

Descriptors: *Patents, *Oil pollution, *Pollution abatement, *Water quality control, *Water pollution control, Equipment, Water pollution, Separation techniques.

Oil is collected from the surface of the water regardless of the contour or wave motion of the water, not by moving the oil in a horizontal direction relative to the water but rather by moving the oil downward beneath the surface of the water, and then upward. Having regard for the differential specific gravities of oil and water, the downward movement of the oil beneath the surface of the water imparts to the oil the ability to perform the work of raising the separated oil a substantial distance above the surface of the water. A tent-like structure is immersed from a position above the surface of the water to a position below the surface thereby confining and forcing downward an area of the oil. The oil moves to the top of the tent-like structure and the oil thus concentrated is permitted to flow into the lower portion of a vertical conduit, in which it tends to flow upward under hydrostatic pressure. The tent-like structure is repeatedly raised and lowered, thereby repeatedly introducing oil into the conduit, so that the liquid in the conduit rises to a height above the surface of the surrounding water. Oil flowing from the conduit is collected and maintained separate from the body of water. (Sinha - OEIS)
W74-08020

FLOATING BARRIER,
Chevron Research Co., San Francisco, Calif. (Assignee).
J. A. Sayles.
U. S. Patent No 3,792,589, 6 p, 7 fig, 5 ref; Official Gazette of the United States Patent Office, Vol 919, No 3, p 819, February 19, 1974.

Descriptors: *Patents, *Oil pollution, *Oil spills, *Pollution abatement, Water quality control, Water pollution control, Equipment, *Barriers, *Flotsam.

The boom which serves as a floating barrier is constructed of a single sheet of reinforced rubber-like material which is folded along a longitudinal median to form the sides of it. A tensile stress cable, stress plates, ballast weights, and, in one modification, stiffening members and end plates, are placed between the two sides of the boom in appropriate operating relationship and the sides are then joined together. A series of relatively short inflatable chambers are formed along the top edge of the boom. Opposite sides of the boom are vulcanized together between flotation chambers to form the chambers as separate air pockets. This construction gives the boom a degree of stiffness in a lateral direction from the top edge to the bottom edge which will function to hold the top edge of the boom above the surface of the water. (Sinha-OEIS)
W74-08025

METHOD AND APPARATUS FOR AERATING BODIES OF WATER,
B. E. Hirshon.
U. S. Patent No 3,794,303, 8 p, 17 fig, 8 ref; Official Gazette of the United States Patent Office, Vol 919, No 4, p 1251, February 26, 1974.

Descriptors: *Patents, *Aeration, *Aerators, Waste water treatment, *Pollution abatement, *Water pollution control, *Water quality control, Equipment, Effluents.

Unbalanced water columns which are connected at their upper ends are used provide continuous aeration of water at any desired depth. The head on one column is attained by the introduction of air into the other columns which serves both to raise and to aerate the water. Alternately, the water may be circulated by mechanical means and the air introduced at the top of its travel. Undissolved air is permitted to escape as it passes between the columns before it enters the return column. (Sinha-OEIS)
W74-08031

OIL RECOVERY APPARATUS,
J. K. Stewart.
U. S. Patent No 3,794,175, 5 p, 4 fig, 8 ref; Official Gazette of the United States Patent Office, Vol 919, No 4, p 1217, February 26, 1974.

Descriptors: *Patents, *Oil pollution, *Oil spills, *Pollution abatement, Water quality control, *Water pollution control, Equipment, *Separation techniques.

An oil recovery vessel is provided with a receiving chamber having an upstanding side wall high enough to prevent excessive flooding during use in moderately heavy seas. Floating oil is picked up by water jets and carried over the wall into the receiving chamber. The nozzle of each jet is supported by a float operated mechanism adapted to automatically maintain it in a proper discharge attitude with respect to the side wall. The receiving chamber consists of two compartments, both open at their lower ends. During operation a column of recovered oil builds up in the annular outer chamber. As the colum increases in depth its lower level drops until eventually the oil is in communication with aperatures in the sidewall. The oil passes through the aperatures into the inner compartments and rises. An oil pickup pipe draws the oil to a collection receptacle. (Sinha-OEIS)
W74-08033

CONTROL OF WATERBORNE OIL SLICKS,
P. Preus.
U. S. Patent No 3,795,315, 3 p, 6 fig, 4 ref; Official Gazette of the United States Patent Office, Vol 920, No 1, p 96, March 5, 1974.

Descriptors: *Patents, *Oil pollution, *Oil spills, *Pollution abatement, Water pollution control, Water quality control, Equipment, *Barriers.

A segmented floating barrier having a fluid previous skirt is placed to contain an oil slick. An oleophilic-hydrophobic fiberous substance is used to absorb the oil and render it incapable of passing through the skirt. A bottom hem is formed along the lower margin of the skirt and is filled with a heavy material to provide ballast. The skirt is formed of an open mesh fabric reinforced sandwich of sheet plastic. (Sinha-OEIS)

Identifiers: *USSR.

The present state of research on quality characteristics of surface waters in the USSR and on evaluation of changes in water quality in rivers, lakes, and water bodies as a result of human activity is reviewed. Attention is focused on problems arising in connection with the need to regulate water quality and to control pollution. Problems relating to development of methods of calculating changes in water quality as a function of waste water inflow and of hydrodynamic and hydrologic conditions are discussed. (Josefson-USGS)

Identifiers: *Chlorophacinone, Destruction trials, *France(Loir-et-Cher department), *Muskrat, Ondatra-Zibethicus, Pesticides, *Poisoning rafts, Ponds.

Two muskrat destruction trials using poisoning rafts in ponds in the Loir-et-Cher department (France) were performed. The practical efficiency of this measure was computed. Intake was measured before and after treatment using unpoisoned bait. The original population level was estimated using Lincoln's Index method. Muskrats were captured in traps and labeled by partial shearing of the fur. Labeled animals found among the dead along the shores of the pond and in final trapping were then counted. Various types of activity such as frequentation of different burrows and water surface activity at night were observed. Poisoning was done with carrots cut in rounds and coated with a 0.25% oily solution of chlorophacinone. The dose was 20 cm3/kg of bait, or 0.005% active matter. The results obtained by these different methods agree, and practical efficiency may be estimated at more than 90%. This method seems to offer complete guarantee that secondary poisoning of game does not occur.--Copyright 1973, Biological Abstracts, Inc.

Identifiers: Pathogenic organisms, Sewage, *Potable water, *Water pollution control, Treatment facilities, *Water supply, *Feasibility studies.

Problems of water supply and consumption are discussed. The esthetic significance of lakes and rivers and the significance of waters as economic bases of agriculture and certain types of industry and fisheries are surpassed by the importance of the drinking water supply. The water supply is based directly or indirectly on recharge. For reasons of hygiene, efforts to purify lake and river water should not lead to reducing the consumption of drinking water. The quality of drinking water and water used for industrial purposes may be improved by employing expensive conditioning methods. Water purification restricted to the killing of pathogenic organisms is not appropriate. The high water consumption in certain ages of life (e.g., infancy) requires particularly cautious disposal of biocidal, pesticidal and carcinogenic substances. Scientific methods for detecting toxic substances contained in the drinking water need elaboration. Legal aspects are considered.--Copyright 1973, Biological Abstracts, Inc.

Identifiers: *Texas water plan, Irrigated agriculture.

This research represents the final phase of a three-phase research project leading towards the development of a computer-oriented planning system for use in planning large, multibasin systems of reservoirs and connecting river reaches and pump-canals. Specifically, the research defines a methodology for finding an optimal size, operation, and staging of construction of a water resource system with highly variable inflows and demands that are increasing over the planning horizon and assessing the impacts of such a system. The methodology is developed using the Texas Water System as an example. Primarily through the development of a model which simulates the demand for and use of water in an agriculturally oriented area, the third phase of the research builds on progress previously achieved in simulating and optimizing the water capture and transfer system. This model simulates the farmer's rational decision process in maximizing his monetary returns in the face of highly variable hydrology and various physical and institutional restrictions. In effect, this model sizes the agricultural water demand to the available water supply. Additionally, the research presented includes enhancements to the supply simulation models as well as the development of a model to simulate the quality of water in a multibasin system. The computer programs developed during this research are designed to analyze a problem on a monthly basis using historic or stochastic hydrologic input data sequences, a specified demand build-up period, and an economic life as defined by the user.

This report summarizes the research experience of the Texas Water Development Board, the constitutional water planning and development agency for the State of Texas, over the period 1965-1972. In this period, the Board initiated and conducted a sustained program of research, supported by the cooperation and financial aid of the Office of Water Resources Research, that has developed techniques useful in decision-making which are believed to be generally applicable to water planning problems elsewhere. The Texas Water Plan, formally adopted and released in 1968, relied upon traditional analytical and planning techniques. This planning effort clearly demonstrated that planning to solve current and future water problems on a statewide basis required new techniques of analysis that would not have been possible, except in a conceptual sense, before the advent of high-speed, large-capacity computers. Therefore, systems analysis techniques were developed to assist in solving some of the long-range water planning problems encountered and identified in the Texas Water Plan and for refining the Texas Water Plan as it was originally conceived. In this report, the conditions dictating the constraints and opportunities of the Texas Water Plan are described. The sequential steps in the research program are outlined, and the proposed facilities of the Texas Water System are used as an example for research and development of new planning techniques.

IMPROVED DYNAMIC PROGRAMING PROCEDURES AND THEIR PRACTICAL APPLICATION TO WATER RESOURCE SYSTEMS,
Water Research Association, Marlow (England).
P. A. Mawer, and D. Thorn.
Water Resources Research, Vol 10, No 2, p 183-190, April 1974. 9 fig, 2 tab, 10 ref.

Descriptors: Water resources development, *Dynamic programming, *Simulation analysis, *Reservoirs, *Long-term planning, *Operation, Optimization, Algorithms, Probability, Markov processes, Reliability, Water demand, Water supply, Pumping plants, Inflow, Rivers, Decision making, Operations research, Mathematical models.
Identifiers: *Cost minimization, Value iteration, Penalty costs, Policy making, Transition costs, Computational procedures.

An optimization algorithm is described that uses value iteration dynamic programming and simulation in conjunction with penalty costs to derive long-term operating policies for water resource systems. Feedback from the simulation to the dynamic programming is achieved by means of the penalty costs, which may be interpreted as Lagrangian multipliers. Highly efficient value iteration procedures are developed for two types of problems illustrated by numerical examples: (1) deterministic transition costs--an on-channel reservoir is to be operated in conjunction with a high cost source; and (2) probability transition costs--herein considers the supply of water to a pumped storage reservoir used for amenity purposes and direct regulated water demands. Both problems require finding an operating policy that minimizes long-term running costs and satisfies a reliability objective; the latter problem requires

also fulfilling an amenity objective. An indication is given of how the methods described can be applied to multireservoir systems by using the concept of an equivalent reservoir. It is shown that simplified dynamic programming procedures can be formulated by recognizing the inherent nature of the problem and neglecting such things as the serial correlation of reservoir inputs. These procedures produce substantial savings in computation, enabling a much more thorough appraisal of problems than was hitherto possible. Although slightly suboptimal operating policies are obtained, the practical benefits obtained from the general optimization algorithm outweigh most theoretical objections. (Bell-Cornell)

INDUCED SAFETY ALGORITHM FOR HYDROLOGIC DESIGN UNDER UNCERTAINTY,
Water Resources Center, Budapest (Hungary).
I. Bogardi, and F. Szidarovszky.
Water Resources Research, Vol 10, No 2, p 155-161, April 1974. 5 fig, 3 tab, 12 ref, 2 appen.

Descriptors: *Design, Hydrology, *Structures, Cost-benefit analysis, *Algorithms, *Simulation analysis, *Levees, Rivers, Equations, Optimization, Decision making, Construction costs, Statistical methods, Regulation, Mathematical models, Systems analysis, *Risks.
Identifiers: *Hungary(Tisza River), *Hungary(Lajta River), Finite sample size, Margin of safety, Economic loss.

The induced safety algorithm (ISA) is a method for calculating the margin of safety in the design of hydrologic structures under the uncertainty due to finite sample size. The ISA may be applied to the design of a new structure or the redesign of an existing one; the initial design criterion may be calculated by benefit-cost or be prescribed by regulation. The optimum decision is reached by maximizing the sum of three terms (in case of redesign to a larger value): the discounted economic benefit due to uncertainty reduction, the average loss averted, and the incremental construction cost. The uncertainty on the distribution function of the state variable (yearly peak flow) is encoded by the probability density function of flow pertaining to a fixed return period. Simulation is used to calculate the distribution of the state variable. Two examples of levee design in Hungary illustrate the method. (Bell-Cornell)

6B. Evaluation Process

SUMMARY REPORT FOR A METHODOLOGY STUDY TO DEVELOP EVALUATION CRITERIA FOR WILD AND SCENIC RIVERS,
Idaho Univ., Moscow. Dept. of Agricultural Economics.
E. L. Michalson, and J. Hamilton.
Available from the National Technical Information Service as PB-232 070, $5.75 in paper copy, $1.45 in microfiche. Completion Report, Idaho Water Resources Research Institute, Moscow, Scenic River Study Report no 10, December 1973. 181 p, 12 fig, 2 tab, 22 ref. OWRR B-014-IDA(16). 14-31-001-3074.

Descriptors: *Methodology, *Cost-benefit ratio, *Evaluation, Water resource development, Hydroelectric power, Irrigation, Agriculture, Archaeology, Commercial fisheries, Flood control, Natural resources, History, Hunting, Navigation, Recreation demand, Water supply, Water quality control, *Idaho, Recreation facilities.
Identifiers: *Salmon River(Idaho), *Wild Rivers, Hydroelectric power.

The general objective was to develop a methodology to evaluate selected rivers to determine if they should be included in the National Wild and Scenic Rivers System as defined in the Wild and Scenic Rivers Act (PL 90-542). Included in the development of the methodology was inventorying resources and resource areas important to wild river states, and evaluating each of these areas in light of river classification. The evaluation process followed the procedures set forth in the Water Resources Council's 'Establishment of Principles and Standards for Planning Water and Related Land Resources' using the alternate cost approach towards establishment of resource values. This approach involves the concept of consumer surplus used to establish net values for alternative resources uses in the Salmon River Basin. These consumer surplus values were then compared to determine which of them provided the largest net benefits. The two competing resource uses identified were hydroelectric power production and recreation. The final step in the proposed methodology determined the trade-offs between outdoor recreation and hydroelectric power production for the Salmon River. The methodology recognizes that the ultimate decision to preserve a wild and scenic river rests largely on a political value judgement. The procedure described permits one to quantify in terms of net benefits measured as consumer surplus values the trade-offs between competing resource uses.

AN ANALYTICAL INTERDISCIPLINARY EVALUATION OF THE UTILIZATION OF THE WATER RESOURCES OF THE RIO GRANDE IN NEW MEXICO: LOWER RIO GRANDE REGION,
New Mexico State Univ., Las Cruces. Dept. of Agricultural Economics.
R. R. Lansford, S. Ben-David, T. G. Gebhard, Jr, W. Brutsaert, and B. J. Creel.
Available from the National Technical Information Service as PB-232 068, $4.50 in paper copy, $1.45 in microfiche. New Mexico Water Resources Research Institute, Las Cruces, Report No 024, May 1974. 109 p, 16 fig, 34 tab, 87 ref. OWRR A-045-NMEX(5) and B-016-NMEX(6). B-019-NMEX(6) and B-026-NMEX(6).

Descriptors: *New Mexico, *Water demand, Economics, *Water resources development, Management, *Economic predictions, *Surface-groundwater relationships, Natural resources, Water requirements, Resource allocation, River basins, Groundwater management, Water law, Interstate compacts, International compacts, Treaties, Litigation, Water quality, Water utilization, Human population, Employment, Industrial water, Recreation, *Rio Grande River.
Identifiers: *Socio-economic model, Interdisciplinary, Groundwater appropriations, Input-output coefficient, Irrigation water diversions.

An interdisciplinary approach to the solution of the water resource problems of the Lower Rio Grande Region in New Mexico was centered around a socio-economic model, with special emphasis placed upon the Rio Grande Region. Inputs into the socio-economic model were obtained from separate studies. Three sets of alternatives were considered: (1) Without a water constraint, in the Rio Grande Region, both production and depletions are expected to exhibit the largest increase (59.7 percent and 47.4 percent, respectively); (2) When a surface water constraint is imposed, the value of production is reduced by $18.1 million in 2020 and water depletions are expected to decrease about 18.1 percent by 2020; (3) When a total water constraint is imposed, the value of production is decreased $4.1 million below that expected when using only a surface water constraint, and water depletions reduced about 8.4 percent. The Lower Rio Grande Region is expected to follow the general trend of the total Rio Grande Region but at a higher growth rate. The expected increase in total value of production from 1970 to 2020 is 62.0 percent, employment 63.5 percent, and water depletions about 61 percent. When a surface-water constraint is imposed, production is expected to be reduced $13.6 million in 2020, employment by 154 employees, and water depletions by 61,404 acre-feet. When an additional constraint is imposed on ground water in the LRGR, production would be decreased $0.4 million in 2020, employment by an additional 15 employees, and water depletions by 5,764 acre-feet. (Hain-New Mexico State)

THE ROLE OF PUBLIC INVOLVEMENT IN WATER RESOURCES PLANNING AND DEVELOPMENT, A REPORT WITH READINGS ON RESEARCH AND EXPERIMENTATION IN PUBLIC AFFAIRS EDUCATION.
Cornell Univ., Ithaca, N.Y. Water Resources and Marine Sciences Center.
Available from the National Technical Information Service as PB-232 079, $5.00 in paper copy, $1.45 in microfiche. Technical Completion Report No 79, A.E. Ext 74-3, Cornell University Water Resources and Marine Sciences Center, Ithaca, New York, March 1974. 160 p, 47 ref. (Assembled and edited David J. Allee). OWRR B-017-NY(1).

Descriptors: *Water resources development, *Planning, *Education, *Research, *River basins, *Projects, *New York, *Evaluation, Methodology, Management, Lakes, Watersheds, Political aspects, Social aspects, Systems analysis.
Identifiers: *Public involvement.

Considered is the use of educational techniques to encourage wider and more informed participation in the public aspects of water resources. This report grows out of experimental educational work at the Cornell University Water Resources and Marine Sciences Center between July 1969 and June 1971, discloses objectives, procedures, and details of this research, and consolidates some experience and analysis in the use of such techniques for improving planning and development processes in the water resources field. The Cornell Project stressed the exploration of methods, principles, roles and opportunities for the participation of universities in providing educational inputs into public involvement in water resources planning and development. Alternative techniques were evaluated and a variety of activities were undertaken in a variety of settings; in every case, comprehensive basin planning was actively being pursued under either state or federal leadership. Evaluation procedures included: systematic application of professional judgment as each program succeeded; and regular contact and interaction with a variety of social scientists. Numerous projects are identified and discussed as to objective, situation, activities, and results. (Bell-Cornell)

CAPACITY OF WATER-BASED RECREATION SYSTEMS PART I: THE STATE OF THE ART - A LITERATURE REVIEW,
North Carolina State Univ., Raleigh. Dept. of Recreation Resources Administration.
G. A. Hammon, H. K. Cordell, L. W. Moncrief, M. R. Warren, and R. A. Crysdale.
Available from the National Technical Information Service as PB-232 092; $3.75 in paper copy, $1.45 in microfiche. North Carolina Water Resources Research Institute, Raleigh, Report No 90, (UNC-WRRI-74-90), April 1974. 49 p, 147 ref. OWRR B-013-NC(3). 14-01-0001-1936.

Descriptors: *Recreation, Boating, Swimming, Water skiing, Fishing, *Recreation facilities, Planning, *Bibliographies, *Reviews, Water sports, Methodology, Measurement, Attitudes, Social aspects.

Identifiers: *Recreation capacity.

Recreation capacity is a popular concept, but there is no established rationale or methodology for understanding, measuring, and applying it. This report recognizes the complex and dynamic nature of capacity by reviewing separately the literature which bears on each of five categories of factors which influence capacity: (1) administrative, (2) biological, (3) physical, (4) social, and (5) temporal. The literature is dominated by published reports dealing primarily with the physical factors and secondarily with the social factors. Administrative, biological, and temporal factors have received minor attention in the literature. The applicability of Liebig's law of the minimum (the occurrence and functioning of an organism is limited by that essential environmental factor, or combination of factors, which is present to the least favorable extent) to the concept of capacity is discussed. The final section reviews the empirical research effort which has been applied to capacity conceptualization and measurement. To date, this effort has been meager and fragmented. (McJunkin-North Carolina State)

INNOVATION: A CASE STUDY,
American Society of Civil Engineers, New York.
M. B. McPherson.
Available from the National Technical Information Service as PB-232 166; $3.75 in paper copy, $1.45 in microfiche. ASCE Urban Water Resources Research Program, Technical Memorandum No 21, February, 1974. 59 p, 11 fig, 156 ref. OWRR C-4048(9009)(4).

Descriptors: *Project planning, *Urbanization, *Water quality control, Administrative agencies, Management, Pollution abatement, Underground storage, Sewers.
Identifiers: *Innovation, *Invention, Technology transfer, Public technology, Information dissemination, *Industrial innovation, San Francisco, Chicago area, Land wastewater disposal, Pressure wastewater sewers, Enforcement, Risk taking, Master planning, Combined sewer overflows, Metropolitan studies.

Four urban water resource case studies are employed as a means for elucidating causation inferences on the process of technological innovation: San Francisco Master Plan; Chicago Underflow Plan; Land Disposal of Wastewater; and Pressure Wastewater Sewer Systems. All four are instances where innovation concepts have been successfully applied, and they are all concerned with water quality matters. Consideration is given to industrial parallels, the roles of individuals versus groups in innovation, and certain characteristics of some leading innovative local government administrators. Also taken into account are related subjects of technology transfer and public technology. However, only briefly discussed are mechanisms for translation or diffusion of the concepts used for illustration. While venturesome forefront examples are used, they are in the early stages of their evolution, as plans, process developments or demonstrations. Evident are some of the limitations in knowledge dealing with innovation, information dissemination and technology transfer.

Identifiers: *Metropolitan Washington, D.C., Public policy, Population distribution, EMPIRIC Activity Allocation model.

One of the means introduced by local governments during the late sixties to slow the rate and control the location of development was the staging and programming of utilities service, particularly sewer facilities. Because of a lack of quantitative analysis on the supposed relationship of water-sewer policy and growth, this study was conducted to: (a) identify and evaluate effects of water and sewage facilities on population and employment; and (b) develop and evaluate methods of expressing relationships between water and sewage service and urban growth in a form useful for urban water resources planning. The qualitative aspect of the study consisted of identifying, through discussions with key officials, the elements of utilities sizing, location and timing policy. The quantitative aspect centered on development of a measure of water or sewer availability that would correlate more highly with actual metropolitan development observed from 1960 to 1968 that the variable specified in the urban growth model, EMPIRIC, currently utilized in the regional planning process for Metropolitan Washington. Statistical analyses performed on a number of hypotheses resulted in improved sewer variables for use in EMPIRIC. (See also W74-07724)

MANAGEMENT PRIORITIES: NOW AND THE FUTURE,
T. R. Snape.
Water Pollution Control, Vol 72, No 8, p 666-674, 1973. 4 fig.

Descriptors: *Personnal management, *Water allocation(Policy), *Water management(Applied), Administration, *Management.

Water is a growth industry, and thus has characteristic problems related to the pace of change. These problems of change essentially have to do with people and their attitudes, their adaptability, their ability to grasp and exploit new opportunities, and their ability to plan and control the change. The validity of this contention is explored together with management priorities for the future from the consultant's point of view. (Sanduski-Franklin)

A SUMMARY OF QUANTITY, QUALITY AND ECONOMIC METHODOLOGY FOR ESTABLISHING MINIMUM FLOWS,
Washington Univ., Seattle.
J. F. Orsborn, B. W. Mar, J. W. Crosby, III, and J. Crutchfield.
Available from the National Technical Information Service as PB232 254 $4.00 in paper copy, $1.45 in microfiche. State of Washington Water Research Center, Pullman, Completion Report no 13, June 1973. 86 p, 17 fig, 15 tab. OWRR B-037-WASH(1). 14-31-0001-3349.

Descriptors: *Low flow, Water allocation(Policy), Competing uses, Legal aspects, Preferences(Water rights), *Washington, Criteria, *Water quality standards, Planning, Evaluation, Drainage basins, Model studies, *Recreation, *Aesthetics, *Conservation, Methodology, Economics.

The study was undertaken to develop methodologies for establishing the legally prescribed minimum flows and levels in streams and lakes in the State of Washington. As more states attempt to preserve their natural resources through the enactment of legislation, their efforts provide a valuable experience record. But, in establishing 'minimum' or 'base' flows in streams for the protection of natural values the development of methodology to apply the laws has not been accomplished and is of particular concern to both state and federal agencies. The overall objective of this study has been to develop methods for analysis of the quantity, quality and economic factors associated with the establishment of low-flow criteria for conservation, recreation and aesthetic purposes. Results have provided methods for predicting natural low flow-recurrence interval graphs for ungaged drainage basins using only USGS 1:62,500 and 1:24,000 scale maps and correlation graphs. Also, using any desired level of flow, four different water quality parameter models were developed. The models vary in degree of sophistication to meet the degree of complexity of the particular stream involved. Economic criteria have been developed for guiding planners in evaluating the

elative value of fisheries, recreation, and diver-ions. The combining of these three project com-onents; quantity, quality, and economics, pro-ides a sequential evaluation of factors required in atisfying the intent of minimum flow laws. Results are reported in two volumes within the re-ort. Vol. 1: Summary; and Vol. 2: Appendices--Methodology and Data.

A SYSTEMS APPROACH TO ASSESSMENT OF RURAL WATER SUPPLY PROGRAM EFFECTIVENESS,
Asian Inst. of Tech., Bangkok (Thailand). Dept. of Environmental Engineering.
R. J. Frankel.
Water Resources Research, Vol 10, No 2, p 163-169, April, 1974. 3 fig, 3 tab, 1 append.

Descriptors: *Potable water, Projects, *Evaluation, *Water supply development, *Developing countries, *Systems analysis, *Surveys, Water utilization, Public health, Social impact, Rural sociology, Community development, Data collections, Research, Methodology, Management, Education.
Identifiers: *Thailand, *Impact analysis, Economic implications, Complementary inputs, Resource constraints, Improvement.

Evaluation research in developing countries has been neglecting the sociopolitical, administrative, psychological, and institutional issues that in practice seem to determine project impact and effectiveness. It appears, for example, that provision of a community potable water system will not produce improvements in village health and sanitation unless it is accompanied by a carefully designed program of health education. Systems analysis was used to improve the methodology of impact evaluation by determining the role of resource constraints and complementary inputs in the development of the rural water supply program in Thailand. An impact evaluation was undertaken to analyze the effectiveness of the National Potable Water Project and to provide feedback for improving the administrative, technical, and operational aspects of the program. Evaluation objectives were to provide: (1) guidelines for design, construction, finance, and administration of these projects; (2) operational guidance for management; (3) information for training plant operators; and (4) feedback on villager attitudes, water habits and use, and village development. Complementary and hidden objectives were enumerated, and several phases were delineated and used to simplify interactions and identify variables affecting program success; a detailed interaction flow chart is provided, as well as results from the collection, analysis, and feedback of field data. The methodology developed measured the social, economic and public health implications of the water projects toward achieving rural community development. Data are being collected from some 165 village projects throughout Northeast Thailand. (Bell-Cornell)

PROBLEM OF RATIONAL USE AND CONSERVATION OF WATER RESOURCES AND GOALS OF HYDROLOGY (PROBLEMA RATSIONAL'NOGO ISPOL'ZOVANIYA I OKHRANY VODNYKH RESURSOV I ZADACHI GIDROLOGII),
Hydrometeorological Service of the USSR, Moscow.
V. I. Korzun, and A. A. Sokolov.
Meteorologiya i Gidrologiya, No 10, p 9-17, October 1973.

Descriptors: *Water utilization, *Water conservation, *Water resources, *Hydrology, *Planning, Forecasting, Water balance, Water pollution, Water pollution control, Water quality, Irrigation efficiency, Drainage, Erosion.
Identifiers: *USSR.

Problems of Soviet hydrology and basic scientific problems relating to rational use and conservation of water resources in the USSR are discussed. The basic scientific problems on which attention must be focused in the near future include: (1) formulation of scientific principles of redistribution of the country's water resources among excessively wet and dry regions in European Russia, Siberia, Kazakhstan, and Soviet Central Asia, and evaluation of the possible consequences of such redistribution; (2) study of natural water pollution, its effects on water quality and the biological cycle, and development of a scientific base for monitoring and controlling water pollution; (3) realization of a complex of hydrologic studies aimed at improving irrigation and drainage efficiency; (4) study of erosion; (5) improvement of methods of hydrologic calculations and forecasts; and (6) development of theoretical and experimental studies of water balance. A major organizational problem is that of establishing a national system of accountability for all types of natural waters and their usage and of conducting a state water survey on the basis of quantitative and qualitative indices. ESTIMATED USE OF WATER IN FLORIDA, 1970,
Geological Survey, Tallahassee, Fla.
R. W. Pride.
Florida Dept. of Natural Resources, Tallahassee, Bureau of Geology Information Circular No 83, 1973. 31 p, 6 fig, 10 tab, 20 ref.

Descriptors: *Water utilization, *Florida, *Consumptive use, *Withdrawal, Municipal water, Irrigation water, Industrial water, *Water supply, Thermal powerplants, Saline water.

Water use in Florida is estimated for 1970. About 15,300 mgd was withdrawn for all purposes, including public supply, rural domestic and livestock, irrigation, and industrial (including thermoelectric power). About 9,500 mgd of the total use was saline water. The remainder, or 5,800 mgd, was freshwater, withdrawn in nearly equal quantities from surface and ground sources. Most of the saline water was used for thermoelectric power generation. The average per capita use of all water in 1970 was 2,250 gpd, an increase from 332 gpd in 1950. Considering freshwater only, the average per capita use was 849 gpd in 1970. The quantity of water consumed was estimated to be

1,930 mgd in 1970, most of which was freshwater. The quantity consumed was about one-third of the total freshwater withdrawn from the source. The largest use of freshwater in Florida in 1970 was for irrigation, 2,070 mgd. The counties in southern Florida, in the Water Resources Council subregion 0309, used 75% of all water used for irrigation. The second largest use of freshwater was by industry, which required 926 mgd of self-supplied water and 166 mgd from public supply systems. The third largest use was for public supplies, 884 mgd. THE ROLE OF WATER IN THE ENERGY CRISIS.
Nebraska Univ., Lincoln. Water Resources Research Inst.
Available from the National Technical Information Service as PB-232 404 $5.75 in paper copy, $1.45 in microfiche. Proceedings of a conference, October 23-24, 1973, Lincoln, Nebraska. Edited by K. E. Stork, (1973). 219 p, 27 fig, 21 tab, 66 ref, 2 append. OWRR A-999-NEB(13).

Descriptors: *Energy, *Water management, *Water consumption, *Water resources, *Water demand, *Conferences, Alternative water use, Water pollution, Water rates, Water utilization, Irrigation efficiency, Nuclear energy, Research and development, Technology, Water allocation, Water shortage, Water supply, Water conservation.
Identifiers: *Energy crisis, *Energy-water relationship, *Energy pool, Water resources planning, Solar energy, Geothermal energy.

Ways that the water resources community could help solve national and regional energy problems are presented. Topics discussed include energy-water relationship (economic, environmental, political-social, and technological), the role of water resources in the energy crisis, regional energy problems, and an assessment of research needs. While traditional energy resources have been largely exploited, and technologies associated with their development are established, great potential exists for solar and geothermal energy development. In supplementing the energy pool, however, opportunities for reducing energy requirements should not be overlooked. The water resources field has such potential through improved management, regulation, and application of the best available technology. Energy and water conservation can also be achieved through economic means, through realistic pricing policies. In addition, questions of how and where energy supplies can be conserved with minimal economic and social disruption need to be answered. Uses of energy and water are highly interrelated. Ways must be found to curtail amounts and rates of water and energy consumed through new manufacturing methods, improved irrigation, better management, and other procedures. (See W74-07962 thru W74-07977) (Grden-North Carolina)

THE ROLE OF WATER IN THE ENERGY CRISIS,
Water Resources Council, Washington, D.C.
W. D. Fairchild.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 10-17, 1973. 6 ref.

Descriptors: *Water demand, *Energy, Powerplants, Water supply, Water utilization, Conferences, Geothermal studies, Water management(Applied), Thermal powerplants.
Identifiers: *Energy crisis, *Energy-water relationships.

Energy is required to produce all water supplies whether it is sun energy necessary for rainfall or electrical or mechanical energy to pump water supplies from lakes, rivers or underground sources. Even the large gravity irrigation projects in the West require energy to construct the works and maintain them. Conversely, water is necessary for man to produce energy. This can range from natural rainfall to produce crops, falling water to produce hydroelectric energy, water required to mine and process coal and other energy fuels, or the large consumptive usage of water for cooling when fossil or nuclear fuel is utilized in steam plants. THE POLITICAL-SOCIAL ASPECTS OF ENERGY-WATER RELATIONSHIPS,
California Univ., Los Angeles. Public Administration Program.
E. A. Engelbert.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 18-37, 1973. 35 ref.

Descriptors: *Energy-water relationships.

The political-social aspects of water-energy relationships have been greatly neglected both in research and development. A review of the literature shows that where nonphysical aspects of energy-water relationships have been analyzed, the focus is limited primarily to functional processes of power generation, pollution or similar interlinking activity. The more pervasive interrelationships of water and energy to society appear to be too ephemeral and complex to warrant penetrating investigation and analysis. The failure to comprehend and project energy-water relationships in broader social settings is producing unfortunate political consequences. Interest groups polarize around specific controversial issues which may be narrowly formulated or wrongly contrived. Amidst the political contentiousness of well-meaning but short-sighted political coalitions, more basic aspects of societal well-being become obscured or lost. New analytical approaches must be fashioned for perceiving and dealing with the social parameters of energy-water relationships. The prevailing system of analysis which rests primarily upon unilateral projections of energy and water requirements to meet the needs of a growing economy will no longer suffice. A system of analysis must show how energy-water interrelationships can be utilized to clarify and shape social goals and developments. (See also W74-07961) (Knapp-USGS)

ECONOMIC ASPECTS OF RESOURCE USE WITH SPECIAL REFERENCE TO ENERGY AND WATER,
Johns Hopkins Univ., Baltimore, Md. Dept. of Geography and Environmental Engineering.
R. K. Davis.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 39-45, 1973.

Descriptors: *Water demand, *Energy, *Economics, *Political aspects, Regulation, Water utilization, Environment, Legislation, Water management(Applied), Resource allocation, Cost-benefit analysis.
Identifiers: *Energy-water relationships.

Economists believe that optimum social welfare is coincident with best economic use of resources. Best economic use is defined with reference to all benefits and costs. If water is allocated among uses so that the ratio of marginal social benefits to marginal social costs is equal in all uses, the logic involved states that the most efficient use of water is achieved. If, as between two uses of water, the ratio of benefits to costs is unequal at the margin, then it is possible to improve society's welfare be reallocating water from the use with the lower ratio of benefits to costs to the use with the higher ratio of benefits to costs, and to continue shifting the resource from one use to the other until the ratio of benefits to costs of the last increment shifted is equal in both uses. Public decision-making, as it affects the uses of water and energy, is characterized by failures to address a range of alternatives broad enough to give some hope of including superior policies. And the evaluation of alternatives is seriously hampered by cost sharing or subsidies which badly warp choices in favor of uneconomic alternatives. (See also W74-07961) (Knapp-USGS)

ENVIRONMENTAL ASPECTS OF ENERGY-WATER RELATIONSHIPS,
Nebraska Univ., Lincoln. Dept. of Agricultural Economics.
L. K. Fischer.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 46-59, 1973. 1 tab, 16 ref.

Descriptors: *Water demand, *Energy, *Agriculture, Irrigation water, Environment, Economics, Water utilization, Industrial water.
Identifiers: *Energy-water relationships.

Public policies relative to water development, which have in the past tended to transfer costs away from the principal beneficiaries, have resulted in substantial quantities of water being committed to uses which yield low returns. Increases in the cost of water to users should induce those who hold rights to water to utilize the water more judiciously and thus reduce water requirements. Of equal importance, those who would initiate water-using activities will have incentives to buy out existing water rights as an alternative costly supply augmentation. Furthermore, full-cost pricing for raw water will make more economically attractive the recycling of wastewater. Agriculture in the United States is a major user of water and energy; a use of water which yields on the margin a small value of product per unit of water; a class of use which has historically been favored by both legal preferences and public subsidies; and a use which is more tolerant of low quality than are many competing uses. Consequently, substantial opportunities exist or will arise for reducing the quantity of irrigation water required to produce a given product; irrigating with water which as been modified substantially by previous users thus freeing water of higher quality to less tolerant uses; and providing a source of water for alternative high-value uses by ceasing to irrigate under conditions which yield relatively low returns. THE ROLE OF WATER RESOURCES RESEARCH IN THE ENERGY CRISIS,
Office of Water Resources Research, Washington, D.C.
W. A. Hall.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 60-67, 1973.

Descriptors: *Energy, *Water demand, *Research and development, Water Resources Research Act, Education, Training, Water resources development.
Identifiers: *Energy-water relationships.

Water and water-related research involves transporting this needed and available resource to the places it is needed. For the western fuel sources, water is the controlling factor because it is also the scarce resource. Water will clearly limit what can

be done in production, in conversion, in transportation, and in reclamation and environmental protection. Storage of energy has always been a major problem which has resulted in inefficiencies in its use. Water stored as geothermal energy is a particularly useful substance for efficient energy utilization. The real challenges in water resources research related to the energy crisis are to demonstrate the fallacy of a policy of maintaining ignorance until the crisis stage and demonstrate the capability of the water resources research community to respond to need efficiently and effectively. ENERGY PRODUCTION,
Omaha Public Power District, Nebr.
T. P. Harding, and B. E. Dose.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 71-91, 1973. 15 fig, 8 ref.

Descriptors: *Water demand, *Energy, *Powerplants, Water supply, Water utilization, Conferences, Water management(Applied), Thermal powerplant, *Production.
Identifiers: *Energy-water relationships.

Of all cooling water used in the United States, 81% is used for electric power generation. The cooling method utilized greatly influences the overall efficiency of the power conversion cycle and hence is directly related to the conservation of energy resources. The mode of cooling is of prime importance as it directly affects the fuel cycle efficiency to produce electrical power. Many studies are underway throughout the United States to determine the impact on the ecology by using once-through cooling. Scientific information is needed to put in perspective the possible ecological damage or changes that can be caused by once-through cooling on the Missouri River and other large bodies of water. W74-07967

MUNICIPAL AND INDUSTRIAL WATER SUPPLY,
Kansas Univ., Lawrence. Dept. of Civil Engineering.
W. J. O'Brien.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 92-113, 1973. 3 fig, 9 tab, 6 ref. EPA Grant T-900135.

Descriptors: *Water demand, *Energy, *Electric power demand, Water management(Applied), Municipal water, Industrial water.
Identifiers: *Energy-water relationships.

Approximately 67% of water withdrawn for municipal purposes is obtained from surface sources. About 17% of the water withdrawn in 1970 by industry was from saline sources. Most of this was surface water. Approximately 79% of the freshwater withdrawn by industry was from surface sources. In many instances a reduction in water withdrawal will not result in a significant reduction in energy consumption by the water supply system. Most of the electrical energy used in water treatment and distribution systems is consumed by pumping. A surface water source is therefore inherently more efficient than a groundwater supply. Smaller, more compact distribution systems are also more efficient in that booster pumping is usually reduced. Slightly more than one-third of the electrical power generated in 1970 was used to supply water to municipalities and industry. Because most of this energy is used in pumping, the most effective way to lower this energy requirement is to reduce the quantity of water used. Peak load power demands can be reduced by the use of intermediate treated water storage or by the use of programmed pumping within the existing distribution system. (See also W74-07961) (Knapp-USGS)
W74-07968

AGRICULTURAL WATER SUPPLY,
Nebraska Univ., North Platte. Dept. of Agricultural Engineering.
D. G. Watts.
In: The Role of Water in the Energy Crisis, Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 114-127, 1973. 4 fig, 4 tab, 16 ref.

Descriptors: *Irrigation water, *Electric power demand, *Water demand, Water management(Applied), Irrigation efficiency, Irrigation practices.
Identifiers: *Energy-water relationships.

Current technological capability can achieve an overall reduction of 10% to 20% in the energy consumed annually for providing an agricultural water supply. Suggested procedures include increasing irrigation pumping plant efficiency, reducing water application, improved management of electric pumping plants, reuse of irrigation runoff water, and improved irrigation system design. (See also W74-07961) (Knapp-USGS)
W74-07969

POLLUTION CONTROL,
New Mexico State Univ., Las Cruces. Water Resources Research Inst.
J. W. Clark.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 128-131, 1973. 1 tab, 5 ref.

Descriptors: *Water demand, *Thermal powerplants, *Strip mines, Cooling water, Land reclamation, Water supply, Industrial water, Energy.
Identifiers: *Energy-water relationships.

Thermal generation of electric power produces a significant thermal discharge. A problem of even greater magnitude in relation to water pollution and supply may be developing in the Northern Great Plains and in the Southwestern Deserts. The states of Arizona, New Mexico, Utah, Colorado, Wyoming, Montana, and North and South Dakota contain about 70% of the nation's low-sulfur coal reserves. These reserves lie close to the surface, and strip mining procedures are being used to obtain the coal. Development of this coal resource involves legal mandates to restore the land after the coal has been removed. Water scarcity may limit the use of Western coal. The problem is that in most of the Western watersheds where immense mining, gasification and power generating complexes are envisioned, existing and potential water supplies are heavily committed and in some basins, water resources are over committed. It would require much more water to rehabilitate some of these lands than would be required initially in mining, processing and utilizing the coal. (See also W74-07961) (Knapp-USGS)
W74-07970

REGIONAL ENERGY-WATER PROBLEMS NORTHEAST,
Delaware Univ., Newark. Water Resources Center.
R. D. Varrin.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 133-140, 1973. 2 fig, 6 ref.

Descriptors: *Delaware River, *Energy, *Water demand, *Thermal powerplants, *Nuclear powerplants, Electric power demand, Streamflow, Dams, Reservoirs, Reservoir yield.
Identifiers: *Energy-water relationships.

In early 1972, 10 power companies serving the Delaware Valley announced plans to construct 11 nuclear power stations. In addition, 6 new conventional generating stations would be built and 10 existing stations would be expanded. These projects were to be completed by 1986 and have a total generating capacity of 87,000 megawatts, nearly three times the present 33,000 megawatts. The estimated future water consumption for power would be 380 million gallons per day, 19 times the present 20 mgd. The Tocks Island project could help provide the necessary low-flow augmentation downstream while allowing New York City to divert its full allocation. In addition, the project would increase the firm water supply and offer significant flood protection. There would also be a pumped storage facility to generate additional power for the basin. The Tocks Island project has been opposed by conservationists for its potential damage to the environment. In addition to the 900 million gallons already authorized for out-of-basin transfer, a downstream flow of at least 3,000 cfs is required to protect the estuary. When the project need for 390 mgd evaporative demand for power is added, there is no way for the total depletive water demand to be met even with Tocks Island and all other developments included. (See also W74-07961) (Knapp-USGS)
W74-07971

REGIONAL ENERGY-WATER PROBLEMS SOUTH ATLANTIC GULF,
Georgia Inst. of Tech., Atlanta. Environmental Resources Center.
L. D. James.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 141-149, 1973. 15 ref.

Descriptors: *Water demand, *Energy, *Electric power demand, Water management(Applied), Municipal water, Industrial water.
Identifiers: *Energy-water relationships.

Water provides a convenient sink for disposing of energy that cannot economically be put to beneficial use. Petroleum, nuclear and other energy-oriented wastes are generated during the processes of fuel extraction, transportation, energy conversion, and residuals disposal; these wastes are often directly or indirectly discharged, accidentally spilled, or washed into streams or aquifers. Water can be used to generate electricity and provides, by far, the most economical means for supply of short-term peak demand loads. Energy is required to operate water supply and water treatment systems. Furthermore, excessive energy use tends to aggravate water pollution problems, and excessive water use tends to burden available energy supplies. Thus, technologies for improving the efficiency fo energy generation, transmission, and utilization and economic and social incentives for reducing low value or unnecessary energy use also have water resources management benefits. (See also W74-07961) (Knapp-USGS)
W74-07972

REGIONAL ENERGY-WATER PROBLEMS, OHIO-GREAT LAKES.
Pennsylvania State Univ., University Park. Inst. for Research on Land and Water Resources.
J. C. Frey.
In: The Role of Wate88in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 150-155, 1973.

Descriptors: *Water demand, *Emergy, *Electric power demand, Water management(Applied), Municipal water, Industrial water, *Great Lakes Region, Ohio.
Identifiers: *Energy-water relationships.

The four major energy-water related problems in the Ohio-Great Lakes Region are: thermal pollution from a shift to nuclear energy; coal mine drainage from an expanded use of coal for energy; nonpoint pollution from an expanded output of energy-producing farm crops; and navigation and other flow resource developments. Shifts from one source of energy to another transfer the burden of pollution from one natural resource to another. Rule out high sulfur coal to protect the air, and the replacement with nuclear fuel becomes an environmental threat to streams and lakes. Switch to the strip mining of low sulfur coal, and the burden of environmental deterioration is transferred to the land. Try geothermal fluids for power and the discharge of brine presents once again a water quality problem. (See also W74-07961) (Knapp-USGS)
W74-07973

REGIONAL ENERGY-WATER PROBLEMS, MISSOURI RIVER,
North Dakota State Univ., Fargo. Water Resources Research Inst.
D. O. Anderson.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 156-164, 1973. 1 fig, 4 ref.

Descriptors: *Water demand, *Energy, *Electric power demand, Water management(Applied), Municipal water, Industrial water, *Missouri River basin, Water pollution sources.
Identifiers: *Energy-water relationships.

Coal development in the Northern Great Plains during the next 20 years will be extensive. Montana, North Dakota and Wyoming all have extensive coal resources. The Fort Union coal beds which underlie a large area of northeastern Wyoming, southeastern Montana and western North Dakota appear to offer the greatest potential for development. The Fort Union reserves account for 40% of the total United States coal reserves and as much as 90% of the low-sulfur reserves. Total Fort Union reserves have been estimated at 1.3 trillion tons. Given the present state of technology and demand for energy, it is estimated that more than 60 billion tons predicted to be available in the three states are economically strippable. While there is probably sufficient water available in most areas to meet the requirements of mining and reclamation activities, there is insufficient ground and surface water in the major coal rich areas to meet the requirements of large-scale conventional electric generation or coal gasification and liquefaction facilities. Since many coal seams in the West are aquifers, strip mining for coal will inevitably disrupt groundwater patterns in those areas. This will affect the quality and quantity and even availability of water. Mining may also disrupt natural drainage networks, and thereby disrupt downstream water rights. The potential effects of disposing of wastes of coal conversion plants in the ground and surface hydrosphere are shown. (See also W74-07961) (Knapp-USGS)
W74-07974

REGIONAL ENERGY-WATER PROBLEMS, PACIFIC NORTHWEST,
North Dakota State Univ., Fargo. Water Resources Research Inst.
C. C. Warnick.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 165-178, 1973. 5 fig, 2 tab, 4 ref.

Descriptors: *Water demand, *Energy, *Electric power demand, Water management(Applied), Municipal water, Industrial water, *Pacific Northwest U.S.
Identifiers: *Energy-water relationships.

The hydropower potential of the Northwest U.S. is about exhausted. This has been worsened by the fact that in the Northwest society does not want any more large dams. More critical in the Pacific Northwest is the fact that the region is suffering a record low in streamflow runoff. This comes following some very high years of runoff that conditioned society to not anticipate such a crisis. Contributing to the problem is the fact that nuclear and fossil fuel plants programmed for increased production are behind schedule and have had operating problems. (See also W74-07961) (Knapp-USGS)
W74-07975

REGIONAL ENERGY-WATER PROBLEMS, SOUTHERN PLAINS,
Texas A and M Univ., College Station. Water Resources Inst.
J. R. Runkles.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 179-191, 1973. 5 tab, 11 ref.

Descriptors: *Water demand, *Energy, *Electric power demand, Water management(Applied), Municipal water, Industrial water, *Great Plains.
Identifiers: *Energy-water relationships, *Southern Great Plains.

The states of the Southern Plains Region play an important role in the nation's energy problems. These states are a major source of the domestic supply of oil and natural gas resources and are a major consumer of electrical energy. Each state in the region is experiencing a rapid growth in the industrial and urban sectors and the associated increased demand for energy. Substantial quantities of water are needed to produce oil and natural gas resources. In the Southern Plains Region, 8,225 million gallons of water per day are used for electric power generation. The Federal Power Commission estimates that to the year 1990, the condenser requirement for water will increase about six times and the consumptive use of water will increase about five times over the period 1965-1990. (See also W74-07961) (Knapp-USGS)
W74-07976

REGIONAL ENERGY-WATER PROBLEMS--COLORADO RIVER-GREAT BASIN,
Colorado State Univ., Fort Collins. Environmental Resources Center.
N. A. Evans.
In: The Role of Water in the Energy Crisis; Proceedings of a Conference at Lincoln, Nebr, October 23-24, 1973: Nebraska Water Resources Research Institute Publication, p 192-194, 1973.

Descriptors: *Water demand, *Energy, *Electric power demand, *Colorado River basin, Water management(Applied), Municipal water, Industrial water.
Identifiers: *Energy-water relationships.

A large portion of the nation's uranium deposits are contained within the Colorado River Basin. Geothermal resources are known but not fully inventoried. It is thought that most of this energy is associated with saline waters which present disposal problems. Power generation by coal requires around 15 acre-feet per megawatt. With 30,000 MW coal generation expected by 1990, the water demand in the Basin for this purpose will be 450,000 acre-feet per year. This amount of water is available within the various state allocations from the Colorado River. An oil shale operation producing one million barrels per day will require 120,000 acre-feet of water per year. To that requirement must be added approximately 4,000 acre-feet per year which will be required to sustain vegetation on reclaimed land and shale residue This amount of water is expected to be available from that reserved by the federal government, although claimed federal rights are in dispute. Nuclear stimulation of natural gas reservoirs has a very small water requirement. The impact of this potential energy source on water supplies can be considered nil. In general, state policies on energy resource development are lacking. The intermingled land ownership creates multi-jurisdictional problems because energy resources do not follow jurisdictional boundaries. The issue is how to obtain harmony in land use regulation. Environmental guidelines are needed which will protect the land and water resources. (See also W74-07961) (Knapp-USGS)

INDUSTRIAL APPLICATION OF WHITFORD'S DEMAND FORECASTING PROCEDURE,
Southern Methodist Univ., Dallas, Tex. Inst. of Tech.
M. A. Collins, and A. H. Plummer, Jr.
Water Resources Research, Vol 10, No 2, p 345-347, April 1974. 2 fig, 15 ref.

Descriptors: *Water demand, *Forecasting, *Probability, *Industrial water, *Water quality, Planning, River basins, Information, Cooling, Electricity, Water utilization, Mathematical models, Systems analysis, *Texas.
Identifiers: *Steam-electric power generation, *Trinity River Basin(Tex.).

A probabilistic method developed by Whitford (1972) for residential water demand forecasting is applied to water demand for steam-electric power generation in the Trinity River basin in Texas in order to reduce reliance upon single isolated estimates of future demand. The forecast of water demand for cooling purposes in the production of electricity has been necessary as part of an overall assessment of the impact of water use on future water quality conditions in the basin. The resulting time-dependent cumulative probability distributions provide useful information for water quality planning in the basin. It is suggested that this probabilistic approach has significant advantages that warrant its further refinement. (Bell-Cornell)

TATE ORGANIZATION FOR WATER ESOURCES MANAGEMENT,
eorgia Inst. of Tech., Atlanta. Environmental esources Center.
. R. Elmore, Jr.
vailable from the National Technical Informa-on Service as PB-232 142, $11.00 in paper copy, .45 in microfiche. Report No ERC-0472, May 72, 143 p, 2 fig, 7 tab, 97 ref, 2 append.

escriptors: Management, *Georgia, Administra-ve agencies, *Institutions, Institutional con-raints, *State governments.
entifiers: *State water agencies, Public adminis-ation, State water program, *Administrative or-nization.

esponsibilities of the states for water resources anagement have been increasing to meet the eeds of the public and the requirements of ederal programs. Georgia is a state with abundant ater resources but the minimum attention it gives water resources management has proven un-tisfactory to those who desire a more com-rehensive and coordinated effort. The organiza-onal structure of resources agencies in Georgia as appeared to impede coordination and com-rehensive management. While reorganization eems necessary for improved State programs, sagreement exists over the appropriate organiza-onal structure and over the importance of or-anizational structure to achieving better water esources management. The natural resources or-anizational structure of Georgia is compared to at of five other states in terms of a research odel from public administration theory. An ideal ate water resources program is outlined, applied Georgia's situation, and used to examine the ef-ct of organizational structure on water resources rograms. Although available techniques of analy-s and data are not sufficient to define organiza-onal structure as cause and program as effect, e structural forms recommended by public ad-inistration theory are regularly associated with ore highly developed programs. Shortcomings of eorgia's water resources programs which appear be related to organization are interagency con-ict, ineffective leadership from the governor, dif-culty in adapting to change, and the omission of rograms for water resources planning, flood pro-ction, dam safety and water rights. Possibilities r improvement are discussed. (See also W69-0331) (James-Georgia Tech)

THE COLUMBIA INTERSTATE COMPACT: POLITICS OF WATER RESOURCES IN THE PACIFIC NORTHWEST,
Washington State Univ., Pullman. Dept. of Political Science.
P. Beckett, and H. R. Doerksen.
Available from the National Technical Information Service as PB-232 255 $3.00 in paper copy, $1.45 in microfiche. Completion Report, January 1973. 14 p. OWRR A-055-WASH(3). 14-31-0001-3848.

Descriptors: *Regional development, Administrative agencies, *Columbia River, Intergovernmental relations, *Pacific Northwest U.S., Washington, Water resources development, Interstate compacts, *Political aspects.

The Columbia Interstate Compact represented an attempt to establish a regional institutional mechanism for river basin development. After seven Pacific Northwest states spent 18 years negotiating the Compact, and five attempts were made to ratify the Compact in the state legislatures, Oregon and Washington had not ratified. This study is in essence a history of the Compact negotiations, describing the efforts of the seven states in the context of the political environment in which the Compact was negotiated. Several factors which contributed to the ultimate dissolution of the negotiating effort are analyzed in some depth. First, role perception (sense of negotiating objectives) of Compact commissioners varied substantially from state to state and within states in a period of time when attitudes related to river basin development were typically strong and polarized. Second, the negotiating environment changed in such a way as to reduce the perceived need for a Compact. Finally, financial crisis, after Washington and Oregon discontinued financial support of the effort, forced the Compact Commission to close its office. The most devasting defeat of the Compact attempt came in the Washington Legislature. There the Compact became embroiled in the existing conflict regarding power generation and marketing. Although the Compact effort may be dead, most issues with which it dealt, including allocation of water, reservation of power for states in which a dam is constructed, and out-of-basin diversion, are very much alive.

A BILL TO AUTHORIZE THE SECRETARY OF THE INTERIOR TO ENGAGE IN FEASIBILITY INVESTIGATIONS OF CERTAIN POTENTIAL WATER RESOURCE DEVELOPMENTS.
Senate Bill 3959, 92nd Cong., 2d Sess. (October 1972). 2 p.

Descriptors: *Water resource development, *Legislation, *Potential water supply, *Feasibility studies, Ground water resources, United States, Oklahoma, North Dakota, South Dakota, Montana, Colorado, New Mexico, Optimum development plans, Planning.

This bill passed the Senate after being amended on October 2, 1972. The bill authorizes the Secretary of the Interior to engage in feasibility investigations of certain potential water resource developments. The bill as introduced only included areas in southwestern Oklahoma and central North Dakota. The bill was amended in the Senate to include projects in South Dakota, Montana, Colorado and New Mexico. The bill was referred to the House Committee on Interior and Insular Affairs. (See also W74-07284) (Daniels-Florida)

During the first years of growth of the Soviet state, the government devoted its attention to the need for a detailed study of the country's water resources. In 1919 the Russian Hydrologic Institute (renamed the State Hydrologic Institute in 1926) was organized as the central scientific establishment in the field of hydrology. In 1921 preparations began to convene the First All-Russian Hydrologic Congress, which was held May 7-14, 1924. The Second All-Union Hydrologic Congress was held April 20-27, 1928 and the Third Congress, October 7-17, 1957. All of the Congresses were held in Leningrad. The Fourth All-Union Hydrologic Congress was convened in Leningrad in October 1973 to discuss current problems of modern hydrology connected with implementation of measures on rational use of water resources of the USSR and their protection from pollution and depletion. Attention was focused on theoretical and procedural problems of hydrology; experimental investigations and techniques of mathematical simulation of hydrologic processes; requirements for accuracy of measurements; methods of calculation and forecasting of items of the hydrologic regime; estimation of quantitative and qualitative changes in water resources and items of the hydrologic regime under the influence of economic activity. Scientific papers on individual aspects of hydrology were discussed at 9 sessions of the congress: (1) water balance and runoff calculations; (2) hydrologic problems of water management; (3) hydrologic forecasts; (4) surface-groundwater relationships; (5) hydrology of lakes, reservoirs, and estuaries; (6) water quality and scientific principles of water conservation; (7) channel processes; (8) hydrometry and keeping of state records on water; and (9) hydrophysics. At plenary sessions of the congress, general papers were presented on the basic problems of hydrology. (Josefson-USGS)

Cornell Univ., Ithaca, N.Y. Water Resources and Marine Sciences Center.
R. T. Oglesby, and J. D. Parkes.
Available from the National Technical Information Service as PB-232 227, $3.25 in paper copy, $1.45 in microfiche. Technical Report 74, August 1973. 24 p, 9 fig. OWRR A-048-NY(1). 14-31-0001-3832.

Descriptors: *Freshwater, *Research facilities, *Evaluation, *Design, Aquatic environment, Ecology, Planning, Architecture, Information exchange.
Identifiers: *Public information.

The process of designing a research and public information center related to aquatic ecology should involve the following components: (1) The formation of a design 'team' whose key members are an aquatic ecologist and an architect, (2) education of the 'team' and development of communication between the scientist and architect, (3) location of a site, (4) definition of the functional objectives of the facility, and (5) prescription of functional relationships and space needs for the various parts of the facility. An example of the design process is provided and this includes a discussion of planning rationale, sketches of functional relationships, schematic building elevations, cross section and floor plan, and an architectural rendering. The present status of design for freshwater facilities is briefly reviewed and the need for new concepts to meet the present and future requirements of aquatic ecologists emphasized.

THE STATE OF THE SYSTEM (SOS) MODEL: MEASURING GROWTH LIMITATIONS USING GEOLOGICAL CONCEPTS,
Chase, Rosen and Wallace, Inc. Alexandria, Virginia
E. R. Williams, and P. W. House.
Copy Available from GPO Sup Doc as EP1.23:660/5-73-013, $3.45; microfiche from NTIS as PB-232 941 $1.45. Environmental Protection Agency, Environmental Study Series Report EPA-600/5-73-013, February 1974. 344 p, 61 fig, 27 ref, 9 append. EPA Program Element 1HA096. Contract GS-03S-38351.

Descriptors: *Simulation analysis, Regional economics, Ecology, Economics, Input-Output analysis, *Resource allocation, *Carrying capacity, *Model studies, *Ecosystems, Systems analysis, Methodology, Measurement.

The State of the System (SOS) Model is the result of an attempt to develop a methodology that relates ecological concepts including regional carrying capacity to the social scientists' concepts of regional growth and development, and quality of life. SOS should be considered at this time as only a cenceptual research tool. The initial operational model, SOS-1, was developed to investigate details of the results predicted by the theory and to explore data requirements and needs. Therefore, the results of the model runs provided are purely illustrative and should be interpreted using extreme care. The SOS Model began as an attempt to provide an example form a constrictor model of the Decision Analysis System (DAS) to be used in conjunction with the General Environmental Model (GEM). It is intended that the later developments of SOS should complete this development as a constrictor model within DAS as well as continue its refinement as a stand-alone analysis tool. The model, as given in the SOS-1 form, is flexible and new data and algorithms can be substituted with relative ease. In order to maintain this ease in later, more complex versions, segmentation of its procedures into smaller modules would be useful. Such a form will increase the utility of SOS as an educational and research tool. (EPA)

RESEARCH TO DETERMINE THE ENVIRONMENTAL RESPONSE TO THE DEPOSITION OF SPOIL ON SALT MARSHES USING DIKED AND UNDIKED TECHNIQUES.
Skidaway Inst. of Oceanography, Savannah, Ga.
Available from the National Technical Information Service as AD-763 920. Army Corps of Engineers. Report March 1973. 189 p. 25 fig, 46 tab, 9 ref. DACW-21-71-C-0020.

Descriptors: *Sediments, *Environmental effects, *Disposal, *Dredging, *Deposition(Sediments), *Spoil banks, Salt marshes, Dikes, Water quality, Channel improvement, Fish, Invertebrates, Benthic fauna, Hydraulic equipment, Biota, Vegetation regrowth, North Carolina, South Carolina, Georgia, Marsh plants, Nutrients.
Identifiers: *Spoil disposal, Spartina alterniflora, Hydraulic dredges, Brunswick Harbor(Ga.), Terry Creek(Ga.), Little Mud River(Ga.), Cooper River(S.C.), Cape Fear River(N.C.).

Environmental effects of hydraulic pipeline dredging where spoil material is deposited on marsh areas were studied. Some of these areas are diked to confine the spoil material, some are not. Relative merits of these techniques on the basis of ecological and water quality considerations were determined as the biological aspects are significant to any type of dredging. Water quality changes during dredging operations cannot be predicted on the basis of simple bulk chemical analysis of sediments to be dredged. Since ammonia is the constituent released to the greatest extent during dredging, macrophyte succession within spoil areas must be considered. No effect of dredging on standing crops of species composition in areas having undiked spoil banks was observed. In one diked area examined, there was some indication that numbers of individuals and species were reduced following dredging for about two months. Studies concerned with regeneration of Spartina salt marshes dealt with ways of transplanting Spartina springs and with establishing successful methods of seed germination to help accelerate revegetation and lead to utilization of dredge spoil material for new salt marsh areas. 7A. Network Design

A GROUND-WATER MONITORING NETWORK FOR KOOTENAI FLATS, NORTHERN IDAHO,
Geological Survey, Boise, Idaho.
N. P. Dion, and R. L. Whitehead.
Idaho Department of Water Administration Water Information Bulletin No33, December 1973. 41 p, 10 fig, 1 tab, 6 ref, 2 append.

Descriptors: *Water levels, *Reservoirs, *Alluvium, *Idaho, *Surface-groundwater relationships, Observation wells, Water level fluctuations, Instrumentation, Network design, Monitoring.
Identifiers: *Kootenai Flats(Idaho).

To measure the effects of the new river-stage regulation on the groundwater system, a network of 82 shallow and two deep observation wells was established on the Kootenai flats, Idaho, in 1971. The water table in the fine-grained sediments of the Kootenai flats area is very shallow and is influenced in part by the stage of the Kootenai River. The operation of newly built Libby Dam, near Libby, Montana, will change the long established patterns of river-stage and, consequently, of water-table fluctuations. This report also describes the nature and availability of the information that was collected as part of earlier investigations. A comparison of the groundwater levels measured during 1930-54 with the few levels measured in the new observation wells indicates that no significant trends in water levels have occurred in the area between 1954 and 1973. A. G. Kovzel'.
Meteorologiya i Gidrologiya, No 10, p 110-122, October 1973. 18 ref.

Descriptors: *Hydrology, *International Hydrological Decade, *Data collections, Foreign countries, Networks, Stations, Basins, Demonstration watersheds, Water balance, Floods, Conferences, Publications, History.
Identifiers: *USSR, United Nations Educational, Scientific, and Cultural Organization(UNESCO), World Meteorological Organization(WMO).

International cooperation of hydrologists after the framework of the International Hydrological Decade (IHD) is reviewed. Purposes and goals of IHD, the IHD station network of the USSR and of

he world, IHD investigations of water balance nd floods of representative and experimental asins, and the future of the international ydrological program are discussed. The interna- ional network of IHD stations presently consists f 1,493 river hydrometric stations, 263 lake sta- ions, 647 evaporation stations, 132 lysimeter sta- ions, and 204 experimental and 584 representative asins. Groundwater-level observations are being onducted at 1,600 IHD observation wells. IHD iver-station density for the world averages 1 per 00,000 sq km. In individual countries this density aries widely. In Czechoslovakia, station density s 1 per 2,000 sq km; in Rumania, 1 per 10,000 sq m; in Spain, 1 per 30,000 sq km; in the USSR, 1 er 45,000 sq km; in the United States, 1 per 0,000 sq km; and in Brazil, 1 per 140,000 sq km. n countries of Equatorial West Africa, this densi- y ranges from 1 station per 17,000 sq km in Ghana nd Cameroon to 1 station per 100,000 to 200,000 q km in Senegal, the Niger Republic, Nigeria, Mali and Chad, and 1 station per 300,000 sq km in India and Australia. The network of IHD stations n the Soviet Union includes 327 river stations, 30 ake stations, 40 evaporation stations, 59 lysimeter stations, 19 experimental and 188 representative basins, and 400 groundwater observation wells, of which 233 are located in representative and experi- mental basins. Since 1968, annual meetings have been held among representatives of national IHD committees of Bulgaria, Hungary, the GDR, Po- land, Rumania, the USSR, and Czechoslovakia for mutual exchange of information on the course of national IHD programs. STATE RECORD KEEPING ON WATER AND ITS USAGE AND HYDROLOGIC CALCULATIONS AND FORECASTS (GOSUDARSTVENNYY UCHET VOD I IKH ISPOL'ZOVANIYA I GIDROLOGICHESKIYE RASCHETY I PROGNOZY),
Hydrometeorological Service of the USSR, Moscow.
S. K. Cherkavskiy.
Meteorologiya i Gidrologiya, No 10, p 18-26, October 1973. 2 fig.

Descriptors: *Data collections, *Hydrologic data, *Water utilization, *Water resources, *Forecasting, Water users, Water consumption(Except consumptive use).
Identifiers: *USSR.

Hydrologic data collection in the USSR is based upon principles established in 1973. It consists of unified systems of gathering and processing information for a USSR state water survey. All water bodies in the USSR constitute a single state water supply consisting of (1) rivers, lakes, reservoirs, other surface bodies of water, and water sources, and waters of canals and ponds; (2) glaciers; (3) groundwater; (4) inland seas and other inland sea waters of the USSR; and (5) territorial waters (territorial seas) of the USSR. This unified system of data collection and its usage is designed to obtain reliable and exhaustive data on quantity and quality of surface waters and groundwater, their regimes, and use. Between 1940 and 1970, total water consumption by main branches of the national economy increased by more than 4 times, industry by more than 8 times and agriculture by almost 3 times. Water consumption in agriculture occupies more than 60% of the total water consumption. According to forecasts by Gidroproyekt (All-Union Experimental Design and Planning Scientific Research Institute im. S. Ya. Zhuk) the volume of water consumed in the USSR will approximately triple by the year 2000. Data flow in the unified state system for record keeping on water and its use, and structure of the USSR state water survey are diagrammed. (Josefson-USGS)

THE ELECTRICAL RESISTIVITY METHOD (PART I),
Keck Consulting Services, Inc., East Lansing, Mich.
R. C. Minning.
Water Well Journal, Vol 27, No 6, p 17-21, June, 1973. 3 fig. (Technical Memo No 3).

Descriptors: *Electrical resistivity, Porosity, Conductivity, *Rock properties, Exploration, Ground water resources, *Groundwater potential, Equipment, Geophysics, On site investigation, *Subsurface investigations, *Remote sensing.
Identifiers: Clays, Shales, Limestones, Granites, Apparent resistivity.

The electrical resistivity method is rapidly gaining acceptance as a technique for use in the search for ground water supplies. The method offers a faster, more economical means of exploring the subsurface than is generally possible through direct exploration by drilling. Furthermore it is based on sound, well-established physical principles and can be used by anyone. Earth materials all have their own characteristic resistance to the flow of electric current. In general, resistivity decreases as porosity, water content, and water conductivity (salinity) increase. This principle provides a basis for distinguishing between various types of subsurface materials. Fine-grained sediments, such as clays and their bedrock counterpart the shales, have low resistance to current flow. Resistivity values for such materials generally fall in the range of 20 to 200 ohm-ft (ohm-ft being the unit of resistivity). Coarser grained sediments such as sands and gravels have higher resistivities, in the order of 200 to 2,000 ohm-ft. Weathered bedrock surfaces and secondary porosity such as faults, fractures, and solution openings, tend to lower these values. Methods for determination and interpretation of electrical resistivity values are presented. (Hunt-NWWA)

Descriptors: *Exploration, *Remote sensing, Locating, *Prospecting, Groundwater, Terrain analysis, Subsurface investigations, Evaluation, *Surveys.
Identifiers: *Thermal studies, Heat picture, *Infra-red studies, Thermal variation.

Thermal infra-red studies of ground and water by use of an air-borne scanner produce a heat picture of that area of the earth's surface scanned by the instrument. Tonal patterns depict thermal variations as small as 0.5C, but thermal infrared imagery is effective only at the terrain surface with negligible penetration. This tool is useful in hydrologic studies because of the exceptionally high specific heat of unity for water relative to other materials. Among its numerous applications are the following: surveying for leakage of water from dams and reservoirs; monitoring the flow of water through porous material; detection of subterranean streams and near surface water which may be reflected as cool areas at valley bottoms or topographic lows where there is no visible surface evidence of such phenomena. It is also possible, by studying the geological structures revealed in this way, to determine which areas are more likely to be productive of groundwater. (Campbell-NWWA)

A DATA ACQUISITION SYSTEM FOR ECOLOGICAL FIELD STUDIES,
Oak Ridge National Lab., Tenn.
C. D. Martin, J. T. Hutton, and R. L. Simpson.
Available from the National Technical Information Service as CONF-730419-1, $3.00 in paper copy, $1.45 in microfiche. Atomic Energy Commission, Oak Ridge, Tenn. (Undated report). 4 p. 2 fig, 3 ref.

Descriptors: *Data collections, *Automation, *Telemetry, Water levels, Stream gages, Computers, Rainfall, Runoff, Tennessee.
Identifiers: Oak Ridge(Tenn.).

In an ecology field study area near the Oak Ridge National Laboratory, rainfall and streamflow are routinely monitored using automatic precipitation recorders and water-level (stage height) recorders. A small computer-based data aquisition system was designed to monitor the field sensors, detect possible sensor failures and produce alarms, record data on magnetic tape for further processing by another computer, and produce daily logs of rainfall and stream runoff. Because of the relative inaccessibility of the field area, located about five miles from the laboratory, the computer was installed inside the plant area, and data are telemetered to the computer. This automated data acquisition system consisting of a minicomputer with standard and custom interfaces, was designed to acquire data remotely. The individual data recorders on the existing sensors were retained to provide redundancy to ensure that data are gathered even if the computer system

should fail due to lightning. The automated system provides oniline data acquisition, allowing current data to be always available to scientific investigators. The system also records data on magnetic tape for daily analysis on a larger computer, prints a daily summary of monitored activity, and prints alarm messages announcing any field system malfunctions. Identifiers: *USSR(Lake Baykal).

Possibilities of utilizing information from artificial earth satellites for hydrologic purposes are examined. TV images from artificial earth satellites are interpreted to study snow cover, ice conditions in lakes, and hydrographic features. Prospects are envisaged for development of methods of interpretation of TV images from artificial earth satellites to solve problems associated with evaluation of water resources, water regime, and water quality. A photograph transmitted from the Apollo-502 spacecraft shows the flood plain of the Senegal River in West Africa (ground resolution is 15-30 m). Ice conditions in Lake Baykal were mapped by the Meteor-10 artificial earth satellite in January 1973. (Josefson-USGS)

G. G. Jamison.
Basic-Data Report, 1973. 208 p, 2 fig, 3 ref.

Descriptors: *Hydrologic data, *Nebraska, *Surface waters, Streamflow, *Data collections, Stage-discharge relations, Gaging stations, Reservoirs.

The surface-water records for the 1972 water year for gaging stations, partial-record stations, and miscellaneous sites in the State of Nebraska are given. The base data collected at gaging stations consists of records of stage and measurements of discharge of streams or canals, and stage, surface area, and contents of lakes or reservoirs. In addition, observations of factors affecting the stage-discharge relation or the stage-capacity relation, weather records, and other information are used to supplement base data in determining the daily flow or volume of water in storage. At or near some gaging stations, water-quality records are collected. Data are obtained on the chemical quality of the stream water, on water temperature, on suspended-sediment concentration, and on the particle-size distribution of suspended sediment and bed material. GROUND-WATER LEVELS IN OBSERVATION WELLS IN KANSAS, 1966-70,
Geological Survey, Lawrence, Kans.
M. E. Broeker, and J. M. McNellis.
Kansas Geological Survey Basic Data Series, Ground-Water Release No 3, 1973. 373 p, 19 fig, 3 tab, 17 ref.

Descriptors: *Water levels, *Kansas, *Water wells, Water table, Groundwater, *Data collections, *Hydrologic data, Water level fluctuations, Observation wells.

Water-level measurements were made in selected wells in 83 counties in Kansas during 1966-70. Water levels in most of Kansas responded primarily to normal seasonal fluctuations in recharge and discharge during 1966-70. However, water levels continued to decline in parts of western Kansas where annual groundwater withdrawals for irrigation plus natural discharge exceed the annual recharge from precipitation. HYDROLOGIC DATA FOR 1972, BROWARD COUNTY, FLORIDA,
Geological Survey, Tallahassee, Fla.
H. W. Bearden.
Open-file report 74005, 1974. 97 p, 42 fig, 5 tab, 16 ref.

Descriptors: *Hydrologic data, *Surface-groundwater relationships, *Florida, Aquifiers, Canals, Data collections, Recharge, Water management(Applied).
Identifiers: *Broward County(Fla).

This report is the second of an annual series presenting hydrologic data in Boward County, Florida. The hydrologic data for the 1972 water year are compared with long periods of records from rainfall, groundwater, surface-water, and water-quality stations. The canal network plays an important role in water management in the county. Flow in primary canals is regulated daily to maintain groundwater levels and storage and to provide flood protection. During the wet season, water is discharged from the aquifer to the canal system. During the dry season, water is transported through the canal system from the conservation areas for aquifer recharge. Water-level fluctuations in the aquifer are monitored in 79 wells. A continuous record of stage and discharge is obtained from seven stream-gaging stations in canals. Tidal fluctuations are recorded at 4 stations. Samples are collected semiannually at 27 sites in primary canals. The average annual rainfall in Broward County is 58.46 inches. Rainfall was 62.24 inches during the 1972 water year. Water levels in the aquifer were about average. Flow in all the major canals except Middle River, Plantation and Snake Creek during the 1972 water year was far below the average. Total coliforms exceeded the permissible limits for Class III waters and waters for public supply in most canals. All public supplies in Broward County are derived from wells in the Biscayne aquifer. During 1972 the seven largest suppliers pumped 29.157 billion gallons, a decrease of 0.227 billion gallons from 1972. (Knapp-USGS)

DATA ON FRESH-WATER INFLOW, APRIL 14-JULY 28, 1973, FOR ANALOG-MODEL STUDY OF THE HOUSTON SHIP CHANNEL, HOUSTON, TEXAS,
Geological Survey, Houston, Tex.
C. A. Heinrich, and C. E. Ranzau, Jr.
Open-file report, April 1974. 11 p, 2 fig, 4 tab.

Descriptors: *Discharge(Water), *Texas, *Hydrologic data, Data collections, Streamflow, *Model studies, *Analog models.
Identifiers: *Houston Ship Channel(Tex).

Total freshwater inflow from surface channels and from direct precipitation on water surfaces into the Houston Ship Channel and Galveston Bay were determined for a model study of Houston Ship Channel, Houston, Texas. Daily discharges

were computed at 14 model discharge stations for the period April 14 to July 28, 1973. The mouth of each major tributary to the Houston Ship Channel and Galveston Bay was designated as a model discharge station. Streamflow and rainfall on the stream surface was projected to these stations on the basis of nearby gaged streamflow and measured rainfall. (Knapp-USGS)

QUANTITY AND QUALITY OF SURFACE WATER IN MARION COUNTY, FLORIDA,
Geological Survey, Tallahassee, Fla.
W. Anderson, and G. L. Faulkner.
Florida Dept. of Natural Resources, (Tallahassee), Bureau of Geology Map Series No 55, 1973. 1 sheet.

Descriptors: *Streamflow, *Surface waters, *Florida, *Water quality, Water balance, Lakes, Springs, Karst hydrology, Discharge(Water), *Maps.
Identifiers: Marion County(Fla), Oklawaha River(Fla).

Surface water is abundant around much of the periphery of Marion County, Florida, and along the Oklawaha River, which flows from south to north through the east-central part of the county. Surface water is sparse elsewhere in the county because, with a few exceptions, rainfall infiltrates the sandy soils too rapidly to run off or accumulate in depressions. Thus, only about 25% of Marion County is subject to direct surface drainage, and the remainder is drained through the subsurface. The Floridan aquifer stores the water while transporting it to two major discharge points, Silver Springs and Rainbow Springs, and several lesser discharge points within the county. Nearly all the spring flow leaves Marion County by way of the Oklawaha River, Blue Run, Juniper Creek, and Salt Springs Run. The annual rainfall on Marion County averages 53.2 inches, an average of about 4.1 bgd. About 240 mgd enter the county from the south in the Oklawaha River and a net input of about 440 mgd flows into the county in the Floridan aquifer. Most water in streams in Marion County, and to a lesser degree in lakes, is of the calcium and magnesium bicarbonate type, meaning that the principal dissolved solids in the water come from the limestone and dolomite present in many places near the land surface and which make up the Floridan aquifer. The mineral content of streams in Marion County ranges from 20 mg/liter to more than 400 mg/liter. (Knapp-USGS)

THE DESIGN, PLANNING AND CONSTRUCTION OF A 45 INCH DIAMETER WATER MAIN ACROSS A CONGESTED AREA OF WEST BROMWICH,
South Staffordshire Waterworks Co. (England). Distribution Dept.
D. E. Burgess.
Journal of the Institution of Water Engineers, Vol 27, No 7, p 365-376, October, 1973. 3 figs.

Descriptors: *Design criteria, *Project planning, *Sewers, Construction materials, *Steel pipes, Testing.
Identifiers: *Pipe bridges, Thrust bores, *United Kingdom(Bromwich).

Described are the design, planning, and construction of a 1145 mm nominal diameter steel water main laid through the County Borough of West Bromwich. The design of the main, which includes pipe bridges over the river Tame and the Walsall Canal, and two thrust bores, is explained and the problems encountered during construction are described. The main was tested in three sections. On completion, of testing the main was drained down and the end connections were then completed. The main was recharged and brought into commission after samples had been chemically tested. (Sanduski-Franklin)

E. B. Rogers, Jr.
Oil and Gas Journal, Vol 69, No 47, p 64-65, 68, November, 1971. 2 fig, 5 tab, 36 ref.

Descriptors: *Wells, Sands, Fine aggregates, Well filters, *Screens, Epoxy resins, *Adhesives, Coatings, Binders, Economics, Costs, *Installation costs.
Identifiers: Chemical-consolidation, *Gravel packs, Sand consolidation, *Sand control.

Several variations, innovations, and combinations of gravel-packing and chemical-consolidation methods of sand control are described. Injection-time estimates for consolidation processes and rig-time requirements for installation of sand-control devices are presented. The cost of installing sand control varies with the method, zone length, depth of well, and location of well. Economics of screens, gravel-packing, and sand consolidation are compared, as well as the advantages and disadvantages of each. (Staplin-NWWA)

SOUTH DAKOTA STANDARDS FOR CONSTRUCTION OF IRRIGATION WELLS IN SHALLOW UNCONSOLIDATED GLACIAL SEDIMENTS,
South Dakota State Univ., Brookings. Inst. of Irrigation Technology.
F. F. Kerr, J. L. Wiersma, D. L. Moe, and S. W. Black.
Cooperative Extension Service Circular No 675, 1969. 8 p, 2 tab, 2 append.

Descriptors: *Wells, *Groundwater, *Irrigation wells, *Construction, *Construction materials, Concretes, Screens, Casings, Water quality, Test wells, *South Dakota.
Identifiers: Well development, Well abandonment, *Well construction standards, Glacial sediments, Gravel packs.

These irrigation well standards include many accepted practices and techniques presently in use in South Dakota and in other states, and give contractees and contractors standards to gauge quality of irrigation well construction. Topics include: test drilling; drilling the well hole; well casings, both concrete and metal; well screens, concrete and metal; gravel packs; well development; well sealing and abandonment; chlorination of wells; and determination of water quality. Also, sample forms are included for recording well completion and test pumping data. (Staplin-NWWA)

IRRIGATION WELL CONSTRUCTION.
South Dakota State Univ., Brookings. Inst. of Irrigation Technology.
Dept. of Agriculture, Cooperative Extension Service, Publication No FS 411, 1968. 5 p, 3 fig, 2 tab.

Descriptors: Groundwater, Wells, *Construction, *Irrigation wells, *Irrigation design, Casing, Well screens, Water permits, *Well regulations, *Drawdown, Water level, Test wells.
Identifiers: Static water level, Air line, Driller responsibilities, Driller qualifications.

Good irrigation well construction is described. Test hole drilling is necessary to locate a water-bearing formation and to determine the quantity and quality of water available. A gravel-packed well is described and reasons for its use are given. Selecting proper casing and screen diameter is discussed and the use of an air line for measuring static water level and drawdown is described. Legal requirements for drilling, the driller's responsibilities in the design, construction, and development of the well, and the qualifications of a reliable irrigation well driller are also presented. PREVENTION OF DAMAGE TO PIPELINES.
National Transportation Safety Board, Washington, D.C.
Available from NTIS, Springfield, Va. 22151, as PB-222 014 Price $3.75 printed copy; $1.45 microfiche. Report NTSB-PSS-73-1, June 1973. 32 p, 8 fig, 42 ref, 3 append.

Descriptors: *Pipelines, Damages, *Safety, Construction, *Reviews, Regulation, Legislation.
Identifiers: *Damage control, *Damage prevention.

Prevention of damage to gas and liquid pipelines caused by excavation and construction activities, including blasting, is reviewed. Several recent damage-related pipeline accidents are described, and Federal, State, and industry statistics are provided in order to illustrate the scope of the problem. The damage-prevention responsibilities of excavators, contractors, and pipeline operators are described. Programs, methods, and devices which have proven effective in preventing damage to pipelines are reviewed as are laws and proposed laws in several States and local communities. A model statute issued by the Office of Pipeline Safety of the U.S. Department of Transportation is discussed. (Knapp-USGS)

E. S. Melsheimer.
Available from NTIS, Springfield, Va. 22151, as AD-762 553 Price $3.00 printed copy; $1.45 microfiche. Technical Report H-73-6, June 1973. 19 p, 7 fig, 15 plate, 11 photo.

Descriptors: *Hydraulic models, *Spillways, *Outlets, Outlet works, Drops(Structures), Gates, Hydraulics, Hydraulic jump, *Kansas.
Identifiers: Clinton dam(Kan), Fort Scott dam(Kan).

Model investigations of the outlet works for the Clinton and Fort Scott Dams were used for development of satisfactory stilling basins for a wide range if discharges and tailwater conditions. Of particular interest were low-flow conditions in which the invert of the outlet is submerged by tailwater or in which there is a little drop from the outlet portal invert to tailwater. Both studies were conducted with a 1:16-scale model that reproduced a portion of the outlet conduit, the stilling basin, and about 800 ft of the exit channel. Performances of the original design basins for both projects were unacceptable, as unstable hydraulic action and eddy formation occurred in the basins at or near expected tailwaters with flows less than 1600 cfs. In the case of the Clinton Dam study, decreasing the flare of the outlet transition sidewalls and reducing the elevation of the basin floor (type 15 basin) resulted in adequate, if not ideal, performance. Adequate performance of the Fort Scott basin required a decrease in basin width and a reduction in apron elevation (type 7 basin). This basin barely maintained a jump with the design discharge (7370 cfs). Investigation of the 1:5-scale model of the low-flow outlet for the Fort Scott outlet works revealed that the most satisfactory location of the control gate was within and perpendicular to the conduit. With the control gate located at the conduit entrance, the high-velocity jet under the gate was unstable, tending to seal off the conduit at all openings greater than 1 ft. (Knapp-USGS)

WELLS AND PUMPING SYSTEMS FOR DOMESTIC WATER SUPPLIES,
Illinois State Water Survey, Urbana.
J. P. Gibb.
Circular 117, 1973. 17 p, 8 fig, 1 tab, 10 ref, 2 append.

Descriptors: *Water wells, *Domestic water, *Illinois, *Groundwater, Water supply, Planning, Water yield, Water quality, Water pollution control, Water treatment, Potable water, Disinfection.

Basic information is presented on wells and pumping systems used for farm and domestic groundwater supplies. Types of wells and their construction, development, and costs are described. Discussed are the various types of pumps and pressure tanks, how to select them, and their costs. Suggestions on locating wells to prevent pollution and procedures for disinfecting a home water supply system are included. (Knapp-USGS)
W74-07638

THE NUMERICAL SOLUTION OF TRANSIENT SUPERCRITICAL FLOW BY THE METHOD OF CHARACTERISTICS WITH A TECHNIQUE FOR SIMULATING BORE PROPAGATION,
Georgia Inst. of Tech., Atlanta. Environmental Resources Center.
J. J. Zovne.
Available from the National Technical Information Service as PB-232 143, $12.50 in paper copy, $1.45 in microfiche. Report No. ERC-0370, May 1970, 165 p, 50 fig, 16 tab, 42 ref, 6 append.

Descriptors: *Supercritical flow, *Unsteady flow, Hydraulic jumps, Open channels, Surges.
Identifiers: *Bore propagation, Method of characteristics.

Two finite-difference schemes for the solution of unsteady, supercritical flow problems are analyzed and the results are used in proposing a method to simulate bore propagation in supercritical flow. Two nonlinear one-dimensional partial-differential equations are written for a rectangular cross section including only the gravity and friction forces. The equations are solved by employing two finite-difference schemes programmed on a digital computer. In the Characteristics Grid scheme, the equations are integrated along curves which results in an uneven distribution of grid points. In the Fixed Grid scheme, the flow quantities at a point on a characteristic are determined by interpolation from a fixed spatial grid. Although the Characteristics Grid method may be more accurate and efficient, the difficulties involved in programming do not recommend its general use, and therefore, the Fixed Grid method is the better method for supercritical flow simulation. A bore may be simulated in supercritical flow by employing in conjunction with Fixed Grid method the well-known sequent depth equation for hydraulic jumps. The numerical scheme adequately simulates the propagation of experimental bores without the necessity of using special finite-difference equations in the vicinity of the bore front. Solution of multi-channel problems in sub- and/or supercritical flow is therefore feasible. (See also W71-10174) (James-Georgia Tech)
W74-07732

HYDRAULICS OF CULVERT OUTLETS,
Auckland Univ., (New Zealand) Dept of Civil Engineering.
R A Callander
New Zealand Engineering, p 261-265, September 15, 1973. 5 fig, 3 ref.

Descriptors. *Jets, *Culverts, Data collections, *Design criteria, Energy dissipation, Settling basins, *Outlets, *Mathematical studies, *Mannings equation.
Identifiers: Jet spreading.

Spreading of a jet from a culvert outlet is analyzed to yield depth, breadth, and velocity in terms of distance from the outlet, with the subsequent solution being presented in the form of design charts. These data facilitate design of a stilling basin to dissipate excess energy, and selection to prevent scour. For the latter purpose, the Manning-Strickler formula is used with the Shields criterion for stability. (Sanduski-Franklin)
W74-07749

TEST RESULTS ON BUOYANT JETS INJECTED HORIZONTALLY IN A CROSS FLOWING STREAM,
American Univ., Beirut (Lebanon). Faculty of Engineering and Architecture.
G. M. Ayoub.
Water, Air, and Soil Pollution, Vol 2, No 4, p 409-426, December 1973. 12 fig, 1 tab, 5 ref.

Descriptors: *Simulation analysis, Investigations, *Turbulent flow, *Currents(Water), *Jets, Distribution patterns, *Mathematical studies.
Identifiers: Concentration distribution, Maximum concentration, Concentration dilution.

The behavior was studied of axi-symmetric turbulent buoyant jets injected horizontally in a cross flowing current. Material concentration profiles were measured across various sections along jets of different parametric values. From these profiles, concentration distribution curves as well as maximum concentration and dilution values and their variation with distance along the jet were determined. Half jet radius values were calculated to study the expansion of the jet. Jet boundaries and trajectories were studied photographically and compared with measured values. The effect of the ambient current on the overall shape of the jet was established by the study of the measured complete concentration section across the jet. (Sandoski-Franklin)

LOCATION AND CHARACTERISTICS OF THE INTERFACE BETWEEN BRINE AND FRESH WATER FROM GEOPHYSICAL LOGS OF BOREHOLES IN THE UPPER BRAZOS RIVER BASIN, TEXAS,
Geological Survey, Denver, Colo.
W. S. Keys, and L. M. MacCary.
Professional Paper 809-B, 1973. 23 p, 13 fig, 1 tab, 11 ref.

Descriptors: Wells, *Test wells, *Groundwater, *Borehole geophysics, *Logging(Recording), Resistivity, Electrical well logging, Radioactive well logging, Geology, Water quality, *Salinity, *Texas.
Identifiers: Neutron logs, Natural-gamma logs, Caliper logs, Brazos River Basin(Tex), Brine seeps.

Borehole geophysics was used during a test-drilling program in the upper Brazos River basin to determine the location, characteristics, and relation to lithology of an interface between brine and overlying fresh to slightly saline water. The analysis of several different types of geophysical well logs enabled the accurate location of the interface, proved that it was quite sharp, and showed that the interface was not related to lithology in most places. Single-point-resistance and spontaneous-potential logs were responsive to the interface in many open holes, whereas the neutron-epithermal-neutron and neutron-gamma log combination could be used to find the interface behind well casing. Caliper logs were used to locate fracture zones, which contained brine in some areas and gas in others. All of these logs along with the natural gamma were used to identify and correlate the lithologic units penetrated by the test holes. (Staplin-NWWA)

DISSOLUTION OF A POROUS MATRIX BY A SLOWLY REACTING ACID,
Fluor Corp. Ltd., Houston, Tex.
W. E. Sinex, Jr., R. S. Schechter, and I. H. Silberberg.
Industrial Engineering Chemical Fundamentals, Vol 11, No 2, p 205-209, May, 1972. 4 fig, 10 ref.

Descriptors: *Wells, *Productivity, *Acids, Chemical reactions, Porous media, Porosity, Permeability.
Identifiers: *Well stimulation, *Acidization, Hydrochloric acid, Hydrofluoric acid, Slow reactions.

The acid treatment of a well to increase its productivity is commonly practiced; however, at the present time there is no proven method to guide the design of such a process. This research examines the ability of a previously proposed model to predict the changes in a porous matrix when invaded by a slowly reactive fluid which dissolves a portion of the solid. The model is shown to predict a relationship between the increase in porosity and the permeability which is not precisely unique, as it depends to some extent on the initial pore size distribution, but for the initial distributions tested the permeabilities were found to lie in a narrow band. These results are independent of any parameters defining the kinetics except that the reaction be slow. It is shown experimentally that the reaction of ferric citrate in the presence of citric acid with porous bronze disks satisfies the condition of being a slow reaction. The permeability change of the porous bronze disks is found to agree closely with the theoretical predictions. (Staplin-NWWA)

EFFECT OF BENTONITIC FLUID PROPERTIES ON DRILLING RATE,
Texas Univ., Austin.
B. Evans, and K. E. Gray.
Journal of Petroleum Technology, Vol 24, No 6, p 657-662, June 1972. 8 fig, 13 ref.

Descriptors: *Drilling, *Bentonite, *Drilling fluids, Mud, Viscosity, Permeability, Filtration, Laboratory tests, Pressure, Slurries, Sandstone, Limestone.
Identifiers: *Drilling rate, *Microbit drilling, Differential pressure, Kinematic viscosity, Berea sandstone, Lueders limestone.

Bentonite suspensions and water were used in a laboratory study of the effect on drilling rate of kinematic viscosity, filtration rate, pressure gradient, permeability reduction beneath the bit, solids concentration and sensitivity of the formation to water. Berea sandstone and Lueders limestone were drilled with a two-cone 1 1/4-inch diameter bit under controlled conditions. Drilling rates in both Berea sandstone and Lueders limestone decreased as bentonite concentration increased from 0.5 to 4.0% by weight, except at 1% concentration. Drilling rate with 1% bentonite suspension was higher than with water alone. Pressure gradients immediately beneath the bit increased as bentonite concentration increased, except for the 1% suspension. Filtration rate and kinematic viscosity were found to have effects on drilling rate but did not independently control it. (Gray-NWWA)

WATER JET CUTTING OF SEDIMENTARY ROCK,
Missouri Univ., Rolla.
D. A. Summers, and R. L. Henry.
Journal of Petroleum Technology, Vol 24, No 7, p 797-802, July, 1972. 9 fig, 3 tab, 11 ref.

Descriptors: *Jets, *Drilling, *Sedimentary rocks, Rock excavation, Drilling equipment, *Sandstone, *Limestone, Rock properties, Statistical methods, Nozzles.
Identifiers: *Water jets, Specific energy of cutting, Rock cutting, Berea sandstone, Indiana limestone, Jet kinetic energy.

A laboratory study was made of the cutting of Berea sandstone and Indiana limestone by a water jet at various traverse speeds at jet pressures of 5000 to 30,000 psi. The specific energy of breakage was calculated. Results showed that at slower traverse speeds the cutting efficiency dropped sharply as jet pressure increased but as the traverse speed increased the efficiency rose and in some instances the high-pressure jets became more efficient than the lower pressure jets. Two concepts in water-jet tools are: (1) rotating jets to remove all of the rock at the face, or (2) cutting slots with the water jet and then removing the ribs of rock by mechanical means. Calculations showed that there was a fifteen-fold gain in efficiency of cutting by the use of the second method. Pump size could be reduced by employing mechanical breakers to remove the ribs remaining after slots had been cut by the water jet. (Campbell-NWWA)
W74-07883

SAND CONTROL IN OIL AND GAS WELLS, PART I,
Standard Oil Co. of California, Huntington Beach. Western Operations Div.
E. B. Rogers, Jr.
Oil and Gas Journal, Vol 69, No 44, p 54-60, November, 1971. 9 fig, 2 tab, 36 ref.

Descriptors: *Wells, *Ground water, *Sand, Well filters, Fine aggregates, Particle size, *Well screens.
Identifiers: Wentworth scale, *Gravel packs, *Sand control.

Operating costs multiply when sand production wears out equipment and forces expensive workovers. A series of laboratory experiments shows: sand breaks away from an unsupported formation face either as individual particles, as sloughing masses, or in a fluidized state; interfacial tension acts as a strong cohesive force between sand grains if two phases are present around grain contacts; introducing water into a rising column of oil and suspended sand grains causes the sand grains to form aggregates (bound by a film of water) that drop cut of the flow stream. Sand-control methods divide into two main categories -- bridging of the sand, and consideration of the sand in place. The bridging methods for sand control use either screens or gravel packs, and require a knowledge of the formation size distribution. Sieve analysis is necessary to obtain this information, and precedes specification of the size and nature of material to be included in the gravel pack. (Staplin-NWWA)

microfiche. Miscellaneous Paper H-73-4, June 1973. 7 p, 13 plate, 4 tab.

Descriptors: *Spillways, *Computer programs, *Stage discharge relations, *Profiles, Hydraulics, Spillway crests, Discharge(Water), Outlet works.

A computer program transfers Bureau of Reclamation upper wateh-surface profile coordinates into terms required for Corps of Engineers design practices. Equations were developed to show the relation between WES profiles for heads of 0.5, 1.0, and 1.33 times the design head. The procedure for design neads is applicable to spillways of varying heights and upstream face slopes. (Knapp-USGS)

SELECTIVE WITHDRAWAL FROM BEECH FORK LAKE, BEECH FORK RIVER, WEST VIRGINIA,
Army Engineer Waterways Experiment Station, Vicksburg, Miss. Hydraulics Lab.
T. L. Gloriod, and J. P. Bohan.
Available from NTIS, Springfield, Va. 22151, AD-768 777, Price $3.00 printed copy; $1.45 microfiche. Technical Report H-73-14, September 1973. 14 p, 8 fig, 19 plate, 1 tab, 7 ref.

Descriptors: *Stratified flow, *Density currents, *Hydraulic models, Reservoir operation, *Reservoir releases, *West Virginia, Stratification, Density stratification, *Withdrawal.
Identifiers: Beech Fork Lake(W Va).

Tests were conducted on a 1:36-scale model of a portion of the proposed Beech Fork Lake and multilevel intake structure to determine the effects of the upstream topography and the geometry in the vicinity of the intake structure on the selective withdrawal capability of the structure. Density stratification caused by differentials in temperature in the prototype was simulated in the model by using saline and fresh waters. Density profiles, appropriate discharges, and other required data were used as input to a computer program based on the selective withdrawal techniques developed in previous investigations to predict the withdrawal-zone limits. Based on selective withdrawal performance, there appeared to be no distinct difference in the three locations tested. One test was conducted with a dyed, dense inflow. An equal rate of withdrawal was released through the lowest level intake to determine the path of the inflow through the lake. The flow followed the sinuous river channel from the point of entry to the intake structure. The dyed inflow then remained in the river channel until there was enough buildup for it to enter the approach channel. Density currents were not affected by either the topography of the reservoir and approach channel or the geometry in the immediate vicinity of the intake structure. (Knapp-USGS)

OUTLET WORKS, STILLING BASIN FOR TALLAHALA DAM, TALLAHALA CREEK, MISSISSIPPI,
Army Engineer Waterways Experiment Station, Vicksburg, Miss.
N. R. Oswalt.
Available from NTIS, Springfield, Va 22151, as AD-759 905, Price $3.00 printed copy; $1.45 microfiche. Technical Report H-73-5, April 1973. 21 p, 2 fig, 5 plate, 4 photo, 1 tab.

Descriptors: *Spillways, *Outlet works, Settling basins, Eddies, Turbulence, Drops(Structures), *Mississippi, Hydraulic structures.
Identifiers: *Stilling basins, Tallahala Dam(Miss).

Tests were conducted on a 1:16.6-scale model of the Tallahala Creek, Mississippi, outlet works stilling basin to determine if eddies or other undesirable flow conditions would exist in the stilling basin. The basin consisted of a horizontal apron 90 ft long and 22 ft wide and was connected to the 10-ft-diam outlet by a 56-ft-long transition with sidewalls flared 8.67 on 1. Eddies occurred in the original design basin with discharges of 800 cfs or less and the expected tailwater elevations. The eddies were eliminated by revising the floor and walls of the flared transition. The sidewall flare was changed from 8.67 on 1 to 11.83 on 1 and the IV-on-8H downsloping floor was changed to a IV-on-6H upslope for a rise of 4 ft and then a downslope. The floor was sloped down laterally 1 ft from the transition center line to each wall. Spray off of the baffle blocks occurred with the design discharge and minimum tailwater with the stilling basin as originally designed. The height of the baffle blocks was increased and an additional row of blocks was added to prevent this type of action. (Knapp-USGS)

FLOATING BREAKWATER FOR ATTENUATING SEAS,
Debero Kogyo Co. Ltd., Mito (Japan). (assignee)
M. Tachii.
U.S. Patent No. 3,791,150, 3 p, 5 fig, 10 ref; Official Gazette of the United States Patent Office, Vol 919, No 2, p 459, February 12, 1974.

Descriptors: *Patents, *Shore protection, *Ocean waves, *Breakwaters, Barriers, Equipment, Floats.

The floating breakwater has two or more expanding portions which are enlarged in turn from the front to the rear of the body. The portions are continuously engaged through concave portions in a sine wave shape in such a manner that not only the heights of the waves but the wavelengths of the expanded portions are in turn enlarged from the front to the rear of the body. The outer layers may preferably be formed of synthetic resin. Floating material such as foam synthetic resin is filled into the floated portion, and liquid such as sea water is filled into the bottom side under water through a supply port. (Sinha-OEIS)

AUTOMATIC PUMPING INSTALLATIONS FOI LIVESTOCK SECTIONS,
Y. Y. Goryacheva, and S. V. Ryzhov.
Typescript 17 p. (Translating agency not cited Translated from Gidrotekhnika i melioratsia, No 10, October 1972.

Descriptors: Groundwater, *Wells, *Pumps, Jets Turbines, Economics, Irrigation, *Livestock Stock water, *Automatic control, *Water supply Automation, Costs.
Identifiers: *USSR, Submersible pumps Peripheral turbines, Regenerative turbines.

The technical and economic characteristics o livestock water supply systems incorporating au tomatic water-lifting installations in the U.S.S.R are discussed. The various components of the in stallations are described: water lifter, hydropneu matic tank, pressure relay, electrical control box safety valve, and pressure gauge. These installa tions are of three general types: those with jet pump lifters, those with peripheral -- or regenera tive -- turbine pumps, and those with submersibl electric pumps. Systems design and operation ar emphasized. (Campbell-NWWA)

VALVE INSTALLATION, OPERATION ANI MAINTENANCE,
H. C. Templeton.
Chemical Engineering, Vol 78, No 23, p 141-149 October 1971. 10 fig, 1 tab, 3 ref.

Descriptors: *Valves, *Operation and main tenance, *Maintenance costs, *Installation.
Identifiers: Ball valves, Plug valves, Globe valves Gate valves, Check valves, Butterfly valves, O rings, Gaskets, Seals, Liners PTFE materials.

Valve repairs are best done out of the pipeline although in-line replacement of PTFE parts an some metal parts will produce satisfactory result on some valve types. The remachining necessar on metal globe, gate and check valves require adequate equipment and know-how on the part o the shop personnel. Most operating plants woul not be justified in attempting such repairs them selves, and specialists should be considered fo this type of work. Installation of seat seals, nev metal parts, liners and other miscellaneous part might be done either in-plant, or in a valve repai shop. Valve repair is generally considere economic if the unit can be reconditioned for n more than 65% of the replacement cost. Repai costs average close to 50% of the replacemen

cost; however, many valves are not repairable because of exceeding the cost criterion above. Generally a valve is not repairable if the body cannot be reused, as cost of repair will exceed the value recoverable. (Campbell-NWWA)
W74-07867

PUMP SELECTION,
Brown and Root, Inc., Houston, Tex.
W. H. Stindt.
Chemical Engineering, Vol 78, No 23, p 43-49, October 1971. 9 fig, 7 ref.

Descriptors: *Pumps, Hydraulics, *Head loss, *Pressure head, Costs, *Capital costs, *Operating costs.
Identifiers: Positive-displacement pumps, Reciprocating pumps, Static head, Velocity head, Suction lift, Net positive suction head.

Pump selection requires a careful analysis of the hydraulic system and the pump's location and function within the system. Hydraulic factors discussed include pressure, head, static head, velocity head, suction lift, total discharge head, total head, head losses, and NPSH (net positive suction head). Means of calculating head curves and NPSH requirements are given. Handling of entrained gases, viscous fluids, and slurries is also discussed. Pump classifications and questions of pump function and installation relevant to pump selection are discussed. Positive-displacement pumps and reciprocating pumps are considered in some detail. Finally, economic factors including capital and operating costs are considered as a part of final pump evaluation procedures. (Staplin-NWWA)

PUMP INSTALLATION AND MAINTENANCE,
Union Carbide Corp., South Charleston, W. Va. Chemicals and Plastics.
J. A. Reynolds.
Chemical Engineering, Vol 78, No 23, p 67-76, October 1971. 8 fig, 2 tab, 2 ref.

Descriptors: *Pumps, *Maintenance, Operations, *Installation, Pipes.
Identifiers: *Pulsation dampeners, Suction piping, Pipe loading, *Pressure relief, Trouble shooting.

Much of the effort devoted to careful selection and sizing of a process pump may be wasted if the unit is not installed and maintained properly. A pump installation check list prescribes a substantial foundation for pump support, a level base plate, proper coupling alignment, even flow through suction piping, little pipe loading, checking direction of rotation, and final alignment after pump has run long enough for temperatures to stabilize. Also discussed are pressure relief devices, vents and drains, pulsation dampeners, catch basins and shield, and startup and trouble shooting procedures. (Campbell-NWWA)

POSITIVE DISPLACEMENT PUMPS,
Dynamic Technology, Inc.
M. Glickman.
Chemical Engineering, Vol 78, No 23, p 37-42, October 1971. 11 fig, 7 ref.

Descriptors: *Pumps, Operations, Flow, *Flow characteristics.
Identifiers: *Positive-displacement pumps, *Volumetric efficiency, Metering pumps, Vacuum pumps, Vane pumps, Rotary pumps, Diaphragm pumps.

The primary characteristic of positive displacement pumps is that they exhibit a direct relationship between the motion of the pumping elements and the quantity of liquid moved. Positive displacement pumps have a dynamic seal (sliding or rotating) that separates the discharge fluid from the inlet or suction side. Liquid displacement is theoretically equal to the swept volume of the pumping element. Flow rate is determined by the speed of the pumping element and is independent of pressure. In actual practice, however, pressure does influence capacity because of leakage through the dynamic seals, which is proportional to the pressure gradient. Actual flow divided by ideal flow is volumetric efficiency, a basic characteristic of positive displacement pumps. Volumetric efficiency can range from less than 50% up to 98%. Metering pumps, vacuum pumps, vane pumps, rotary pumps, and diaphragm pumps are discussed; their specific applications and operating characteristics are identified. (Staplin-NWWA)

DOWN-HOLE MOTORS FOR IMPROVED DRILLING,
Dyna-Drill Co., Houston, Tex.
B. J. Roberts, and C. H. Mohr.
Journal of Petroleum Technology, Vol 24, No 12, p 1484-1490, December 1972. 3 tab, 5 ref.

Descriptors: *Turbines, *Drilling, *Drilling equipment, Drilling fluids, Boreholes, Wells, Temperature, Hydraulics, Pumps, Drilling fluid, Mud, *Texas.
Identifiers: *Down-hole motors, *Diamond bits, Drill-string stabilization, Drilling cost.

The performance record for a down-hole motor and diamond bit in drilling the Wolfcamp formation in West Texas is given. From this study, conclusions are drawn as to the applicability of the down-hole motor in straight-hole drilling. The formation to be drilled must be suitable to the use of diamond bits. Shales (free of chert, pyrite and quartzite), dolomites, some limestones and some sandstones are 'diamond drillable.' The hydraulic system of the drilling rig must provide flow and pressure characteristics that will permit optimum performance of the motor. The pressure drops needed to operate various down-hole motors range from 250 to 1000 psi. The circulating rate necessary to power the bit depends on the size of the tool. For positive displacement motors the range is 160 to 450 gal. per min. A pressure drop of about 400 psi across the bit is a practical value. The down-hole environment must be such as to permit the economical operation of the down-hole motor. Temperature must be less than 300 degrees F. Rubber components of the down-hole motor may be adversely affected by certain oils in the drilling fluid, by abrasive substances, and by high pressure gas. Lost-circulation materials may plug the tool. Diamond bits used with down-hole motors should be specifically designed for this purpose. Stabilization of the string is a key requirement in the economic use of down-hole motors. Intangible savings result from slower rotation and fewer trips when using down-hole motors and diamond bits. IMPROVED DRILLING RATES AT LOWER COSTS,
New South Wales Univ., Broken Hill (Australia).
V. S. Vutukuri.
Mining Magazine, Vol 125, No 4, p 324, 327, October, 1971. 1 tab, 19 ref.

Descriptors: *Rotary drilling, *Drilling fluids, *Surfactants, *Cost analysis, Electrolytes, Drilling, Rock properties.
Identifiers: Specific energy, Drilling rate, Sodium carbonate, Rock carbonate, Rock hardness, Bit wear, Rock strength.

Several publications on the subject of the effect of some electrolytes and surfaceactive agents on the drilling strength of rock are reviewed. Cost of drilling, the ultimate measure of efficiency, depends upon the energy required to break a unit volume of rock, the speed of drilling, and the bit wear. Reduction in rock strength lowers the energy requirement, or, if power applied is kept constant increases the rate of penetration. A decrease or an increase in the hardness of the bit may occur. Depending upon the predominating factors, the total effect of additives on drilling costs may be positive or negative. A decrease of about 10% in the compressive and the tensile strengths of sandstone and limestone was observed when specimens were saturated with a solution of 8% sodium carbonate as compared to water-saturated samples. Improvement in drilling rate can be brought about by the addition to water of small amounts of electrolytes, polar liquids, and soaps. (Gray-NWWA)

APPLICATION OF ELECTRICAL ENERGY TO CULVERT ICING PROBLEMS--A LABORATORY STUDY,
Cold Regions Research and Engineering Lab., Hanover, N.H.
D. A. Gaskin, and L. E. Stanley.
Technical Report 248, March 1974. 43 p, 17 fig, 7 tab, 6 ref, 7 append.

Descriptors: *Ice, *Melting, *Culverts, *Deicers, Heating, Thawing, Snow removal, Highways.
Identifiers: *Culvert deicing.

The use of electric heat cables to counteract culvert icing was tested. An 80-in-long, 1-ft-diam culvert with a 10-ft copper sheath heating cable modeled a typical Alaskan installation. Tests were made to evaluate several continuous power levels, a short-term percentage timer, and the automatic system. Maximum efficiency (cross section produced per unit energy input) occurred when the cable was operated continuously at its maximum permissible power level. The short-term timer system was less efficient than applying the same amount of energy continuously. The automatic system performed well in the laboratory, but may need additional design work to ensure reliability in field applications. The major heat transfer mechanism is convection. Marked constrictions in tunnel size were observed at the ice/air interfaces. These observations imply that the cable should be installed near the bottom of the culvert and the end risers doubled or tripled. The continuous operation mode is the most reliable, but the most expensive

of the systems tested. The pulsed system was less expensive. The automatic system was the least expensive. (Knapp-USGS)

FLOW-INDUCED VIBRATION OF VERTICAL-LIFT GATE,
Imperial Coll. of Science and Technology, London (England). Dept. of Civil Engineering.
J. D. Hardwick.
Journal of the Hydraulics Division, American Society of Civil Engineers, Vol 100, No HY5, Paper 10546, p 631-644, May 1974. 17 fig, 18 ref.

Descriptors: *Gates, *Hydraulics, *Vibrations, Jets, Hydraulic models, Hydraulic design, Hydrodynamics, Turbulence.

The vibration of a vertical-lift gate with a flat bottom and a single vertical degree-of-freedom was studied experimentally in a scale model. The vibration is due to a periodic reattachment of the jet to the bottom of the gate. The exciting force and the unsteady flow pattern was correlated. Negative damping was measured directly and is a function of flow velocity and vibration amplitude. The nonlinear response of the system is related to interactions between the exciting force and the motion of the gate. (Knapp-USGS)

8D. Soil Mechanics

LIME GROUT PENETRATION AND ASSOCIATED MOISTURE MOVEMENTS IN SOIL,
Commonwealth Scientific and Industrial Research Organization, Melbourne (Australia). Div. of Applied Geomechanics.
O. G. Ingles, and R. C. Neil.
In: Proceedings of the Symposium on Soils and Earth Structures in Arid Climates, May 21-22, 1970, Adelaide, Australia, p 37-41, (1970). 1 fig, 2 tab, 13 ref.

Descriptors: *Grouting, Soil properties, Soil types, Soil moisture, Permeability, *Soil stabilization, *Stabilization, Soil mechanics, *Soil physical properties.
Identifiers: *Lime grout penetration, Depth of stabilization, Drill-lime, Deep stabilization.

The use of lime, placed or injected, for deep soil stabilization has been a matter of controversy. To permit a rational assessment of this process for design purposes, a series of field experiments were made. These experiments were chosen to determine whether diverse soils subject to intermittent severe drying and occasional flooding might be stabilized by a lime grouting process, and if so, what design procedures would be required. The results show that fissuring of the soil and the moisture associated with the grout are major parameters for practical purposes, and their implications for practical application of drill-lime and lime grout injection processes have been critically evaluated. (Martino-NWWA)

THE SIGNIFICANCE OF MOISTURE FLOW AND EQUILIBRIA IN UNSATURATED SOILS IN RELATION TO THE DESIGN OF ENGINEERING STRUCTURES BUILT ON SHALLOW FOUNDATIONS IN AUSTRALIA,
Commonwealth Scientific Industrial Research Organization, Syndal (Australia). Soil Mechanics Section.
B. G. Richards.
Presented at Symposium on Permeability and Capillarity, American Society for Testing and Materials, June 26-July 1, 1966, Atlantic City, New Jersey, 28 p, 13 fig, 2 tab, 40 ref

Descriptors: *Soil water movement, Moisture, *Soil moisture, Permeability, Soil stability, Foundation, *Foundation investigations, *Australia, Structural design.
Identifiers: *Moisture flow, *Moisture equilibrium, Foundation design, Undersaturated soil, Moisture retention.

A broad-scale investigation of moisture conditions in pavement subgrades in Australia was undertaken to define the moisture movement and equilibria in undersaturated clay soil. Concurrently, a number of investigations were carried out on moisture equilibria under houses and slab floors of large industrial buildings. The results of these investigations were used to produce a design technique for the foundation of structures founded at shallow depths. This technique has been used as a guide in the design of buildings on flat slabs in the vicinity of Melbourne, but it has not been tested adequately at this time. Techniques for measuring the necessary soil properties are given. (Martino-NWWA)

SUBSURFACE EXPLORATION AND SAMPLING OF SOILS FOR CIVIL ENGINEERING PURPOSES,
Army Engineers, Waterways Experiment Station, Vicksburg, Miss.
M. J. Hvorslev.
Report on a Research Project of the Committee on Sampling and Testing, Soil Mechanics and Foundations Division, American Society of Civil Engineers, 1948. 465 p, 357 fig, 13 tab, 986 ref, 1 append.

Descriptors: *Soil types, Soil structure, *Soil surveys, Soil properties, *Soil mechanics, Soil analysis, *Subsurface investigations, *Sampling, Civil engineering, *Reviews.
Identifiers: Ocean-bottom exploration, Mineral exploration, Piston samplers, Open drive samplers, Penetration resistance drive samplers.

A review is presented of the requirements, general procedures, and various methods of subsurface exploration and sampling. A series of summary directions for the design of sampling equipment and for sampling operations and handling of samples has been formulated, including a fairly detailed description of the equipment and methods used in obtaining samples of subsurface materials and in the preservation and handling of these samples. Also presented is a review of the principal sampling methods and equipment used in ocean-bottom exploration and in search for oil and minerals. The advantages and disadvantages of the various methods and types of equipment for boring and sampling are discussed in relation to the soil conditions. (Campbell-NWWA)

U. I. Moiseyenko, L. S. Sokolova, and V. Ye. Istomin
Available from the National Technical Information Service as NASA TT F-671 $3.00 in paper copy, $1.45 in microfiche. NASA Technical Translation, NASA TT F-671, February, 1972. 59 p, 17 fig, 10 tab, 70 ref. Translated from Elektricheskiye i Teplovyye Svoystva Gornykh Porod v Usloviyakh Normalnykh i Vysokikh Temperatur i Davleniy, Nauka Press, Siberian Dept., Novosibirsk, 1970.

Descriptors: *Boreholes, *Resistivity, *Electrical studies, Geology, Physics, *Geothermal studies, Electrical conductance, Conductivity, *Thermal conductivity, Heat, Sedimentary rocks, Igneous rocks.
Identifiers: Lattice heat conductivity, Electron heat conductivity, Olivinite, Eclogite, Diorite, Aleurolite, Argillite.

Results are presented of a study of the electric conductivity of rocks under different thermodynamic conditions. The apparatus and methods used in measuring these parameters are described. Experiments for studying the effect of temperature, pressure, and the joint effect of these factors on rock resistivity are discussed, as well as the results of a study of the thermal properties of sedimentary and igneous rocks at temperatures from room temperature to 1,200-1,400C. The dependence of electric conductivity is given for unilateral pressures and with simultaneous heating to 600C and pressures greater than 30 kbar. The results of a study of the dependence of heat conductivity on temperature are discussed. Conclusions are drawn concerning the mechanism of electric and heat conductivity of rocks at high temperatures. (Staplin-NWWA)

USING IMPROVED TECHNOLOGY TO OBTAIN BETTER CEMENT JOBS ON DEEP, HOT LINERS,
Western Co., Dallas, Tex.
A. Tragesser, and P. N. Parker.
Journal of Petroleum Technology, Vol 24, No 11, p 1307-1313, November 1972. 3 fig, 8 tab, 9 ref.

Descriptors: *Cements, *Cement grouting, *Well casings, *Thermocline, Temperature, Compressive strength, Pressure, Oil wells, Drilling fluids, Slurries, Mud, Viscosity.
Identifiers: *Cement thickening time, *Spacers, API thickening time test, Curing pressure, Liners.

Performance requirements of cementing slurries for liner casings in deep, hot wells are even more critical than for full strings of casing. A laboratory and field study was made of factors affecting the success of cementing liners in Southwest Texas areas where previous experience was unsatisfactory. Cement slurries designed for deep wells are very sensitive to temperature. Accurate information is needed to obtain proper performance. The API schedule for testing oil-well cements is based on a measured static temperature and the calculated circulating temperature may differ substantially from the actual temperature. Significant variations exist between the bottom-hole circulating temperatures of oil-base and water-base drilling fluids. Certain oil muds cause severe gelation of cement slurries and can shorten thickening time. A spacer composition should be used that is compatible with both mud and cement. Standard laboratory tests on compressive strength made after short curing times at 3000 psi do not adequately represent compressive strength development under bottom-hole conditions of extreme pressure and temperature. Improved mud displacement can be achieved by maintaining viscosity of the cement slurry greater than that of the drilling fluid and by rotating the liner when cement slurry is being pumped up the annulus. (Gray-NWWA)

GYPSUM-CEMENT BLEND WORKS WELL IN PERMAFROST AREAS,
Imperial Oil Ltd., Calgary (Alberta).
N. M. Kljucec, A. S. Telford, and C. C. Bombardieri.
World Oil, Vol 176, No 4, p 49-52, March, 1973. 6 fig, 2 tab, 6 ref.

Descriptors: Cements, *Cement grouting, *Permafrost, *Arctic, *Gypsum, *Canada, Cold regions, Ice, Frozen ground, Heat transfer, Thawing, Compressive strength, Shear strength.
Identifiers: *Gypsum-cement blend, Bond strength, Arctic Islands, MacKenzie Delta, API Class B cement, High-alumina cement.

Thermal behavior, compressive strength and the shear-bond strength against simulated permafrost were investigated for conventional oil-well cements and for high-alumina and gypsum-cement blends. Class B cement slurry at 50 degrees F. placed in contact with simulated permafrost formations maintained at 24 degrees F. quickly cooled and froze before hydration took place. When the Class B cement slurry was held at 50 degrees F. (by heaters) the sample set. Bonding to the formation was observed only against gravel. High-alumina cement generated enough heat in setting to sustain the setting reaction when the sample was placed in air at 20 degrees F. in 3 to 4 hours. Gypsum-cement blend mixed at 50 degrees F. and placed in frozen sand at 23 degrees F. set without significant change in temperature of the permafrost. Shear-bond strengths between cement and frozen gravel and sand formations were satisfactory but bond was poor or lacking between cement and ice. Thermistor cables were strapped to the outside of surface casing strings on several wells in the Canadian Arctic. Temperatures measured during the waiting-on-cement period of surface casing indicated satisfactory setting of gypsum-cement blend. Conventional oil-field cement maintained at about 45 degrees by circulating warm fluid in the casing set in the normal time. (Campbell-NWWA)

CORROSION RESISTANT CEMENTS,
Prodorite Ltd., Surrey (England).
V. Evans.
Anti-Corrosion, Vol 18, No 12, p 15-17, December, 1971. 3 fig, 1 tab.

Descriptors: *Cements, *Corrosion, *Chemical properties, *Compressive strength, *Tensile strength, Solvents, *Adhesion.
Identifiers: Ceramics, Resin-base cement, Hydraulic cement, Latex cement, Silicate cement, Sulphur cement.

Different types of corrosion-resistant cements are reviewed, including hydraulic cements, latex cements, silicate cements, sulphur cements, and resinous cements. The resin-based varieties are evaluated most extensively, according to the following parameters: compressive strength, tensile strength, adhesion to ceramic ware, temperature range, resistance to sulphuric acid, resistance to hydrochloric acid, resistance to nitric acid, resistance to hydrofluoric acid, resistance to alkalis, and resistance to solvents. The products discussed are those most suitable for use in the bedding and jointing of ceramic units in floors, gutters, channels, chimneys, tank and vessel linings of all types, walls, and similar construction. (Staplin-NWWA)

THREE-DIMENSIONAL ZONE MODEL LOG INTERPRETATION,
Hawaii Univ., Honolulu. Water Resources Research Center.
L. J. Shamey, and W. M. Adams.
Available from the National Technical Information Service as PB-232 157, $3.00 in paper copy, $1.45 in microfiche. Technical Report No 69, September 1973. 20 p, 1 fig, 2 tab, 4 ref. OWRR A-032-HI(1). 14-31-0001-3511.

Descriptors: *Resistivity, *Boundary conditions, Equations, Mud, Drilling fluids, *Electrical well logging, Logging(Recording), *Model studies, *Boreholes geophysics, Rock properties.
Identifiers: Cylindrical zones.

To facilitate the interpretation of geophysical electrical well-logging data, the apparent resistivity has been calculated in a model in which the experimental situation is approximated by three coaxial cylindrical zones containing the drilling mud, flushed rock, and surrounding rock matrix, respectively. This three-zone model is shown to yield results that differ by as much as 25 percent from the earlier two-zone model calculations.

PREVENTION OF CALCIUM CARBONATE SCALE DEPOSITION IN MILL WATER SYSTEMS,
NL Industries, Inc., Houston, Tex. Baroid Div.
A. E. Beasley, and I. McKinney.
Mining Engineering, Vol 25, No 3, p 32-37, March, 1973. 7 fig, 2 tab, 4 ref.

Descriptors: *Scaling, *Calcium carbonate, *Scale prevention, Water quality, Water reuse, Water softening, Quality control, Recirculated water, Sodium compounds, Treatment facilities, Copper.
Identifiers: Sodium tripolyphosphate, Sodium hexametaphosphate, Lignosulfonates, Organic phosphonate, Pentasodium aminotrimethylenephosphonate, *Mill water systems.

Scale deposition can cause severe operational problems in copper concentrator water systems. A thorough investigation of the mill water system makes practical a chemical treatment to minimize the formation of calcium carbonate scale. Molecularly dehydrated phosphates, lignosulfonates, and, more recently, organic phosphonates can be used to achieve an effective scale control program at a reasonable cost. Co-mingling of various process waters is an important consideration in scale inhibition. Routine analyses of the waters and monitoring of scale formation on test coupons are essential to a satisfactory program. (Gray-NWWA)
W74-07848

DOMESTIC WATER SYSTEMS, NONCHEMICAL FACTORS IN CORROSION CONTROL,
Olin Corp. Stamford, Conn.
S. Sussman.
Materials Protection and Performance, Vol 12, No 4, p 38-42, April, 1973. 4 fig, 5 ref.

Descriptors: *Corrosion, *Corrosion control, *Potable water, Hardness(Water), Water softening, Ion exchange, Zeolites, Impaired water quality.
Identifiers: Water system design, *Water system operation, Hydraulic feeder.

Corrosion control in the domestic water systems of buildings has two major nonchemical constraints: (1) The water must remain suitable for drinking, and (2) limitations are imposed by the design, construction, and operation of large, urban buildings. The building operator usually has no control over the composition of the entering water but control can be exercised over water-softening treatment practices to avoid creation of corrosive water by over-treatment. Such nonchemical factors in water system design as the choice of piping material, pipe sizing, hot water temperature controls, and maintenance facilities can have an important effect on corrosion. Unless the water system is properly operated and maintained, efforts to minimize corrosion may fail, even though the system is adequately designed. Maintenance personnel should be made aware of how their actions influence the development of corrosion in domestic water systems and they should be trained to take the steps necessary to minimize corrosion. (Gray-NWWA)
W74-07849

DOMESTIC HOT WATER SYSTEMS, SILICATE TREATMENT INHIBITS CORROSION OF GALVANIZED STEEL AND COPPER ALLOYS,
Illinois State Water Survey, Urbana.
R. W. Lane, T. E. Larson, C. H. Neff, and S. W. Schilsky.

Materials Protection and Performance, Vol 12, No 4, p 32-37, April, 1973. 1 fig, 12 tab, 7 ref.

Descriptors: *Corrosion, *Corrosion control, *Potable water, *Silicates, Copper, Copper alloys, Stainless steel, Inorganic compounds, Phosphates, Zinc, Hardness(Water), Alkalinity, Temperature, Distribution systems, Laboratory tests, Hydrogen ion concentration.
Identifiers: Galvanized steel, Zinc pyrosilicate, Zinc carbonate.

Laboratory test circuits were constructed on the basis of the design of the central domestic hot water systems in Illinois state institutions and produced approximately the same corrosive conditions that were found in tests on the larger systems. Corrosion tests were continued for 120 days. Results were evaluated in terms of the weight loss method, both 'descaled metal loss' and 'weight change' being examined. Types of waters studied were: (1) low hardness and alkalinity and low mineral content; (2) medium hardness and alkalinity and medium mineral content, and (3) blended hardness, high alkalinity and high mineral content. Based on the test results, a table was prepared as a guide to recommended treatment to inhibit corrosion of metals in domestic hot water at 140 degrees F and 180 degrees F. Silicate treatment generally was the most effective in inhibiting corrosion of galvanized steel and copper base metals. Zinc-phosphate formulations were considered acceptable inhibitors of copper bearing metals. The 90-10 copper nickel was much more resistant to corrosion than was copper. Stainless steel grade 409 was not sufficiently resistant to corrosion, because of seam and crevice corrosion, to be considered acceptable in domestic hot water systems. (Gray-NWWA)

RECENT ADVANCES IN LOG EVALUATION,
Schlumberger, Well Surveying Corp., Paris (France).
R. L. Campbell, Jr.
World Petroleum, Vol 43, No 2, p 22-30, February, 1972. 9 fig, 16 ref.

Descriptors: *Borehole geophysics, *Logging(Recording), *Well logging, Lithologic logs, Subsurface investigations, *Well data, Computers, *Remote sensing.
Identifiers: Crossplots, Quantitative log interpretation, Moveable hydrocarbons.

Crossplotting of borehole geophysical data with the aid of large computers can be effective in determining reservoir properties such as lithology, clay content, effective porosity, water saturation, and the volume of movable hydrocarbons. The technique involves integrating the responses from neutron formation density, sonic, and resistivity logs to give an analog display of the lithology and reservoir parameters of the zone of interest. The data obtained can be used to develop optimum casing and perforation programs that will maximize production rates. A disadvantage of the technique is that the large computers required to integrate the data are not available at the well site. However 'quick-look' schemes have been developed that allow rapid and accurate detection of water saturation, movable hydrocarbons, porosity, and lithology at the well-site. (Hunt-NWWA)
W74-07853

PERFORMANCE AND SELECTION OF MATERIALS FOR POTABLE HOT WATER SERVICE,
Air Force Inst. of Tech., Wright-Patterson AFB, Ohio.
J. R. Myers, and M. F. Obrecht.
Materials Protection and Performance, Vol 12, No 4, p 17-23, April, 1973. 19 fig, 1 tab, 11 ref.

Descriptors: *Corrosion, *Corrosion control, Copper, *Copper alloys, *Potable water, Hardness(Water), Water softening, Carbon dioxide, Oxygen, Temperature, Zeolites, Stainless steel.
Identifiers: *Thermoplastic pipe.

Premature erosion-corrosion failures have occurred in copper tubes of circulating, potable hot water systems of large buildings, especially when the waters were 'soft' and contained dissolved oxygen and carbon dioxide. An extensive test program assessed erosion-corrosion damage from micrometric wall-thickness measurement, weight loss, and radiographic studies. Results are presented graphically in a form to allow the design/corrosion engineer to select materials and operating conditions which will provide erosion-corrosion free systems for conveying most potable cold and hot water supplies in buildings. General recommendations are offered. Copper tube should be used to convey potable waters at temperatures to 140 degrees F and velocities to 4 feet per second. Above 140 degrees F, 90-10 cupro-nickel should be used. Admiralty brass can also be used to convey corrosive waters in the temperature range of 140 to 170 degrees F. Tanks for potable hot water should be glass lined. Carefully controlled chemical treatment of the water may be useful. (Gray-NWWA)
W74-07855

TRACERS IN MUD IMPROVE DST, WIRELINE TEST ACCURACY,
Chevron Oil Co., Denver, Colo.
B. B. Cooley.
World Oil, Vol 175, No 2, p 40-44, August 1, 1972. 1 fig, 1 ref.

Descriptors: *Tracers, *Nitrates, *Drilling fluids, Nitrogen compounds, Salts, Water analysis, Colorimetry, Mud.
Identifiers: *Drillstem tests, *Wireline tests, Sodium nitrate, Ammonium nitrate, Potassium nitrate.

Field examples are cited to illustrate the use of nitrate ion as a tracer of filtrate from the drilling fluid in order to determine the source and type of water recovered on drill stem and wireline tests. Because nitrate ion is rarely present in saline formation waters, the presence of even a few parts per million in water recovered on a formation test indicates contamination by nitrate from the nitrate-treated drilling mud. The usual treatment consists of adding five pounds of ammonium, sodium or potassium nitrate to each 100 barrels (4200 gallons) of drilling mud. A simple colorimetric test is made on the mud filtrate. Subsequently nitrate analysis of water recovered on tests will indicate the extent of contamination by mud filtrate. Major mud suppliers have been licensed by Chevron Oil Co. to offer the service. (Gray-NWWA)
W74-07856

COUPON CORROSION RATES VERSUS HYDROGEN PROBE ACTIVITY,
Fincher Engineering Co., Houston, Tex.
D. R. Fincher, A. C. Nestle, and J. J. Marr.
Presented at The International Corrosion Forum Devoted Exclusively to the Protection and Performance of Materials, March 4-8, 1974, Chicago, Illinois, 19 p, 6 fig, 4 tab.

Descriptors: Corrosion, *Corrosion control, Wells, Monitoring.
Identifiers: *Corrosion rates, Corrosion monitoring, *Hydrogen probe activity, *Coupon corrosion rates.

Methods of corrosion rate measurement, corrosion detection, and corrosion control monitoring are discussed. These methods are categorized into the following general groups: (1) the study of equipment performance records (2) visual inspection of shut down equipment (3) non-destructive testing (4) analysis of corrodents and corrosion products samples (5) use of sentinel holes and (6) corroding specimens. These techniques have proven to be of relative value only because they depend upon a weight/surface area/time rate which often assumes uniform rather than local corrosion. Variables such as velocity, pressure, temperature, exposure time and location are known to directly control corrosion rate but their effect has not been quantitatively defined by these methods. Three gas wells were monitored for corrosion and data were gathered pertaining to coupon corrosion rates, iron content of the produced water, and hydrogen probe activity. A strong correlation was found between the corrosion rates in each of the three wells and the hydrogen probe activity. (Martino-NWWA)

NEW BROMIDE PACKER FLUID CUTS CORROSION PROBLEMS,
Dow Chemical Co., Midland, Mich. Halogens Research Lab.
J. H. Plonka.
World Oil, Vol 174, No 5, p 88-89, April, 1972. 4 fig.

Descriptors: Corrosion, Chemical properties, *Corrosion control, Solutes, *Calcium chloride.
Identifiers: *Calcium bromide, *Packer fluids, Completion fluids

A new low corrosion, solids-free calcium bromide-calcium chloride brine solution can be mixed to weights of 12-15 ppg for use as a fluid behind packers or as a completion fluid. Other substances previously used for these purposes have serious drawbacks: mud suspensions can be weighted sufficiently, but their high solids content can cause major problems; zinc chloride brine, the only other solids-free fluid used above 11.6 ppg, is corrosive in high density ranges. In addition, the calcium bromide-calcium chloride solution is not damaging to the ecology, and it is compatible with other additives. (Campbell-NWWA)

FINDING ANSWERS TO CORROSION PROBLEMS,
Carpenter Technology Corp., San Diego, Calif.
M. Henthorne.
Chemical Engineering, Vol 79, No 7, p 97-100, April 1972. 1 fig, 3 tab, 21 ref.

Descriptors: *Corrosion, Deterioration, *Corrosion control, Coatings, Paints, Metallurgy, Materials, On-site investigations.
Identifiers: *Inspection, *Early detection, Laboratory investigations, Unexpected failures.

Early detection of corrosion through scheduled inspections is very effective in averting costly failures and loss of production. Unexpected failures that do occur are commonly the result of one or more of the following: poor choice of materials, operating conditions different than those anticipated, defective fabrication, improper design, inadequate maintenance, or defective materials. The importance of onsite and laboratory investigations of unexpected failures is emphasized. Checklists are given that outline the procedures to be followed for each of these investigations. Corrosion data for material selection

an be obtained from such sources as textbooks, ournals, metals producers, company files, techni- al societies, and consultants. Future trends in corrosion control will be directed toward improv- ng material and fabrication techniques and im- proving protection techniques. (Martino-NWWA) W74-07863

VARIATIONS IN THE DESIGN OF DEPTH SAMPLERS FOR USE IN GROUNDWATER STUDIES,
nstitute of Geological Sciences, London England). Dept. of Hydrogeology.
. K. Tate.
Water and Water Engineering, Vol 77, No 928, p 23, June 1973. 2 fig.

Descriptors: *Wells, *Water wells, *Groundwater, Sampling, Water analysis, Quality control, Chemical analysis, Remote control.
dentifiers: *Depth samplers.

Depth samplers permit sampling of groundwater, particularly from water supply boreholes at predetermined depths below the surface of the water. This approach to sampling is especially im- portant when chemical variation occurs in the column of water in the borehole, rendering a pumped sample unrepresentative. Sampling in production boreholes often presents difficulties of limited access, due to the presence in the borehole of the pump and rising main, together with cables to the pump and ancillary equipment. Small diame- ter samplers with a smooth outline are thus needed. Different varieties of this type of water sampler and their methods of use are reviewed. (Campbell-NWWA) W74-07865

CORROSIVE EFFECTS OF SOUTHERN CALIFORNIA POTABLE WATERS,
Southern California Metropolitan Water District, Los Angeles
D. R. Reed
Materials Protection and Performance, Vol 12, No , p 43-48, April 1973. 7 fig, 3 tab, 4 ref.

Descriptors: Corrosion, *Corrosion control, Potable water, Stainless steel, Copper, Copper alloys, Colorado River, *Colorado River Aqueduct, Zinc, Laboratory tests, *California, Water supply.
dentifiers: *Corrosometers, *Sacramento Delta(Calif), Monel.

Two surface water supplies furnish about 40% of he total quantity used in southern California: (1) he Colorado River and (2) the Sacramento Delta. Normal water treatment includes clarification, fil- ration, and chlorination, although partial soften- ng is applied to portions of the Colorado River vater. The corrosion rates of these waters were neasured by the 'electric coupon' method on the netal alloys commonly used in plumbing materi- ls. Corrosion rates in the range of 9 to 21 mils per ear were found on 1010 carbon steel and zinc. Corrosion rates for copper, low zinc brasses, and ronzes are in the range of 2 to 3 m.p.y. Monel and tainless steel are virtually corrosion resistant in hese potable waters. The corrosion rates may ecrease somewhat when the lower mineralized vater from the California aqueduct system is elivered. (Campbell-NWWA) W74-07866

CASING POTENTIAL LOGGING RELATED TO VERTILOG CORROSION LOGGING,
AMF Tuboscope, Inc., Grand Rapids, Mich.
. A. Lindsey.
Presented at The International Corrosion Forum Devoted Exclusively to the Protection and Per- ormance of Materials, March 4-8, 1974, Chicago, llinois. 6 p, 4 fig.

Descriptors: *Borehole geophysics, *Logging(Recording), *Corrosion, *Pitting(Corrosion), *Well casings.
Identifiers: Casing potential logging, Vertilog, *Corrosion logging, Electromagnetic flux leakage.

A new wire line technique used to detect corrosion pitting damage to downhole tubular steel is discussed. This technique, called electromagnetic flux leakage, utilizes the fact that any pipe wall anomaly causes the lines of magnetic flux being conducted through the pipe to be interrupted. Cor- responding interruptions occur in the electrical field associated with the magnetic flux, and these electrical signals are sent to the surface and later interpreted. Drastic changes in current patterns are shown to be related to pipe wall anomalies. (Martino-NWWA) W74-07868

DRILL PIPE FAILURES: WHERE DO WE GO FROM HERE,
Continental Oil Co., Ponca City, Okla.
P. Mehdizadeh.
Petroleum Engineer, Vol 45, No 10, p 52-70, Sep- tember 1973. 6 fig, 2 tab.

Descriptors: *Fatigue(Mechanics), *Failure(Mechanics), *Corrosion, Rotary drilling, Drilling equipment, Drilling, Drilling fluids, Mud, Wells, Tensile stress, Washouts, Corrosion con- trol.
Identifiers: *Drill pipe, *Tool joints, Notch fatigue, American Petroleum Institute RP7G.

Service problems of drill pipe and tool joints are tabulated and discussed briefly according to mode of failure, causes, and preventive measures to be taken. Problems caused by inadequate design or improper downhole operations nowadays are rela- tively rare as compared with problems resulting from mishandling prior to entering the hole. Problems arising from fatigue and corrosion fatigue account for about 90% of drill string failures. Corrosive agents that may enter the drilling fluid are oxygen, hydrogen sulfide and car- bon dioxide. Sources, estimated reduction in fatigue strength of pipe, and approaches to mitiga- tion of corrosion of these substances are tabu- lated. Suggestions are offered on the care and maintenance of drill strings. (Campbell-NWWA) W74-07869

37 WAYS TO IMPROVE YOUR WELL COMPLETIONS,
Institut Francais du Petrole, Rueil-Malmaison (France).
R. Desbrandes.
World Oil, Vol 174, No 5, p 71-74, April 1972. 2 fig, 41 ref.

Descriptors: *Logging(Recording), *Borehole geophysics, *Electrical well logging, *Radioactive well logging, *Borehole cameras, *Lithologic logs, Subsurface investigations.
Identifiers: Well completion, CORIBAND, Acoustic logs, Borehole television.

Improved formation evaluation, more efficient perforating jobs and higher well productivities are resulting from recent advances in wireline tools. New engineering methods now being applied in the field include: logging methods for controlling sand production; techniques for evaluating elements such as carbon, aluminum and silica in borehole rocks; detection of casing tension failures in steam injection wells; through-tubing formation logs and production tools; and techniques for obtaining cleaner, deeper perforations for higher well flow. Specialty devices discussed include radar logging tools, sidewall acoustic logging devices, magnetic casing logging tools, a 1 3/4-inch borehole televiewer, an electromagnetic perforator orienta- tion device, and CORIBAND analysis units. (Staplin-NWWA) W74-07870

INFLUENCE OF WATER QUALITY ON THE CORROSION AND ELECTROCHEMICAL BEHAVIOR OF MILD STEEL IN SYNTHETIC ACID MINE WATERS,
Department of Energy, Mines and Resources, Ot- tawa (Ontario).
D. V. Subrahmanyam, and G. R. Hoey.
Presented at The International Corrosion Forum Devoted Exclusively to the Protection and Per- formance of Materials, March 4-8, 1974, Chicago, Illinois. 17 p, 8 fig, 3 tab, 20 ref.

Descriptors: *Corrosion, *Corrosion control, *Acid mine water, *Electrolysis, Physicochemical properties, Mining, Metallurgy, Water quality.
Identifiers: *Mild steel, Corrosion rates, *Ionic species, Electrochemical behavior, Type 1010 mild steel.

The results of investigations on the influence of ionic species on the corrosion and electrochemical behavior of Type 1010 mild steel in synthetic acid mine waters are presented. These results show that: (1) in synthetic acid mine waters, the corro- sion rates are increased significantly by ferric and cupric ions; (2) the corrosion rate is directly pro- portional to the ferric ion reduction rate; (3) the corrosion of mild steel is predominantly under the control of diffusion controlled cathodic reduction steps, (4) the weight loss and Tofel extrapolation methods of determining corrosion rates of mild steel in various waters agrees within 30%, (5) polarizing the mild steel to a potential of -1000 mpy to 30 mpy in solutions containing ferric ions, and (6) copper complexing did not inhibit copper deposition or minimize the corrosion rate. (Martino-NWWA) W74-07876

COMPENSATED GAMMA RAY DENSIMETER MEASURES SLURRY DENSITIES IN FLOW,
Halliburton Services, Duncan, Okla.
R. J. Guest, and C. W. Zimmerman.
Petroleum Engineer, Vol 45, No 10, p 80-87, Sep- tember 1973. 5 fig, 6 ref.

Descriptors: *Density, *Slurries, *Cements, *Drilling fluids, *Gamma rays, Radiation, Well drilling, Grouting.
Identifiers: *Gamma ray densimeter, Compen- sated densimeter, Mass absorption coefficient, Photon energy, Hydraulic fracturing, Scintillation counter.

A gamma radiation detector consisting of a scintil- lation crystal, a photomultiplier tube, and ap- propriately designed shielding, makes practical a compensated densimeter that is but little in- fluenced by the constituents of the slurry. The density indication for the full range of slurry con- stituents normally pumped in oilfield service is within plus or minus 0.25 pound per gallon of true density. If the constituents are limited to those normally used in drilling muds, density indications are made to within plus or minus 0.1 pound per gal- lon of true density. Measurement of the density of the slurry under pressure eliminates uncertainties caused by entrained air. In drilling operations, the densimeter transducer inserted in the standpipe is capable of sustained operation at 4000 psi. The returns densimeter transducer is mounted on a skid with a pump to circulate the mud. The instru- ment package is installed near the driller's console and displays and records the densities. The stand- pipe and returns density readouts can be corre- lated with pressure and other data to interpret a wide range of well bore conditions. In cementing operations the densimeter instrument package is installed near the cementing operator to provide a continuous visual indication of density. A per- manent record is provided also. Tests are in progress on the use of the densimeter in hydraulic fracturing to measure sand concentration. (Campbell-NWWA) W74-07877

CORROSIVE EFFECTS OF POTABLE WATER,
Denver Water Dept., Colo.
R. C. Randolph, and D. A. Lincoln.
Materials Protection and Performance, Vol 12, No 4, p 25-27, April 1973. 1 fig, 1 tab.

Descriptors: *Corrosion, *Corrosion control, *Potable water, *Stainless steel, *Filters, Copper alloys, Screens, Pitting(Corrosion), Filtration, Sands, Screens, Treatment facilities.
Identifiers: *Microstrainers, Rapid sand filters.

Two examples are cited of corrosion by potable water in the Marston Treatment Plant of the Denver Water Department: (1) Type 304 stainless steel microstrainer screens, and (2) galvanized steel piping in a rapid sand filtration system. The first major installation in the United States of stainless steel microstrainer screens was made in 1961. Installation cost was about $845,000. Operation cost is estimated at $3.58 per million gallons. After seven years of operation, pinholes were noted in the microstrainer fabric. The following year, algae and turbidity appeared in the finished water and several of the microstrainer drums were judged to be inoperable. A study of the cause of failure showed that the major source of trouble was crevice corrosion initiated by oxygen starvation and depassivation of the Type 304 stainless steel. The badly corroded panels were replaced by Type 316 steel. Alcoholic phosphoric acid was used in cleaning and washwater flow was increased. The treatment appears to be successful after three years. The rapid sand filtration unit was installed in 1964. Although provision had been made to insulate between the red bronze and the galvanized steel segments of the system, serious corrosion of the galvanized steel occurred. Coating with mastic and replacement by red brass are the treatments in progress. (Gray-NWWA)

CORROSION RESISTANCE OF PIPING AND CONSTRUCTION MATERIALS,
Engelhard Industries, Inc., Newark, N.J.
P. N. Cheremisinoff, I. Fideli, and N. P. Cheremisinoff.
Pollution Engineering, Vol 5, No 8, p 23-26, August, 1973.

Descriptors: *Corrosion, Pitting, Cavitation, Fatigue, *Corrosion control, *Materials, Specifications, Design, Metals, *Alloys, Chemicals.
Identifiers: Clarkson, *Acidic solutions, Metallic corrosion, Non-metallic corrosion.

Corrosion is deterioration or decay occurring when a material reacts with its surroundings or the fluid being transported or contained. It may be either uniform, where the material corrodes at the same rate over the entire surface, or localized with only small portions affected. Twelve types of corrosion are described. Most construction materials are expected to undergo some type of corrosion. Therefore, it becomes important to determine what effects chemicals in an environmental system will have on materials. Careful analysis must be made of effluents, and existing piping and construction materials should also be examined and compared. The following factors influencing the extent of corrosion should be considered: (1) concentration of major constituents being handled; (2) pH of effluent; (3) temperature of effluent; (4) degree of aeration (limited aeration may enhance certain types of corrosion); (5) velocity of the fluid stream in the transport system; (6) inhibitors; and (7) startup and downtime procedures. Numerous construction materials, metallic and non-metallic are available for pipe and tanks. Physical properties should be thoughfully examined before any final selection is made. Tables are presented as a general guide to proper selection. (Hunt-NWWA)

CAUSES AND PREVENTION OF DRILL PIPE TROUBLES,
Armco Steel Corp., Houston, Tex.
R. L. Vingoe.
Drilling, Vol 33, No 6, p 22-24, April, 1972. 10 fig.

Descriptors: Rotary drilling, Drilling fluids, *Failure(Mechanics), *Buckling, *Cracks, *Fatigue(Mechanics), *Pitting(Corrosion), Hydrogen ion concentration, *Corrosion control.
Identifiers: Internal corrosion fatigue, *Corrosion fatigue, Yield point, Critical rotary speeds, Fatigue cracks, *Pipe bending, Nodal vibration, Pendulum vibration.

Corrosion fatigue and the bending of drilling pipe are the two major problems that drilling contractors face. Corrosion fatigue begins with pitting of the pipe surface and progresses to fatigue cracking in the final stages, where each crack roots along the former pits. This process is accelerated by (1) exceeding a stress level of 90,000 psi during drilling, (2) drilling in corrosive formations, and (3) allowing the pH of the drilling fluid to drop below 9.5. Four performance guidelines for preventing corrosion fatigue are given: (1) plastic coating of inside and outside walls of pipe, (2) keeping pipe under tension during service, (3) minimizing slip damage or other notch and gouge markings, (4) maintaining the pH of the drilling mud at 10.5 or higher. Bends in drill pipe occur when the critical rotary speed is exceeded for a given drilling depth. The relationships of critical rotary speeds with pipe size and hole depth for the two types of vibrations responsible for pipe bending, i.e. nodal and pendulum vibrations, are described. The use of stronger drill pipe with a higher yield point can reduce the amount of pipe bending due to drill pipe whipping. (Martino-NWWA)
W74-07889

CORROSION BY WATERS,
Union Carbide Corp., New York.
C. P. Dillon.
Materials Protection and Performance, Vol 12, No 4, p 49, April, 1973.

Descriptors: *Corrosion, *Corrosion control, *Boiler feedwater, Water quality, Stainless steel, Carbon dioxide, Oxygen, Metal pipes.
Identifiers: *Sodium sulfite.

Untreated aerated water is corrosive to steel, and more resistant materials of construction are required in industrial service. Most industrial problems arise from inadequate attention or downright abuse of the utilities. Improperly deaerated boiler feedwater, for example, may result from substitution of ordinary sodium sulfite for catalyzed sodium sulfite in a steam plant designed for the latter product. Piping design should prevent the inadvertent introduction of untreated makeup water. Adequate control of water chemistry sometimes is neglected when steam is generated from boiler feedwater in converters or waste heat boilers. Low carbon dioxide content and absence of oxygen is required if stream condensate is to be handled in steel pipes. Stainless steel is needed for badly contaminated condensate. Wrought iron, or a high-strength, low alloy steel may be adequate for condensate of intermediate quality. (Gray-NWWA)
W74-07890

LEARN THE BASICS OF CORROSION CONTROL,
J. D. Palmer.
Canadian Chemical Processing, Vol 56, No 1, p 45-48, January, 1972.

Descriptors: *Corrosion control, *Deterioration, Electrolysis, Metallurgy, Rusting, Saline water, Stainless steel, Control.
Identifiers: *Corrosion engineering, *Materials engineer, Corrosion characteristics, Material selection.

The application of modern corrosion engineering principles that rely heavily on material science represents the most efficient means of combating corrosion. Classically, the term corrosion has been restricted to the deterioration of metals by electrochemical reactions. Modern corrosion engineering involves a detailed analysis of the types of corrosion that can occur in virtually every natural and artificial environment, as well as an understanding of the corrosion characteristics of all metallic and non-metallic materials. In designing a successful corrosion control program the corrosion engineer must consider the following parameters: cost, corrosion behavior, weldability and solderability, forming characteristics, mechanical properties, availability, compatability, thermal and electrical characteristics, and magnetic characteristics. W74-07892

EVALUATION OF SCALING TENDENCIES,
G. B. Hatch.
Materials Protection and Performance, Vol 12, No 4, p 49-50, April, 1973. 4 ref.

Descriptors: *Scaling, *Calcium carbonate, *Hardness(Water), Calcium sulfate, Solubility, Saturation, Crystallization, Cooling water, Supersaturation, Heat exchangers, Carbon dioxide.
Identifiers: *Metastable solutions, *Thermal precipitation.

Calcium carbonate, as calcite or aragonite, is the scale most commonly found in water systems. Several factors should be considered before undertaking the operation of cooling water systems in the metastable solution range of calcium carbonate. Metastable limits are poorly defined. Moderately supersaturated solutions will remain stable indefinitely in the absence of solid surfaces that can serve as nuclei for crystalization. Relief of supersaturation can be quite slow even in the presence of the solid phase. The solubility of calcium carbonate decreases in the temperature range of cooling waters (25-95C). Thermal precipitation of calcium carbonate generally is the result of the retrograde solubility-temperature behavior. Loss of carbon dioxide from bicarbonate waters is not an essential factor in precipitation. Numerous solid surfaces, such as ferric oxide, accelerate the deposition of calcium carbonate from supersaturated solutions. Flow rate is another factor. Control tests must be made to determine the degree of saturation of calcium carbonate and deposition tests can be made through test heat exchangers. (Gray-NWWA)

ZINC/PHOSPHATE COMBINATIONS CONTROL CORROSION IN POTABLE WATER DISTRIBUTION SYSTEMS,
Virginia Chemicals, Inc., Portsmouth, Va.
T. E. Kelly, M. A. Kise, and F. B. Steketee.
Materials Protection and Performance, Vol 12, No 4, p 28-31, April 1973. 14 tab.

Descriptors: *Corrosion, *Corrosion control, *Potable water, Hydrogen ion concentration, Inorganic compounds, *Phosphates, Sulfur compounds, Distribution systems, Laboratory tests, *Zinc, Water quality, Pitting(Corrosion).
Identifiers: Zinc sulfate, Sodium dihydrogen phosphate, Sulfamic acid, 1010 steel.

Laboratory and field experience indicated that corrosion inhibitors based on zinc salts and orthophosphate salts reduced corrosion of 10 steel coupons about 85% in waters from Virginia, New Jersey, New York and a New England area.

he usual concentration in the treated water was 1 pm of zinc (Zn) and 0.88 ppm of phosphate (PO_4). inc sulfate, sulfamic acid and sodium dihydrogen nosphate were generally used. Sulfuric acid can e substituted for sulfamic acid, and other salts of nc can be used. Inhibitor concentrations are verned by the corrosivity of the water involved. ood results have been obtained at a cost of $1.80 er million gallons but in very corrosive waters sts may range as high as $7.20 per million gal-ns. Treatment costs may be offset by reduction chemical costs for post-coagulation pH adjust-ents because the zinc/phosphate inhibitor func-ons over a wide range in pH. A commercial reparation of suitable composition has been ap-oved for drinking water, provided that the con-ntrations of selected ions do not exceed the nits published in U.S. Drinking Water Standards. dentifiers: Differential pressure sticking, Forma-on pressure, Formation damage.

evere drilling problems have been encountered in ilburton Field, Oklahoma. Some of these roblems are related to variations in formation essures throughout the area. Well logs can be sed effectively to determine pressure profiles. In is field, overpressures and underpressures are resent. Correct mud weights and casing point lections are vital to drilling the wells efficiently nd economically. Drilling rate varies depending n the degree of differential pressure of the illing fluid to the formation pressure. Such dif-erential pressure can cause pipe stricking, circula-on losses and formation damage. Also, negative fferential pressure creates potential blowout onditions. Techniques were developed using logs o determine fluid pressures in the Spiro producing terval and overpressured adjacent shale interval. harts have been designed and are presented to be sed for the pressure calculations. OROSITY-RESISTIVITY CROSS-PLOTTING,
nion Oil Co. of California, Los Angeles.
. H. Lang, Jr.
: 13th Annual Logging Symposium Transac-ons, Society of Professional Well Log Analysts, lay 7-10, 1972, Tulsa, Oklahoma, paper F, 10 p, 972), 10 fig, 5 ref.

escriptors: *Aquifer characteristics, Porosity, Resistivity, Mathematics, *Graphical methods, lectric logs, *Hydrologic data, Equations.
dentifiers: Formation evaluation, *Formation actors, Water saturation.

uantitative formation evaluation has depended n the Humble or modified Archie equations as ie generally accepted Formation factor-porosity elations. Recent work by others indicates that dif-erent average relations may be more applicable. It ppears, however, that no worldwide average rela-on accurately fits a specific reservoir rock. The orosity-resistivity cross-plotting technique is in-ependent of a, m, Rw and other formation con-tants. If a statistically significant number of oints of a given rock type with a constant Rw can e plotted, it becomes possible to accurately ob-in a quantitative evaluation of that rock. Further, ie correct formation constants for that particular formation in that part of a particular geologic basin can be derived from the finished porosity-resistivity plot. As in any method formation evaluation, the analysis of a single log in any 'unexplored' basin may lead to errors which are not readily apparent to the inexperienced log analyst. As evidence is gathered in a geologic sequence in a basin, or, ideally, in a single formation in a field, the Formation factor-porosity equation can be determined that most accurately fits the rocks in question. THE SULFATE-REDUCING BACTERIA AND OILFIELD BACTERIAL CORROSION - A REVIEW OF THE CURRENT STATE-OF-THE-ART,
Superior Oil Co., Houston, Tex.
G. B. Farquhar.
Presented at The International Corrosion Forum Devoted Exclusively to the Protection and Performance of Materials, March 4-8, 1974, Chicago, Illinois, 13 p, 2 fig, 1 tab, 49 ref.

Descriptors: *Corrosion, *Anaerobic bacteria, *Sulfate-reducing bacteria, Bacteria, Microorganisms, *Reviews.
Identifiers: *Oilfield bacterial corrosion, Desulfovibrios, Hydrogenose, Cathodic hydrogen.

The role of sulfate-reducing bacteria in the corrosion of mild steel is discussed. Early investigators attributed anaerobic corrosion to: (1) bacterial utilization of the cathodic hydrogen by the enzyme hydrogenose, (2) the formation of concentration cells, and (3) anodic stimulation by the ferrous sulfide formed by the bacteria. More recent work has shown quite conclusively that: (1) the corrosivity of sulfate-reducing bacteria is principally due to their ability to produce iron sulfide, (2) the soluble iron content of the growth media is the most important factor controlling their rate of corrosion, and (3) the bacterial utilization of the cathodic hydrogen does not contribute significantly to the corrosion process. GALVANIC EFFECTS INCREASE CORROSION, PART 2,
J. D. Palmer.
Canadian Chemical Processing, Vol 56, No 2, p 36, 38-39, February, 1972. 5 fig, 3 tab.

Descriptors: *Corrosion, Pitting, Anodes, Cathodes, Chemical reactions, *Cathodic protection, Films, Stainless steel, *Electrochemistry.
Identifiers: *Galvanic effects, *Galvanic series, Electrochemical cell, Cell potential, Standard potential.

An understanding of relative electrochemical potentials is vital in minimizing corrosion wherever two or more different metals come into contact with one another. Describes are the characteristics of the electrochemical cell, and the cell action that takes place either locally on the surface of a single piece of metal, or between electrically interconnected pieces of different metals. The role of dissolved oxygen in solution is explored. Measuring cell potential is explained, and the role of the sacrificial anode to save steel from corroding is emphasized. Only corrosion at approximately ambient temperatures is discussed. (Campbell-NWWA)

TWO NEW DRILLING SYSTEMS PASS INITIAL FIELD TESTS, DC ELECTRIC POWER SWIVEL CAN SAVE TIME AND MONEY; HYDRAULIC SNUBBER BUILT TO OPERATE IN RUGGED TERRAIN.
World Oil, Vol 174, No 1, p 35-43, January, 1972. 9 fig.

Descriptors: Wells, *Drilling, *Drilling equipment, Well drilling, Offshore platforms, *Oil industry, Casings.
Identifiers: *Hydraulic snubber unit, *Electric powered swivel, Automatic pipe racking system, Wireline retrievable bit.

Two new concepts in drilling equipment have been built and are designed to operate with maximum personnel safety and well control, using only three-man crews. Main components of the systems are a 750 continuous hp DC electric powered swivel and a hydraulically powered snubber unit capable of handling drill pipe and casing. An automatic pipe racking system that will handle from one joint to one stand of pipe at a time can be used with either method. Also, a wireline retrievable bit will allow either system to drill with casing. The DC powered swivel will be especially applicable for use on many current electrically powered rigs. Large land units and many offshore rigs already are equipped with adequate generator and switchgear capacity to operate the unit. The drilling snubber unit is a specialty tool designed for use on remote locations. Because of its light overall weight and design, the snubber can be disassembled into small loads, comparable to mast, prime mover, BOP and mud system components, for complete transportation by helicopter. LABORATORY REARING EXPERIMENTS ON ARTIFICALLY PROPAGATED INCONNU (STENODUS LEUCICHTHYS),
Alaska Univ., College. Dept. of Biology.
J. D. LaPerriere.
Available from the National Technical Information Service as PB-232 141, $4.50 in paper copy, $1.45 in microfiche. Alaska Institute of Water Resources, Fairbanks, Report No IWR-40. June, 1973, 25 p, 7 fig, 4 ref. OWRR A-041-ALAS(2). 14-31-0001-3802.

Descriptors: *Fish hatcheries, Arctic, *Alaska, Photoperiodism, Daphnia, Shellfish, Algae, Brine shrimp, *Fish farming, Fish food organisms, *Fish diets.
Identifiers: *Inconnu, Oregon mash, Stenodus leucichthys, Selenastrum sp.

During the period of ice cover 1972-1973 the grayling thermal tolerance experiments in Interior Alaska were interrupted by the unavailability of

these fish. In collaboration with the Alaska Department of Fish and Game it was decided to use the experimental set-up to attempt to rear Inconnu (Stenodus leucichthys) in controlled conditions. Two temperatures (5C and 8C) and four feeds (freeze dried Daphnia, freeze dried brine shrimp nauplii, Oregon mash, and cultured algae, mainly Selenastrum sp.) were used as treatments. No significant difference was found between treatments due to heavy mortality. Papers by a Russian worker Karzinkin and Chilikov seemed to explain our heavy mortality. A photoperiod of 24 hours of light has been found necessary for successful rearing of Inconnu young.

EXPERIMENTS TO RE-ESTABLISH HISTORICAL OYSTER SEED GROUNDS AND TO CONTROL THE SOUTHERN OYSTER DRILL,
Louisiana Wild Life and Fisheries Commission, New Orleans. Div. of Oysters, Water Bottoms and Seafoods.
J. F. Pollard.
Available from the National Technical Information Service as COM-73-11171. Technical Bulletin No 6, January 1973. 82 p. 29 fig, 8 tab, 33 ref. 2-90-R. PL 88-309.

Descriptors: *Commercial shellfish, *Oysters, *Aquiculture, *Louisiana, Monitoring, Management, Marshes, Saline water intrusion, Parasitism, Planting management, Salinity, Water temperature, Water chemistry, Spawning, Estuaries, Economics, Deltas, Hydrologic properties.
Identifiers: *Oyster seed grounds, Southern oyster drill, Cultch plantings, Spatfall.

Cultch planting programs and fresh water diversion activities were studied in order to enhance production of oysters, Crassostrea virginica, in Louisiana. Various materials were screened for oyster cultch with clamshell found to be the most suitable. Two methods of planting cultch were evaluated and the preferable conditions are outlined. Plankton sampling to monitor oyster larvae in the water column and the use of spat-catching devices to monitor spatset were employed to determine periods and peaks of oyster spawning activity. The delineation of the infestation by the Southern oyster drill and its historical movement were discovered and methods for its control are discussed. Plankton sampling revealed the seasonal distribution of drill larvae in the water column, which extended from May through September and peaked in July or August. Trawl and dredge sampling gauged the effects of or compiled base line data on existing and proposed fresh water diversions intended to depress the salinity regimen of the area, and also project probable alterations in the area. Salinity and water temperatures were intensively monitored to outline the seasonal regimens of both parameters and a less intensive study of additional water chemistry parameters was accomplished. A WATER QUALITY PROBLEM IN LOBSTER HOLDING TANKS,
Rhode Island Univ., Kingston. Marine Advisory Service.
T. L. Meade.
Available from the National Technical Information Service as COM-73-11886, $2.75 in paper copy, $1.45 in microfiche. Marine Memorandum Series No 31 (undated). 3 p. 1 ref.

Descriptors: *Storage tanks, *Water quality, *Lobsters, Water temperature, Mortality, Ammonia, Toxicity, Nitrates, Dissolved oxygen, Nitrification.
Identifiers: *Lobster holding tanks.

While refrigeration is used to maintain desirable temperatures in lobster holding tanks, nevertheless high mortalities occurred from midsummer to early autumn in some shore holding facilities coinciding with maximum surface water temperatures and relatively high percentages of newly moulted lobsters in the catch which are under greater stress than their heavily shelled counterparts and require more oxygen. Water quality was implicated as a possible cause of the high mortality. Water is sometimes recirculated longer than desirable with the result that weak and dead lobsters remain in some tanks for excessive periods. Water samples were analyzed for ammonia five hours after introduction of fresh seawater. The following morning samples averaged 3.7 ppm ammonia and from the same tanks six hours later, 4.8 ppm. Forty-two hours later ammonia ranged from 9.2 to 14 ppm; concentrations greater than 10 ppm probably are unsafe. The apparent solution was the installation of additional refrigeration tonnage and, possibly, insulation of the holding tanks. An alternative was to encourage the development of marine nitrifying microorganisms that would convert the toxic ammonia to less toxic nitrate. (Jones-Wisconsin)

THE EFFECTS OF THE MARYLAND HYDRAULIC CLAM DREDGE ON POPULATIONS OF THE SOFT-SHELL CLAM, 'MYA ARENARIA,'
Maryland Dept. of Research and Education, Solomons. Chesapeake Biological Lab.
H. T. Pfitzenmeyer.
Available from the National Technical Information Service as COM-73-11006, $6.00 in paper copy, $1.45 in microfiche. National Marine Fisheries Service Report No. NOAA-73052501, April 1972. 77 p. 22 fig, 21 tab. 3-93-R. PL 88-309.

Descriptors: *Harvesting, *Chesapeake Bay, *Clams, *Dredging, Reproduction, Particle size, Juvenile growth stage, Shellfish, Estuarine fisheries, Spawning, Commercial fishing, Mortality, Sediments, Growth rates, Potomac River.
Identifiers: *Mya arenaria.

Effects of seasonal and intermittent hydraulic clam dredging upon survival and growth of remaining populations and annual recruitment of juvenile soft-shell clams were determined in Chesapeake Bay and the Potomac River. Physical and chemical changes in substrates altered by dredging were evaluated. Population densities of sub-legal soft-shell clams were not significantly reduced by dredge harvesting legal-sized clams. Populations of legal-sized clams sampled four months after the March or June dredging were not significantly different from densities in undredged areas. August dredging resulted in significantly different population densities until 8-12 months later. Initial setting was not greater in dredged areas, but recruitment of young clams increased where adult populations were reduced. No differences in survival or recruitment were observed in plots dredged daily and weekly. Growth rates did not appear to vary in dredged and undredged plots. No major changes in sediment grain size were detected after dredging. The marketable population of soft-shell clams in dredged plots averaged 5 clams per square foot at the beginning of the June 1969 experiment; at the termination of the investigation in December 1971, average density was .05 clams. MOLLUSCAN MORTALITY STUDIES,
Maryland Dept. of Natural Resources, Annapolis.
S. V. Otto.
Available from the National Technical Information Service as COM-73-11891/1, $5.50 in paper copy, $1.45 in microfiche. National Marine Fisheries Service Report NOAA-73101017, August 1973. 68 p. 5 append. 3-131-R. PL 88-309.

Descriptors: *Animal diseases, *Molluscs, *Mortality, *Chesapeake Bay, Oysters, Animal parasites, Clams, Commercial shellfish, Protozoa, Distribution, Aquiculture, Breeding, Reproduction.
Identifiers: Minchinia nelsoni, Dermocystidium marinum, Manokin River(Md.), Ciliated thigmotrichs, Amoebiasis, Ovacystis, Neoplasia, Tagelus plebius, Vibrio anguillarum.

Determination was made of the ranges, prevalence, and intensities of the major economically deleterious parasites and diseases affecting the several species of molluscan shellfish found in Chesapeake Bay and its tributaries. Oyster samples were collected and examined quarterly from the eight natural bars and four raft-caught spat planted bars in the Manokin River. Hard clams were sampled monthly, soft clam sampling was conducted during May-October 1971, and razor clams were examined on an irregular basis. Manokin River field work in spatfall monitoring and off-bottom spat capture studied economically feasible methods of development and management of the oyster resource in mass seed capture and transplantings. In setting areas, off-bottom cultch is far superior to on-bottom cultch as far as density is concerned. Gill infections caused by the probably commensal organism, ciliated thigmotrichs, were found in 461 oysters. Amoebiasis was found in 15 oysters in the April 1970 sample. Excluding the Manokin River, 22 oysters were found with ovacystis, and 11 cases of neoplasias. Hard clam and soft clam parasite distribution studies were made. Mortality and infection rates of oyster stock in a non-enzootic area was compared with stock from an enzootic area. (Jones-Wisconsin)

THE APPLICATION OF 'ROTENONE' FOR THE EXTERMINATION OF THE INDIGENOUS FISH STOCK IN WATERS WHERE INTENSIVE FISH FARMING IS TO BE INTRODUCED,
I. Mihajlovic, and V. Rajevski.
Available from the National Technical Information Service as TT 72-56039, $3.00 in paper copy, $1.45 in microfiche. Bureau of Sport Fisheries and Wildlife Translation TT 72-56039, 1973, 7 p. Translated from Ribarstvo, Vol 6, 1960.

Descriptors: *Fish control agents, *Rotenone, *Fish stocking, Fish farming, Piscicides, Application methods, Aquatic life, Toxicity.
Identifiers: Serbia.

National economic considerations offer a primary rationale for the introduction of fish farming into appropriate bodies of water, including all types of reservoirs and drainage networks. Fish farming requires a radical clearing of existing indigenous fish and the introduction of those fish species best suited to the hydrochemical and hydrobiological conditions of a specific location. Rotenone is a specific fish poison if used in prescribed concentrations, and fish poisoned with Rotenone may be safely eaten. Fisheries research stations of the PR of Serbia carried out experiments in the application of so-called semi-pond farming on the Opovacki Dunavac at Pancevacki Rit. Rotenone was chosen as a means of clearing the location both for practical and experimental purposes. Tests were performed of the effects of Rotenone on carp in aquaria. It was decided to clear one-half acre of water and up to 2 m deep with Rotenone as a test of its efficiency. A concentration of 0.025 mg/l of pure Rotenone proved to be quite sufficient. Biological analysis carried out early in the

ring did not reveal any harmful effects to quatic organisms. (Jones-Wisconsin)

ANNUAL REPORT '72 - '73.
Hawaii Univ., Honolulu. Water Resources Research Center.
Available from the National Technical Information Service as PB-232 016, $7.75 in paper copy, $1.45 in microfiche. 1973. 92 p. OWRR A-999-HI(9).

Descriptors: Water Resources Research Act, *Hawaii, Water quality, *Colleges, Runoff, Sedimentation, Water reuse, Waste water disposal, Landfills, Water supply, Irrigation, Reservoir design, Radioactive well logging, Isotope studies, Urban hydrology, *Water Resources Institute, *Universities, *Training, *Grants.

The Office of Water Resources Research allotment and matching grant programs provided a firm base for about one-third of the University of Hawaii Water Resources Research Center's research effort. Projects directed toward evaluation of runoff and sediment contributions to quality of surface waters included A-018-HI, A-027-HI, and A-030-HI. Wastewater reclamation potential was evaluated in A-018-HI and A-036-HI. In A-040-HI the pollution potential of sanitary landfill leachate was assayed. Projects directed toward water sufficiency included A-030-HI, concerning the patterns and trends of water demand in southern Oahu; A-031-HI, comparing drip to sprinkle irrigation; and modeling studies of infiltration, water demand, and optimal use of small reservoir systems in A-035-HI, A-037-HI, and A-038-HI, respectively. Radiation well logging and calibration techniques for that work were studied in A-032-HI and A-034-HI. Isotopic means of evaluating water age and movement was researched in B-030-HI. A new rain gage was developed and utilized in B-028-HI. Simulation of urban hydrology and water distribution system design were the objectives of B-028-HI and B-029-HI, respectively. (Knapp-USGS)

ACIDIZATION
Dissolution of a Porous Matrix by a Slowly Reacting Acid,
W74-07860 8B

ACIDS
Dissolution of a Porous Matrix by a Slowly Reacting Acid,
W74-07860 8B

ACTIVATED CARBON
Adsorption from Aqueous Solution,
W74-07739 5D

Wastewater Treatment Using Electrolysis with Activated Carbon Cathode,
W74-08028 5D

ACTIVATED SILICA
Activated Silica in Wastewater Coagulation,
W74-07738 5D

ACTIVATED SLUDGE
The Treatment of Waste Water from Industries and Commerce in Public Purification Plants (in German),
W74-07748 5D

Mechanical-Biological Waste Water Purification Plant,
W74-08032 5D

Investigations on the Problem of Solubility and Stability of Steroid Ovulation Inhibitors in Water, Waste Water and Activated Sludge, (In German),
W74-08133 5A

ADHESION
Adhesion of Ice Frozen from Dilute Electrolyte Solutions,
W74-07618 2C

Corrosion Resistant Cements,
W74-07887 8F

ADHESIVES
Sand Control, (Part 4), Combinations, Comparisons, and Costs,
W74-07851 8A

ADMINISTRATIVE ORGANIZATION
State Organization for Water Resources Management,
W74-07733 6E

ADSORPTION
Adsorption of Fenuron and Monuron (Substituted Ureas) by Two Montmorillonite Clays,
W74-07627 5B

Fixation of Zinc by Clay Minerals,
W74-07629 2G

Anion Adsorption by Allophanic Tropical Soils: I. Chloride Adsorption,
W74-07634 2G

Anion Adsorption by Allophanic Tropical Soils: II. Sulfate Adsorption,
W74-07635 2G

Anion Adsorption by Allophanic Tropical Soils: III. Phosphate Adsorption,
W74-07636 2G

Adsorption from Aqueous Solution,
W74-07739 5D

Wastewater Treatment,
W74-08034 5D

AERATION
Oxygenation of Aqueous Bodies Using Liquid Oxygen-Loxination,
W74-07741 5D

Phytoplankton Community Structure and Nutrient Relationships in Lake Carl Blackwell, Oklahoma,
W74-07992 2H

Apparatus for Aerating Water,
W74-08023 5D

Submerged Turbine Aerator,
W74-08027 5D

Method and Apparatus for Aerating Bodies of Water,
W74-08031 5G

Mathematical Model for Post Aeration,
W74-08045 5D

Design and Simulation of Equalization Basins,
W74-08046 5D

AERATORS
Method and Apparatus for Aerating Bodies of Water,
W74-08031 5G

AEROBIC CONDITIONS
Results of Red Tide Formation in Tokyo Bay,
W74-07770 5C

AEROBIC TREATMENT
Oxygenation of Aqueous Bodies Using Liquid Oxygen-Loxination,
W74-07741 5D

AESTHETICS
A Summary of Quantity, Quality and Economic Methodology for Establishing Minimum Flows,
W74-07847 6B

AGRICULTURAL RUNOFF
Contribution to Water Pollution from Agricultural and Urban Sources in the Coachella Valley,
W74-07757 5B

AGRICULTURE
Environmental Aspects of Energy-Water Relationships,
W74-07965 6D

AIR POLLUTION
Inorganic Mercury-Relation Between Exposure and Effects,
W74-07686 5C

The Environmental Context,
W74-07696 5C

Trace Metals in Atmospheric Particulates and Atomic Absorption Spectroscopy,
W74-07705 5A

Analysis of Trace Metal Particulates in Atmospheric Samples Using X-Ray Fluorescence,
W74-07709 5A

The Determination of Mercury in Air Samples and Biological Materials,
W74-07710 5A

Tritium Distribution in the Nuclear Industry - The Requirements for Control Strategies,
W74-07784 5B

Environmental Radioactivity,
W74-07791 5B

Smelter Gases Yield Mercury,
W74-07956 5D

ALABAMA
Use of Fluorescent Dye Tracers in Mobile Bay,
W74-07642 5B

ALASKA
Effects of Crude Oil and Some of its Components on Young Coho and Sockeye Salmon,
W74-07613 5C

Laboratory Rearing Experiments on Artifically Propagated Inconnu (Stenodus Leucichthys),
W74-07725 8I

ALFALFA
Leaching Requirement Studies: Sensitivity of Alfalfa to Salinity of Irrigation and Drainage Waters,
W74-07774 3C

Effect of Establishment Method, Variety, and Seeding Rate on the Production and Quality of Alfalfa Under Dryland and Irrigation,
W74-08077 3F

Variations in Potassium Content of Alfalfa Grown on Pseudogley Soil Depending on Mineral Fertilizing, (In Serbo-Creation),
W74-08097 3F

ALGAE

The Use of Algal Assays for Determining the Effect of Iron and Phosphorus Compounds on the Growth of Various Algal Species,
W74-07776 5C

Phytoplankton Community Structure and Nutrient Relationships in Lake Carl Blackwell, Oklahoma,
W74-07992 2H

Species Composition of Epiphytic Bacteria of Green Filamentous Algae in the Northern Donets-Donbas Canal, (in Russian),
W74-08112 5C

Seasonal Changes of Benthos Algae of the Higher Part of Vorskla River, (In Russian),
W74-08142 5C

ALGAE (UNICELLULAR)

Experiments on the Movement Behavior of Unicellular Algae in Flowing Water,
W74-08120 2I

ALGAL

Toxicity of an Algal Complex on Freshwater Fauna: 1. Action on Some Benthic Animals and Fishes. (in French),
W74-08108 5C

Toxicity of an Algal Complex on Freshwater Fauna: 2. Action on Lymnaea Spp. (in French).
W74-08109 5C

ALGAL CONTROL

The Use of Algal Assays for Determining the Effect of Iron and Phosphorus Compounds on the Growth of Various Algal Species,
W74-07776 5C

Inorganic Nitrogen Removal in a Combined Tertiary Treatment-Marine Aquaculture System - II. Algal Bioassays,
W74-07777 5C

ALGAL GROWTH

Experiments on the Movement Behavior of Unicellular Algae in Flowing Water,
W74-08120 2I

ALGORITHMS

Induced Safety Algorithm for Hydrologic Design under Uncertainty,
W74-08017 6A

ALKALINE SOILS

Effects of Drainage and Organic Amendments on the Reclamation of a Sodic Soil Cropped With Rice,
W74-08087 3C

ALKALINITY

Activated Silica in Wastewater Coagulation,
W74-07738 5D

Investigation of River Water for the Presence of Escherichia coli and Enterococcus, (in Russian),
W74-08004 5A

ALLOYS

Corrosion Resistance of Piping and Construction Materials,
W74-07888 8G

ALLUVIAL CHANNELS

Exploration for a Buried Valley by Resistivity and Thermal Probe Surveys,
W74-07935 2F

ALLUVIUM

A Ground-Water Monitoring Network for Kootenai Flats, Northern Idaho,
W74-07662 7A

ALTERATION OF FLOW

Present and Future of Lake Sevan (Sovremennoye sostoyaniye i budushcheye ozera Sevan),
W74-08048 2H

ALUM RECOVERY

Coagulant Recovery and Reuse in Water Reclamation Systems,
W74-07844 5D

ALUMINUM

Effect of Monosilicic Acid on Hydrolytic Reactions of Aluminum,
W74-07626 2G

AMMONIA

A Kinetic Study of Ammonium and Nitrite Oxidation in a Soil Field Plot,
W74-07625 5B

ANAEROBIC BACTERIA

The Sulfate-Reducing Bacteria and Oilfield Bacterial Corrosion - A Review of the Current State-of-the-Art,
W74-07902 8G

ANALOG MODELS

Data on Fresh-Water Inflow, April 14-July 28, 1973, For Analog-Model Study of the Houston Ship Channel, Houston, Texas,
W74-07921 7C

ANALYSIS

Mercury Analysis by Atomic Absorption Spectrophotometry,
W74-07704 5A

ANALYTICAL TECHNIQUES

Mercury in the Environment, An Epidemiological and Toxicological Appraisal.
W74-07680 5C

Methods of Analysis,
W74-07681 5A

Methods of Mercurometric Investigations,
W74-07695 5A

Mercury Analysis by Atomic Absorption Spectrophotometry,
W74-07704 5A

The Determination of Mercury in Air Samples and Biological Materials,
W74-07710 5A

A Note Concerning the Environmental Acceptability of Nitrilotriacetic Acid (NTA): The Effect of NTA on the Growth of Gymnodinium breve,
W74-07775 5C

Fractionation of Suspended and Colloidal Particles in Natural Water,
W74-07783 5A

Determination of the Fate of Polynuclear Aromatic Hydrocarbons in Natural Water Systems,
W74-07827 5A

Gradient Analysis of Carbon Monoxide and Methane in Polluted and Other Nearshore Habitats,
W74-07984 5A

Sources, Sinks, and Methods of Analysis of Organic Nitrogen Compounds in Fresh Water Systems,
W74-08008 5C

ANASCO RIVER (P

Trace-Element Interactions Between River Water and Seawater,
W74-07805 5B

ANIMAL BEHAVIOR

The Effects of Crude Oil Pollution on the Behavior of Marine Invertebrates,
W74-07987 5C

ANIMAL DISEASES

Molluscan Mortality Studies,
W74-07995 8I

ANIMAL PATHOLOGY

Antagonistic Effect of Arginine on Zinc Metabolism in Chicks,
W74-07955 5C

ANIMALS

Tissue Sulfhydryl Groups in Selenium-Deficient Rats and Lambs,
W74-07952 5B

ANION EXCHANGE RESINS

Organic Water Impurities and Evaluation of Methods for their Removal in Water Mains (In Russian),
W74-07862 5D

ANIONS

Anion Adsorption by Allophanic Tropical Soils: I. Chloride Adsorption,
W74-07634 2G

Anion Adsorption by Allophanic Tropical Soils: II. Sulfate Adsorption,
W74-07635 2G

Anion Adsorption by Allophanic Tropical Soils: III. Phosphate Adsorption,
W74-07636 2G

ANNUAL INCREMENT

Effect of Climatic and Phytocenotic Factors on Annual Increment of Trees in Stands, (In Russian),
W74-08127 2I

ANTARCTICA (HASWELL ISLAND)

Freshwater Fauna and Flora in Haswell Island (Queen Mary Land, Eastern Antarctica),
W74-08107 2I

API WASTE WATER SEPARATOR

Sun Oil Develops Water Reuse Program,
W74-07882 5D

AQUATIC ANIMALS

Study on the Periphytic Colonizations of a Lateral Environment of the River Po(Italy), (In Italian),
W74-07702 2I

AQUATIC ENVIRONMENT

Iron-55 and Ruthenium-103 and -106 in the Brackish-Water Clam Rangia cuneata,
W74-07804 5A

AQUATIC INSECTS

Studies on Southeastern Aquatic Insects,
W74-07740 5C

The Effects of River Fluctuations Resulting from Hydroelectric Peaking on Selected Aquatic Invertebrates,
W74-07830 2I

AQUATIC LIFE
Plutonium in North Atlantic Ocean Organisms; Ecological Relationships,
W74-07800 5C

Thermoluminescent Dosimetry of AquatiR Organisms,
W74-07819 5C

AQUATIC PLANTS
A Preliminary Check-List of the Marine Algae of the Moss Landing Jetty: An Annotated Floristic Compilation,
W74-07981 5C

AQUATIC PLANTS BEECH
Tricladium varium, An Aquatic Hyphomycete on Wood in Water-Cooling Towers,
W74-08011 2I

AQUEOUS SOLUTIONS
Paper Chromatographic and Electrochromatographic Separation of Edta Complexes of Metal Ions,
W74-07693 5A

AQUICULTURE
Experiments to Re-establish Historical Oyster Seed Grounds and to Control the Southern Oyster Drill,
W74-07982 8I

AQUIFER CHARACTERISTICS
Porosity-Resistivity Cross-Plotting,
W74-07900 8G

AQUIFER SYSTEMS
Groundwater Pollution and Conservation.
W74-08071 5B

AQUIFERS
The Transport of Radioisotopes by Fine Particulate Matter in Aquifers,
W74-07730 5B

Buried Triassic Basin in the Central Savannah River Area, South Carolina and Georgia,
W74-07916 2F

Groundwater Pollution and Conservation.
W74-08071 5B

ARCTIC
Gypsum-Cement Blend Works Well in Permafrost Areas,
W74-07884 8F

Delimitation of Weathering Zones in the Fiord Area of Eastern Baffin Island, Canada,
W74-07937 2J

ARGENTINA (TUCUMAN)
'Hill-Top Irrigation,' A New System for Early Sweetpotato Planting, (In Spanish),
W74-08136 3F

ARGININE
Antagonistic Effect of Arginine on Zinc Metabolism in Chicks,
W74-07955 5C

ARIZONA
Geohydrology and Water Resources of the Tucson Basin, Arizona,
W74-07648 2F

Improving Municipal Water Supplies in Arizona by Desalting,
W74-08063 3A

ARKANSAS RIVER (COLO)
Transit Losses and Travel Times for Reservoir Releases, Upper Arkansas River Basin, Colorado,
W74-07931 4A

AROMATIC COMPOUNDS
Determination of the Fate of Polynuclear Aromatic Hydrocarbons in Natural Water Systems,
W74-07827 5A

AROMATIC HYDROCARBONS
The Effects of Crude Oil Pollution on the Behavior of Marine Invertebrates,
W74-07987 5C

ARTESIAN AQUIFERS
Hydrology and Chloride Contamination of the Principal Artesian Aquifer in Glynn County, Georgia,
W74-07919 2F

ASCORBIC ACID
Effect of Ascorbic Acid on Cadmium Toxicity in the Young Coturnix,
W74-07707 5C

ASH ELEMENTS
Effect of the Moisture and Temperature on the Leaching of Ash Elements from Plant Residues (in Russian),
W74-08016 2I

ASSAY
Radioactivity of Nevada Hot-Spring Systems,
W74-07786 5A

Plutonium in North Atlantic Ocean Organisms; Ecological Relationships,
W74-07800 5C

ATLANTIC OCEAN
Influence of Older Relief on the Location of Sand Waves in a Part of the Southern North Sea,
W74-07676 2J

Plutonium in North Atlantic Ocean Organisms; Ecological Relationships,
W74-07800 5C

ATOMIC ABSORPTION SPECTROPHOTOMETRY
Mercury Analysis by Atomic Absorption Spectrophotometry,
W74-07704 5A

ATOMIC ABSORPTION SPECTROSCOPY
Trace Metals in Atmospheric Particulates and Atomic Absorption Spectroscopy,
W74-07705 5A

Determination of Copper and Zinc in Biological Material,
W74-07712 5A

The Determination of Heavy Metals in Domestic Sewage Treatment Plant Wastes,
W74-07763 5A

An Instrumental Technique for the Determination of Sub-Microgram Concentrations of Mercury in Soils, Rocks, and Gas,
W74-07948 2K

AUSTRALIA
The Significance of Moisture Flow and Equilibria in Unsaturated Soils in Relation to the Design of Engineering Structures Built on Shallow Foundations in Australia,
W74-07899 8D

AUTOMATIC CONTROL
Automatic Pumping Installations for Livestock Sections,
W74-07864 8C

AUTOMATION
Automation of the Control and Operation of Water Pollution Control Works,
W74-07758 5D

A Data Acquisition System for Ecological Field Studies,
W74-07989 7B

AXISYMMETRIC INFILTRATION
Axisymmetric Infiltrations,
W74-07839 2G

BACTERIA
Survival of Intestinal Bacteria in Oligotrophic Waters,
W74-07737 5C

Coliforms are an Inadequate Index of Water Quality,
W74-07885 5A

Investigations on the Occurrence and Decomposition of Fats and Fatty Acids in Lakes, (In German),
W74-08141 5C

BACTERIA (EPIPHYTIC)
Species Composition of Epiphytic Bacteria of Green Filamentous Algae in the Northern Donets-Donbas Canal, (in Russian),
W74-08112 5C

BACTERIOLOGICAL STUDIES
Sowing of Ponds and Carp with Clostridium perfringens, (In Ukrainian),
W74-08076 5B

BAFFIN ISLAND (CANADA)
Delimitation of Weathering Zones in the Fiord Area of Eastern Baffin Island, Canada,
W74-07937 2J

BAJA CALIFORNIA
Ranger Submarine Slide, Northern Sebastian Vizcaino Bay, Baja California, Mexico,
W74-07938 2J

BARRIERS
Floating Barrier,
W74-08025 5G

Control of Waterborne Oil Slicks,
W74-08036 5G

BASELINE STUDIES
A Preliminary Check-List of the Marine Algae of the Moss Landing Jetty: An Annotated Floristic Compilation,
W74-07981 5C

BAYESIAN ANALYSIS
The Methodology of Bayesian Inference and Decision Making Applied to Extreme Hydrologic Events,
W74-07601 2A

BAYS
Use of Fluorescent Dye Tracers in Mobile Bay,
W74-07642 5B

A Numerical Study of the Steady Circulation in an Open Bay,
W74-07924 2L

BEACH EROSION
Sediment Distribution in a Beach Ridge Complex and its Application to Artificial Beach Replenishment,
W74-07666 2J

BEACHES
Bacteriological Water Quality Data, Beach Areas, Gatineau Park Lakes, National Capital Commission, 1973,
W74-07932 5B

BELGIUM (GHENT)
Limnological Observations on the 'National Watersportbaan Georges Nachez' at Ghent in 1968, 1969, 1970 and 1971,
W74-08113 5C

BELUGA
Biological Characteristics of the Volga School of Beluga and Stellate Sturgeon, (In Russian),
W74-08126 2I

BENTHIC RECOVERY
Aquatic Invertebrate Recovery in the Clinch River Following Hazardous Spills and Floods,
W74-07841 5C

BENTHOS
An Ecological Study of the Missouri River Prior to Channelization,
W74-07744 2I

Aquatic Invertebrate Recovery in the Clinch River Following Hazardous Spills and Floods,
W74-07841 5C

Seasonal Changes of Benthos Algae of the Higher Part of Vorskla River, (In Russian),
W74-08142 5C

BENTONITE
Effect of Bentonitic Fluid Properties on Drilling Rate,
W74-07879 8B

BIBLIOGRAPHIES
Part I - A Conceptual Model for a Terrestrial Ecosystem Perturbed with Sewage Effluent, with Special Reference to the Michigan State University Water Quality Management Project; Part II - A Personalized Bibliographi c Retrieval Package for Resource Scientists,
W74-07606 5D

Mercury in the Environment, An Epidemiological and Toxicological Appraisal.
W74-07680 5C

Capacity of Water-Based Recreation Systems Part I: The State of the Art - A Literature Review,
W74-07719 6B

Phreatophytes, A Bibliography, Revised.
W74-07829 3B

BIOACCUMULATION
Accumulation Phenomenon Which takes Place in a Mussel (Mytilus galloprovincialis LMK) Grown in an Artificially Polluted Environment, Verification of a Simplified Model of the Dynamic Equilibrium of Metal Ripartition Between Mussels and Sea-Water, Note II-Pollution from Copper, (Fenomeno di Accumulo Nel Mitilo (Mytilus galloprovincia-Lis LMK) Stabulato in Ambiente Artificialmente Inquinato. Verifica di un Modello Semplificato per L'equilibr io Dinamico di Ripartizione del Metalli fra Mitilo e Acqua Marina, Nota II: Inquinamento da rame),
W74-07746 5C

BIOASSAY
The LD(50) Value of Tetraethyl Lead,
W74-07700 5C

Tetraethyl Lead Dose Response Curve for Mortality in Laboratory Rats,
W74-07701 5C

BIOASSAYS
The Use of Algal Assays for Determining the Effect of Iron and Phosphorus Compounds on the Growth of Various Algal Species,
W74-07776 5C

Inorganic Nitrogen Removal in a Combined Tertiary Treatment-Marine Aquaculture System - II. Algal Bioassays,
W74-07777 5C

BIOCHEMICAL OXYGEN DEMAND
Carbon Measurements in Water Quality Monitoring,
W74-07641 5A

BOD, Solids and Nutrient Removal by Foam Flotation,
W74-07742 5D

BIOCHEMISTRY
Genetic Effects,
W74-07688 5C

BIODEGRADATION
Biodegradation of Nitrilotriacetate (NTA) in Soils,
W74-07624 5B

BIOINDICATORS
Accumulation Phenomenon Which takes Place in a Mussel (Mytilus galloprovincialis LMK) Grown in an Artificially Polluted Environment, Verification of a Simplified Model of the Dynamic Equilibrium of Metal Ripartition Between Mussels and Sea-Water, Note II-Pollution from Copper, (Fenomeno di Accumulo Nel Mitilo (Mytilus galloprovincia-Lis LMK) Stabulato in Ambiente Artificialmente Inquinato. Verifica di un Modello Semplificato per L'equilibr io Dinamico di Ripartizione del Metalli fra Mitilo e Acqua Marina, Nota II: Inquinamento da rame),
W74-07746 5C

Regularities of the Growth of the Body and Brain of the Common Carp in Bodies of Waters of the Amu-Dar'ya Delta, (in Russian),
W74-08106 2I

BIOLOGICAL COMMUNITIES
Phytoplankton Community Structure and Nutrient Relationships in Lake Carl Blackwell, Oklahoma,
W74-07992 2H

BIOLOGICAL HALF-LIFE
Biological Half-Lives for Zinc and Mercury in the Pacific Oyster, Crassostrea gigas,
W74-07807 5C

BIOLOGICAL SAMPLES
Determination of Copper and Zinc in Biological Material,
W74-07712 5A

BIOLOGICAL TREATMENT
Treatment Methods for Heavy Metal-Containing Liquid Waste (In Japanese),
W74-07745 5D

Mechanical-Biological Waste Water Purification Plant,
W74-08032 5D

Wastewater Treatment,
W74-08034 5D

BIOTA
An Ecological Study of the Missouri River Prior to Channelization,
W74-07744 2I

BIRDS
Evaluation of Zinc Availability in Foodstuffs of Plant and Animal Origin,
W74-07706 5C

BLACK SEA
Quality of Drinking Water on Ships in Relation to Sailing Conditions, (In Russian),
W74-08082 5D

BOGGY AREAS (DYSTROPHIC)
Relics of the Boggy Vegetation in Sodic Territories, (In Hungarian),
W74-08122 2I

BOILER FEEDWATER
Corrosion by Waters,
W74-07890 8G

BOILING WATER REACTORS
Final Environmental Statement Related to the Proposed Perry Nuclear Power Plant, Units 1 and 2.
W74-07793 5A

BONDING
Carbonate Bonding of Taconite Tailings,
W74-07959 5C

BORE PROPAGATION
The Numerical Solution of Transient Supercritical Flow by the Method of Characteristic with a Technique for Simulating Bore Propagation,
W74-07732 8B

BOREHOLE CAMERAS
37 Ways to Improve Your Well Completions,
W74-07870 8G

BOREHOLE GEOPHYSICS
Recent Advances in Log Evaluation,
W74-07853 8G

Location and Characteristics of the Interface Between Brine and Fresh Water from Geophysical Logs of Boreholes in the Upper Brazos River Basin, Texas,
W74-07859 8B

Casing Potential Logging Related to Metallic Corrosion Logging,
W74-07868 8G

37 Ways to Improve Your Well Completions,
W74-07870 8G

Solving Drilling Problems Utilizing Well Logs A Case History,
W74-07898 8G

BOREHOLES
Electric and Thermal Properties of Rocks,
W74-07906 8B

BOREHOLES GEOPHYSICS
Three-Dimensional Zone Model Log Interpretation,
W74-07735 8G

BOTTOM SEDIMENTS
Observations and Analysis of Bottom Turbidic Layers on the Oregon Continental Shelf,
W74-07632 2J

Investigation of the Sediments and Potential Manganese Nodule Resources of Green Bay, Wisconsin,
W74-07652 2J

BOUNDARY CONDITIONS
Three-Dimensional Zone Model Log Interpretation,
W74-07735 8G

BRAIN WEIGHT (FISH)
Regularities of the Growth of the Body and Brain of the Common Carp in Bodies of Waters of the Amu-Dar'ya Delta, (in Russian),
W74-08106 2I

BREAKWATERS
Floating Breakwater for Attenuating Seas,
W74-08043 8B

BREAM
Acclimatization of Introduced Fish Species in the Eravninsk Lakes (Buryat Assr), (In Russian),
W74-08129 8I

BRINE SHRIMP
Effects of Gamma Irradiation on the Reproductive Performance of Artermia as Determined by Individual Pair Matings,
W74-07822 5C

Effects of Gamma Irradiation on the Maintenance of Population Size in the Brine Shrimp, Artemia,
W74-07823 5C

BRINES
The Hydrogeology and Utilization of Brines in El Salado, Chile,
W74-07936 4A

BROWARD COUNTY (FLA)
Hydrologic Data for 1972, Broward County, Florida,
W74-07918 7C

BUBBLES
Electrolytic Flotation Apparatus,
W74-08030 5D

BUCKLING
Causes and Prevention of Drill Pipe Troubles,
W74-07889 8G

BUREAU OF RECLAMATION
Reclamation Research in the Seventies--First Progress Report.
W74-07922 4A

BURIED VALLEYS
Exploration for a Buried Valley by Resistivity and Thermal Probe Surveys,
W74-07935 2F

CADMIUM
Metals Focus Shifts to Cadmium,
W74-07697 5B

The Influence of Temperature and Salinity on the Toxicity of Cadmium to the Fiddler Crab, Uca pugilator,
W74-07699 5C

Effect of Ascorbic Acid on Cadmium Toxicity in the Young Coturnix,
W74-07707 5C

CALCIUM
Accumulation of Calcium-45 in Developing Coho Salmon Eggs and Fry reared in varying concentrations of Stable Calcium,
W74-07808 5C

CALCIUM BROMIDE
New Bromide Packer Fluid Cuts Corrosion Problems,
W74-07858 8G

CALCIUM CARBONATE
Prevention of Calcium Carbonate Scale Deposition in Mill Water Systems,
W74-07848 8G

Evaluation of Scaling Tendencies,
W74-07893 8G

CALCIUM CHLORIDE
New Bromide Packer Fluid Cuts Corrosion Problems,
W74-07858 8G

CALIFORNIA
Historic Flood Information for Northern California Streams from Geological and Botanical Evidence,
W74-07646 2E

Deformation Moduli of Water-Bearing Formations at Elevated Temperatures,
W74-07726 4B

Contribution to Water Pollution from Agricultural and Urban Sources in the Coachella Valley,
W74-07757 5B

Corrosive Effects of Southern California Potable Waters,
W74-07866 8G

Optimal Timing and Sizing of a Conjunctive Urban Water Supply and Waste Water System with Nonlinear Programming,
W74-08010 5D

Effects of Colorado River Water Quality and Supply on Irrigated Agriculture,
W74-08014 3C

Earthquake Damage Costs in the Design of Water Resource Systems,
W74-08018 4A

CANADA
A Similarity Solution for Steady-State Gravitational Circulation in Fjords,
W74-07675 2L

Cartmen Devises Technique for Disposing of 3.5 Million Gallons of Liquid Discards Annually.
W74-07762 5D

Gypsum-Cement Blend Works Well in Permafrost Areas,
W74-07884 8F

Bacteriological Water Quality Data, Beach Areas, Gatineau Park Lakes, National Capital Commission, 1973,
W74-07932 5B

Delimitation of Weathering Zones in the Fiord Area of Eastern Baffin Island, Canada,
W74-07937 2J

CAPILLARY ACTION
Calculation of Capillary Rise from Groundwater Table into the Root Zone Under Steady-State Conditions, (In German),
W74-08139 2G

CAPITAL COSTS
Pump Selection,
W74-07872 8C

CAPROLACTAM PRODUCTION
Experimental Study of the Protective Ability of Water-Treatment Plants with Respect to some Substances of Caprolactam Production (In Russian),
W74-07771 5D

CARABIDAE
Ground Beetles (Coleoptera, Carabidae) from the Boggy Areas of the Crimea, (in Russian),
W74-08103 2I

CARBON
Carbon Measurements in Water Quality Monitoring,
W74-07641 5A

CARBON-14 METHOD
Determination of Counting Efficiency by 14C by Liquid Scintillation in Primary Production Measurements in a Lagoon Environment, (In French),
W74-08143 5A

CARBON MONOXIDE
Gradient Analysis of Carbon Monoxide and Methane in Polluted and Other Nearshore Habitats,
W74-07984 5A

CARBON RADIOISOTOPES
An Investigation of the Water Quality and Productivity of Polson Bay, Flathead Lake, Montana,
W74-07717 5C

CARBONATE BONDING
Carbonate Bonding of Taconite Tailings,
W74-07959 5G

CARBONATE ROCKS
Microporosity in Carbonate Rocks,
W74-07861 4B

CARBONATES
Carbonate Bonding of Taconite Tailings,
W74-07959 5G

CARCINOGENS
The Photosensitizing Action of Carcinogens. I. The Action of 2-Naphthylamine on Escherichia Coli K-12 and Paramecium Caudatum,
W74-08095 5C

CARCINOMA
Liver Zinc in Carcinoma,
W74-07690 5C

CARP
Sensitivity of Carp (Cyprinus carpio) Embryos to Acute Gamma Radiation,
W74-07817 5C

Sowing of Ponds and Carp with Clostridium perfringens, (In Ukrainian),
W74-08076 5B

Regularities of the Growth of the Body and Brain of the Common Carp in Bodies of Waters of the Amu-Dar'ya Delta, (in Russian),
W74-08106 2I

CARP (AMUR)
Acclimatization of Introduced Fish Species in the Eravninsk Lakes (Buryat Assr), (In Russian),
W74-08129 8I

CARP (JUVENILES)
Effect of Organic and Inorganic Fertilizers on the Growth and Development of Juvenile Carp in Spawning Ponds, (In Russian),
W74-08124 5C

CARPIODES CARPIO
The Biology and Ecology of River Carpsucker, Carpiodes Carpio (Rafinesque), in the Little Missouri Arm of Lake Sakakawea, North Dakota,
W74-07991 2H

CARPSUCKER
The Biology and Ecology of River Carpsucker, Carpiodes Carpio (Rafinesque), in the Little Missouri Arm of Lake Sakakawea, North Dakota,
W74-07991 2H

CARRYING CAPACITY
The State of the System (SOS) Model: Measuring Growth Limitations Using Geological Concepts,
W74-07958 6G

CASPIAN ROACH
Growth of the Caspian Roach in the Mingechaur Reservoir, (In Azerbaijarian),
W74-08123 2H

CATALYSTS
The Surface Catalyzed Hydrolysis of Parathion on Kaolinite,
W74-07628 5B

CATHODIC PROTECTION
Galvanic Effects Increase Corrosion, Part 2,
W74-07904 8G

CELL DIVISION
Genetic Effects,
W74-07688 5C

CEMENT GROUTING
Using Improved Technology to Obtain Better Cement Jobs on Deep, Hot Liners,
W74-07878 8F

Gypsum-Cement Blend Works Well in Permafrost Areas,
W74-07884 8F

CEMENT THICKENING TIME
Using Improved Technology to Obtain Better Cement Jobs on Deep, Hot Liners,
W74-07878 8F

CEMENTS
Compensated Gamma Ray Densimeter Measures Slurry Densities in Flow,
W74-07877 8G

Using Improved Technology to Obtain Better Cement Jobs on Deep, Hot Liners,
W74-07878 8F

Corrosion Resistant Cements,
W74-07887 8F

CENTRIFUGAL PUMPS
South Dakota Standards for Irrigation Pumps and Power Units,
W74-07895 8C

CENTRIFUGATION
Fractionation of Suspended and Colloidal Particles in Natural Water,
W74-07783 5A

CEREAL CROPS
Ameliorative Effect of Field Shelterbelts Under Conditions in the Urals, (In Russian),
W74-08100 4A

CESIUM
Structure and Function of Hardwood Litter and Soil Subsystems After Chronic Gamma Irradiation, I. Mesofauna, Nitrogen, and Total Soil Respiration,
W74-07824 5C

Structure and Function of Hardwood Litter and Soil Subsystems After Chronic Gamma Irradiation. II. Microfungi,
W74-07825 5C

CEYLON
On Some Aspects of the Parasites of Ceylonese Fresh Water Crabs,
W74-08002 2I

CHANNEL ARMORING
The Role of Sediment Gradation on Channel Armoring,
W74-07731 2J

CHANNEL EROSION
The Role of Sediment Gradation on Channel Armoring,
W74-07731 2J

CHANNEL MORPHOLOGY
A Derivation of the Hydraulic Geometry of Steady-State Channels from Conservation Principles and Sediment Transport Laws,
W74-07633 2J

Evolution of Meander Loops,
W74-07661 2J

CHAPARRAL
Phreatophytes, A Bibliography, Revised.
W74-07829 3B

CHEMICAL ANALYSIS
The Determination of Mercury in Air Samples and Biological Materials,
W74-07710 5A

Collection, Detection, Identification, and Quantitation of Human Effluents,
W74-07912 5A

CHEMICAL PRECIPITATION
Leachate Treatment by Coagulation and Precipitation,
W74-08091 5D

CHEMICAL PROPERTIES
Corrosion Resistant Cements,
W74-07887 8F

Theory and Application of Continuous Monitoring for Chemical Research in Natural Water Systems,
W74-07985 5A

CHEMICAL TREATMENT
Activated Silica in Wastewater Coagulation,
W74-07738 5D

Lime Stabilization of Primary Sludges,
W74-07760 5D

Leachate Treatment by Coagulation and Precipitation,
W74-08091 5D

CHEMICAL WARFARE
Progress in Ecological Research at Edgewood Arsenal, Maryland: Fiscal Years 1971 and 1972,
W74-07986 5C

CHEMICALS
New Sludge Processing Plant of the Beeston and Stapleford Urban District Council.
W74-07779 5D

CHERNOZEM SOILS
Effect of Dilute Salt Solutions on Chernozem Soil Estimated Through the Hydration Properties of the Colloids,
W74-08135 2G

CHESAPEAKE BAY
Tidal Currents and Zig-Zag Sand Shoals in a Wide Estuary Entrance,
W74-07939 2L

The Effects of the Maryland Hydraulic Clam Dredge on Populations of the Soft-Shell Clam, 'Mya Arenaria,'
W74-07994 8I

Molluscan Mortality Studies,
W74-07995 8I

CHESTER RIVER (MD)
Chester River Study, Volumes I, II, and III
W74-07653 5B

Biochemical Investigations,
W74-07654 5B

Trace Metals Investigations,
W74-07655 5B

Biological Investigations,
W74-07656 5B

Geological Investigations,
W74-07657 5B

Meteorological and Hydrological Investigations,
W74-07658 5B

Data Management,
W74-07659 5B

CHICAGO (ILL)
A Streamflow Model for Metropolitan Planning and Design,
W74-07721 2A

CHILE (RIO SALADO CATCHMENT)
The Hydrogeology and Utilization of Brines in El Salado, Chile,
W74-07936 4A

CHIRONOMUS RIPARIUS
Chromosome Aberrations in Chironomus Riparius developing in Different Concentrations of Tritiated Water,
W74-07820 5C

CHLORANIL
Experimental Study of the Hazard Due to Chlorinated Quinones and their Safety Levels in Water Bodies (In Russian),
W74-07778 5C

CHLORIDE CELLS
A Scanning Electron Microscopic Study of Secondary Lamellae and Chloride Cells of Rainbow Trout (Salmo gairdneri),
W74-08096 5C

CHLORIDES
Hydrogeologic Investigation of a Sanitary Landfill in Stratified Glacial Drift,
W74-07728 5B

CHLORINATED HYDROCARBONS
Experimental Study of the Hazard Due to Chlorinated Quinones and their Safety Levels in Water Bodies (In Russian),
W74-07778 5C

HLORINATION
Experimental Study of the Protective Ability of Water-Treatment Plants with Respect to some Substances of Caprolactam Production (In Russian),
W74-07771 5D

HLOROPHACINONE
Destruction Trials of the Muskrat, Ondatra Zibethica L., in Ponds Using Poisoning Rafts, (In French),
W74-08128 5G

HLOROPHYLL
Distribution of Phosphorus, Silica, Chlorophyll a, and Conductivity in Lake Michigan and Green Bay,
W74-08000 5C

HOLECYSTITIS
Treatment of Children with Chronic Hepatoangiocholecystitis at the Lake Uchum Health Resort,
W74-08102 2I

HROMATOGRAPHY
Paper Chromatographic and Electrochromatographic Separation of Edta Complexes of Metal Ions,
W74-07693 5A

Collection, Detection, Identification, and Quantitation of Human Effluents,
W74-07912 5A

HROMIUM
Some Novel Complexes of Chromium(I),
W74-07946 5A

Process for Treating Water Contaminated with Hexavalent Chromium,
W74-08024 5D

HROMOSOMAL ABERRATIONS
Chromosome Aberrations in Chironomus Riparius developing in Different Concentrations of Tritiated Water,
W74-07820 5C

HROMOSOMES
Genetic Effects,
W74-07688 5C

ILIATES
The Photosensitizing Action of Carcinogens. I. The Action of 2-Naphthylamine on Escherichia Coli K-12 and Paramecium Caudatum,
W74-08095 5C

ITRUS
Irrigation of Citrus with Citrus Waste Water,
W74-07603 5D

LAMS
Iron-55 and Ruthenium-103 and -106 in the Brackish-Water Clam Rangia cuneata,
W74-07804 5A

The Effects of the Maryland Hydraulic Clam Dredge on Populations of the Soft-Shell Clam, 'Mya Arenaria,'
W74-07994 8I

Fluctuations in Gulf of Maine Sea Temperature and Specific Molluscan Abundance,
W74-08145 2I

CLAY MINERALS
Adsorption of Fenuron and Monuron (Substituted Ureas) by Two Montmorillonite Clays,
W74-07627 5B

Fixation of Zinc by Clay Minerals,
W74-07629 2G

CLAYEY SOILS
The Relationships Between Soil Water and Engineering Properties of the Clayey Soils, (In Japanese),
W74-07679 2G

CLAYS
Fixation of Zinc by Clay Minerals,
W74-07629 2G

Effect of Narrow Trenching in Harlingen Clay Soil on Plant Growth, Rooting Depth, and Salinity,
W74-08078 3F

CLEVELAND (OHIO)
Major Wastewater Treatment Plant to be Upgraded,
W74-07761 5D

CLOSTRIDIUM-PERFRINGENS
Sowing of Ponds and Carp with Clostridium perfringens, (In Ukrainian),
W74-08076 5B

CLOUD SEEDING
Project Skywater 1972 Annual Report.
W74-07928 3B

Some Climatological Characteristics of Seedable Upslope Cloud Systems in the High Plains,
W74-07929 3B

COACHELLA VALLEY (CALIF)
Contribution to Water Pollution from Agricultural and Urban Sources in the Coachella Valley,
W74-07757 5B

COAGULATION
Activated Silica in Wastewater Coagulation,
W74-07738 5D

Coagulant Recovery and Reuse in Water Reclamation Systems,
W74-07844 5D

Apparatus and Method for Treating Waste Liquid,
W74-08026 5D

Leachate Treatment by Coagulation and Precipitation,
W74-08091 5D

COASTS
Coastal Vegetation of Delaware,
W74-07616 2L

Pleistocene-Holocene Sediments Interpreted by Seismic Refraction and Wash-Bore Sampling, Plum Island-Castle Neck, Mass.,
W74-07875 2L

COBALT
Effects of Gamma Irradiation on the Reproductive Performance of Artermia as Determined by Individual Pair Matings,
W74-07822 5C

Effects of Gamma Irradiation on the Maintenance of Population Size in the Brine Shrimp, Artemia,
W74-07823 5C

COHO SALMON
Effects of Crude Oil and Some of its Components on Young Coho and Sockeye Salmon,
W74-07613 5C

COLEOPTERA
Ground Beetles (Coleoptera, Carabidae) from the Boggy Areas of the Crimea, (in Russian),
W74-08103 2I

COLIFORMS
Survival of Intestinal Bacteria in Oligotrophic Waters,
W74-07737 5C

Coliforms are an Inadequate Index of Water Quality,
W74-07885 5A

COLLEGES
Annual Report '72 - '73.
W74-07602 9A

COLONIZATION (ALGAE)
Experiments on the Movement Behavior of Unicellular Algae in Flowing Water,
W74-08120 2I

COLORADO
Transit Losses and Travel Times for Reservoir Releases, Upper Arkansas River Basin, Colorado,
W74-07931 4A

COLORADO RIVER AQUEDUCT
Corrosive Effects of Southern California Potable Waters,
W74-07866 8G

COLORADO RIVER BASIN
Regional Energy-Water Problems--Colorado River-Great Basin,
W74-07977 6D

COLORADO RIVER BASIN (TEX)
Quality of Surface Waters in the Colorado River Basin, Texas, 1966-72 Water Years,
W74-07670 5B

COLUMBIA RIVER
A Study of Pollutant Discharges from Reactor Operations Utilizing Ultracentrifugation Techniques,
W74-07782 5A

Thermoluminescent Dosimetry of AquatiR Organisms,
W74-07819 5C

The Columbia Interstate Compact: Politics of Water Resources in the Pacific Northwest,
W74-07846 6E

Sediment Transport by Streams in the Upper Columbia River Basin, Washington, May 1969-June 1971,
W74-07911 2J

COMBINED SEWERS
A Streamflow Model for Metropolitan Planning and Design,
W74-07721 2A

COMBINED TREATMENT
Inorganic Nitrogen Removal in a Combined Tertiary Treatment-Marine Aquaculture System - II. Algal Bioassays,
W74-07777 5C

COMMERCIAL SHELLFISH
Experiments to Re-establish Historical Oyster Seed Grounds and to Control the Southern Oyster Drill,
W74-07982 8I

COMPREHENSIVE PLANNING
Environmental Statement Related to Construction and Operation of Barnwell Nuclear Fuel Plant.
W74-07792 5B

Final Environmental Statement Related to the Proposed Perry Nuclear Power Plant, Units 1 and 2.
W74-07793 5A

COMPRESSIBILITY
Deformation Moduli of Water-Bearing Formations at Elevated Temperatures,
W74-07726 4B

COMPRESSIVE STRENGTH
Corrosion Resistant Cements,
W74-07887 8F

COMPUTER MODELS
A Streamflow Model for Metropolitan Planning and Design,
W74-07721 2A

Pricing of Industrial Wastewater Treatment Service,
W74-07727 5D

The Dispersion of Continuously Injected Effluents in Open Channels,
W74-07833 5B

A Stochastic Model for the James,
W74-07843 5B

Model for Estimating Soil Water, Plant, and Atmospheric Interrelations: II. Field Test of Model,
W74-08085 2G

COMPUTER PROGRAMS
Spillway Water-Surface Profiles,
W74-07913 8B

National Weather Service River Forecasting System,
W74-08057 4A

Dam Collapse Wave in a River,
W74-08060 2E

COMPUTERS
Automation of the Control and Operation of Water Pollution Control Works,
W74-07758 5D

CONCRETE CONSTRUCTION
Solid Forms for Savannah River Plant High-Level Waste,
W74-07787 5D

CONCRETES
Solid Forms for Savannah River Plant High-Level Waste,
W74-07787 5D

CONDUCTIVITY
Distribution of Phosphorus, Silica, Chlorophyll a, and Conductivity in Lake Michigan and Green Bay,
W74-08000 5C

CONFERENCES
The Role of Water in the Energy Crisis.
W74-07961 6D

All-Union Hydrologic Congresses (Vsesoyuznyye gidrologicheskiye syezdy),
W74-08056 6E

CONIFEROUS FORESTS
Models of Matter Flow in a Southern Mixed Hardwood Forest in Florida: Preliminary Results,
W74-07813 5B

CONJUNCTIVE OPERATION
Optimal Timing and Sizing of a Conjunctive Urban Water Supply and Waste Water System with Nonlinear Programming,
W74-08010 5D

CONJUNCTIVE USE
Geology and Water Resources of the Wharton Tract and the Mullica River Basin in Southern New Jersey,
W74-07668 4B

Optimal Conjunctive Use Model for Indus Basin,
W74-08059 4B

CONNECTICUT
Hydrogeologic Investigation of a Sanitary Landfill in Stratified Glacial Drift,
W74-07728 5B

CONSERVATION
A Summary of Quantity, Quality and Economic Methodology for Establishing Minimum Flows,
W74-07847 6B

CONSTRUCTION
South Dakota Standards for Construction of Irrigation Wells in Shallow Unconsolidated Glacial Sediments,
W74-07896 8A

Irrigation Well Construction.
W74-07897 8A

Processes, Procedures, and Methods to Control Pollution Resulting from All Construction Activity.
W74-07942 5B

CONSTRUCTION COSTS
Major Wastewater Treatment Plant to be Upgraded,
W74-07761 5D

Design and Simulation of Equalization Basins,
W74-08046 5D

CONSTRUCTION MATERIALS
South Dakota Standards for Construction of Irrigation Wells in Shallow Unconsolidated Glacial Sediments,
W74-07896 8A

CONSUMPTIVE USE
Estimated Use of Water in Florida, 1970,
W74-07917 6D

CONTINENTAL SHELF
Observations and Analysis of Bottom Turbid Layers on the Oregon Continental Shelf,
W74-07632 2J

A Numerical Study of the Steady Circulation in an Open Bay,
W74-07924 2L

CONTROL SYSTEMS
Redevelopment of Haven Sewage-Treatment Works, Colchester,
W74-07759 5D

COOLING WATER
A Study of Pollutant Discharges from Reactor Operations Utilizing Ultracentrifugation Techniques,
W74-07782 5A

A Prediction of Changes in the Thermal Cycle of a Stratified Lake Used to Cool a 1000 MW Power Plant,
W74-07998 5C

COPPER
Determination of Copper and Zinc in Biological Material,
W74-07712 5A

Aerial Pollution and the Rapid Evolution of Copper Tolerance,
W74-07713 5B

Accumulation Phenomenon Which takes Place in a Mussel (Mytilus galloprovincialis LMK) Grown in an Artificially Polluted Environment, Verification of a Simplified Model of the Dynamic Equilibrium of Metal Ripartition Between Mussels and Sea-Water, Note II-Pollution from Copper, (Fenomeno di Accumulo Nel Mitilo (Mytilus galloprovincia-Lis LMK) Stabulato in Ambiente Artificialmente Inquinato. Verifica di un Modello Semplificato per L'equilibr io Dinamico di Ripartizione del Metalli fra Mitilo e Acqua Marina, Nota II: Inquinamento da rame),
W74-07746 5C

COPPER ALLOYS
Performance and Selection of Materials for Potable Hot Water Service,
W74-07855 8G

CORROSION
Domestic Water Systems, Nonchemical Factors in Corrosion Control,
W74-07849 8G

Drought Hardening in Onions: I. Influence of Presowing Treatments on Vegetative Behavior and Yield, (In Spanish),
W74-08148 3F

CROP RESPONSE
Influence of Temperature and Moisture Stress from Sodium Chloride Salinization on Okra Emergence,
W74-08073 3C

Effect of Temperature and Plant Water Stress on Photosynthesis Diffusion Resistance, and Leaf Water Potential in Spring Wheat,
W74-08075 3F

Effect of Establishment Method, Variety, and Seeding Rate on the Production and Quality of Alfalfa Under Dryland and Irrigation,
W74-08077 3F

Effect of Narrow Trenching in Harlingen Clay Soil on Plant Growth, Rooting Depth, and Salinity,
W74-08078 3F

Sugarbeet Response to Irrigation as Measured with Growth Sensors,
W74-08079 3F

Tolerance of Rice (Oryza Sativa L.) to Salt During Boot, Flowering, and Grain-Filling Stages,
W74-08080 3C

CROP YIELD
Effects of Colorado River Water Quality and Supply on Irrigated Agriculture,
W74-08014 3C

CRUDE OIL
Effects of Crude Oil and Some of its Components on Young Coho and Sockeye Salmon,
W74-07613 5C

CRYOLOGY
Adhesion of Ice Frozen from Dilute Electrolyte Solutions,
W74-07618 2C

CULICIDAE
Effects of Chrome Radiation Exposure On Mosquitoes (Diptera: Culicidae). 1. Effects of Rearing in Sr-90 + Y-90 Solutions,
W74-07821 5C

CULVERT DEICING
Application of Electrical Energy to Culvert Icing Problems--A Laboratory Study,
W74-07909 8C

CULVERTS
Hydraulics of Culvert Outlets,
W74-07749 8B

Application of Electrical Energy to Culvert Icing Problems--A Laboratory Study,
W74-07909 8C

CURRENTS (WATER)
Test Results on Buoyant Jets Injected Horizontally in a Cross Flowing Stream,
W74-07766 8B

Tidal Currents and Zig-Zag Sand Shoals in a Wide Estuary Entrance,
W74-07939 2L

CYANOPHYTA
Environmental Control of Nitrogen Fixation in Lakes, I. In situ Nitrogen Fixation by Free Living Blue-Green Algae, and II. Nitrogen Fixation by the Duckweed-Algal Association,
W74-07716 5C

CYTOLOGICAL STUDIES
Genetic Effects,
W74-07688 5C

Liver Zinc in Carcinoma,
W74-07690 5C

Accumulation of Calcium-45 in Developing Coho Salmon Eggs and Fry reared in varying concentrations of Stable Calcium,
W74-07808 5C

Determination of Counting Efficiency by 14C by Liquid Scintillation in Primary Production Measurements in a Lagoon Environment, (In French),
W74-08143 5A

CZECHOSLOVAKIA (NOVY CEPSKY POND)
Zonation of Mosses on the Banks of the Novy Cepsky Pond. (in Czech.),
W74-08119 2H

DADE COUNTY (FLA)
Reconnaissance of the Water Resources in the Vicinity of Proposed Deep-Well Injection Sites in Southeast Dade County, Florida,
W74-07915 5B

DAM FAILURE
Dam Collapse Wave in a River,
W74-08060 2E

DAMAGE CONTROL
Prevention of Damage to Pipelines.
W74-07923 8A

DAMAGE PREVENTION
Prevention of Damage to Pipelines.
W74-07923 8A

DAMAGES
Earthquake Damage Costs in the Design of Water Resource Systems,
W74-08018 4A

DATA COLLECTIONS
Water Resources Data for Nebraska, 1972: Part I. Surface-Water Records,

Commercial Desalting Plant Data and Analysis, Volumes I-VI,
W74-08061 3A

DATA PROCESSING
Data Management,
W74-07659 5B

DATA STORAGE AND RETRIEVAL
Data Management,
W74-07659 5B

DDE
Factors Controlling the Dynamics of Non-Ionic Synthetic Organic Chemicals in Aquatic Environments,
W74-07831 5B

DDT
The Fate and Effects of Pesticides in the Aquatic Environment of the Flathead Lake Drainage Area,
W74-07835 5C

DECANTATION
Water Treatment Mud Decanting Tank,
W74-08042 5F

DECISION MAKING
The Methodology of Bayesian Inference and Decision Making Applied to Extreme Hydrologic Events,
W74-07601 2A

DECOMPOSING ORGANIC MATTER
Investigations on the Occurrence of Phenol-Decomposing Microorganisms in Waters and Sediments. (in German),
W74-08115 5C

DECOMPOSITION (HERBACEOUS PLANTS)
Effect of Water-Soluble Decomposition Products of Herbaceous Plants on Uptake of Radioisotopes in Soil. (in Russian),
W74-08117 2G

DECOMPOSITION (ORGANIC MATTER)
Investigations on the Occurrence and Decomposition of Fats and Fatty Acids in Lakes. (In German),
W74-08141 5C

DECOMPOSITION (PLANT RESIDUES)
Effect of the Moisture and Temperature on the Leaching of Ash Elements from Plant Residues (in Russian),
W74-08016 2I

DEFICIENT ELEMENTS
Antagonistic Effect of Arginine on Zinc Metabolism in Chicks,
W74-07955 5C

DEGRADATION (DECOMPOSITION)
Results of Red Tide Formation in Tokyo Bay.
W74-07770 5C

DEICERS
Effect of Deicing Chemicals on Ground and Surface Water--(Modus Operandi),
W74-07617 5B

Application of Electrical Energy to Culvert Icing Problems--A Laboratory Study,
W74-07909 8C

DELAWARE
Coastal Vegetation of Delaware,
W74-07616 2L

Alterations in the Hydrologic Cycle Induced by Urbanization in Northern New Castle County, Delaware: Magnitudes and Projections,
W74-07729 4C

DELAWARE ESTUARY (N
Process Control Model for Oxygen Regeneration of Polluted Rivers, Phases IV and V, and Spacially and Temporally Distributed Discharge of Effluents in Estuaries,
W74-07837 5B

DELAWARE RIVER
Regional Energy-Water Problems Northeast,
W74-07971 6D

DELTAS
Heterogeneities in Salinity in a River Plume,
W74-07672 2L

DEMINERALIZATION
Reverse Osmosis-Neutralization Process for Treating Mineral Contaminated Waters,
W74-08041 5D

DENITRIFICATION
Nitrogen Transformations in Soil During Leaching: I. Theoretical Considerations,
W74-07619 5B

Nitrogen Transformation in Soil During Leaching: II. Steady State Nitrification and Nitrate Reduction,
W74-07620 5B

Nitrogen Transformations in Soil During Leaching: III. Nitrate Reduction in Soil Columns,
W74-07621 5B

Nitrogen Transformations During Continuous Leaching,
W74-07623 5B

DENSITY
Compensated Gamma Ray Densimeter Measures Slurry Densities in Flow,
W74-07877 8G

DENSITY CURRENTS
Selective Withdrawal From Beech Fork Lake, Beech Fork River, West Virginia,
W74-07914 8B

DENTRIFICATION
Nitrogen Removal by Soil Mechanisms,
W74-08081 5D

DEPOSITION (SEDIMENTS)
Research to Determine the Environmental Response to the Deposition of Spoil on Salt Marshes Using Diked and Undiked Techniques.
W74-07990 6G

DEPTH SAMPLERS
Variations in the Design of Depth Samplers for use in Groundwater Studies,
W74-07865 8G

DESALINATION
Cellulosic Reverse Osmosis Membranes Having High Flux and High Salt Rejection,
W74-08022 3A

Method and Equipment for Desalination of Liquids,
W74-08038 3A

The Potential of Desalting for Industrial Water Supplies in Northeastern Wyoming,

DISSOLVED OXYGEN
Process Control Model for Oxygen Regeneration of Polluted Rivers, Phases IV and V, and Spacially and Temporally Distributed Discharge of Effluents in Estuaries,
W74-07837 5B

DISTRIBUTION
'Normal' Concentrations of Mercury in Human Tissue and Urine,
W74-07685 5C

The Distribution of Lead in Human Deciduous Teeth,
W74-07691 5C

DISTRIBUTION

Influence of Dietary and Injected Selenium on Whole-Body Retention, Route of Excretion, and Tissue Retention of 75SeO3 (--) in the Rat,
W74-07708 5C

Endogenous Zinc Excretion and 65Zinc Metabolism in Holstein Calves Fed Intermediate to High But Nontoxic Zinc Levels in Practical Diets,
W74-07954 5C

The Biology and Ecology of River Carpsucker, Carpiodes Carpio (Rafinesque), in the Little Missouri Arm of Lake Sakakawea, North Dakota,
W74-07991 2H

DISTRIBUTION PATTERNS
Factors Controlling the Dynamics of Non-Ionic Synthetic Organic Chemicals in Aquatic Environments,
W74-07831 5B

Delimitation of Weathering Zones in the Fiord Area of Eastern Baffin Island, Canada,
W74-07937 2J

Foam Fractionation of Mercury(II) Nitro Complexes,
W74-07945 5A

Trichoptera in the Reservation Area Heiliges Meer in Westphalia,
W74-07997 2I

DISTRICT OF COLUMBIA
Water Resources Management for Metropolitan Washington: Analysis of the Joint Interactions of Water and Sewage Service, Public Policy and Land Development Patterns in an Expanding Metropolitan Area.
W74-07723 6B

Appendices to Water Resources Management for Metropolitan Washington: Analysis of the Joint Interactions of Water and Sewage Service, Public Policy, and Land Development Patterns in an Expanding Metropolitan Area.
W74-07724 6B

DIVERSION
Present and Future of Lake Sevan (Sovremennoye sostoyaniye i budushcheye ozera Sevan),
W74-08048 2H

DIVERSON LOSSES
Transit Losses and Travel Times for Reservoir Releases, Upper Arkansas River Basin, Colorado,
W74-07931 4A

DOMESTIC WASTES
Collection, Detection, Identification, and Quantitation of Human Effluents,
W74-07912 5A

DOMESTIC WATER
Water Quality and Treatment of Domestic Groundwater Supplies,
W74-07637 5F

Wells and Pumping Systems for Domestic Water Supplies,
W74-07638 8B

Planning a Domestic Groundwater Supply System,
W74-07639 4B

The Chemical/Physical and Microbiological Characteristics of Typical Bath and Laundry Waste Waters,
W74-07663 5B

DORMANCY
Effects of Ionizing Radiation on Processes Influencing Tolerance of Tree Seedlings,
W74-07815 5C

DOWN-HOLE MOTORS
Down-Hole Motors for Improved Drilling,
W74-07880 8C

DRAINAGE
Model for Estimating Soil Water, Plant, and Atmospheric Interrelations: II. Field Test of Model,
W74-08085 2G

Effects of Drainage and Organic Amendments on the Reclamation of a Sodic Soil Cropped With Rice,
W74-08087 3C

Quality of Drainage Water From a Heavy-Textured Soil,
W74-08088 5B

DRAINAGE AREA
Drainage Area and River Mileage of Nebraska Streams: Part 1--Salt and Weeping Water Creeks, Big and Little Nemaha Rivers, and Minor Streams in Southeastern Nebraska,
W74-07669 2E

DRAINAGE SYSTEMS
A Streamflow Model for Metropolitan Planning and Design,
W74-07721 2A

DRAWDOWN
Irrigation Well Construction.
W74-07897 8A

DREDGING
Research to Determine the Environmental Response to the Deposition of Spoil on Salt Marshes Using Diked and Undiked Techniques.
W74-07990 6G

The Effects of the Maryland Hydraulic Clam Dredge on Populations of the Soft-Shell Clam, 'Mya Arenaria,'
W74-07994 8I

DRIFT
Experiments on the Movement Behavior of Unicellular Algae in Flowing Water,
W74-08120 2I

DRILL PIPE
Drill Pipe Failures: Where Do We Go From Here,
W74-07869 8G

DRILLING
Optimum Drilling Sites for Ground-Water Development on the East Coast of Lanai Island,
W74-07734 4B

Effect of Bentonitic Fluid Properties on Drilling Rate,
W74-07879 8B

Down-Hole Motors for Improved Drilling,
W74-07880 8C

Water Jet Cutting of Sedimentary Rock,
W74-07883 8B

Two New Drilling Systems Pass Initial Field Tests, DC Electric Power Swivel Can Save Time and Money, Hydraulic Snubber Built to Operate in Rugged Terrain
W74-07980 8C

DRILLING EQUIPMENT
Down-Hole Motors for Improved Drilling,
W74-07880 8C

Two New Drilling Systems Pass Initial Field Tests, DC Electric Power Swivel Can Save Time and Money; Hydraulic Snubber Built to Operate in Rugged Terrain.
W74-07980 8C

DRILLING FLUIDS
Tracers in Mud Improve DST, Wireline Test Accuracy,
W74-07856 8G

Compensated Gamma Ray Densimeter Measures Slurry Densities in Flow,
W74-07877 8G

Effect of Bentonitic Fluid Properties on Drilling Rate,
W74-07879 8B

Improved Drilling Rates at Lower Costs,
W74-07901 8C

DRILLING RATE
Effect of Bentonitic Fluid Properties on Drilling Rate,
W74-07879 8B

DRILLSTEM TESTS
Tracers in Mud Improve DST, Wireline Test Accuracy,
W74-07856 8G

DROUGHT
Growth Feature of Introduced Plants in Connection with Their Adaptation to Drought. (in Russian),
W74-08118 2I

DROUGHT RESISTANCE (PLANTS)
Drought Hardening in Onions: I. Influence of Presowing Treatments on Vegetative Behavior and Yield, (In Spanish),
W74-08148 3F

Drought Hardening in Onions: II. Analysis of Growth, (In Spanish),
W74-08149 3F

DUMBARTON TRIASSIC BASIN (SO
Buried Triassic Basin in the Central Savannah River Area, South Carolina and Georgia,
W74-07916 2F

DUNE LAKES
The Freshwater Mollusks From the Dune Area North of the Hague,
W74-07996 2H

DYE RELEASES
Use of Fluorescent Dye Tracers in Mobile Bay,
W74-07642 5B

DYNAMIC PROGRAMMING
Improved Dynamic Programing Procedures and Their Practical Application to Water Resource Systems,
W74-08013 6A

DYSTROPHY
Relics of the Boggy Vegetation in Sodic Territories, (In Hungarian),
W74-08122 2H

Investigation of River Water for the Presence of Escherichia coli and Enterococcus, (in Russian),
W74-08004 5A

The Photosensitizing Action of Carcinogens. I. The Action of 2-Naphthylamine on Escherichia Coli K-12 and Paramecium Caudatum,
W74-08095 5C

EARLY DETECTION
Finding Answers to Corrosion Problems,
W74-07863 8G

EARTHQUAKES
Earthquake Damage Costs in the Design of Water Resource Systems,
W74-08018 4A

ECOLOGY
Plutonium in North Atlantic Ocean Organisms; Ecological Relationships,
W74-07800 5C

Error Analysis of Ecological Models,
W74-07811 5B

Progress in Ecological Research at Edgewood Arsenal, Maryland: Fiscal Years 1971 and 1972,
W74-07986 5C

Ecology of the Eulittoral Zone of Lakes,
W74-08003 5C

ECONOMIC ANALYSIS
Economic Evaluation of the Effect of Selected Crop Practices on Nonagricultural Uses of Water,
W74-07828 5B

ECONOMIC EFFICIENCY
Economic Optimization and Simulation Techniques for Management of Regional Water Resource Systems,
W74-07714 6A

ECONOMIC FEASIBILITY
Preliminary Study to Investigate Feasibility of Desalting Ground Water in North Dakota,
W74-08066 3A

ECONOMIC PREDICTIONS
An Analytical Interdisciplinary Evaluation of the Utilization of the Water Resources of the Rio Grande in New Mexico: Lower Rio Grande Region,
W74-07609 6B

ECONOMICS
Economic Aspects of Resource Use with Special Reference to Energy and Water,
W74-07964 6D

ECOSYSTEMS
Radionuclides in Ecosystems, Volume II.
W74-07799 5C

Error Analysis of Ecological Models,

A Simple, Segmented Prism Model of Tidal Mixing in Well-Mixed Estuaries,
W74-07673 2L

Process Control Model for Oxygen Regeneration of Polluted Rivers, Phases IV and V, and Spacially and Temporally Distributed Discharge of Effluents in Estuaries,
W74-07837 5B

Tidal Currents and Zig-Zag Sand Shoals in a Wide Estuary Entrance,
W74-07939 2L

STUARINE FISHERIES
Concentrations of Manganese, Iron, and Zinc in Juveniles of Five Estuarine-Dependent Fishes,
W74-07803 5C

ULITTORAL ZONE
Ecology of the Eulittoral Zone of Lakes,
W74-08003 5C

UTROPHICATION
Environmental Control of Nitrogen Fixation in Lakes, I. In situ Nitrogen Fixation by Free Living Blue-Green Algae, and II. Nitrogen Fixation by the Duckweed-Algal Association,
W74-07716 5C

Results of Red Tide Formation in Tokyo Bay,
W74-07770 5C

Seasonal and Spatial Changes in Primary Production and Nutrients in Lake Michigan,
W74-07773 5C

A Note Concerning the Environmental Acceptability of Nitrilotriacetic Acid (NTA): The Effect of NTA on the Growth of Gymnodinium breve,
W74-07775 5C

The Use of Algal Assays for Determining the Effect of Iron and Phosphorus Compounds on the Growth of Various Algal Species,
W74-07776 5C

VALUATION
Summary Report for a Methodology Study to Develop Evaluation Criteria for Wild and Scenic Rivers,
W74-07608 6B

The Role of Public Involvement in Water Resources Planning and Development, A Report with Readings on Research and Experimentation in Public Affairs Education.
W74-07610 6B

An Evaluation of the Needs in Freshwater Research and Related Public Information Facilities,
W74-07838 6G

A Systems Approach to Assessment of Rural Water Supply Program Effectiveness,
W74-08012 6B

Problem of Assessing Effects of Human Activity on Surface-Water Resources (K probleme otsenki vliyaniya deyatel'nosti cheloveka na resursy poverkhnostnykh vod),
W74-08053 4A

VAPOTRANSPIRATION
Alterations in the Hydrologic Cycle Induced by Urbanization in Northern New Castle County, Delaware: Magnitudes and Projections,
W74-07729 4C

Phreatophytes, A Bibliography, Revised.
W74-07829 3B

XPLORATION
Research - - Targets and Developments, Regional Assessments,
W74-07903 7B

XTRACTION
Determination of Mercury in Vegetation with Dithizone - A Single Extraction Procedure,
W74-07949 5A

FAILURE (MECHANICS)
Drill Pipe Failures: Where Do We Go From Here,
W74-07869 8G

Causes and Prevention of Drill Pipe Troubles,
W74-07889 8G

FARM WASTES
Methods and Practices for Controlling Water Pollution from Agricultural Nonpoint Sources.
W74-07941 5B

FATE OF POLLUTANTS
Determination of the Fate of Polynuclear Aromatic Hydrocarbons in Natural Water Systems,
W74-07827 5A

Recovery, Residual Effects, and Fate of Nitrogen Fertilizer Sources in a Semiarid Region,
W74-08086 5B

FATIGUE (MECHANICS)
Drill Pipe Failures: Where Do We Go From Here,
W74-07869 8G

Causes and Prevention of Drill Pipe Troubles,
W74-07889 8G

FATS
Investigations on the Occurrence and Decomposition of Fats and Fatty Acids in Lakes, (In German),
W74-08141 5C

FATTY ACIDS
Investigations on the Occurrence and Decomposition of Fats and Fatty Acids in Lakes, (In German),
W74-08141 5C

FAUNA
Freshwater Fauna and Flora in Haswell Island (Queen Mary Land, Eastern Antarctica),
W74-08107 2I

Invertebrate Fauna of the Bodies of Water of the Stationary 'Agapa' (Western Taimir). (in Russian),
W74-08110 2I

FAUNA (FRESHWATER)
Toxicity of an Algal Complex on Freshwater Fauna: 1. Action on Some Benthic Animals and Fishes. (in French),
W74-08108 5C

Toxicity of an Algal Complex on Freshwater Fauna: 2. Action on Lymnaea Spp. (in French).
W74-08109 5C

FEASIBILITY STUDIES
The Treatment of Waste Water from Industries and Commerce in Public Purification Plants (in German),
W74-07748 5D

A Bill to Authorize the Secretary of the Interior to Engage in Feasibility Investigations of Certain Potential Water Resource Developments.
W74-07943 6E

The Potential of Desalting for Industrial Water Supplies in Northeastern Wyoming,
W74-08062 3A

Improving Municipal Water Supplies in Arizona by Desalting,
W74-08063 3A

Potential Contribution of Desalting Systefs to Municipal Water Quality and Supply in South Dakota.
W74-08064 3A

The Future Role of Desalting in Nevada,
W74-08065 3A

Preliminary Study to Investigate Feasibility of Desalting Ground Water in North Dakota,
W74-08066 3A

Pollution Control and Erection of Sewage Plants: Technical Feasibilities, Future Demands, (In German),
W74-08138 5G

FEDERAL GOVERNMENT
Effluent Standards Strategy: Rejuvenation of an Old Game Plan,
W74-07769 5G

FEDERAL WATER POLLUTION CONTROL ACT
Federal Laws and Regulations,
W74-07703 5G

FENURON
Adsorption of Fenuron and Monuron (Substituted Ureas) by Two Montmorillonite Clays,
W74-07627 5B

FERTILIZATION
Variations in Potassium Content of Alfalfa Grown on Pseudogley Soil Depending on Mineral Fertilizing, (In Serbo-Creation),
W74-08097 3F

Studies on the Influence of Irrigation and Different Doses of N, P and K on the Flowering Behaviour and Absorption of Nutrient Elements in Muskmelon (Cucumis melo L.),
W74-08144 3F

FERTILIZERS
Recovery, Residual Effects, and Fate of Nitrogen Fertilizer Sources in a Semiarid Region,
W74-08086 5B

Ways of Increasing the Production of Takyr Soils of the Tedzhen Delta, (In Russian),
W74-08098 3F

Effectiveness of Mineral Fertilizers During Cotton Cultivating Depending on Soil Humidity, (In Azerbaijanian),
W74-08099 3F

Effect of Organic and Inorganic Fertilizers on the Growth and Development of Juvenile Carp in Spawning Ponds, (In Russian),
W74-08124 5C

Correlations Between P, Fe and Mn Availability in Water-Logged Soil at Different Fertility Levels,
W74-08134 2G

FIDDLER CRABS
The Influence of Temperature and Salinity on the Toxicity of Cadmium to the Fiddler Crab, Uca pugilator,
W74-07699 5C

FILTERS
Corrosive Effects of Potable Water,
W74-07886 8G

FILTRATION
Apparatus and Method for Treating Waste Liquid,
W74-08026 5D

Method and Equipment for Desalination of Liquids,
W74-08038 3A

FINITE ELEMENT ANALYSIS
Analysis of Liquid-Waste Injection Wells in Illinois by Mathematical Models,
W74-07604 5B

FISH
Radiation Effects on Serum Proteins, Hematocrits, Electrophoretic Patterns and Protein Components in the Bluegill (Lepomis macrochirus),
W74-07816 5C

FISH BARRIERS (MESH)
Study of Mesh Fish Barriers in the Polder Systems of the Nemunas River Delta, (In Russian),
W74-08125 8I

FISH CONTROL AGENTS
The Application of 'Rotenone' for the Extermination of the Indigenous Fish Stock in Waters Where Intensive Fish Farming is to be Introduced,
W74-08001 8I

FISH DIETS
Laboratory Rearing Experiments on Artifically Propagated Inconnu (Stenodus Leucichthys),
W74-07725 8I

Distribution of ZN, FE, MN, and SR in Marine Fishes of Different Feeding Habits,
W74-07801 5C

FISH EGGS
Accumulation of Calcium-45 in Developing Coho Salmon Eggs and Fry reared in varying concentrations of Stable Calcium,
W74-07808 5C

Sensitivity of Carp (Cyprinus carpio) Embryos to Acute Gamma Radiation,
W74-07817 5C

FISH FARMING
Laboratory Rearing Experiments on Artifically Propagated Inconnu (Stenodus Leucichthys),
W74-07725 8I

FISH HATCHERIES
Laboratory Rearing Experiments on Artifically Propagated Inconnu (Stenodus Leucichthys),
W74-07725 8I

FISH MIGRATION
Study of Mesh Fish Barriers in the Polder Systems of the Nemunas River Delta, (In Russian),
W74-08125 8I

FISH MORPHOLOGY
Results and Prospects of Investigating Fishes and Their Food Resources of the Khatanga River Basin, (In Russian),
W74-08130 8I

FISH POPULATIONS
An Ecological Study of the Missouri River Prior to Channelization,
W74-07744 2I

Ecological Factors Affecting Anadromous Fishes of Lake Ponchartrain and Its Tributaries,
W74-07993 2H

FISH STOCKING
The Application of 'Rotenone' for the Extermination of the Indigenous Fish Stock in Waters Where Intensive Fish Farming is to be Introduced,
W74-08001 8I

FIXATION
The Technology of Tritium Fixation and Storage,
W74-07789 5D

FJORDS
A Similarity Solution for Steady-State Gravitational Circulation in Fjords,
W74-07675 2L

FLATHEAD LAKE (MONT)
An Investigation of the Water Quality and Productivity of Polson Bay, Flathead Lake, Montana,
W74-07717 5C

The Fate and Effects of Pesticides in the Aquatic Environment of the Flathead Lake Drainage Area,
W74-07835 5C

FLOCCULATION
Apparatus and Method for Treating Waste Liquid,
W74-08026 5D

Method of Treating Waste Water Containing Ligninsulfonate,
W74-08029 5D

FLOOD DISCHARGE
The Methodology of Bayesian Inference and Decision Making Applied to Extreme Hydrologic Events,
W74-07601 2A

FLOOD FREQUENCY
The Methodology of Bayesian Inference and Decision Making Applied to Extreme Hydrologic Events,
W74-07601 2A

FLOOD PROTECTION
The Methodology of Bayesian Inference and Decision Making Applied to Extreme Hydrologic Events,
W74-07601 2A

FLOOD WAVES
Dam Collapse Wave in a River,
W74-08060 2E

FLOODING
Flood and Seepage Water Sampling Techniques in Rice Fields Under Different Water Management Practices,
W74-08090 5B

The Moss Vegetation of the Forests in the Rhine Lowland Between Basel and Mannheim, (In German),
W74-08131 2I

FLOODS
Estimating the Magnitude of Peak Discharges for Selected Flood Frequencies on Small Streams in East Texas,
W74-07664 2E

Aquatic Invertebrate Recovery in the Clinc River Following Hazardous Spills and Floods,
W74-07841 5C

FLORA
Freshwater Fauna and Flora in Haswell Islan (Queen Mary Land, Eastern Antarctica),
W74-08107 2

FLORIDA
Irrigation of Citrus with Citrus Waste Water,
W74-07603 5I

Models of Matter Flow in a Southern Mixe Hardwood Forest in Florida: Preliminar Results,
W74-07813 5I

Reconnaissance of the Water Resources in th Vicinity of Proposed Deep-Well Injection Site in Southeast Dade County, Florida,
W74-07915 5I

Estimated Use of Water in Florida, 1970,
W74-07917 6I

Hydrologic Data for 1972, Broward County Florida,
W74-07918 7C

A Numerical Study of the Steady Circulation i an Open Bay,
W74-07924 2I

Hydrobiochemical Effects of Spraying Waste Treatment Effluent in St. Petersburg, Florida,
W74-07978 5C

Quantity and Quality of Surface Water i Marion County, Florida,
W74-08044 7C

FLOTATION
BOD, Solids and Nutrient Removal by Foam Flotation,
W74-07742 5D

Electrolytic Flotation Apparatus,
W74-08030 5D

FLOTSAM
Floating Barrier,
W74-08025 5G

FLOW CHARACTERISTICS
Positive Displacement Pumps,
W74-07874 8C

FLOW EQUATION
Analysis of Liquid-Waste Injection Wells in Illinois by Mathematical Models,
W74-07604 5B

FLOW MEASUREMENTS
Models of Matter Flow in a Southern Mixed Hardwood Forest in Florida: Preliminary Results,
W74-07813 5B

FLUCTUATIONS
Trends and Problems in Investigation of Long-Term Fluctuations of River Runoff (Napravleniya i zadachi issledovaniya mnogoletnikh kolebaniy rechnogo stoka),
W74-08051 2E

FLUORINE
Sanitary-Hygienic Evaluation of the Water Quality of the Nura Water Conduit of the Tselinograd District (In Russian),
W74-08052 5A

OAM FLOTATION
BOD, Solids and Nutrient Removal by Foam Flotation,
W74-07742 5D

OAM FRACTIONATION
Foam Fractionation of Mercury(II) Nitro Complexes,
W74-07945 5A

OOD CHAINS
Trace Elements in Marine Shrimp,
W74-07806 5C

Modeling Radionuclides and Pesticides in Food Chains,
W74-07810 5B

ORECASTING
Adsorption from Aqueous Solution,
W74-07739 5D

Hydrological Forecasting and Water Management (In Russian),
W74-07768 4A

Error Analysis of Ecological Models,
W74-07811 5B

Industrial Application of Whitford's Demand Forecasting Procedure,
W74-08015 6D

State Record Keeping on Water and Its Usage and Hydrologic Calculations and Forecasts (Gosudarstvennyy uchet vod i ikh ispol'zovaniya i gidrologicheskiye raschety i prognozy),
W74-08034 7A

OREST SOILS
Distribution of Free Iron and Organic Carbon as Related to Available Water in Some Forested Sandy Soils,
W74-07622 2G

OREST STANDS
Vegetation and Soil Relationships in Southern Beaufort County, North Carolina,
W74-08150 2K

ORESTS
The Moss Vegetation of the Forests in the Rhine Lowland Between Basel and Mannheim, (In German),
W74-08131 2I

Hydrological Investigations in Forest.
W74-08140 4C

ORESTS (STAND DENSITY)
Effect of the Stand Density of Walnut Forests on Surface Runoff and Soil Erosion on the Spurs of the Southwestern Slope of the Darvaza Range, (In Russian),
W74-08137 4D

ORMATION FACTORS
Porosity-Resistivity Cross-Plotting,
W74-07900 8G

OUNDATION INVESTIGATIONS
The Significance of Moisture Flow and Equilibria in Unsaturated Soils in Relation to the Design of Engineering Structures Built on Shallow Foundations in Australia,
W74-07899 8D

RANCE (LAC DU BOUNGET)
Toxicity of an Algal Complex on Freshwater Fauna: 1. Action on Some Benthic Animals and Fishes. (in French),
W74-08108 5C

FRANCE (LOIR-ET-CHER DEPARTMENT)
Destruction Trials of the Muskrat, Ondatra Zibethica L., in Ponds Using Poisoning Rafts, (In French),
W74-08128 5G

FRANCE (RHONE RIVER)
Heterogeneities in Salinity in a River Plume,
W74-07672 2L

FRESHWATER
An Evaluation of the Needs in Freshwater Research and Related Public Information Facilities,
W74-07838 6G

FUEL CYCLE
The Technology of Tritium Fixation and Storage,
W74-07789 5D

FUEL REPROCESSING
Tritium Distribution in the Nuclear Industry - The Requirements for Control Strategies,
W74-07784 5B

FUEL REPROCESSING PLANT
Environmental Statement Related to Construction and Operation of Barnwell Nuclear Fuel Plant.
W74-07792 5B

Iodine-129 Levels in Milk and Water Near a Nuclear Fuel Reprocessing Plant,
W74-07798 5B

FUELS
The Technology of Tritium Fixation and Storage,
W74-07789 5D

FUNGI
Structure and Function of Hardwood Litter and Soil Subsystems After Chronic Gamma Irradiation. II. Microfungi,
W74-07825 5C

FUNGICIDES
Organo-Mercury Fungicide Treatment of Sugar-Beet Seed,
W74-07951 5B

GALVANIC EFFECTS
Galvanic Effects Increase Corrosion, Part 2,
W74-07904 8G

GALVANIC SERIES
Galvanic Effects Increase Corrosion, Part 2,
W74-07904 8G

GAMBUSIA
Gambusia in the Zeravshan River Basin, (in Russian),
W74-08105 2I

GAME BIRDS
Effect of Ascorbic Acid on Cadmium Toxicity in the Young Coturnix,
W74-07707 5C

GAMMA RAY DENSIMETER
Compensated Gamma Ray Densimeter Measures Slurry Densities in Flow,
W74-07877 8G

GAMMA RAYS
Sensitivity of Carp (Cyprinus carpio) Embryos to Acute Gamma Radiation,
W74-07817 5C

Compensated Gamma Ray Densimeter Measures Slurry Densities in Flow,
W74-07877 8G

GASEOUS DIFFUSION PLANT
Environmental Effects of the Construction and Operation of a Gaseous Diffusion Plant.
W74-07781 5C

GASES
Gradient Analysis of Carbon Monoxide and Methane in Polluted and Other Nearshore Habitats,
W74-07984 5A

GASTROINTESTINAL DISEASES
Quality of Drinking Water on Ships in Relation to Sailing Conditions, (In Russian),
W74-08082 5B

GATES
Flow-Induced Vibration of Vertical-Lift Gate,
W74-08058 8C

GENETICS
Genetic Effects,
W74-07688 5C

GEOCHEMISTRY
Methods of Mercurometric Investigations,
W74-07695 5A

Uranium-234,
W74-07790 5B

GEOLOGICAL SURVEYS
An Instrumental Technique for the Determination of Sub-Microgram Concentrations of Mercury in Soils, Rocks, and Gas,
W74-07948 2K

GEOPHYSICS
Exploration for a Buried Valley by Resistivity and Thermal Probe Surveys,
W74-07935 2F

GEORGIA
State Organization for Water Resources Management,
W74-07733 6E

Buried Triassic Basin in the Central Savannah River Area, South Carolina and Georgia,
W74-07916 2F

Hydrology and Chloride Contamination of the Principal Artesian Aquifer in Glynn County, Georgia,
W74-07919 2F

Patterns of Water Flow and Sediment Dispersion Adjacent to an Eroding Barrier Island,
W74-07920 2J

Geohydrology of the Buried Triassic Basin at the Savannah River Plant,
W74-07934 5B

GEOTHERMAL ENERGY
Icelandic Geothermal Activity and the Mercury of the Greenland Icecap,
W74-07944 5B

GEOTHERMAL STUDIES
Electric and Thermal Properties of Rocks,
W74-07906 8E

Exploration for a Buried Valley by Resistivity and Thermal Probe Surveys,
W74-07935 2F

Icelandic Geothermal Activity and the Mercury of the Greenland Icecap,
W74-07944 5B

GERMANY
Problems for Hydrobiological Investigation under Conditions of Complex Use of Water Resources (In Russian),
W74-07765 5F

GERMANY (LOWER SAXONY)
Calculation of Capillary Rise from Groundwater Table into the Root Zone Under Steady-State Conditions, (In German),
W74-08139 2G

GERMINATION
Effects of Ionizing Radiation on Processes Influencing Tolerance of Tree Seedlings,
W74-07815 5C

GLACIAL AQUIFERS
Exploration for a Buried Valley by Resistivity and Thermal Probe Surveys,
W74-07935 2F

GLACIAL DRIFT
Hydrogeologic Investigation of a Sanitary Landfill in Stratified Glacial Drift,
W74-07728 5B

GLACIOHYDROLOGY
Isua, Greenland: Glaciological Investigations During 1973,
W74-07910 2C

GLACIOLOGY
Isua, Greenland: Glaciological Investigations During 1973,
W74-07910 2C

GRANTS
Annual Report '72 - '73.
W74-07602 9A

Water Resources Research in Virginia - Annual Report for Fiscal Year 1972.
W74-07842 9D

GRAPHICAL METHODS
Porosity-Resistivity Cross-Plotting,
W74-07900 8G

GRASSES
Studies of Re-Vegetation in Vehicle Tracks in Svalbard. (in Norwegian),
W74-08116 4A

GRAVEL PACKS
Sand Control, (Part 4), Combinations, Comparisons, and Costs,
W74-07851 8A

Sand Control in Oil and Gas Wells, Part I,
W74-07891 8B

GREAT LAKES
World's Greatest Source of Fresh Water,
W74-07643 2H

Transport of Radionuclides in Sediments,
W74-07814 5B

Hydrologic Models of the Great Lakes,
W74-07826 2H

Big Eddies and Mixing Processes in the Great Lakes,
W74-07926 5B

GREAT LAKES REGION
World's Greatest Source of Fresh Water,
W74-07643 2H

Regional Energy-Water Problems, Ohio-Great Lakes.
W74-07973 6D

GREAT PLAINS
Regional Energy-Water Problems, Southern Plains,
W74-07976 6D

GREAT SALT LAKE DESERT (UTAH)
Hydrologic Reconnaissance of the Northern Great Salt Lake Desert and Summary Hydrologic Reconnaissance of Northwestern Utah,
W74-07665 2F

GREEN BAY (WIS
Distribution of Phosphorus, Silica, Chlorophyll a, and Conductivity in Lake Michigan and Green Bay,
W74-08000 5C

GREEN BAY (WISC)
Investigation of the Sediments and Potential Manganese Nodule Resources of Green Bay, Wisconsin.
W74-07652 2J

GREENBRIER COUNTY (W
Hydrology of Limestone Karst in Greenbrier County, West Virginia,
W74-07908 2F

GREENLAND
Icelandic Geothermal Activity and the Mercury of the Greenland Icecap,
W74-07944 5B

GREENLAND (ISUA)
Isua, Greenland: Glaciological Investigations During 1973,
W74-07910 2C

GROUND BEETLES
Ground Beetles (Coleoptera, Carabidae) from the Boggy Areas of the Crimea, (in Russian),
W74-08103 2I

GROUND WATER
Sand Control in Oil and Gas Wells, Part I,
W74-07891 8B

GROUNDWATER
Groundwater Pollution Features of Federal and State Satutes and Regulations,
W74-07614 5G

Polluted Groundwater: Some Causes, Effects, Controls, and Monitoring.
W74-07615 5B

Water Quality and Treatment of Domestic Groundwater Supplies,
W74-07637 5F

Wells and Pumping Systems for Domestic Water Supplies,
W74-07638 8B

Planning a Domestic Groundwater Supply System,
W74-07639 4B

Geohydrology and Water Resources of the Tucson Basin, Arizona,
W74-07648 2F

Water Resources of Lehigh County, Pennsylvania,
W74-07649 4A

Hydrologic Reconnaissance of the Northern Great Salt Lake Desert and Summary Hydrologic Reconnaissance of Northwestern Utah,
W74-07665 2F

Geology and Water Resources of the Wharto Tract and the Mullica River Basin in Southe New Jersey,
W74-07668 4

Water Resources of the Little River Basi Louisiana,
W74-07671 4

Alterations in the Hydrologic Cycle Induced b Urbanization in Northern New Castle Count Delaware Magnitudes and Projections.
W74-07729 4

Optimum Drilling Sites for Ground-Wat Development on the East Coast of Lan Island,
W74-07734 4

Groundwater Issue Merits More Federal Pr tection, Groundwater Pollution and Conserv tion,
W74-07854 5

Location and Characteristics of the Interfac Between Brine and Fresh Water fro Geophysical Logs of Boreholes in the Upp Brazos River Basin, Texas,
W74-07859 8

Variations in the Design of Depth Samplers fo use in Groundwater Studies,
W74-07865 8

South Dakota Standards for Construction of I rigation Wells in Shallow Unconsolidated Gl cial Sediments,
W74-07896 8

Water in the Okanogan River Basin, Washin ton,
W74-07907 3

Ground-Water Quality Models: What They Ca and Cannot Do,
W74-07933 5

Preliminary Study to Investigate Feasibility o Desalting Ground Water in North Dakota,
W74-08066 3

Groundwater Pollution and Conservation.
W74-08071 5

Injection Wells Pose a Potential Threat.
W74-08072 5

GROUNDWATER BASINS
Buried Triassic Basin in the Central Savanna River Area, South Carolina and Georgia,
W74-07916 2

Geohydrology of the Buried Triassic Basin a the Savannah River Plant,
W74-07934 5

GROUNDWATER MOVEMENT
Hydrogeologic Investigation of a Sanitary Landfill in Stratified Glacial Drift,
W74-07728 5

GROUNDWATER POTENTIAL
The Electrical Resistivity Method (Part I),
W74-07852 7

GROUTING
Lime Grout Penetration and Associated Moisture Movements in Soil,
W74-07871 8

OWTH
Regularities of the Growth of the Body and Brain of the Common Carp in Bodies of Waters of the Amu-Dar'ya Delta, (in Russian),
W74-08106 2I

Growth of the Caspian Roach in the Mingechaur Reservoir, (In Azerbaijarian),
W74-08123 2H

Effect of Organic and Inorganic Fertilizers on the Growth and Development of Juvenile Carp in Spawning Ponds, (In Russian),
W74-08124 5C

OWTH ONION PLANTS
Drought Hardening in Onions: II. Analysis of Growth, (In Spanish),
W74-08149 3F

OWTH RATES
A Note Concerning the Environmental Acceptability of Nitrilotriacetic Acid (NTA): The Effect of NTA on the Growth of Gymnodinium breve,
W74-07775 5C

LF OF MAINE
Fluctuations in Gulf of Maine Sea Temperature and Specific Molluscan Abundance,
W74-08145 2I

LF OF MEXICO
Trace Elements in Marine Shrimp,
W74-07806 5C

LF OF PANAMA
Distribution of ZN, FE, MN, and SR in Marine Fishes of Different Feeding Habits,
W74-07801 5C

MNODINIUM
A Note Concerning the Environmental Acceptability of Nitrilotriacetic Acid (NTA): The Effect of NTA on the Growth of Gymnodinium breve,
W74-07775 5C

PSUM
Gypsum-Cement Blend Works Well in Permafrost Areas,
W74-07884 8F

PSUM-CEMENT BLEND
Gypsum-Cement Blend Works Well in Permafrost Areas,
W74-07884 8F

NGMAN CREEK (IDAHO)
Geology and Groundwater Resources of the Hangman Creek Drainage Basin, Idaho-Washington,
W74-07644 4A

RBORS
Harbor Pollution from Large Ships,
W74-08006 5B

RDNESS (WATER)
Evaluation of Scaling Tendencies,
W74-07893 8G

RDWOOD
Structure and Function of Hardwood Litter and Soil Subsystems After Chronic Gamma Irradiation, I. Mesofauna, Nitrogen, and Total Soil Respiration,
W74-07824 5C

HARVESTING
The Effects of the Maryland Hydraulic Clam Dredge on Populations of the Soft-Shell Clam, 'Mya Arenaria,'
W74-07994 8I

HAWAII
Annual Report '72 - '73.
W74-07602 9A

Optimum Drilling Sites for Ground-Water Development on the East Coast of Lanai Island,
W74-07734 4B

HAZARDOUS MATERIALS
Aquatic Invertebrate Recovery in the Clinch River Following Hazardous Spills and Floods,
W74-07841 5C

HAZARDS
Design Data and Safety Features of Commercial Nuclear Power Plants, Vol I,
W74-07794 5G

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol. II.
W74-07795 5G

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol. III,
W74-07796 5G

HEAD LOSS
Pump Selection,
W74-07872 8C

Head Drop Across Bar Screens,
W74-08092 5D

HEAVY METALS
Polyacrylamide Gel Disc Electrophoresis of Rat Bile after Intravenous Administration of 52 MnC12, 64CuC12, 203HgC12 and 210 Pb(N03)2,
W74-07694 5C

USGS Completes Nationwide Reconnaissance of Metals in Streams.
W74-07698 5A

Sensitivity of Vertebrate Embryos to Heavy Metals as a Criterion of Water Quality-Phase I,
W74-07715 5C

Treatment Methods for Heavy Metal-Containing Liquid Waste (In Japanese),
W74-07745 5D

Reverse Osmosis Process and its Application, (In Japanese),
W74-07750 5D

LIMNOLOGICAL STUDIES
Limnological Observations on the 'National Watersportbaan Georges Nachez' at Ghent in 1968, 1969, 1970 and 1971,
W74-08113 5C

LIMNOLOGY
Determining a Recreational Lake's Tolerance for Development and Usage,
W74-07836 5A

LINDANE
Factors Controlling the Dynamics of Non-Ionic Synthetic Organic Chemicals in Aquatic Environments,
W74-07831 5B

LIQUID OXYGEN
Oxygenation of Aqueous Bodies Using Liquid Oxygen-Loxination,
W74-07741 5D

LIQUID WASTES
Cartmen Devises Technique for Disposing of 3.5 Million Gallons of Liquid Discards Annually.
W74-07762 5D

Industrial Liquid Waste Surveys: Training Manual.
W74-07988 5G

LITHOLOGIC LOGS
37 Ways to Improve Your Well Completions,
W74-07870 8G

LITTER
Structure and Function of Hardwood Litter and Soil Subsystems After Chronic Gamma Irradiation, I. Mesofauna, Nitrogen, and Total Soil Respiration,
W74-07824 5C

LITTLE RIVER BASIN (LA)
Water Resources of the Little River Basin, Louisiana,
W74-07671 4A

LITTORAL
Ecology of the Eulittoral Zone of Lakes,
W74-08003 5C

LITTORAL DRIFT
The Effects of River Fluctuations Resulting from Hydroelectric Peaking on Selected Aquatic Invertebrates,
W74-07830 2I

LIVESTOCK
Automatic Pumping Installations for Livestock Sections,
W74-07864 8C

LOBSTER HOLDING TANKS
A Water Quality Problem in Lobster Holding Tanks,
W74-07983 8I

LOBSTERS
A Water Quality Problem in Lobster Holding Tanks,
W74-07983 8I

LOGGING (RECORDING)
Recent Advances in Log Evaluation,
W74-07853 8G

Location and Characteristics of the Interface Between Brine and Fresh Water from Geophysical Logs of Boreholes in the Upper Brazos River Basin, Texas,
W74-07859 8B

Casing Potential Logging Related to Vertilog Corrosion Logging,
W74-07868 8G

37 Ways to Improve Your Well Completions,
W74-07870 8G

Solving Drilling Problems Utilizing Well Logs - A Case History,
W74-07898 8G

LONG-TERM PLANNING
Improved Dynamic Programing Procedures and Their Practical Application to Water Resource Systems,
W74-08013 6A

LOS ANGELES (CALIF
Optimal Timing and Sizing of a Conjunctive Urban Water Supply and Waste Water System with Nonlinear Programming,
W74-08010 5D

LOUISIANA
Water Resources of the Little River Basin, Louisiana,
W74-07671 4A

Experiments to Re-establish Historical Oyster Seed Grounds and to Control the Southern Oyster Drill,
W74-07982 8I

LOW FLOW
The 7-Day 10-Year Low Flows of Illinois Streams,
W74-07677 2E

A Summary of Quantity, Quality and Economic Methodology for Establishing Minimum Flows,
W74-07847 6B

LYMNAEA-SPP
Toxicity of an Algal Complex on Freshwater Fauna: 2. Action on Lymnaea Spp. (in French).
W74-08109 5C

LYSIMETERS
Leaching Requirement Studies: Sensitivity of Alfalfa to Salinity of Irrigation and Drainage Waters,
W74-07774 3C

MAINTENANCE
Pump Installation and Maintenance,
W74-07873 8C

Commercial Desalting Plant Data and Analysis Volumes I-VI.
W74-08061 3A

MAINTENANCE COSTS
Valve Installation, Operation and Maintenance
W74-07867 8C

MANAGEMENT
Water Resources Management for Metropolitan Washington Analysis of the Joint Interaction of Water and Sewage Service, Public Policy and Land Development Patterns in an Expanding Metropolitan Area.
W74-07723 6E

Management Priorities Now and the Future.
W74-07755 6E

MANGANESE
Investigation of the Sediments and Potential Manganese Nodule Resources of Green Bay Wisconsin,
W74-07652 2

Distribution of ZN, FE, MN, and SR in Marine Fishes of Different Feeding Habits,
W74-07801 5C

Concentrations of Manganese, Iron, and Zinc in Juveniles of Five Estuarine-Dependent Fishes,

Nitrogen Transformations During Continuous Leaching,
W74-07623 5B

NITRILOTRIACETIC ACID
Biodegradation of Nitrilotriacetate (NTA) in Soils,
W74-07624 5B

A Note Concerning the Environmental Acceptability of Nitrilotriacetic Acid (NTA): The Effect of NTA on the Growth of Gymnodinium breve,
W74-07775 5C

NITROGEN
Characterization of Suspended Sediments Water from Selected Watersheds as Related t Control Processes Nutrient Contents an Lake Eutrophication
W74-07736 5

Inorganic Nitrogen Removal in a Combine Tertiary Treatment Marine Aquaculture System II Algal Bioassays
W74-07777 5

Structure and Function of Hardwood Litter an Soil Subsystems After Chronic Gamma Irradiation. I. Mesofauna Nitrogen, and Total So Respiration,
W74-07824 5

Nitrogen Removal by Soil Mechanisms.
W74-08081 5

Recovery, Residual Effects, and Fate o Nitrogen Fertilizer Sources in a Semiarid Re gion.
W74-08086 5

Studies on the Influence of Irrigation and Dif ferent Doses of N, P and K on the Floweri Behaviour and Absorption of Nutrient El ments in Muskmelon (Cucumis melo L.).
W74-08144 3

NITROGEN COMPOUNDS
Sources, Sinks, and Methods of Analysis o Organic Nitrogen Compounds in Fresh Wate Systems.
W74-08008 5C

NITROGEN FIXATION
Environmental Control of Nitrogen Fixation i Lakes, I. In situ Nitrogen Fixation by Free Liv ing Blue-Green Algae, and II. Nitrogen Fixa tion by the Duckweed-Algal Association,
W74-07716 5C

NONLINEAR PROGRAMMING
Optimal Timing and Sizing of a Conjunctive Urban Water Supply and Waste Water Systen with Nonlinear Programming,
W74-08010 5I

NORTH CAROLINA
Concentrations of Manganese, Iron, and Zinc in Juveniles of Five Estuarine-Dependen Fishes,
W74-07803 5C

Iron-55 and Ruthenium-103 and -106 in the Brackish-Water Clam Rangia cuneata,
W74-07804 5A

NORTH CAROLINA (BEAUFORT COUNTY)
Vegetation and Soil Relationships in Southern Beaufort County, North Carolina,
W74-08150 2K

NORTH DAKOTA
The Biology and Ecology of River Carpsucker Carpiodes Carpio (Rafinesque), in the Little Missouri Arm of Lake Sakakawea, North Dakota,
W74-07991 2H

Preliminary Study to Investigate Feasibility of Desalting Ground Water in North Dakota,
W74-08066 3A

NORTH SEA
Influence of Older Relief on the Location of Sand Waves in a Part of the Southern North Sea,
W74-07676 2J

NORWAY (SVALBARD)
Studies of Re-Vegetation in Vehicle Tracks in Svalbard. (in Norwegian),
W74-08116 4A

NUCLEAR ENERGY
Environmental Effects of the Construction and Operation of a Gaseous Diffusion Plant.
W74-07781 5C

NUCLEAR EXPLOSIONS
Project Rio Blanco Spall Measurements Data Report,
W74-07797 4B

NUCLEAR POWERPLANTS
A Study of Pollutant Discharges from Reactor Operations Utilizing Ultracentrifugation Techniques,
W74-07782 5A

Tritium Distribution in the Nuclear Industry - The Requirements for Control Strategies,
W74-07784 5B

Environmental Statement Related to Construction and Operation of Barnwell Nuclear Fuel Plant.
W74-07792 5B

Final Environmental Statement Related to the Proposed Perry Nuclear Power Plant, Units 1 and 2.
W74-07793 5A

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol I,
W74-07794 5G

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol. II.
W74-07795 5G

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol. III,
W74-07796 5G

Iodine-129 Levels in Milk and Water Near a Nuclear Fuel Reprocessing Plant,
W74-07798 5B

Radioecology of the Plaice (Pleuronectes platessa L) in the Northeast Irish Sea,
W74-07802 5C

Regional Energy-Water Problems Northeast,
W74-07971 6D

NUCLEAR REACTORS
A Study of Pollutant Discharges from Reactor Operations Utilizing Ultracentrifugation Techniques,
W74-07782 5A

NUCLEAR WASTES
A Study of Pollutant Discharges from Reactor Operations Utilizing Ultracentrifugation Techniques,
W74-07782 5A

The Technology of Tritium Fixation and Storage,
W74-07789 5D

NUTRIENT REMOVAL
BOD, Solids and Nutrient Removal by Foam Flotation,
W74-07742 5D

Nitrogen Removal by Soil Mechanisms,
W74-08081 5D

Recovery, Residual Effects, and Fate of Nitrogen Fertilizer Sources in a Semiarid Region,
W74-08086 5B

Flood and Seepage Water Sampling Techniques in Rice Fields Under Different Water Management Practices,
W74-08090 5B

NUTRIENT REQUIREMENTS
Iron and Associated Trace Mineral Problems in Man and Animals,
W74-07950 2K

NUTRIENTS
Testacea (Protozoa: Sarcodina) as Indicators of Water Quality in Western Montana,
W74-07718 5A

Characterization of Suspended Sediments in Water from Selected Watersheds as Related to Control Processes, Nutrient Contents, and Lake Eutrophication,
W74-07736 5B

Seasonal and Spatial Changes in Primary Production and Nutrients in Lake Michigan,
W74-07773 5C

Methods and Practices for Controlling Water Pollution from Agricultural Nonpoint Sources.
W74-07941 5B

Tissue Sulfhydryl Groups in Selenium-Deficient Rats and Lambs,
W74-07952 5B

Phytoplankton Community Structure and Nutrient Relationships in Lake Carl Blackwell, Oklahoma,
W74-07992 2H

OATS
Relationship Between Soil Oxygen Diffusion Rate and Yield of Oats in a Coastal Alluvial Soil at Critical Salinity Level,
W74-08094 3C

OCEAN WAVES
Floating Breakwater for Attenuating Seas,
W74-08043 8B

ODOR CONTROL
Odors Emitted from Raw and Digested Sewage Sludge,
W74-07960 5D

OHIO
Lime Stabilization of Primary Sludges,
W74-07760 5D

Final Environmental Statement Related to the Proposed Perry Nuclear Power Plant, Units 1 and 2.
W74-07793 5A

Exploration for a Buried Valley by Resistivity and Thermal Probe Surveys,
W74-07935 2F

OHIO RIVER
Environmental Effects of the Construction and Operation of a Gaseous Diffusion Plant.
W74-07781 5C

OIL FIELDS
Mathematical Model of Tritiated and Stable Water Movement in an Old-Field Ecosystem,
W74-07812 5B

OIL INDUSTRY
Two New Drilling Systems Pass Initial Field Tests, DC Electric Power Swivel Can Save Time and Money; Hydraulic Snubber Built to Operate in Rugged Terrain.
W74-07980 8G

OIL POLLUTION
Effects of Crude Oil and Some of its Components on Young Coho and Sockeye Salmon,
W74-07613 5C

Petroleum Systems Reliability Analysis, A Program for Prevention of Oil Spills Using an Engineering Approach to a Study of Offshore and Onshore Crude Oil Petroleum Systems, Volume II - Appendices,
W74-07957 5G

The Effects of Crude Oil Pollution on the Behavior of Marine Invertebrates,
W74-07987 5C

Multi-Unit Apparatus for Collecting Oil from the Surface of a Body of Water,
W74-08020 5G

Floating Barrier,
W74-08025 5G

Oil Recovery Apparatus,
W74-08033 5G

Control of Waterborne Oil Slicks,
W74-08036 5G

OIL SPILL RECORDS
Petroleum Systems Reliability Analysis, A Program for Prevention of Oil Spills Using an Engineering Approach to a Study of Offshore and Onshore Crude Oil Petroleum Systems, Volume II - Appendices,
W74-07957 5G

OIL SPILLS
Floating Barrier,
W74-08025 5G

Oil Recovery Apparatus,
W74-08033 5G

Control of Waterborne Oil Slicks,
W74-08036 5G

OILFIELD BACTERIAL CORROSION
The Sulfate-Reducing Bacteria and Oilfield Bacterial Corrosion - A Review of the Current State-of-the-Art,
W74-07902 8G

OKANOGAN RIVER BASIN (WASH)
Water in the Okanogan River Basin, Washington,
W74-07907 3B

OKLAHOMA
Solving Drilling Problems Utilizing Well Logs - A Case History,
W74-07898 8G

OKRA
Influence of Temperature and Moisture Stress from Sodium Chloride Salinization on Okra Emergence,
W74-08073 3C

OLIGOTROPHY
Survival of Intestinal Bacteria in Oligotrophic Waters,
W74-07737 5C

ON-SITE DATA COLLECTIONS
Contribution to Water Pollution from Agricultural and Urban Sources in the Coachella Valley,
W74-07757 5B

ON-SITE INVESTIGATIONS
Interdisciplinary Monitoring of the New York Bight,
W74-07764 5A

An Instrumental Technique for the Determination of Sub-Microgram Concentrations of Mercury in Soils, Rocks, and Gas,
W74-07948 2K

ONIONS
Drought Hardening in Onions: I. Influence of Presowing Treatments on Vegetative Behavior and Yield, (In Spanish),
W74-08148 3F

Drought Hardening in Onions: II. Analysis of Growth, (In Spanish),
W74-08149 3F

OPERATING COSTS
Pump Selection,
W74-07872 8C

Commercial Desalting Plant Data and Analysis, Volumes I-VI,
W74-08061 3A

OPERATION
Improved Dynamic Programing Procedures and Their Practical Application to Water Resource Systems,
W74-08013 6A

OPERATION AND MAINTENANCE
The Snodland-Ightham Regional Drainage Scheme: Design and Operation,
W74-07752 5D

Valve Installation, Operation and Maintenance,
W74-07867 8C

OPTIMIZATION
Optimization of Stochastic Storage Models Formulated by P.A.P. Moran, and Z. Kaczmarek (Optymalizaeja stochastycznych modeli retencjonwania podanych przes P.A.P. Morana i Z. Kaczmarka),
W74-07747 4A

Optimal Conjunctive Use Model for Indus Basin,
W74-08059 4B

OPTIMUM DEVELOPMENT PLANS
Economic Optimization and Simulation Techniques for Management of Regional Water Resource Systems,
W74-07714 6A

OREGON
Survey of Oregon's Water Laws,
W74-07611 6E

Observations and Analysis of Bottom Turbid Layers on the Oregon Continental Shelf,
W74-07632 2J

ORGANIC CARBON
Distribution of Free Iron and Organic Carbon as Related to Available Water in Some Forested Sandy Soils,
W74-07622 2G

ORGANIC COMPOUNDS
Effects of Crude Oil and Some of its Components on Young Coho and Sockeye Salmon,
W74-07613 5C

Transport and Transformation of Mercury in Nature and Possible Routes of Exposure,
W74-07682 5B

Symptoms and Signs of Intoxication,
W74-07684 5C

Organic Mercury Compounds-Relation Between Exposure and Effects,
W74-07687 5C

Sources, Sinks, and Methods of Analysis of Organic Nitrogen Compounds in Fresh Water Systems,
W74-08008 5C

ORGANIC MATTER
Distribution of Free Iron and Organic Carbon as Related to Available Water in Some Forested Sandy Soils,
W74-07622 2G

Carbon Measurements in Water Quality Monitoring,
W74-07641 5A

The Determination of Mercury in Air Samples and Biological Materials,
W74-07710 5A

Organic Water Impurities and Evaluation of Methods for their Removal in Water Mains (In Russian),
W74-07862 5D

ORGANIC PESTICIDES
Factors Controlling the Dynamics of Non-Ionic Synthetic Organic Chemicals in Aquatic Environments,
W74-07831 5B

ORGANIZATIONS
Regional Water Authorities: Organizational Patterns-Purpose or Professional,
W74-07754 5G

ORGANOLEPTIC PROPERTIES
Experimental Study of the Hazard Due to Chlorinated Quinones and their Safety Levels in Water Bodies (In Russian),
W74-07778 5C

ORGANOMERCURIC COMPOUNDS
Organo-Mercury Fungicide Treatment of Sugar-Beet Seed,
W74-07951 5B

ORGANOPHOSPHORUS PESTICIDES
The Surface Catalyzed Hydrolysis of Parathion on Kaolinite,
W74-07628 5B

OSPREY
The Fate and Effects of Pesticides in the Aquatic Environment of the Flathead Lake Drainage Area,
W74-07835 5C

OTTAWA RIVER (CANADA)
Bacteriological Water Quality Data, Beach Areas, Gatineau Park Lakes, National Capital Commission, 1973,
W74-07932 5B

OUTLET WORKS
Outlet Works, Stilling Basin for Tallahala Dam, Tallahala Creek, Mississippi,
W74-07925 8B

OUTLETS
Hydraulics of Culvert Outlets,
W74-07749 8B

Outlet Works Stilling Basins, Clinton and Fort Scott Dams, Wakarusa and Marmaton Rivers, Kansas,
W74-07930 8A

OXIDATION
A Kinetic Study of Ammonium and Nitrite Oxidation in a Soil Field Plot,
W74-07625 5B

OXYGEN REGENERATION
Process Control Model for Oxygen Regeneration of Polluted Rivers. Phases IV and V and Spacially and Temporally Distributed Discharge of Effluents in Estuaries,
W74-07837 5B

OXYGEN SAG
Oxygen Depletion Model for Cayuga Lake,
W74-08007 5C

OXYGENATION
Oxygenation of Aqueous Bodies Using Liquid Oxygen-Loxination,
W74-07741 5D

Process and Apparatus for the Purification of a Natural Body of Water,
W74-08019 5D

Apparatus for Aerating Water,
W74-08023 5D

Relationship Between Soil Oxygen Diffusion Rate and Yield of Oats in a Coastal Alluvial Soil at Critical Salinity Level,
W74-08094 3C

OYSTER SEED GROUNDS
Experiments to Re-establish Historical Oyster Seed Grounds and to Control the Southern Oyster Drill,
W74-07982 8I

OYSTERS
Biological Half-Lives for Zinc and Mercury in the Pacific Oyster, Crassostrea gigas,
W74-07807 5C

Experiments to Re-establish Historical Oyster Seed Grounds and to Control the Southern Oyster Drill,
W74-07982 8I

PACIFIC NORTHWEST U
The Columbia Interstate Compact: Politics of Water Resources in the Pacific Northwest,
W74-07846 6E

Regional Energy-Water Problems, Pacific Northwest,
W74-07975 6D

PACIFIC OCEAN
Biological Half-Lives for Zinc and Mercury in the Pacific Oyster, Crassostrea gigas,
W74-07807 5C

PACKER FLUIDS
New Bromide Packer Fluid Cuts Corrosion Problems,
W74-07858 8G

PADUS
Growth Feature of Introduced Plants in Connection with Their Adaptation to Drought. (in Russian),
W74-08118 2I

PAKISTAN (INDUS RIVER)
Optimal Conjunctive Use Model for Indus Basin,
W74-08059 4B

PARAGONIMUS-SPP
On Some Aspects of the Parasites of Ceylonese Fresh Water Crabs,
W74-08002 2I

PARAMECIUM CAUDATUM
The Photosensitizing Action of Carcinogens. I. The Action of 2-Naphthylamine on Escherichia Coli K-12 and Paramecium Caudatum,
W74-08095 5C

PARASITES (CRABS)
On Some Aspects of the Parasites of Ceylonese Fresh Water Crabs,
W74-08002 2I

PARATHION
The Surface Catalyzed Hydrolysis of Parathion on Kaolinite,
W74-07628 5B

PATENTS
Process and Apparatus for the Purification of a Natural Body of Water,
W74-08019 5D

Multi-Unit Apparatus for Collecting Oil from the Surface of a Body of Water,
W74-08020 5G

Pivotable Fluid Diverter for Recirulation System,
W74-08021 5D

Cellulosic Reverse Osmosis Membranes Having High Flux and High Salt Rejection,
W74-08022 3A

Apparatus for Aerating Water,
W74-08023 5D

Process for Treating Water Contaminated with Hexavalent Chromium,
W74-08024 5D

Floating Barrier,
W74-08025 5G

Apparatus and Method for Treating Waste Liquid,
W74-08026 5D

Submerged Turbine Aerator,
W74-08027 5D

Wastewater Treatment Using Electrolysis with Activated Carbon Cathode,
W74-08028 5D

Method of Treating Waste Water Containing Ligninsulfonate,
W74-08029 5D

Electrolytic Flotation Apparatus,
W74-08030 5D

Method and Apparatus for Aerating Bodies of Water,
W74-08031 5G

Mechanical-Biological Waste Water Purification Plant,
W74-08032 5D

Oil Recovery Apparatus,
W74-08033 5G

Wastewater Treatment,
W74-08034 5D

Industrial Waste Processing Apparatus,
W74-08035 5D

Control of Waterborne Oil Slicks,
W74-08036 5G

System for Reversed Osmosis,
W74-08037 5D

Method and Equipment for Desalination of Liquids,
W74-08038 3A

Storage and Dispensing Apparatus for a Reverse Osmosis Water Purification System,
W74-08039 5D

Valve for Reverse Osmosis Purification and Storage System,
W74-08040 5D

Reverse Osmosis-Neutralization Process for Treating Mineral Contaminated Waters,
W74-08041 5D

Water Treatment Mud Decanting Tank,
W74-08042 5F

Floating Breakwater for Attenuating Seas,
W74-08043 8B

PATH OF POLLUTANTS
Effect of Deicing Chemicals on Ground and Surface Water--(Modus Operandi),
W74-07617 5B

Biodegradation of Nitrilotriacetate (NTA) in Soils,
W74-07624 5B

Adsorption of Fenuron and Monuron (Substituted Ureas) by Two Montmorillonite Clays,
W74-07627 5B

Use of Fluorescent Dye Tracers in Mobile Bay,
W74-07642 5B

Chester River Study, Volumes I, II, and III.
W74-07653 5B

Biochemical Investigations,
W74-07654 5B

Chemical Evidence for the Dispersal of River Mersey Run-off in Liverpool Bay,
W74-07674 5B

Transport and Transformation of Mercury in Nature and Possible Routes of Exposure,
W74-07682 5B

Metabolism,
W74-07683 5B

The Transport of Radioisotopes by Fine Particulate Matter in Aquifers,
W74-07730 5B

Characterization of Suspended Sediments in Water from Selected Watersheds as Related to Control Processes, Nutrient Contents, and Lake Eutrophication,
W74-07736 5B

Radionuclides in Ecosystems, Volume II.
W74-07799 5C

A Systems analysis Methodology for Predicting Dose to Man From a Radioactively Contaminated Terrestrial Environment,
W74-07809 5C

Big Eddies and Mixing Processes in the Great Lakes,
W74-07926 5B

Recovery, Residual Effects, and Fate of Nitrogen Fertilizer Sources in a Semiarid Region,
W74-08086 5B

PATHOGENIC BACTERIA
Coliforms are an Inadequate Index of Water Quality,
W74-07885 5A

PEAK DISCHARGE
Estimating the Magnitude of Peak Discharges for Selected Flood Frequencies on Small Streams in East Texas,
W74-07664 2E

Annual Peak Discharges from Small Drainage Areas in Montana, Through September 1972,
W74-07667 2E

PEAT SOILS
Effect of Humidity and Temperature on Microbial Activity in Moor Peat Soils, (In Russian),
W74-08089 2G

PENNSYLVANIA
Water Resources of Lehigh County, Pennsylvania,
W74-07649 4A

PERIPHYTIC POPULATIONS
Study on the Periphytic Colonizations of a Lateral Environment of the River Po(Italy), (In Italian),
W74-07702 2I

PERIPHYTON
Testacea (Protozoa: Sarcodina) as Indicators of Water Quality in Western Montana,
W74-07718 5A

Survival of Intestinal Bacteria in Oligotrophic Waters,
W74-07737 5C

An Ecological Study of the Missouri River Prior to Channelization,
W74-07744 2I

PERMAFROST
Gypsum-Cement Blend Works Well in Permafrost Areas,
W74-07884 8F

PERMEABILITY
Estimation of Imperviousness and Specific Curb Length for Forecasting Stormwater Quality and Quantity,
W74-07640 5B

PERSISTENCE
Factors Controlling the Dynamics of Non-Ionic Synthetic Organic Chemicals in Aquatic Environments,
W74-07831 5B

PERSONNAL MANAGEMENT
Management Priorities: Now and the Future,
W74-07755 6B

PESTICIDE KINETICS
Factors Controlling the Dynamics of Non-Ionic Synthetic Organic Chemicals in Aquatic Environments,
W74-07831 5B

PESTICIDE REMOVAL
Factors Controlling the Dynamics of Non-Ionic Synthetic Organic Chemicals in Aquatic Environments,
W74-07831 5B

PESTICIDE RESIDUES
The Fate and Effects of Pesticides in the Aquatic Environment of the Flathead Lake Drainage Area,
W74-07835 5C

PHENOLS
Investigations on the Occurrence of Phenol-Decomposing Microorganisms in Waters and Sediments. (in German),
W74-08115 5C

PHOSPHATES
Zinc/Phosphate Combinations Control Corrosion in Potable Water Distribution Systems,
W74-07894 8G

PHOSPHORUS
The Use of Algal Assays for Determining the Effect of Iron and Phosphorus Compounds on the Growth of Various Algal Species,
W74-07776 5C

Distribution of Phosphorus, Silica, Chlorophyll a, and Conductivity in Lake Michigan and Green Bay,
W74-08000 5C

Correlations Between P, Fe and Mn Availability in Water-Logged Soil at Different Fertility Levels,
W74-08134 2G

Studies on the Influence of Irrigation and Different Doses of N, P and K on the Flowering Behaviour and Absorption of Nutrient Elements in Muskmelon (Cucumis melo L.),
W74-08144 3F

PHOTOACTIVATION
The Photosensitizing Action of Carcinogens. I. The Action of 2-Naphthylamine on Escherichia Coli K-12 and Paramecium Caudatum,
W74-08095 5C

PHOTODECOMPOSITION
Determination of the Fate of Polynuclear Aromatic Hydrocarbons in Natural Water Systems,
W74-07827 5A

PHOTOGRAPHY
Application of Satellite Data for Hydrologic Purposes (Ispol'zovaniye sputnikovoy informatsii dlya gidrologicheskikh tseley),
W74-08049 7B

PHOTOSENSITIZING
The Photosensitizing Action of Carcinogens. I. The Action of 2-Naphthylamine on Escherichia Coli K-12 and Paramecium Caudatum,
W74-08095 5C

PHOTOSYNTHESIS
Effect of Temperature and Plant Water Stress on Photosynthesis Diffusion Resistance, and Leaf Water Potential in Spring Wheat,
W74-08075 3F

PHREATOPHYTES
Phreatophytes, A Bibliography, Revised.
W74-07829 3B

PHYSIOCHEMICAL ANALYSIS
Vegetation and Soil Relationships in Southern Beaufort County, North Carolina,
W74-08150 2K

PHYTOCENOTIC FACTORS
Effect of Climatic and Phytocenotic Factors on Annual Increment of Trees in Stands, (In Russian),
W74-08127 2I

PHYTOPLANKTON
An Investigation of the Water Quality and Productivity of Polson Bay, Flathead Lake, Montana,
W74-07717 5C

Results of Red Tide Formation in Tokyo Bay,
W74-07770 5C

Phytoplankton Community Structure and Nutrient Relationships in Lake Carl Blackwell, Oklahoma,
W74-07992 2H

Primary Production and Respiration of the Phytoplankton of the Rivers Thames and Kennet at Reading,
W74-08132 5C

PHYTOSOCIOLOGICAL STUDIES
Phytosociological Observations in Inundation Zone Farmlands in the Northern Upper Rhine Valley, (In German),
W74-08121 2I

PILOT PLANTS
Lime Stabilization of Primary Sludges,
W74-07760 5D

PIPE BENDING
Causes and Prevention of Drill Pipe Troubles,
W74-07889 8G

PIPE BRIDGES
The Design, Planning and Construction of a 45 inch Diameter Water Main Across a Congested Area of West Bromwich,
W74-07751 8A

PIPELINES
Prevention of Damage to Pipelines.
W74-07923 8A

PITTING (CORROSION)
Casing Potential Logging Related to Vertilog Corrosion Logging,
W74-07868 8G

Causes and Prevention of Drill Pipe Troubles,
W74-07889 8G

PLAICE
Radioecology of the Plaice (Pleuronectes platessa L) in the Northeast Irish Sea,
W74-07802 5C

PLANKTON
Biological Investigations,
W74-07656 5B

Plankton Production and Water Quality in Spanish Reservoirs. First Report on a Research Project,
W74-08005 5C

Studies on the Occurrence of Planktonic Rotatoria in Urban Waters and Their Relationship to Saprobism. (in German),
W74-08111 2I

PLANNING
The Role of Public Involvement in Water Resources Planning and Development, A Report with Readings on Research and Experimentation in Public Affairs Education.
W74-07610 6B

Analytical Techniques for Planning Complex Water Resource Systems.
W74-07722 6A

Water Resources Management for Metropolitan Washington: Analysis of the Joint Interactions of Water and Sewage Service, Public Policy and Land Development Patterns in an Expanding Metropolitan Area.
W74-07723 6B

Appendices to Water Resources Management for Metropolitan Washington: Analysis of the Joint Interactions of Water and Sewage Service, Public Policy, and Land Development Patterns in an Expanding Metropolitan Area.
W74-07724 6B

Regional Water Authorities: Organizational Patterns-Purpose or Professional,
W74-07754 5G

Earthquake Damage Costs in the Design of Water Resource Systems,
W74-08018 4A

Problem of Rational Use and Conservation of Water Resources and Goals of Hydrology (Problema ratsional'nogo ispol'zovaniya i okhrany vodnykh resursov i zadachi gidrologii),
W74-08055 6B

All-Union Hydrologic Congresses (Vsesoyuznyye gidrologicheskiye syezdy),
W74-08056 6E

The Potential of Desalting for Industrial Water Supplies in Northeastern Wyoming,
W74-08062 3A

Improving Municipal Water Supplies in Arizona by Desalting,
W74-08063 3A

Potential Contribution of Desalting Systefs to Municipal Water Quality and Supply in South Dakota.
W74-08064 3A

The Future Role of Desalting in Nevada,
W74-08065 3A

PLANT GROWTH
Aerial Pollution and the Rapid Evolution of Copper Tolerance,
W74-07713 5B

PLANT TISSUES
Lead Detection in Living Plant Tissue Using a New Histochemical Method,
W74-07711 5A

PLANTING MANAGEMENT
Effect of Establishment Method, Variety, and Seeding Rate on the Production and Quality of Alfalfa Under Dryland and Irrigation,
W74-08077 3F

PLUTONIUM
Plutonium in North Atlantic Ocean Organisms; Ecological Relationships,
W74-07800 5C

POISONING RAFTS
Destruction Trials of the Muskrat, Ondatra Zibethica L., in Ponds Using Poisoning Rafts, (In French),
W74-08128 5G

POLAND CRACOW REGION
Environmental Factors of Leukemia Morbidity, (In Polish),
W74-07999 5C

POLITICAL ASPECTS
The Columbia Interstate Compact: Politics of Water Resources in the Pacific Northwest,
W74-07846 6E

Economic Aspects of Resource Use with Special Reference to Energy and Water,
W74-07964 6D

POLLUTANT IDENTIFICATION
Methods of Analysis,
W74-07681 5A

Solvent Extraction of Selenium (IV) with 2-Thenoyltri-Fluoroacetone,
W74-07692 5A

Paper Chromatographic and Electrochromatographic Separation of Edta Complexes of Metal Ions,
W74-07693 5A

Mercury Analysis by Atomic Absorption Spectrophotometry,
W74-07704 5A

Trace Metals in Atmospheric Particulates and Atomic Absorption Spectroscopy,
W74-07705 5A

Analysis of Trace Metal Particulates in Atmospheric Samples Using X-Ray Fluorescence,
W74-07709 5A

The Determination of Mercury in Air Samples and Biological Materials,
W74-07710 5A

Lead Detection in Living Plant Tissue Using a New Histochemical Method,
W74-07711 5A

Determination of Copper and Zinc in Biological Material,
W74-07712 5A

Testacea (Protozoa: Sarcodina) as Indicators of Water Quality in Western Montana,
W74-07718 5A

The Determination of Heavy Metals in Domestic Sewage Treatment Plant Wastes,
W74-07763 5A

Determination of the Fate of Polynuclear Aromatic Hydrocarbons in Natural Water Systems,
W74-07827 5A

Collection, Detection, Identification, and Quantitation of Human Effluents,
W74-07912 5A

Some Novel Complexes of Chromium(I),
W74-07946 5A

Odors Emitted from Raw and Digested Sewage Sludge,
W74-07960 5D

POLLUTION ABATEMENT
Mine Drainage Pollution Control Via Reverse Osmosis,
W74-07881 5D

Petroleum Systems Reliability Analysis, A Program for Prevention of Oil Spills Using an Engineering Approach to a Study of Offshore and Onshore Crude Oil Petroleum Systems, Volume II - Appendices,
W74-07957 5G

Multi-Unit Apparatus for Collecting Oil from the Surface of a Body of Water,
W74-08020 5G

Apparatus for Aerating Water,
W74-08023 5D

Floating Barrier,
W74-08025 5G

Method and Apparatus for Aerating Bodies of Water,
W74-08031 5G

Oil Recovery Apparatus,
W74-08033 5G

Control of Waterborne Oil Slicks,
W74-08036 5G

POLLUTION TAXES (CHARGES)
Pricing of Industrial Wastewater Treatment Service,
W74-07727 5D

POLYCHLORINATED BIPHENYLS
Chester River Study, Volumes I, II, and III.
W74-07653 5B

Biochemical Investigations,
W74-07654 5B

POLYMYXIN
Investigation of River Water for the Presence of Escherichia coli and Enterococcus, (in Russian),
W74-08004 5A

POLYNUCLEAR AROMATIC HYDROCARBONS
Determination of the Fate of Polynuclear Aromatic Hydrocarbons in Natural Water Systems,
W74-07827 5A

PORE PRESSURE
Axisymmetric Infiltrations,
W74-07839 2G

POROSITY
Microporosity in Carbonate Rocks,
W74-07861 4B

POSITIVE-DISPLACEMENT PUMPS
Positive Displacement Pumps,
W74-07874 8C

POST AERATION TECHNIQUES
Mathematical Model for Post Aeration,
W74-08045 5D

POTABLE WATER
The Severn Scheme of the Bristol Waterworks Company.
W74-07772 5F

Domestic Water Systems, Nonchemical Factors in Corrosion Control,
W74-07849 8G

Domestic Hot Water Systems, Silicate Treatment Inhibits Corrosion of Galvanized Steel and Copper Alloys,
W74-07850 8G

Performance and Selection of Materials for Potable Hot Water Service,
W74-07855 8G

Corrosive Effects of Southern California Potable Waters,
W74-07866 8G

Corrosive Effects of Potable Water,
W74-07886 8G

Zinc/Phosphate Combinations Control Corrosion in Potable Water Distribution Systems,
W74-07894 8G

Environmental Factors of Leukemia Morbidity, (In Polish),
W74-07999 5C

A Systems Approach to Assessment of Rural Water Supply Program Effectiveness,
W74-08012 6B

Quality of Drinking Water on Ships in Relation to Sailing Conditions, (In Russian),
W74-08082 5B

Pollution Control and Erection of Sewage Plants: Technical Feasibilities, Future Demands, (In German),
W74-08138 5G

POTASSIUM
Effect of the Moisture and Temperature on the Leaching of Ash Elements from Plant Residues (in Russian),
W74-08016 2I

Variations in Potassium Content of Alfalfa Grown on Pseudogley Soil Depending on Mineral Fertilizing, (In Serbo-Creation),
W74-08097 3F

Studies on the Influence of Irrigation and Different Doses of N, P and K on the Flowering Behaviour and Absorption of Nutrient Elements in Muskmelon (Cucumis melo L.),
W74-08144 3F

POTENTIAL WATER SUPPLY
A Bill to Authorize the Secretary of the Interior to Engage in Feasibility Investigations of Certain Potential Water Resource Developments.
W74-07943 6E

POULTRY
Antagonistic Effect of Arginine on Zinc Metabolism in Chicks,
W74-07955 5C

POWER UNIT STANDARDS
South Dakota Standards for Irrigation Pumps and Power Units,
W74-07895 8C

POWERPLANTS
Energy Production,
W74-07967 6D

PRECIPITATION
Precipitation Characteristics of the Northern New Jersey, New York City Metropolitan Area,
W74-07607 2B

PRECIPITATION (ATMOSPHERIC)
Hydrologic Models of the Great Lakes,
W74-07826 2H

PRESOWING TREATMENT
Drought Hardening in Onions: I. Influence of Presowing Treatments on Vegetative Behavior and Yield, (In Spanish),
W74-08148 3F

PRESSURE HEAD
Pump Selection,
W74-07872 8C

PRESSURE RELIEF
Pump Installation and Maintenance,
W74-07873 8C

PRICING
Pricing of Industrial Wastewater Treatment Service,
W74-07727 5D

PRIMARY PRODUCTION
Primary Production and Respiration of the Phytoplankton of the Rivers Thames and Kennet at Reading,
W74-08132 5C

Determination of Counting Efficiency by 14C by Liquid Scintillation in Primary Production Measurements in a Lagoon Environment, (In French),
W74-08143 5A

PRIMARY PRODUCTIVITY
Seasonal Changes in Water Quality and Primary Productivity in Doe Valley Lake,
W74-07605 5C

An Investigation of the Water Quality and Productivity of Polson Bay, Flathead Lake, Montana,
W74-07717 5C

Seasonal and Spatial Changes in Primary Production and Nutrients in Lake Michigan,
W74-07773 5C

PRIOR APPROPRIATION
Survey of Oregon's Water Laws,
W74-07611 6E

PROBABILITY
Industrial Application of Whitford's Demand Forecasting Procedure,
W74-08015 6D

PRODUCTION
Energy Production,
W74-07967 6D

PRODUCTIVITY
The Use of Algal Assays for Determining the Effect of Iron and Phosphorus Compounds on the Growth of Various Algal Species,
W74-07776 5C

Dissolution of a Porous Matrix by a Slowly Reacting Acid,
W74-07860 8B

Plankton Production and Water Quality in Spanish Reservoirs. First Report on a Research Project,
W74-08005 5C

PROFILES
Spillway Water-Surface Profiles,
W74-07913 8B

PROJECT PLANNING
Innovation: A Case Study,
W74-07720 6B

A Streamflow Model for Metropolitan Planning and Design,
W74-07721 2A

The Design, Planning and Construction of a 45 inch Diameter Water Main Across a Congested Area of West Bromwich,
W74-07751 8A

PROJECT SKYWATER
Project Skywater 1972 Annual Report.
W74-07928 3B

PROJECTS
The Role of Public Involvement in Water Resources Planning and Development, A Report with Readings on Research and Experimentation in Public Affairs Education.
W74-07610 6B

PROPAGATION (BIOLOGICAL)
Sensitivity of Carp (Cyprinus carpio) Embryos to Acute Gamma Radiation,
W74-07817 5C

PROSPECTING
Research - - Targets and Developments, Regional Assessments,
W74-07903 7B

PROTEINS
Polyacrylamide Gel Disc Electrophoresis of Rat Bile after Intravenous Administration of 52 MnC12, 64CuC12, 203HgC12 and 210 Pb(N03)2,
W74-07694 5C

PROTOZOA
Testacea (Protozoa: Sarcodina) as Indicators of Water Quality in Western Montana,
W74-07718 5A

Survival of Intestinal Bacteria in Oligotrophic Waters,
W74-07737 5C

PSEUDOGLEY SOIL
Variations in Potassium Content of Alfalfa Grown on Pseudogley Soil Depending on Mineral Fertilizing, (In Serbo-Creation),
W74-08097 3F

PUBLIC HEALTH
Mercury in the Environment, An Epidemiological and Toxicological Appraisal.
W74-07680 5C

Environmental Factors of Leukemia Morbidity, (In Polish),
W74-07999 5C

PUBLIC INFORMATION
An Evaluation of the Needs in Freshwater Research and Related Public Information Facilities,
W74-07838 6G

PUBLIC INVOLVEMENT
The Role of Public Involvement in Water Resources Planning and Development, A Report with Readings on Research and Experimentation in Public Affairs Education.
W74-07610 6B

PUERTO RICO
Distribution of ZN, FE, MN, and SR in Marine Fishes of Different Feeding Habits,
W74-07801 5C

Trace-Element Interactions Between River Water and Seawater,
W74-07805 5B

PULP WASTES
Pollution Monitoring in Lake Champlain Using ERTS-1 Imagery,
W74-08009 5A

Method of Treating Waste Water Containing Ligninsulfonate,
W74-08029 5D

PULSATION DAMPENERS
Pump Installation and Maintenance,
W74-07873 8C

PUMPS
Automatic Pumping Installations for Livestock Sections,
W74-07864 8C

Pump Selection,
W74-07872 8C

Pump Installation and Maintenance,
W74-07873 8C

Positive Displacement Pumps,
W74-07874 8C

South Dakota Standards for Irrigation Pumps and Power Units,
W74-07895 8C

QUAIL
Effect of Ascorbic Acid on Cadmium Toxicity in the Young Coturnix,
W74-07707 5C

QUINONES
Experimental Study of the Hazard Due to Chlorinated Quinones and their Safety Levels in Water Bodies (In Russian),
W74-07778 5C

RADIATION
Effects of Ionizing Radiation on Processes Influencing Tolerance of Tree Seedlings,
W74-07815 5C

Sensitivity of Carp (Cyprinus carpio) Embryos to Acute Gamma Radiation,
W74-07817 5C

Effect of Radiation, Salinity and Temperature on the Ionic Regulation of the Blue Crab, Callinectes sapidus,
W74-07818 5C

RADIATION EXPOSURE
Radiation Effects on Serum Proteins, Hematocrits, Electrophoretic Patterns and Protein Components in the Bluegill (Lepomis macrochirus),
W74-07816 5C

RADIOACTIVE WASTE DISPOSAL
Solid Forms for Savannah River Plant High-Level Waste,
W74-07787 5D

Chemical Engineering Division, Waste Management Programs, Quarterly Report, July-September 1973,
W74-07788 5D

RADIOACTIVE WASTES
The Transport of Radioisotopes by Fine Particulate Matter in Aquifers,
W74-07730 5B

Geohydrology of the Buried Triassic Basin at the Savannah River Plant,
W74-07934 5B

RADIOACTIVE WELL LOGGING
37 Ways to Improve Your Well Completions,
W74-07870 8G

RADIOACTIVITY
Environmental Effects of the Construction and Operation of a Gaseous Diffusion Plant.
W74-07781 5C

Radioactivity of Nevada Hot-Spring Systems,
W74-07786 5A

Environmental Radioactivity,
W74-07791 5B

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol I,
W74-07794 5G

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol. II.
W74-07795 5G

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol. III,
W74-07796 5G

Radionuclides in Ecosystems, Volume II.
W74-07799 5C

Iron-55 and Ruthenium-103 and -106 in the Brackish-Water Clam Rangia cuneata,
W74-07804 5A

Trace-Element Interactions Between River Water and Seawater,
W74-07805 5B

A Systems analysis Methodology for Predicting Dose to Man From a Radioactively Contaminated Terrestrial Environment,
W74-07809 5C

Modeling Radionuclides and Pesticides in Food Chains,
W74-07810 5B

Radiation Effects on Serum Proteins, Hematocrits, Electrophoretic Patterns and Protein Components in the Bluegill (Lepomis macrochirus),
W74-07816 5C

Effects of Chrome Radiation Exposure On Mosquitoes (Diptera: Culicidae). 1. Effects of Rearing in Sr-90 + Y-90 Solutions,
W74-07821 5C

Effects of Gamma Irradiation on the Reproductive Performance of Artermia as Determined by Individual Pair Matings,
W74-07822 5C

Effects of Gamma Irradiation on the Maintenance of Population Size in the Brine Shrimp, Artemia,
W74-07823 5C

Structure and Function of Hardwood Litter and Soil Subsystems After Chronic Gamma Irradiation, I. Mesofauna, Nitrogen, and Total Soil Respiration,
W74-07824 5C

Structure and Function of Hardwood Litter and Soil Subsystems After Chronic Gamma Irradiation. II. Microfungi,
W74-07825 5C

ADIOACTIVITY EFFECTS

Effects of Ionizing Radiation on Processes Influencing Tolerance of Tree Seedlings,
W74-07815 5C

Radiation Effects on Serum Proteins, Hematocrits, Electrophoretic Patterns and Protein Components in the Bluegill (Lepomis macrochirus),
W74-07816 5C

Sensitivity of Carp (Cyprinus carpio) Embryos to Acute Gamma Radiation,
W74-07817 5C

Effect of Radiation, Salinity and Temperature on the Ionic Regulation of the Blue Crab, Callinectes sapidus,
W74-07818 5C

Effects of Chrome Radiation Exposure On Mosquitoes (Diptera: Culicidae). 1. Effects of Rearing in Sr-90 + Y-90 Solutions,
W74-07821 5C

Effects of Gamma Irradiation on the Reproductive Performance of Artermia as Determined by Individual Pair Matings,
W74-07822 5C

Effects of Gamma Irradiation on the Maintenance of Population Size in the Brine Shrimp, Artemia,
W74-07823 5C

Structure and Function of Hardwood Litter and Soil Subsystems After Chronic Gamma Irradiation, I. Mesofauna, Nitrogen, and Total Soil Respiration,
W74-07824 5C

Structure and Function of Hardwood Litter and Soil Subsystems After Chronic Gamma Irradiation. II. Microfungi,
W74-07825 5C

RADIOECOLOGY

Radionuclides in Ecosystems, Volume II.
W74-07799 5C

Radioecology of the Plaice (Pleuronectes platessa L) in the Northeast Irish Sea,
W74-07802 5C

Accumulation of Calcium-45 in Developing Coho Salmon Eggs and Fry reared in varying concentrations of Stable Calcium,
W74-07808 5C

Effects of Ionizing Radiation on Processes Influencing Tolerance of Tree Seedlings,
W74-07815 5C

RADIOISOTOPES

The Transport of Radioisotopes by Fine Particulate Matter in Aquifers,
W74-07730 5B

Uranium-234,
W74-07790 5B

Radionuclides in Ecosystems, Volume II.
W74-07799 5C

Plutonium in North Atlantic Ocean Organisms; Ecological Relationships,
W74-07800 5C

Distribution of ZN, FE, MN, and SR in Marine Fishes of Different Feeding Habits,
W74-07801 5C

Iron-55 and Ruthenium-103 and -106 in the Brackish-Water Clam Rangia cuneata,
W74-07804 5A

Trace-Element Interactions Between River Water and Seawater,
W74-07805 5B

Trace Elements in Marine Shrimp,
W74-07806 5C

Biological Half-Lives for Zinc and Mercury in the Pacific Oyster, Crassostrea gigas,
W74-07807 5C

A Systems analysis Methodology for Predicting Dose to Man From a Radioactively Contaminated Terrestrial Environment,
W74-07809 5C

Transport of Radionuclides in Sediments,
W74-07814 5B

Thermoluminescent Dosimetry of AquatiR Organisms,
W74-07819 5C

Effect of Water-Soluble Decomposition Products of Herbaceous Plants on Uptake of Radioisotopes in Soil. (in Russian),
W74-08117 2G

RADIOPHOSPHORUS

Thermoluminescent Dosimetry of AquatiR Organisms,
W74-07819 5C

RAIN FORESTS

Structure and Function of Hardwood Litter and Soil Subsystems After Chronic Gamma Irradiation. II. Microfungi,
W74-07825 5C

RAINBOW TROUT

A Scanning Electron Microscopic Study of Secondary Lamellae and Chloride Cells of Rainbow Trout (Salmo gairdneri),
W74-08096 5C

RAINFALL

The Significance of Rainfall on Salt and Sodium Accumulations Under Irrigation,
W74-07743 3C

RAINFALL DISPOSITION

Precipitation Characteristics of the Northern New Jersey, New York City Metropolitan Area,
W74-07607 2B

RAINFALL-RUNOFF RELATIONSHIPS

Application of Remote Sensing to Hydrology--Final Technical Report,
W74-07940 2A

RATIONAL FORMULA

Hydrological Aspect of Surface Run-Off,
W74-07756 2A

RECLAIMED WATER

Sun Oil Develops Water Reuse Program,
W74-07882 5D

RECREATION

Capacity of Water-Based Recreation Systems Part I: The State of the Art - A Literature Review,
W74-07719 6B

A Summary of Quantity, Quality and Economic Methodology for Establishing Minimum Flows,
W74-07847 6B

RECREATION CAPACITY

Capacity of Water-Based Recreation Systems Part I: The State of the Art - A Literature Review,
W74-07719 6B

RECREATION FACILITIES

Capacity of Water-Based Recreation Systems Part I: The State of the Art - A Literature Review,
W74-07719 6B

RECYCLING

Optimal Timing and Sizing of a Conjunctive Urban Water Supply and Waste Water System with Nonlinear Programming,
W74-08010 5D

RED TIDE

Results of Red Tide Formation in Tokyo Bay,
W74-07770 5C

REFRACTION SEISMOLOGY

Pleistocene-Holocene Sediments Interpreted by Seismic Refraction and Wash-Bore Sampling, Plum Island-Castle Neck, Mass.,
W74-07875 2L

REGIONAL ANALYSIS
Economic Optimization and Simulation Techniques for Management of Regional Water Resource Systems,
W74-07714 6A

Appendices to Water Resources Management for Metropolitan Washington: Analysis of the Joint Interactions of Water and Sewage Service, Public Policy, and Land Development Patterns in an Expanding Metropolitan Area.
W74-07724 6B

REGIONAL DEVELOPMENT
Regional Water Authorities: Organizational Patterns-Purpose or Professional,
W74-07754 5G

The Columbia Interstate Compact: Politics of Water Resources in the Pacific Northwest,
W74-07846 6E

REGULATION
Groundwater Pollution Features of Federal and State Satutes and Regulations,
W74-07614 5G

Federal Laws and Regulations,
W74-07703 5G

Effluent Standards Strategy: Rejuvenation of an Old Game Plan,
W74-07769 5G

REMOTE SENSING
The Electrical Resistivity Method (Part I),
W74-07852 7B

Recent Advances in Log Evaluation,
W74-07853 8G

Solving Drilling Problems Utilizing Well Logs - A Case History,
W74-07898 8G

Research - - Targets and Developments, Regional Assessments,
W74-07903 7B

Application of Remote Sensing to Hydrology--Final Technical Report,
W74-07940 2A

Application of Satellite Data for Hydrologic Purposes (Ispol'zovaniye sputnikovoy informatsii dlya gidrologicheskikh tseley),
W74-08049 7B

REPRODUCTION
Sensitivity of Carp (Cyprinus carpio) Embryos to Acute Gamma Radiation,
W74-07817 5C

Effects of Gamma Irradiation on the Reproductive Performance of Artermia as Determined by Individual Pair Matings,
W74-07822 5C

Data on the Reproduction of the Striped Riffle Minnow (Alburnoides Teniatus Kesser) in the Zeravshan River, (in Russian),
W74-08104 2I

Gambusia in the Zeravshan River Basin, (in Russian),
W74-08105 2I

RESEARCH
The Role of Public Involvement in Water Resources Planning and Development, A Report with Readings on Research and Experimentation in Public Affairs Education.
W74-07610 6B

RESEARCH AND DEVELOPMENT
Active Research Tasks Report--Fiscal Year 1973.
W74-07651 5G

Water Resources Research in Virginia - Annual Report for Fiscal Year 1972.
W74-07842 9D

Reclamation Research in the Seventies--First Progress Report.
W74-07922 4A

The Role of Water Resources Research in the Energy Crisis,
W74-07966 6D

RESEARCH FACILITIES
Fractionation of Suspended and Colloidal Particles in Natural Water,
W74-07783 5A

An Evaluation of the Needs in Freshwater Research and Related Public Information Facilities,
W74-07838 6G

RESEARCH PRIORITIES
General Discussion and Conclusions-Need for Further Research,
W74-07689 5C

Metals Focus Shifts to Cadmium,
W74-07697 5B

RESERVOIR OPERATION
Optimization of Stochastic Storage Models Formulated by P.A.P. Moran, and Z. Kaczmarek (Optymalizaeja stochastycznych modeli retencjonwania podanych przes P.A.P. Morana i Z. Kaczmarka),
W74-07747 4A

RESERVOIR RELEASES
Selective Withdrawal From Beech Fork Lake, Beech Fork River, West Virginia,
W74-07914 8B

Transit Losses and Travel Times for Reservoir Releases, Upper Arkansas River Basin, Colorado,
W74-07931 4A

RESERVOIRS
A Ground-Water Monitoring Network for Kootenai Flats, Northern Idaho,
W74-07662 7A

Plankton Production and Water Quality in Spanish Reservoirs. First Report on a Research Project,
W74-08005 5C

Improved Dynamic Programing Procedures and Their Practical Application to Water Resource Systems,
W74-08013 6A

RESISTIVITY
Three-Dimensional Zone Model Log Interpretation,
W74-07735 8G

Porosity-Resistivity Cross-Plotting,
W74-07900 8G

Electric and Thermal Properties of Rocks,
W74-07906 8E

RESOURCE ALLOCATION
The State of the System (SOS) Model: Measuring Growth Limitations Using Geological Concepts,
W74-07958 6G

RESPIRATION
Primary Production and Respiration of the Phytoplankton of the Rivers Thames and Kennet at Reading,
W74-08132 5C

RETENTION
Influence of Dietary and Injected Selenium on Whole-Body Retention, Route of Excretion, and Tissue Retention of 75SeO3 (--) in the Rat,
W74-07708 5C

Reduction of Lead Absorption from the Intestine in Newborn Rats,
W74-07953 5C

RETENTION BASINS
A Simple Method for Retention Basin Design,
W74-07753 5D

RETRIEVABLE SURFACE STORAGE
Solid Forms for Savannah River Plant High-Level Waste,
W74-07787 5D

RETURN FLOWS
Characterization of Suspended Sediments in Water from Selected Watersheds as Related to Control Processes, Nutrient Contents, and Lake Eutrophication,
W74-07736 5B

REVERSE OSMOSIS
Reverse Osmosis Process and its Application, (In Japanese),
W74-07750 5D

Mine Drainage Pollution Control Via Reverse Osmosis,
W74-07881 5D

Water Treatment System,
W74-07979 5F

Cellulosic Reverse Osmosis Membranes Having High Flux and High Salt Rejection,
W74-08022 3A

System for Reversed Osmosis,
W74-08037 5D

Storage and Dispensing Apparatus for a Reverse Osmosis Water Purification System,
W74-08039 5D

Valve for Reverse Osmosis Purification and Storage System,
W74-08040 5D

Reverse Osmosis-Neutralization Process for Treating Mineral Contaminated Waters,
W74-08041 5D

REVIEWS
Mercury in the Environment, An Epidemiological and Toxicological Appraisal.
W74-07680 5C

Capacity of Water-Based Recreation Systems Part I: The State of the Art - A Literature Review,
W74-07719 6B

The Sulfate-Reducing Bacteria and Oilfield Bacterial Corrosion - A Review of the Current State-of-the-Art,
W74-07902 8G

Subsurface Exploration and Sampling of Soils for Civil Engineering Purposes,
W74-07905 8D

Prevention of Damage to Pipelines.
W74-07923 8A

RICE
Tolerance of Rice (Oryza Sativa L.) to Salt During Boot, Flowering, and Grain-Filling Stages,
W74-08080 3C

Effects of Drainage and Organic Amendments on the Reclamation of a Sodic Soil Cropped With Rice,
W74-08087 3C

Flood and Seepage Water Sampling Techniques in Rice Fields Under Different Water Management Practices,
W74-08090 5B

RIO GRANDE RIVER
An Analytical Interdisciplinary Evaluation of the Utilization of the Water Resources of the Rio Grande in New Mexico: Lower Rio Grande Region,
W74-07609 6B

RIPARIAN RIGHTS
Survey of Oregon's Water Laws,
W74-07611 6E

RIPUS
Acclimatization of Introduced Fish Species in the Eravninsk Lakes (Buryat Assr), (In Russian),
W74-08129 8I

RISKS
The Methodology of Bayesian Inference and Decision Making Applied to Extreme Hydrologic Events,
W74-07601 2A

Induced Safety Algorithm for Hydrologic Design under Uncertainty,
W74-08017 6A

RIVER BASINS
The Role of Public Involvement in Water Resources Planning and Development, A Report with Readings on Research and Experimentation in Public Affairs Education.
W74-07610 6B

RIVER FLOW
Hydrology and Structural Design (In Russian),
W74-07767 8B

The Effects of River Fluctuations Resulting from Hydroelectric Peaking on Selected Aquatic Invertebrates,
W74-07830 2I

RIVER FORECASTING
National Weather Service River Forecasting System,
W74-08057 4A

RIVER WATERS
Investigation of River Water for the Presence of Escherichia coli and Enterococcus, (in Russian),
W74-08004 5A

RIVERS
Quality of Surface Waters in the Colorado River Basin, Texas, 1966-72 Water Years,
W74-07670 5B

Hydrologic Response of Ice-Covered Streams,
W74-07832 2E

ROACH
Growth of the Caspian Roach in the Mingechaur Reservoir, (In Azerbaijarian),
W74-08123 2H

ROAD CONSTRUCTION
Carbonate Bonding of Taconite Tailings,
W74-07959 5G

ROCK PROPERTIES
The Electrical Resistivity Method (Part I),
W74-07852 7B

ROCKS
Methods of Mercurometric Investigations,
W74-07695 5A

Uranium, Thorium, and Lead Concentrations in Three Silicate Standards and a Method of Lead Isotopic Analysis,
W74-07947 2K

RODENTS
Polyacrylamide Gel Disc Electrophoresis of Rat Bile after Intravenous Administration of 52 MnC12, 64CuC12, 203HgC12 and 210 Pb(N03)2,
W74-07694 5C

Evaluation of Zinc Availability in Foodstuffs of Plant and Animal Origin,
W74-07706 5C

Influence of Dietary and Injected Selenium on Whole-Body Retention, Route of Excretion, and Tissue Retention of 75SeO3 (--) in the Rat,
W74-07708 5C

Reduction of Lead Absorption from the Intestine in Newborn Rats,
W74-07953 5C

ROTARY DRILLING
Improved Drilling Rates at Lower Costs,
W74-07901 8C

ROTATORIA
Studies on the Occurrence of Planktonic Rotatoria in Urban Waters and Their Relationship to Saprobism. (in German),
W74-08111 2I

ROTENONE
The Application of 'Rotenone' for the Extermination of the Indigenous Fish Stock in Waters Where Intensive Fish Farming is to be Introduced,
W74-08001 8I

RUNOFF
Alterations in the Hydrologic Cycle Induced by Urbanization in Northern New Castle County, Delaware: Magnitudes and Projections,
W74-07729 4C

Trends and Problems in Investigation of Long-Term Fluctuations of River Runoff (Napravleniya i zadachi issledovaniya mnogoletnikh kolebaniy rechnogo stoka),
W74-08051 2E

Quality of Drainage Water From a Heavy-Textured Soil,
W74-08088 5B

Hydrological Investigations in Forest.
W74-08140 4C

RUNOFF FORECASTING
Hydrological Aspect of Surface Run-Off,
W74-07756 2A

National Weather Service River Forecasting System,
W74-08057 4A

SACRAMENTO DELTA (CALIF)
Corrosive Effects of Southern California Potable Waters,
W74-07866 8G

SAFETY
Design Data and Safety Features of Commercial Nuclear Power Plants, Vol I,
W74-07794 5G

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol. II.
W74-07795 5G

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol. III,
W74-07796 5G

South Dakota Standards for Irrigation Pumps and Power Units,
W74-07895 8C

Prevention of Damage to Pipelines.
W74-07923 8A

SAGEBRUSH
Phreatophytes, A Bibliography, Revised.
W74-07829 3B

SALINE SOILS
An Oscillator Circuit for Automated Salinity Sensor Measurements,
W74-08074 2G

SALINE WATER
Effects of Colorado River Water Quality and Supply on Irrigated Agriculture,
W74-08014 3C

SALINE WATER INTRUSION
Hydrology and Chloride Contamination of the Principal Artesian Aquifer in Glynn County, Georgia,
W74-07919 2F

SALINITY
Heterogeneities in Salinity in a River Plume,
W74-07672 2L

The Influence of Temperature and Salinity on the Toxicity of Cadmium to the Fiddler Crab, Uca pugilator,
W74-07699 5C

The Significance of Rainfall on Salt and Sodium Accumulations Under Irrigation,
W74-07743 3C

Effect of Radiation, Salinity and Temperature on the Ionic Regulation of the Blue Crab, Callinectes sapidus,
W74-07818 5C

Location and Characteristics of the Interface Between Brine and Fresh Water from Geophysical Logs of Boreholes in the Upper Brazos River Basin, Texas,
W74-07859 8B

Influence of Temperature and Moisture Stress from Sodium Chloride Salinization on Okra Emergence,
W74-08073 3C

An Oscillator Circuit for Automated Salinity Sensor Measurements,
W74-08074 2G

Effect of Narrow Trenching in Harlingen Clay Soil on Plant Growth, Rooting Depth, and Salinity,
W74-08078 3F

SALINITY

Tolerance of Rice (Oryza Sativa L.) to Salt During Boot, Flowering, and Grain-Filling Stages,
W74-08080 3C

Effects of Drainage and Organic Amendments on the Reclamation of a Sodic Soil Cropped With Rice,
W74-08087 3C

Relationship Between Soil Oxygen Diffusion Rate and Yield of Oats in a Coastal Alluvial Soil at Critical Salinity Level,
W74-08094 3C

SALMON

Accumulation of Calcium-45 in Developing Coho Salmon Eggs and Fry reared in varying concentrations of Stable Calcium,
W74-07808 5C

SALMON RIVER (IDAHO)

Summary Report for a Methodology Study to Develop Evaluation Criteria for Wild and Scenic Rivers,
W74-07608 6B

SALMONELLA

Survival of Enteric Pathogens and Indicator Organisms in Natural Waters,
W74-07840 5A

SALT SOLUTIONS

Effect of Dilute Salt Solutions on Chernozem Soil Estimated Through the Hydration Properties of the Colloids,
W74-08135 2G

SALTS

Leaching Requirement Studies: Sensitivity of Alfalfa to Salinity of Irrigation and Drainage Waters,
W74-07774 3C

SAMPLING

USGS Completes Nationwide Reconnaissance of Metals in Streams.
W74-07698 5A

The Determination of Mercury in Air Samples and Biological Materials,
W74-07710 5A

The Determination of Heavy Metals in Domestic Sewage Treatment Plant Wastes,
W74-07763 5A

Seasonal and Spatial Changes in Primary Production and Nutrients in Lake Michigan,
W74-07773 5C

Variations in the Design of Depth Samplers for use in Groundwater Studies,
W74-07865 8G

Subsurface Exploration and Sampling of Soils for Civil Engineering Purposes,
W74-07905 8D

SAND

Sand Control in Oil and Gas Wells, Part I,
W74-07891 8B

SAND CONTROL

Sand Control, (Part 4), Combinations, Comparisons, and Costs,
W74-07851 8A

Sand Control in Oil and Gas Wells, Part I,
W74-07891 8B

SAND WAVES

Influence of Older Relief on the Location of Sand Waves in a Part of the Southern North Sea,
W74-07676 2J

SANDSTONE

Water Jet Cutting of Sedimentary Rock,
W74-07883 8B

SANDSTONES

Deformation Moduli of Water-Bearing Formations at Elevated Temperatures,
W74-07726 4B

SANITARY ENGINEERING

Leachate Treatment by Coagulation and Precipitation,
W74-08091 5D

SAPROBISM

Studies on the Occurrence of Planktonic Rotatoria in Urban Waters and Their Relationship to Saprobism. (in German),
W74-08111 2I

SATELLITES (ARTIFICIAL)

Pollution Monitoring in Lake Champlain Using ERTS-1 Imagery,
W74-08009 5A

Application of Satellite Data for Hydrologic Purposes (Ispol'zovaniye sputnikovoy informatsii dlya gidrologicheskikh tseley),
W74-08049 7B

SAVANNAH RIVER BASIN

Studies on Southeastern Aquatic Insects,
W74-07740 5C

SAVANNAH RIVER PLANT (SO

Geohydrology of the Buried Triassic Basin at the Savannah River Plant,
W74-07934 5B

SCALE PREVENTION

Prevention of Calcium Carbonate Scale Deposition in Mill Water Systems,
W74-07848 8G

SCALING

Prevention of Calcium Carbonate Scale Deposition in Mill Water Systems,
W74-07848 8G

Evaluation of Scaling Tendencies,
W74-07893 8G

SCARAB (PASTURE)

Environmental Stress in the Pasture Scarab Sericesthis nigrolineata Boisd.: Mortality in Larvae Caused by High Temperature,
W74-08146 5C

Environmental Stress in the Pasture Scarab Sericesthis nigrolineata Boisd.: II. Effects of Soil Moisture and Temperature on Survival of Firstinstar Larvae,
W74-08147 5C

SCINTILLATION METHOD

Determination of Counting Efficiency by 14C by Liquid Scintillation in Primary Production Measurements in a Lagoon Environment, (In French),
W74-08143 5A

SCREENS

Sand Control, (Part 4), Combinations, Comparisons, and Costs,
W74-07851 8A

Head Drop Across Bar Screens,
W74-08092 5D

SEA TEMPERATURE

Fluctuations in Gulf of Maine Sea Temperature and Specific Molluscan Abundance,
W74-08145 2I

SEA WATER

Gradient Analysis of Carbon Monoxide and Methane in Polluted and Other Nearshore Habitats,
W74-07984 5A

SEASONAL

Seasonal Changes of Benthos Algae of the Higher Part of Vorskla River, (In Russian),
W74-08142 5C

SEASONAOL

Seasonal Changes in Water Quality and Primary Productivity in Doe Valley Lake,
W74-07605 5C

SECONDARY RECOVERY (OIL)

Project Rio Blanco Spall Measurements Data Report,
W74-07797 4B

SEDIMENT CONTROL

Processes, Procedures, and Methods to Control Pollution Resulting from All Construction Activity.
W74-07942 5B

SEDIMENT DISTRIBUTION

Transport of Radionuclides in Sediments,
W74-07814 5B

SEDIMENT SORTING

Packing-Induced Radial Particle-Size Segregation: Influence on Hydrodynamic Dispersion and Water Transfer Measurements,
W74-07630 2G

SEDIMENT TRANSPORT

Observations and Analysis of Bottom Turbid Layers on the Oregon Continental Shelf,
W74-07632 2J

A Derivation of the Hydraulic Geometry of Steady-State Channels from Conservation Principles and Sediment Transport Laws,
W74-07633 2J

The Role of Sediment Gradation on Channel Armoring,
W74-07731 2J

Sediment Transport by Streams in the Upper Columbia River Basin, Washington, May 1969-June 1971,
W74-07911 2J

Patterns of Water Flow and Sediment Dispersion Adjacent to an Eroding Barrier Island,
W74-07920 2J

Ranger Submarine Slide, Northern Sebastian Vizcaino Bay, Baja California, Mexico,
W74-07938 2J

Tidal Currents and Zig-Zag Sand Shoals in a Wide Estuary Entrance,
W74-07939 2L

SEDIMENT YIELD

Sediment Transport by Streams in the Upper Columbia River Basin, Washington, May 1969-June 1971,
W74-07911 2J

EDIMENTARY ROCKS
Water Jet Cutting of Sedimentary Rock,
W74-07883 8B

EDIMENTARY STRUCTURES
Historic Flood Information for Northern California Streams from Geological and Botanical Evidence,
W74-07646 2E

EDIMENTATION
Historic Flood Information for Northern California Streams from Geological and Botanical Evidence,
W74-07646 2E

Geological Investigations,
W74-07657 5B

Methods and Practices for Controlling Water Pollution from Agricultural Nonpoint Sources.
W74-07941 5B

EDIMENTS
Characterization of Suspended Sediments in Water from Selected Watersheds as Related to Control Processes, Nutrient Contents, and Lake Eutrophication,
W74-07736 5B

Research to Determine the Environmental Response to the Deposition of Spoil on Salt Marshes Using Diked and Undiked Techniques.
W74-07990 6G

EED TREATMENT
Organo-Mercury Fungicide Treatment of Sugar-Beet Seed,
W74-07951 5B

EEPAGE
Flood and Seepage Water Sampling Techniques in Rice Fields Under Different Water Management Practices,
W74-08090 5B

EISMIC REGIONS
Earthquake Damage Costs in the Design of Water Resource Systems,
W74-08018 4A

EISMIC STUDIES
Pleistocene-Holocene Sediments Interpreted by Seismic Refraction and Wash-Bore Sampling, Plum Island-Castle Neck, Mass.,
W74-07875 2L

ELENIUM
Solvent Extraction of Selenium (IV) with 2-Thenoyltri-Fluoroacetone,
W74-07692 5A

Influence of Dietary and Injected Selenium on Whole-Body Retention, Route of Excretion, and Tissue Retention of 75SeO3 (--) in the Rat,
W74-07708 5C

Tissue Sulfhydryl Groups in Selenium-Deficient Rats and Lambs,
W74-07952 5B

ELF-PURIFICATION
Problems for Hydrobiological Investigation under Conditions of Complex Use of Water Resources (In Russian),
W74-07765 5F

ENSITIVITY STUDY
A Stochastic Model for the James,
W74-07843 5B

SEPARATION TECHNIQUES
Solvent Extraction of Selenium (IV) with 2-Thenoyltri-Fluoroacetone,
W74-07692 5A

Smelter Gases Yield Mercury,
W74-07956 5D

Pivotable Fluid Diverter for Recirulation System,
W74-08021 5D

Oil Recovery Apparatus,
W74-08033 5G

System for Reversed Osmosis,
W74-08037 5D

SERICESTHIS-NIGROLINEATA
Environmental Stress in the Pasture Scarab Sericesthis nigrolineata Boisd.: Mortality in Larvae Caused by High Temperature,
W74-08146 5C

Environmental Stress in the Pasture Scarab Sericesthis nigrolineata Boisd.: II. Effects of Soil Moisture and Temperature on Survival of Firstinstar Larvae,
W74-08147 5C

SEWAGE DISPOSAL
Using Sewage Effluent and Liquid Digested Sludge to Establish Grasses and Legumes on Bituminous Strip-Mine Spoils,
W74-07612 5D

Harbor Pollution from Large Ships,
W74-08006 5B

SEWAGE DISTRICTS
Regional Water Authorities: Organizational Patterns-Purpose or Professional,
W74-07754 5G

SEWAGE SLUDGE
Odors Emitted from Raw and Digested Sewage Sludge,
W74-07960 5D

SEWAGE TREATMENT
Part I - A Conceptual Model for a Terrestrial Ecosystem Perturbed with Sewage Effluent, with Special Reference to the Michigan State University Water Quality Management Project; Part II - A Personalized Bibliographi c Retrieval Package for Resource Scientists,
W74-07606 5D

BOD, Solids and Nutrient Removal by Foam Flotation,
W74-07742 5D

The Snodland-Ightham Regional Drainage Scheme: Design and Operation,
W74-07752 5D

Automation of the Control and Operation of Water Pollution Control Works,
W74-07758 5D

Redevelopment of Haven Sewage-Treatment Works, Colchester,
W74-07759 5D

Major Wastewater Treatment Plant to be Upgraded,
W74-07761 5D

The Determination of Heavy Metals in Domestic Sewage Treatment Plant Wastes,
W74-07763 5A

Pivotable Fluid Diverter for Recirulation System,
W74-08021 5D

Apparatus and Method for Treating Waste Liquid,
W74-08026 5D

Design and Simulation of Equalization Basins,
W74-08046 5D

Head Drop Across Bar Screens,
W74-08092 5D

SEWERS
Water Resources Management for Metropolitan Washington: Analysis of the Joint Interactions of Water and Sewage Service, Public Policy and Land Development Patterns in an Expanding Metropolitan Area.
W74-07723 6B

Appendices to Water Resources Management for Metropolitan Washington: Analysis of the Joint Interactions of Water and Sewage Service, Public Policy, and Land Development Patterns in an Expanding Metropolitan Area.
W74-07724 6B

The Design, Planning and Construction of a 45 inch Diameter Water Main Across a Congested Area of West Bromwich,
W74-07751 8A

SEXUAL VARIABILITY
Gambusia in the Zeravshan River Basin, (in Russian),
W74-08105 2I

SHALLOW WATER
Ecology of the Eulittoral Zone of Lakes,
W74-08003 5C

SHELTERBELTS
Ameliorative Effect of Field Shelterbelts Under Conditions in the Urals, (In Russian),
W74-08100 4A

SHIPS
Harbor Pollution from Large Ships,
W74-08006 5B

SHORE PROTECTION
Floating Breakwater for Attenuating Seas,
W74-08043 8B

SHORES
Ecology of the Eulittoral Zone of Lakes,
W74-08003 5C

SHRIMP
Trace Elements in Marine Shrimp,
W74-07806 5C

SILICA
Effect of Monosilicic Acid on Hydrolytic Reactions of Aluminum,
W74-07626 2G

Activated Silica in Wastewater Coagulation,
W74-07738 5D

Distribution of Phosphorus, Silica, Chlorophyll a, and Conductivity in Lake Michigan and Green Bay,
W74-08000 5C

SILICATES
Domestic Hot Water Systems, Silicate Treatment Inhibits Corrosion of Galvanized Steel and Copper Alloys,
W74-07850 8G

SIMILITUDE REQUIREMENTS
Axisymmetric Infiltrations,
W74-07839 2G

SIMULATION ANALYSIS
Economic Optimization and Simulation Techniques for Management of Regional Water Resource Systems,
W74-07714 6A

Test Results on Buoyant Jets Injected Horizontally in a Cross Flowing Stream,
W74-07766 8B

Error Analysis of Ecological Models,
W74-07811 5B

Application of Remote Sensing to Hydrology--Final Technical Report,
W74-07940 2A

The State of the System (SOS) Model: Measuring Growth Limitations Using Geological Concepts,
W74-07958 6G

Improved Dynamic Programing Procedures and Their Practical Application to Water Resource Systems,
W74-08013 6A

Induced Safety Algorithm for Hydrologic Design under Uncertainty,
W74-08017 6A

SINKS
Hydrology of Limestone Karst in Greenbrier County, West Virginia,
W74-07908 2F

Sources, Sinks, and Methods of Analysis of Organic Nitrogen Compounds in Fresh Water Systems,
W74-08008 5C

SITES
Optimum Drilling Sites for Ground-Water Development on the East Coast of Lanai Island,
W74-07734 4B

Environmental Statement Related to Construction and Operation of Barnwell Nuclear Fuel Plant.
W74-07792 5B

Final Environmental Statement Related to the Proposed Perry Nuclear Power Plant, Units 1 and 2.
W74-07793 5A

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol I,
W74-07794 5G

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol. II.
W74-07795 5G

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol. III,
W74-07796 5G

SLUDGE DIGESTION
Mechanical-Biological Waste Water Purification Plant,
W74-08032 5D

SLUDGE TREATMENT
Using Sewage Effluent and Liquid Digested Sludge to Establish Grasses and Legumes on Bituminous Strip-Mine Spoils,
W74-07612 5D

Lime Stabilization of Primary Sludges,
W74-07760 5D

New Sludge Processing Plant of the Beeston and Stapleford Urban District Council.
W74-07779 5D

Odors Emitted from Raw and Digested Sewage Sludge,
W74-07960 5D

SLURRIES
Compensated Gamma Ray Densimeter Measures Slurry Densities in Flow,
W74-07877 8G

SMALL WATERSHEDS
Annual Peak Discharges from Small Drainage Areas in Montana, Through September 1972,
W74-07667 2E

SMELTERS
Smelter Gases Yield Mercury,
W74-07956 5D

SOCIAL ASPECTS
Social and Economic Factors in the Adoption by Industry of Water Pollution Control Measures in Minnesota,

SOIL MOISTURE
Soil Moisture Transport in Arid Site Vadose Zones,
W74-07780 2G

The Significance of Moisture Flow and Equilibria in Unsaturated Soils in Relation to the Design of Engineering Structures Built on Shallow Foundations in Australia,
W74-07899 8D

Influence of Temperature and Moisture Stress from Sodium Chloride Salinization on Okra Emergence,
W74-08073 3C

Effect of Temperature and Plant Water Stress on Photosynthesis Diffusion Resistance, and Leaf Water Potential in Spring Wheat,
W74-08075 3F

Sugarbeet Response to Irrigation as Measured with Growth Sensors,
W74-08079 3F

Studies of Re-Vegetation in Vehicle Tracks in Svalbard. (in Norwegian),
W74-08116 4A

Environmental Stress in the Pasture Scarab Sericesthis nigrolineata Boisd.: II. Effects of Soil Moisture and Temperature on Survival of Firstinstar Larvae,
W74-08147 5C

OIL MOISTURE SUCTION
Calculation of Capillary Rise from Groundwater Table into the Root Zone Under Steady-State Conditions, (In German),
W74-08139 2G

OIL PHYSICAL PROPERTIES
The Relationships Between Soil Water and Engineering Properties of the Clayey Soils, (In Japanese),
W74-07679 2G

Lime Grout Penetration and Associated Moisture Movements in Soil,
W74-07871 8D

OIL STABILIZATION
Lime Grout Penetration and Associated Moisture Movements in Soil,
W74-07871 8D

OIL SURVEYS
Subsurface Exploration and Sampling of Soils for Civil Engineering Purposes,
W74-07905 8D

OIL TEMPERATURE
Effect of Humidity and Temperature on Microbial Activity in Moor Peat Soils, (In Russian),
W74-08089 2G

Environmental Stress in the Pasture Scarab Sericesthis nigrolineata Boisd.: II. Effects of Soil Moisture and Temperature on Survival of Firstinstar Larvae,
W74-08147 5C

OIL TEXTURE
Effect of Narrow Trenching in Harlingen Clay Soil on Plant Growth, Rooting Depth, and Salinity,
W74-08078 3F

OIL TYPES
Subsurface Exploration and Sampling of Soils for Civil Engineering Purposes,
W74-07905 8D

OIL WATER
Distribution of Free Iron and Organic Carbon as Related to Available Water in Some Forested Sandy Soils,
W74-07622 2G

The Relationships Between Soil Water and Engineering Properties of the Clayey Soils, (In Japanese),
W74-07679 2G

Axisymmetric Infiltrations,
W74-07839 2G

Model for Estimating Soil Water, Plant, and Atmospheric Interrelations: II. Field Test of Model,
W74-08085 2G

OIL WATER MOVEMENT
Packing-Induced Radial Particle-Size Segregation: Influence on Hydrodynamic Dispersion and Water Transfer Measurements,
W74-07630 2G

Anion Exclusion and Coupling Effects in Nonsteady Transport Through Unsaturated Soils: II. Laboratory and Numerical Experiments,
W74-07631 2G

The Significance of Moisture Flow and Equilibria in Unsaturated Soils in Relation to the Design of Engineering Structures Built on Shallow Foundations in Australia,
W74-07899 8D

SOIL-WATER-PLANT RELATIONSHIPS
Model for Estimating Soil Water, Plant, and Atmospheric Interrelations: II. Field Test of Model,
W74-08085 2G

SOILS
Effect of Water-Soluble Decomposition Products of Herbaceous Plants on Uptake of Radioisotopes in Soil. (in Russian),
W74-08117 2G

SOILS (WATERLOGGED)
Correlations Between P, Fe and Mn Availability in Water-Logged Soil at Different Fertility Levels,
W74-08134 2G

SOLUBILITY
Investigations on the Problem of Solubility and Stability of Steroid Ovulation Inhibitors in Water, Waste Water and Activated Sludge, (In German),
W74-08133 5A

SOLVENT EXTRACTIONS
Solvent Extraction of Selenium (IV) with 2-Thenoyltri-Fluoroacetone,
W74-07692 5A

SONIC VELOCITY TESTS
Deformation Moduli of Water-Bearing Formations at Elevated Temperatures,
W74-07726 4B

SOUNDING
Influence of Older Relief on the Location of Sand Waves in a Part of the Southern North Sea,
W74-07676 2J

SOUTH CAROLINA
Solid Forms for Savannah River Plant High-Level Waste,
W74-07787 5D

Environmental Statement Related to Construction and Operation of Barnwell Nuclear Fuel Plant.
W74-07792 5B

Buried Triassic Basin in the Central Savannah River Area, South Carolina and Georgia,
W74-07916 2F

Geohydrology of the Buried Triassic Basin at the Savannah River Plant,
W74-07934 5B

SOUTH DAKOTA
An Ecological Study of the Missouri River Prior to Channelization,
W74-07744 2I

South Dakota Standards for Irrigation Pumps and Power Units,
W74-07895 8C

South Dakota Standards for Construction of Irrigation Wells in Shallow Unconsolidated Glacial Sediments,
W74-07896 8A

Potential Contribution of Desalting Systefs to Municipal Water Quality and Supply in South Dakota.
W74-08064 3A

SOUTHEAST U
Studies on Southeastern Aquatic Insects,
W74-07740 5C

The Design, Planning and Construction of a 45 inch Diameter Water Main Across a Congested Area of West Bromwich,
W74-07751 8A

STELLATE
Biological Characteristics of the Volga School of Beluga and Stellate Sturgeon, (In Russian),
W74-08126 2I

STEROID OVULATION
Investigations on the Problem of Solubility and Stability of Steroid Ovulation Inhibitors in Water, Waste Water and Activated Sludge, (In German),
W74-08133 5A

STILLING BASINS
Outlet Works, Stilling Basin for Tallahala Dam, Tallahala Creek, Mississippi,
W74-07925 8B

STOCHASTIC PROCESSES
Optimization of Stochastic Storage Models Formulated by P.A.P. Moran, and Z. Kaczmarek (Optymalizaeja stochastycznych modeli retencjonwania podanych przes P.A.P. Morana i Z. Kaczmarka),
W74-07747 4A

STONEFLIES
Studies on Southeastern Aquatic Insects,
W74-07740 5C

STORAGE REQUIREMENTS
A Simple Method for Retention Basin Design,
W74-07753 5D

STORAGE TANKS
A Water Quality Problem in Lobster Holding Tanks,
W74-07983 8I

Quality of Drinking Water on Ships in Relation to Sailing Conditions, (In Russian),
W74-08082 5B

STORM RUNOFF
Estimation of Imperviousness and Specific Curb Length for Forecasting Stormwater Quality and Quantity,
W74-07640 5B

A Streamflow Model for Metropolitan Planning and Design,
W74-07721 2A

A Simple Method for Retention Basin Design,
W74-07753 5D

Redevelopment of Haven Sewage-Treatment Works, Colchester,
W74-07759 5D

STORM SEWERS
A Streamflow Model for Metropolitan Planning and Design,
W74-07721 2A

STRATIFICATION
Results of Red Tide Formation in Tokyo Bay,
W74-07770 5C

A Prediction of Changes in the Thermal Cycle of a Stratified Lake Used to Cool a 1000 MW Power Plant,
W74-07998 5C

STRATIFIED FLOW
Selective Withdrawal From Beech Fork Lake, Beech Fork River, West Virginia,
W74-07914 8B

STREAM EROSION
Evolution of Meander Loops,
W74-07661 2J

STREAM STABILIZATION
The Role of Sediment Gradation on Channel Armoring,
W74-07731 2J

STREAMFLOW
A Streamflow Model for Metropolitan Planning and Design,
W74-07721 2A

Quantity and Quality of Surface Water in Marion County, Florida,
W74-08044 7C

Trends and Problems in Investigation of Long-Term Fluctuations of River Runoff (Napravleniya i zadachi issledovaniya mnogoletnikh kolebaniy rechnogo stoka),
W74-08051 2E

STREAMFLOW FORECASTING
National Weather Service River Forecasting System,
W74-08057 4A

STREPTOCOCCUS
Survival of Intestinal Bacteria in Oligotrophic Waters,
W74-07737 5C

STRESS
Influence of Temperature and Moisture Stress from Sodium Chloride Salinization on Okra Emergence,
W74-08073 3C

STRIP MINE WASTES
Using Sewage Effluent and Liquid Digested Sludge to Establish Grasses and Legumes on Bituminous Strip-Mine Spoils,
W74-07612 5D

STRIP MINES
Pollution Control,
W74-07970 6D

STRIPED BASS
Ecological Factors Affecting Anadromous Fishes of Lake Ponchartrain and Its Tributaries,
W74-07993 2H

STRIPED RIFFLE MINNOWS
Data on the Reproduction of the Striped Riffle Minnow (Alburnoides Teniatus Kesser) in the Zeravshan River, (in Russian),
W74-08104 2I

STRONTIUM
Distribution of ZN, FE, MN, and SR in Marine Fishes of Different Feeding Habits,
W74-07801 5C

STRUCTURAL DESIGN
Hydrology and Structural Design (In Russian),
W74-07767 8B

STRUCTURES
Induced Safety Algorithm for Hydrologic Design under Uncertainty,
W74-08017 6A

STURGEON (SHOVELNOSE)
An Ecological Study of the Missouri River Prior to Channelization,
W74-07744 2I

STURGEON (STELLATE)
Biological Characteristics of the Volga School of Beluga and Stellate Sturgeon, (In Russian),
W74-08126 2I

SUBMARINE LANDSLIDES
Ranger Submarine Slide, Northern Sebastian Vizcaino Bay, Baja California, Mexico,
W74-07938 2J

SUBSURFACE INVESTIGATIONS
The Electrical Resistivity Method (Part I),
W74-07852 7B

Subsurface Exploration and Sampling of Soils for Civil Engineering Purposes,
W74-07905 8D

SUBSURFACE MAPPING
Pleistocene-Holocene Sediments Interpreted by Seismic Refraction and Wash-Bore Sampling, Plum Island-Castle Neck, Mass.,
W74-07875 2L

SUGAR BEETS
Sugarbeet Response to Irrigation as Measured with Growth Sensors,
W74-08079 3F

SULFATE-REDUCING BACTERIA
The Sulfate-Reducing Bacteria and Oilfield Bacterial Corrosion - A Review of the Current State-of-the-Art,
W74-07902 8G

SUNFISHES
Radiation Effects on Serum Proteins, Hematocrits, Electrophoretic Patterns and Protein Components in the Bluegill (Lepomis macrochirus),
W74-07816 5C

SUPERCRITICAL FLOW
The Numerical Solution of Transient Supercritical Flow by the Method of Characteristics with a Technique for Simulating Bore Propagation,
W74-07732 8B

SURFACE-GROUNDWATER RELATIONSHIPS
An Analytical Interdisciplinary Evaluation of the Utilization of the Water Resources of the Rio Grande in New Mexico: Lower Rio Grande Region,
W74-07609 6B

A Ground-Water Monitoring Network for Kootenai Flats, Northern Idaho,
W74-07662 7A

Hydrologic Data for 1972, Broward County, Florida,
W74-07918 7C

SURFACE RUNOFF
Alterations in the Hydrologic Cycle Induced by Urbanization in Northern New Castle County, Delaware: Magnitudes and Projections,
W74-07729 4C

Hydrological Aspect of Surface Run-Off,
W74-07756 2A

Contribution to Water Pollution from Agricultural and Urban Sources in the Coachella Valley,
W74-07757 5B

SURFACE WATERS
Water Resources Data for Nebraska, 1972: Part I. Surface-Water Records,
W74-07647 7C

Water Resources of Lehigh County, Pennsylvania,
W74-07649 4A

Geology and Water Resources of the Wharton Tract and the Mullica River Basin in Southern New Jersey,
W74-07668 4B

Water Resources of the Little River Basin, Louisiana,
W74-07671 4A

Quality of Surface Water in Illinois, 1966-1971,
W74-07678 5A

USGS Completes Nationwide Reconnaissance of Metals in Streams.
W74-07698 5A

Water in the Okanogan River Basin, Washington,
W74-07907 3B

Quantity and Quality of Surface Water in Marion County, Florida,
W74-08044 7C

Present Problems in the Study of Surface-Water Quality (Aktual'nyye problemy issledovaniya kachestva poverkhnostnykh vod),
W74-08050 5G

Problem of Assessing Effects of Human Activity on Surface-Water Resources (K probleme otsenki vliyaniya deyatel'nosti cheloveka na resursy poverkhnostnykh vod),
W74-08053 4A

SURFACTANTS
Improved Drilling Rates at Lower Costs,
W74-07901 8C

SURVEYS
Research - - Targets and Developments, Regional Assessments,
W74-07903 7B

Industrial Liquid Waste Surveys: Training Manual.
W74-07988 5G

A Systems Approach to Assessment of Rural Water Supply Program Effectiveness,
W74-08012 6B

SUSPENDED LOAD
Fractionation of Suspended and Colloidal Particles in Natural Water,
W74-07783 5A

SUSPENDED SOLIDS
Characterization of Suspended Sediments in Water from Selected Watersheds as Related to Control Processes, Nutrient Contents, and Lake Eutrophication,
W74-07736 5B

BOD, Solids and Nutrient Removal by Foam Flotation,
W74-07742 5D

SWEETPOTATO
'Hill-Top Irrigation,' A New System for Early Sweetpotato Planting, (In Spanish),
W74-08136 3F

SYSTEMATICS
Studies on Southeastern Aquatic Insects,
W74-07740 5C

A Preliminary Check-List of the Marine Algae of the Moss Landing Jetty: An Annotated Floristic Compilation,
W74-07981 5C

SYSTEMS ANALYSIS
Analytical Techniques for Planning Complex Water Resource Systems.
W74-07722 6A

Design Data and Safety Features of Commercial Nuclear Power Plants, Vol I,
W74-07794 5G

A Systems analysis Methodology for Predicting Dose to Man From a Radioactively Contaminated Terrestrial Environment,
W74-07809 5C

Modeling Radionuclides and Pesticides in Food Chains,
W74-07810 5B

Error Analysis of Ecological Models,
W74-07811 5B

Process Control Model for Oxygen Regeneration of Polluted Rivers, Phases IV and V, and Spacially and Temporally Distributed Discharge of Effluents in Estuaries,
W74-07837 5B

A Systems Approach to Assessment of Rural Water Supply Program Effectiveness,
W74-08012 6B

SYSTEMS ENGINEERING
Analytical Techniques for Planning Complex Water Resource Systems.
W74-07722 6A

TACONITE TAILINGS
Carbonate Bonding of Taconite Tailings,
W74-07959 5G

TAKYR SOILS
Ways of Increasing the Production of Takyr Soils of the Tedzhen Delta, (In Russian),
W74-08098 3F

TAMARISK
Phreatophytes, A Bibliography, Revised.
W74-07829 3B

TANNERY HAIR
The Removal of Soluble Mercury from Waste Water by Complexing Techniques,
W74-07845 5D

TELEMETRY
A Data Acquisition System for Ecological Field Studies,
W74-07989 7B

TEMPERATURE
The Influence of Temperature and Salinity on the Toxicity of Cadmium to the Fiddler Crab, Uca pugilator,
W74-07699 5C

Effect of Temperature and Plant Water Stress on Photosynthesis Diffusion Resistance, and Leaf Water Potential in Spring Wheat,
W74-08075 3F

TEMPERATURE DISTRIBUTION
Hydrologic Response of Ice-Covered Streams,
W74-07832 2E

TEMPORAL DISTRIBUTION
Precipitation Characteristics of the Northern New Jersey, New York City Metropolitan Area,
W74-07607 2B

TENNESSEE
Survival of Enteric Pathogens and Indicator Organisms in Natural Waters,
W74-07840 5A

TENNESSEE RIVER VALLEY
Application of Remote Sensing to Hydrology--Final Technical Report,
W74-07940 2A

TENSILE STRENGTH
Corrosion Resistant Cements,
W74-07887 8F

TERTIARY TREATMENT
Inorganic Nitrogen Removal in a Combined Tertiary Treatment-Marine Aquaculture System - II. Algal Bioassays,
W74-07777 5C

TEST WELLS
Location and Characteristics of the Interface Between Brine and Fresh Water from Geophysical Logs of Boreholes in the Upper Brazos River Basin, Texas,
W74-07859 8B

TESTACEA
Testacea (Protozoa: Sarcodina) as Indicators of Water Quality in Western Montana,
W74-07718 5A

TESTING
Progress in Ecological Research at Edgewood Arsenal, Maryland: Fiscal Years 1971 and 1972,
W74-07986 5C

TETRAETHYL LEAD
The LD(50) Value of Tetraethyl Lead,
W74-07700 5C

TEXAS
Estimating the Magnitude of Peak Discharges for Selected Flood Frequencies on Small Streams in East Texas,
W74-07664 2E

Quality of Surface Waters in the Colorado River Basin, Texas, 1966-72 Water Years,
W74-07670 5B

Location and Characteristics of the Interface Between Brine and Fresh Water from Geophysical Logs of Boreholes in the Upper Brazos River Basin, Texas,
W74-07859 8B

Down-Hole Motors for Improved Drilling,
W74-07880 8C

Data on Fresh-Water Inflow, April 14-July 28, 1973, For Analog-Model Study of the Houston Ship Channel, Houston, Texas,
W74-07921 7C

Industrial Application of Whitford's Demand Forecasting Procedure,
W74-08015 6D

TEXAS WATER PLAN
Economic Optimization and Simulation Techniques for Management of Regional Water Resource Systems,
W74-07714 6A

Analytical Techniques for Planning Complex Water Resource Systems.
W74-07722 6A

TEXTBOOK
Environmental Radioactivity,
W74-07791 5B

THAILAND
A Systems Approach to Assessment of Rural Water Supply Program Effectiveness,
W74-08012 6B

THERMAL CONDUCTIVITY
Deformation Moduli of Water-Bearing Formations at Elevated Temperatures,
W74-07726 4B

Electric and Thermal Properties of Rocks,
W74-07906 8E

THERMAL POLLUTION
Hydrologic Response of Ice-Covered Streams,
W74-07832 2E

Environmental Stress in the Pasture Scarab Sericesthis nigrolineata Boisd.: Mortality in Larvae Caused by High Temperature,
W74-08146 5C

THERMAL POWERPLANTS
Pollution Control,
W74-07970 6D

Regional Energy-Water Problems Northeast,
W74-07971 6D

THERMAL PRECIPITATION
Evaluation of Scaling Tendencies,
W74-07893 8G

THERMAL STRATIFICATION
An Investigation of the Water Quality and Productivity of Polson Bay, Flathead Lake, Montana,
W74-07717 5C

THERMAL STRESS
Environmental Stress in the Pasture Scarab Sericesthis nigrolineata Boisd.: Mortality in Larvae Caused by High Temperature,
W74-08146 5C

THERMAL STUDIES
Research - - Targets and Developments, Regional Assessments,
W74-07903 7B

THERMOCLINE
Using Improved Technology to Obtain Better Cement Jobs on Deep, Hot Liners,
W74-07878 8F

THERMOELECTRIC POWER
Hydrologic Response of Ice-Covered Streams,
W74-07832 2E

THERMOLUMINESCENT DOSIMETRY
Thermoluminescent Dosimetry of AquatiR Organisms,
W74-07819 5C

THERMOPLASTIC PIPE
Performance and Selection of Materials for Potable Hot Water Service,
W74-07855 8G

TIDES
Patterns of Water Flow and Sediment Dispersion Adjacent to an Eroding Barrier Island,
W74-07920 2J

Tidal Currents and Zig-Zag Sand Shoals in a Wide Estuary Entrance,
W74-07939 2L

TOLEDO CLAY SOILS
Quality of Drainage Water From a Heavy-Textured Soil,
W74-08088 5B

TOOL JOINTS
Drill Pipe Failures: Where Do We Go From Here,
W74-07869 8G

TORDON
The Fate and Effects of Pesticides in the Aquatic Environment of the Flathead Lake Drainage Area,
W74-07835 5C

TOXICITY
Effects of Crude Oil and Some of its Components on Young Coho and Sockeye Salmon,
W74-07613 5C

Mercury in the Environment, An Epidemiological and Toxicological Appraisal
W74-07680 5C

Symptoms and Signs of Intoxication,
W74-07684 5C

Inorganic Mercury-Relation Between Exposure and Effects,
W74-07686 5C

Organic Mercury Compounds-Relation Between Exposure and Effects,
W74-07687 5C

General Discussion and Conclusions-Need for Further Research,
W74-07689 5C

The Distribution of Lead in Human Deciduous Teeth,
W74-07691 5C

The Influence of Temperature and Salinity on the Toxicity of Cadmium to the Fiddler Crab, Uca pugilator,
W74-07699 5C

The LD(50) Value of Tetraethyl Lead,
W74-07700 5C

Tetraethyl Lead Dose Response Curve for Mortality in Laboratory Rats,
W74-07701 5C

Effect of Ascorbic Acid on Cadmium Toxicity in the Young Coturnix,
W74-07707 5C

Toxicity of an Algal Complex on Freshwater Fauna: 1. Action on Some Benthic Animals and Fishes. (in French),
W74-08108 5C

Toxicity of an Algal Complex on Freshwater Fauna: 2. Action on Lymnaea Spp. (in French).
W74-08109 5C

TRACE ELEMENTS
Trace Metals Investigations,
W74-07655 5B

Trace Metals in Atmospheric Particulates and Atomic Absorption Spectroscopy,
W74-07705 5A

Analysis of Trace Metal Particulates in Atmospheric Samples Using X-Ray Fluorescence,
W74-07709 5A

Trace-Element Interactions Between River Water and Seawater,
W74-07805 5B

Iron and Associated Trace Mineral Problems in Man and Animals,
W74-07950 2K

TRACERS
Tracers in Mud Improve DST, Wireline Test Accuracy,
W74-07856 8G

TRAINING
Annual Report '72 - '73.
W74-07602 9A

Industrial Liquid Waste Surveys: Training Manual.
W74-07988 5G

RANSFER
Transport and Transformation of Mercury in Nature and Possible Routes of Exposure,
W74-07682 5B

Metabolism,
W74-07683 5B

RANSPORT DEPLETION
Soil Moisture Transport in Arid Site Vadose Zones,
W74-07780 2G

REATMENT FACILITIES
Pricing of Industrial Wastewater Treatment Service,
W74-07727 5D

The Treatment of Waste Water from Industries and Commerce in Public Purification Plants (in German),
W74-07748 5D

The Snodland-Ightham Regional Drainage Scheme: Design and Operation,
W74-07752 5D

A Simple Method for Retention Basin Design,
W74-07753 5D

Redevelopment of Haven Sewage-Treatment Works, Colchester,
W74-07759 5D

Lime Stabilization of Primary Sludges,
W74-07760 5D

Major Wastewater Treatment Plant to be Upgraded,
W74-07761 5D

The Severn Scheme of the Bristol Waterworks Company.
W74-07772 5F

Head Drop Across Bar Screens,
W74-08092 5D

TREES
Effects of Ionizing Radiation on Processes Influencing Tolerance of Tree Seedlings,
W74-07815 5C

TREES (STANDS)
Effect of Climatic and Phytocenotic Factors on Annual Increment of Trees in Stands, (In Russian),
W74-08127 2I

TRICHOPTERA
Studies on Southeastern Aquatic Insects,
W74-07740 5C

Trichoptera in the Reservation Area Heiliges Meer in Westphalia,
W74-07997 2I

TRICLADIUM-VARIUM
Tricladium varium, An Aquatic Hyphomycete on Wood in Water-Cooling Towers,
W74-08011 2I

TRINITY RIVER BASIN (TEX
Industrial Application of Whitford's Demand Forecasting Procedure,
W74-08015 6D

TRITIATED WATER
Mathematical Model of Tritiated and Stable Water Movement in an Old-Field Ecosystem,
W74-07812 5B

Chromosome Aberrations in Chironomus Riparius developing in Different Concentrations of Tritiated Water,
W74-07820 5C

TRITIUM
Soil Moisture Transport in Arid Site Vadose Zones,
W74-07780 2G

Tritium Distribution in the Nuclear Industry - The Requirements for Control Strategies,
W74-07784 5B

Chemical Engineering Division, Waste Management Programs, Quarterly Report, July-September 1973,
W74-07788 5D

The Technology of Tritium Fixation and Storage,
W74-07789 5D

Mathematical Model of Tritiated and Stable Water Movement in an Old-Field Ecosystem,
W74-07812 5B

Transport of Radionuclides in Sediments,
W74-07814 5B

Chromosome Aberrations in Chironomus Riparius developing in Different Concentrations of Tritiated Water,
W74-07820 5C

TURBIDITY CURRENTS
Observations and Analysis of Bottom Turbid Layers on the Oregon Continental Shelf,
W74-07632 2J

TURBINES
Down-Hole Motors for Improved Drilling,
W74-07880 8C

South Dakota Standards for Irrigation Pumps and Power Units,
W74-07895 8C

TURBULENT FLOW
Test Results on Buoyant Jets Injected Horizontally in a Cross Flowing Stream,
W74-07766 8B

TYBEE ISLAND (GA)
Patterns of Water Flow and Sediment Dispersion Adjacent to an Eroding Barrier Island,
W74-07920 2J

UNDERGROUND WASTE DISPOSAL
Polluted Groundwater: Some Causes, Effects, Controls, and Monitoring.
W74-07615 5B

Geohydrology of the Buried Triassic Basin at the Savannah River Plant,
W74-07934 5B

Injection Wells Pose a Potential Threat.
W74-08072 5B

UNITED KINGDOM
Regional Water Authorities: Organizational Patterns-Purpose or Professional,
W74-07754 5G

Automation of the Control and Operation of Water Pollution Control Works,
W74-07758 5D

UNITED KINGDOM (BEESTON-STAPLEFORD)
New Sludge Processing Plant of the Beeston and Stapleford Urban District Council.
W74-07779 5D

UNITED KINGDOM (BRISTOL)
The Severn Scheme of the Bristol Waterworks Company.
W74-07772 5F

UNITED KINGDOM (BROMWICH)
The Design, Planning and Construction of a 45 inch Diameter Water Main Across a Congested Area of West Bromwich,
W74-07751 8A

UNITED KINGDOM (COLCHESTER)
Redevelopment of Haven Sewage-Treatment Works, Colchester,
W74-07759 5D

UNITED KINGDOM (LIVERPOOL BAY)
Chemical Evidence for the Dispersal of River Mersey Run-off in Liverpool Bay,
W74-07674 5B

UNITED KINGDOM (SNODLAND-CROUCH)
The Snodland-Ightham Regional Drainage Scheme: Design and Operation,
W74-07752 5D

UNITED KINGDOM (THAMES ESTUARY)
A Simple, Segmented Prism Model of Tidal Mixing in Well-Mixed Estuaries,
W74-07673 2L

UNITED KINGDOM (THAMES-KENNET RIVERS)
Primary Production and Respiration of the Phytoplankton of the Rivers Thames and Kennet at Reading,
W74-08132 5C

UNITED STATES
Problems for Hydrobiological Investigation under Conditions of Complex Use of Water Resources (In Russian),
W74-07765 5F

UNIVERSITIES
Annual Report '72 - '73.
W74-07602 9A

Water Resources Research in Virginia - Annual Report for Fiscal Year 1972.
W74-07842 9D

UNSATURATED FLOW
Nitrogen Transformations in Soil During Leaching: I. Theoretical Considerations,
W74-07619 5B

Nitrogen Transformation in Soil During Leaching: II. Steady State Nitrification and Nitrate Reduction,
W74-07620 5B

Nitrogen Transformations in Soil During Leaching: III. Nitrate Reduction in Soil Columns,
W74-07621 5B

Nitrogen Transformations During Continuous Leaching,
W74-07623 5B

UNSTEADY FLOW
The Numerical Solution of Transient Supercritical Flow by the Method of Characteristics with a Technique for Simulating Bore Propagation,
W74-07732 8B

URANIUM
Uranium-234,
W74-07790 5B

URBAN HYDROLOGY
Estimation of Imperviousness and Specific Curb Length for Forecasting Stormwater Quality and Quantity,
W74-07640 5B

Alterations in the Hydrologic Cycle Induced by Urbanization in Northern New Castle County, Delaware: Magnitudes and Projections,
W74-07729 4C

URBAN RUNOFF
Alterations in the Hydrologic Cycle Induced by Urbanization in Northern New Castle County, Delaware: Magnitudes and Projections,
W74-07729 4C

Contribution to Water Pollution from Agricultural and Urban Sources in the Coachella Valley,
W74-07757 5B

URBAN WATERS
Studies on the Occurrence of Planktonic Rotatoria in Urban Waters and Their Relationship to Saprobism. (in German),
W74-08111 2I

URBANIZATION
Innovation: A Case Study,
W74-07720 6B

A Streamflow Model for Metropolitan Planning and Design,
W74-07721 2A
